flow of applicants to train for the skills in which shortages exist or are likely to develop.

It should be emphasized that 9 out of every 10 apprentices now in training are veterans of World War II. In the development of our program we felt a special responsibility toward the veteran in assuring him the maximum opportunity of acquiring skills in the ranks of the building and construction trades.

PRODUCTIVITY

The volume of housing construction in 1947 indicates that a new record has been achieved. The number of units started in 1947, estimated at 860,000 new permanent units, was exceeded only once—1925, 7 years after the end of World War I. This represents an increase of almost 30 percent over the activity registered in 1946.

Of even greater importance is the number of dwelling units completed. Last year 745,000 dwelling units were completed, while during 1946 only 437,800 were made ready for occupancy. In other words, 70 percent more units were made ready for families in need of housing during 11 months of 1947 than in all of the previous year.

In considering this record of performance it is natural to raise the question about the charges made repeatedly, persistently, and often maliciously, that one of the most serious obstacles to the increase in the housing volume is the record of low productivity. It is widely claimed that the output of workers has been greatly reduced, that workers are soldiering on the job, that they refuse to turn out a record of output anywhere near the established standard of their trade.

A searching review of all available information reveals that productivity in the construction of homes, after having suffered a severe decline, has staged a spectacular comeback in the past 12 months. In analyzing the evidence it should be stressed that a record of man-hour performance in the construction of a given volume of dwelling units is by no means confined to the measure of the effort of the worker alone. Many factors, for which labor is in no way responsible, enter into the final record of performance, determining the efficiency on the job.

A brief review of the developments in the field of housing construction over a period of years would be helpful in making a valid assessment of the problem as it really exists. This record is divided roughly into four periods.

1. The decade from 1930 to 1940. During this time the construction industry suffered severely from widespread unemployment growing out of the depression. In 1932 housing construction came virtually to a standstill, with only 58,000 units built in that year. As the result of the depressed conditions persisting in the industry, the supply of new recruits to the various construction trades was curtailed. The fact that new and younger workers were not attracted to the trades during those years accounts for the later character of the available labor force. But in that period itself, the pressures for the utmost efficiency in construction were often absent, the morale was low and an attempt to stretch out the work was sometimes in evidence.

2. The war years, from 1940 to 1945. The labor force in the construction industry suffered severely from the draft. The younger men with skill and training in the construction trades were siphoned off into the armed forces in large numbers. The average age of the worker in the construction force was thereby substantially raised, and because of the heavy volume of wartime construction of all types, the labor force was heavily diluted with men of insufficient training.

Even more important was the increasing prevalence of the cost-plus systems of compensation to the contractors on wartime work. The cost-plus percentage fee and the cost-plus fixed fee methods gave rise to a strong pressure on the part of the contractor to overman the work in order to derive the highest profit from it. The impetus given by the employer to low productivity is probably the largest factor accounting for the inefficiencies growing into the industry during the war.

3. The initial postwar period, 1945–46. During this time the volume of construction was severely retarded by critical shortages of materials. Presence of local labor shortages in many areas led to labor hoarding by the contractors. The number of man-hours required for the output of the same volume of work rose to an all-time high and productivity reached an all-time low. The effect of the prewar and wartime experience on the labor force was also strongly felt. In fact, in much of the private construction the wartime practices of cost-plus compensation were carried over.

4. 1946 to date. Beginning with the closing months of 1946 and on through the construction season of 1947 the improvement in the building-materials supply had a marked effect on the improvement in productivity.

Impartial reports made by Government observers indicate that since July 1946 to the end of last year rapid progress has been made in bringing the productivity back to normal. There is still room for improvement, and we feel confident that this improvement will be rapidly taking place.

Perhaps the best available evidence of the actual record of productivity in home construction consists of the reports provided by the Bureau of Labor Statistics originating from its field staff. Normally the construction of an average one-family house requires approximately 4 months from start to completion. According to the Bureau of Labor Statistics, during the first half of 1946 the time required to complete a one-family house averaged from 6 to as much as 9 months. As the Bureau points out, "The causes for the delays during 1946 were not hard to find. Both materials and labor were in short supply in many of the important housing construction centers. The materials manufacturers had not yet brought their production up to capacity and the labor supply had not become readjusted to peacetime requirements."

According to the Bureau of Labor Statistics findings, the construction time period has been steadily declining since the middle of 1946, reflecting improved productivity. The reports indicate that, beginning in April 1947, there has been an especially notable improvement in the time it took to complete an average single-family unit. Evidence gathered by the Bureau during this period indicates "that the dwelling units started since June of this year will be completed in about 4½ months on the average. The reduction in the construction time period indicates improvements in efficiency on both labor and management."

RESTRICTIVE PRACTICES

In the course of the last 2 years a widespread campaign of propaganda has been conducted in an attempt to discredit unions in the building and construction industry, and to persuade the public that labor is responsible for either the high cost of housing or the housing shortage itself. These charges have appeared in newspaper articles, in special columns, in magazines, and in every other medium of publicity. They have covered a wide range of allegations extending from a blanket and unsubstantiated indictment of organized labor as being the source of what is termed in such charges as featherbedding, to instances allegedly occurring in particular communities as the result of policies pursued by specific trades.

Stories of this nature, publicized in periodicals with Nation-wide circulation, have had the effect of creating the impression that such practices are, in fact, widely prevalent and that they do constitute a major obstacle to housing progress. That such is not the case can best be established by a truly objective examination of the facts alleged.

For my part, I am not appearing before this committee to contend that everyone in the ranks of unions is blameless, that all trade unionists are devoid of sin, or that there have not been instances of abuses within labor's ranks. On the contrary, it is my purpose to this committee that there have been, are today, and will undoubtedly be in the future, instances of unreasonable actions, of abuses and dishonesty among labor men. But I assert that the abuses which do take place among unionists are no more numerous and no more flagrant than in any other group in our society. They are bound to occur with equal frequency among any group of comparable size. And, of course, they do occur among workers, among employers, among bankers and even among Congressmen.

What I consider to be my special responsibility here is not to deny any alleged abuse on the part of the men I represent, but to determine whether the charge is real—and, if it is substantiated, to take prompt and effective action to correct it. Wherever there are substantiated specific instances of such abuses, the Building and Construction Trades Department wants to know about them. Men who act in good faith and wish to serve a constructive purpose have reported instances of abuses directly to us. Every such instance brought to our attention is promptly made the subject of investigation. Wherever it proved to exist, prompt steps were taken to correct the abuse. This is the method we have followed in the past and propose to follow in the future.

We have found that the majority of the complaints brought directly to us have been often the result of either misinformation or misunderstanding of the problem. In some instances we have found that abuses did exist. I assert to this committee without reservation that wherever this has been the case, corrective measures have been promptly taken.

I submit that a good test of the validity of the charges made to date has been the method of presenting them. There have been organizations and individuals who, while withholding the alleged facts from anyone directly connected with the problem, strove to give them the maximum publicity possible. I believe their purpose and their motive was destructive, not corrective. At least 99 percent of the stories so presented have proved to be without any foundation whatsoever. Those who have perpetrated them must stand convicted of bad faith and of malicious intent in falsifying facts and misleading the public.

I am not appearing here to engage in recrimination. It would have been easy for me to trace the antiunion allegations to their source and to meet charges with countercharges. But I think that there has been much too much name-calling in the matter of housing; much too much pointing of the finger at the other fellow and saying that the other fellow is to blame. That does not get any housing built. In fact, I think that by now a good measure of the fellow's own guilt is how loudly he shouts of the cupidity of others, and how much money he spends on advertising publicity and lobbying to spread his venom on the public record.

I do not intend to provide a detailed roster of the types of charges made against labor and engage in the long recitation of detailed facts to disprove them. For one thing I know that the Joint Committee on Housing has been the recipient of every conceivable accusation made against labor in virtually every community of the Nation. I also know that the evidence before this

committee, which is a matter of public record, has provided conclusive proof of the specious nature of these accusations. The charges made to the committee and believed to have some degree of merit were referred by the committee to the building and construction trades department. In an official letter from the committee I have a list of five items in which the committee felt there might be a degree of validity. As the committee knows, all of these cases have been satisfactorily adjusted or explained, with the exception of one which is in the process of adjustment at the present time.

To give a few typical illustrations of the types of charges made, I will cite two or three instances of such charges along with our answers to them.

Refusal to use the spray gun in painting homes: The charge has been made that in many cities union painters either refuse, or are forbidden by union rules, to use the spray gun on home building. It is made as a flat assertion with the idea of conveying the impression that a modern technological improvement is being held back by unions intent on perpetuating the slower, less efficient, and more costly methods, which would yield greater earnings to them. Among the publications in which this charge has been made during the past year are: Look magazine for April 1, 1947; the Wall Street Journal for October 10 and October 20 1947; the Washington Evening Star for October 27, 1947; and the New York Times for October 26, 1947. The layman, not familiar with the facts, is likely to feel indignant about the obstacles being placed in the path of progress by labor unions. It is significant therefore that these stories have failed to raise such pertinent questions as—How efficient and economical is the spray gun in the painting of a home? How safe is its operation and what measures of protection against injury should be maintained when it is in use? Nor do these stories indicate that their authors have gone to the sources of information and interviewed the painters themselves, whom they charge with these tactics.

All of these stories appearing in 1947 failed to mention the fact that the International Brotherhood of Painters, which they name as the culprit in the case, launched in the early part of 1944 a comprehensive survey of the use of the spray painting machine and in September 1946 rendered a detailed report to its convention on the basis of which a specific program on the use of the spray gun was laid down by the painters' international. The fact is that the 1946 convention of the International Brotherhood of Painters adopted a national program of standards to govern the use of the spray painting machine throughout the United States and Canada and recommended that these uniform standards be embodied in a national code after negotiation with the National Painting and Decorating Contractors Association and other employers concerned.

The international brotherhood's special committee on spray painting presented to the 1946 convention a detailed finding of facts which I will attempt to summarize briefly.

1. There are at least 103 manufacturers of paint spray machinery who produce machines ranging in price from $5 to $5,000. These machines are, of course, of varying efficiency. The spray painting machine has been greatly improved in recent years and on large flat surfaces makes possible much more rapid completion of work than with the brush and more rapid application of several coats of paint. It has had wider use in industrial construction than on residential construction. In building work, where actual spray painting effectiveness was studied, it was found that this work was supplemented by at least 50 percent of work with paint brush. While the efficiency of the spray gun is greater on flat surfaces, on any work requiring the painting of sash, trim, molding, etc., in different colors, it is necessary to resort to taping which offsets much of the gain in efficiency. In the case of single-family houses, it is doubtful that any substantial economy in cost can be achieved.

2. The study of materials in use in spray painting shows that there has been no change in their toxic or poisonous content in the past 20 years. After extensive consultation with health and safety officials in the Federal Government and in the several States and with the National Safety Council, it was found that the exposure to lead poisoning and other types of poisoning is considerable in the use of the spray painting machine, but that much of this danger can be prevented by the strict adherence to the use of modern protective measures. Some of these protective devices, including shields, masks, and ventilators, have been developed by the National Safety Council. Considerable improvement in the prevailing practice is still needed to protect the operator and those in close proximity to the spray machine when in operation. In addition to the danger of poisoning there is also a hazard of fire and explosion involved, especially when the paint spray is used in the interior work.

The program adopted by the International Brotherhood of Painters is a positive one. It is designed to insure the use of all necessary safety measures to protect the workers and, where these safety standards are met, to assure the widest possible acceptance by workmen of the spray gun on all types of construction. The national standards which the brotherhood is attempting to evolve would apply in the form of a model State code and a model city ordinance which would require the use of the essential safety devices during operations, would call for shorter working hours for spray machine operators, with periods of intermission, and would call for periodic physical examinations of the operators to determine the effect on their health.

I submit that those who make public charges against the painters' union about the use of the spray gun owe it to the American public to at least inform themselves about the facts they allege. The least they can do is to learn about the record of 4 years of organized study devoted by this union to an effort to solve the problem in the best public interest, yet providing for the worker the minimum measure of protection. I submit also that instances in which the workmen have refused to operate the spray machine where protective devices have been lacking and where the use of the machine has been clearly a menace to the worker's health are ones which should be presented to the public in the light of full facts surrounding such refusal.

The point that stands out emphatically in this connection is that the union concerned is making a real contribution toward better and more rational utilization of a modern technological development seeking at the same time to safeguard the safety and health of workers against hazard; and that it is certainly not standing in the way of reduced home-building costs.

Bricklayers' union limiting production to 400 or 500 brick a day, as compared with prewar record of 1,000 or 1,200 brick a day. One of the most unfair and malicious pieces of propaganda was a newsreel-type of movie produced in 1946 by the March of Time. This particular release of the film showed what purported to be a shot of an actual construction job, with two bricklayers working on a wall. The older man turns to the younger man, waving him to slow down. "Take it easy, bud," he says, "you will live longer. Five hundred brick a day is plenty," or words to that effect. Millions of moviegoers seeing this picture naturally thought it to be a shot of an actual occurrence illustrating a widely prevalent practice. But the trained eye of a brickmason could readily see that the scene was a deliberately—and expensively—staged hoax. Evidently the producers could not find a real bricklayer to do the scene and those who knew enough could readily see that the actor hired for it had never held a trowel in his life: He was clutching it in his fist, holding it straight up, the way no real bricklayer ever would.

Just to make sure that the charge would stick in the public mind, it was again repeated in an equally ill-documented article on housing in the Life magazine. The same charge was also made in an article published in Colliers last November, along with a number of other unsubstantiated allegations against unions. It was again repeated in the Wall Street Journal series on housing published last October and notable for its numerous inaccuracies.

Let me say emphatically that there has not been and cannot be a union rule limiting the performance of bricklayers on any job. The Bricklayers, Masons, and Plasterers International Union, while unable to run down vague and general rumors of this character, has given a thorough on-the-spot investigation to every specific instance where such or similar allegation was brought to its attention.

The union's investigations bring out forcefully the misleading character of the claims made against it, reflecting the accuser's complete ignorance of the trade and of construction methods.

The number of brick a competent worker can lay in a day depends, of course, on many factors, including the degree of his skill, his physical condition, the supply of materials and, above all, the type and thickness of the wall and the number of turns, openings, and corners. The union's investigations of the 500-brick-a-day charges illustrate the real nature of the problem. Some years ago the typical house wall was of solid brick masonry, 12 to 22 inches thick. Today brick-veneer construction has become much more prevalent than in former years. In this type of construction, the outside or curtain wall of brick must be backed with cement block or cinder block, with a heavy mortar fill. This backing up is counted in the number of brick the mason has laid. The work on this new type of brick-veneer construction is in sharp contrast with the daily output on a solid brick wall, on which the number of brick laid may easily be more than twice as great in a day. Any responsible masonry contractor will testify that even 400 brick a day on brick-veneer construction on a typical single-family house is a good record of bricklayer's performance.

But even in the case of a modern house of solid brick construction, it must be realized that the changes in design which now call for more and closer spaced windows, along with many other departures from the design of the older and usually larger typical dwellings have imposed heavier and more exacting work requirements upon the brick mason, reducing the number of brick he can lay per hour or per day.

Let me say that here again it must be said that there are no doubt numerous instances of individual workers slowing down production. Such cases can be found in shops and offices everywhere—they are not confined to construction. There is no doubt that there are also isolated instances of collusion between workers and their foremen or the employer himself. The cost-plus psychology and speculative character of boom-time building of the last 2 years have served to make such instances more numerous than in normal times. But such collusive practices cannot be charged to the workers alone: They cannot exist without participation of the employer who finds increased cost of construction profitable.

What I do challenge is the assertion that the union has been the instrumentality for

slowing down production, with the resulting increase in construction cost. The standard of skill and performance of its members is the most valuable asset that the union possesses. To maintain and preserve a high standard of achievement is a matter of the union's vital concern. Assertions that there is any degree of self-interest in the union's undermining the standards of its own trade fly in the face of both reality and common sense.

Nor can the union be held responsible for the character of supervision over the workers on the job. Much of good performance on the job depends on good management. It should be remembered that the employer's prerogatives in the construction industry are greater than is generally the case in other employment. The building worker is employed by the hour. He goes to work when the employer puts him on the job. The employer may take a particular worker off the job whenever the employer wants to, and the worker goes off the job. The worker's pay ends with the hour he is taken off.

In hiring, the employer exercises complete freedom of passing on the qualifications of the workers whom the union furnishes to him. He is free to reject any worker not satisfactory to him or to dismiss the man after trying him out. Under these conditions and with good management, there is every opportunity for maintaining production at a high level. Under these conditions also there is little room for what the antilabor spokesmen call featherbedding by the worker.

Numerous charges have been leveled against unions that have since been, or can be, completely refuted. The requirement for the three coats of plaster for each room has been publicized as one chargeable to unions. It has been shown to have been embodied in the basic standards promulgated by the United States Bureau of Standards, having nothing whatsoever to do with union rules.

It is argued that the unloading and sorting of plumbing supplies and equipment delivered to a large project should not be done by skilled plumbers, who are paid $2.25 an hour, but should be done by laborers who would be paid $1.10 an hour for this work, because this change would make it possible to cut labor cost on this operation in half. Experience has shown, however, that the unloading and sorting of such equipment is much faster, more efficient and economical, when done by men familiar with the character and function of the unassembled parts and that the cost of having this work done by untrained workers would in the end be actually higher.

I have cited these few instances of the many charges indiscriminately made against building labor primarily to explain the true nature of the problem involved and to point out how misleading they can prove to be when given fair study.

My request to this committee and to every fair-minded American is simple. I merely ask that, when occurrences take place indicating conditions for which unions are actually properly responsible and which call for correction, specific information, giving the time, the place, and the relevant facts be brought to me for attention. I pledge the cooperation of the Building and Construction Trades Department of the American Federation of Labor and of its affiliates to have them promptly investigated and, if found to be valid, corrected. But when the accuser refuses to be specific in his charges, when he denies us the opportunity to examine them, answer them and act upon them, I ask that the judgment against our unions be withheld, but that the accuser of labor, his motives and his actions, be then subjected to thorough public scrutiny.

JURISDICTIONAL DISPUTES

Jurisdictional disputes present a perplexing problem that has caused grave concern to the officers and members of the building and construction trades-unions for many years. A number of different plans have been placed in operation in an effort by the Department to reduce these jurisdictional disputes to a minimum, and provide for their orderly settlement.

Since the enactment of the Labor-Management Relations Act of 1947 there has been a grave question in our mind as to what extent labor unions could exercise any authority in preventing stoppages of work due to jurisdictional disputes.

It is a human characteristic for an employer to seek an increase in his volume of business. It is likewise a human characteristic that workmen desire to extend their field of employment opportunities. Responsibility for proper allocation of work is by no means labor's alone. Actions taken by employers in the light of changing conditions are often deeply involved in the jurisdictional problem. Realizing this fact, the Building and Construction Trades Department of the American Federation of Labor has been for the past 2 months carrying on negotiations with various employees' associations who employ members of organizations affiliated with the building and construction trades department and drafting a plan for the orderly adjustment of jurisdictional disputes in a manner that will not be in violation of the provisions of the Labor-Management Relations Act. These negotiations have now reached a point where they are to be submitted for ratification to various employers' associations and to the affiliated organizations of the building and construction trades department. Upon ratification, the plan will be put in operation.

LABOR COSTS

In the current discussion of the housing cost an attempt has been made to confuse the labor cost at the site of construction with the labor cost entering all component parts. The share of responsibility on the part of the building construction industry for improving the housing supply and keeping down the cost cannot be properly determined unless we clearly differentiate between the site cost and other costs entering into the price of a house.

The two largest elements of site construction cost are materials and labor. As these costs rise so do total costs. It is therefore important to study the relative increase in each item. The best place to look for this information is the Bureau of Labor Statistics. The figures provided by BLS show that the index of union hourly wage scales in the building trades rose from 100.0 in June 1939, to 147.3 in July 1947. On the other hand, all building materials increased 107 percent during the same period. Lumber increased 222 percent between the two dates while paint materials increased by 155 percent. In this respect it must be remembered that lumber is one of the most important components of a house. Any increase in lumber causes a disproportionate increase in total construction cost. If we convert the building material index to a 1939 base we find that the level reached in July 1947 is 185.3. Substantial increases have occurred since then. On the same base all building materials reached 207.1 in November 1947, while brick was 161.2, lumber 317.1, paint and paint materials 195.4, and plumbing and heating 171.7.

While comprehensive information on the share of labor costs at the cite is not available for the country as a whole, and we therefore cannot determine exactly the differences in such costs which exist due to the varying types of construction under different climatic conditions, a number of special studies have been made in a number of localities which indicate the general relationship of labor costs to the total cost. In general these studies show that site labor cost varies between 29 and 34 percent of the total site cost of residential buildings. These studies also show that this proportion has remained approximately the same since before the war.

The Bureau of Labor Statistics reports that an analysis of 106 single-family houses built in Chicago in 1947 showed site-labor cost to be 31 percent of the total construction cost A study of defense housing built in 1940 showed that at that time labor cost at the site represented 32.3 percent of the total site cost. This indicates that there has been no substantial change in the relation between the labor cost and the total cost in the past 7 years. As a matter of fact, we know that according to a comprehensive study conducted in 15 cities in 1932 site-labor cost on housing construction at that time constituted 37.3 percent of the total construction cost.

Let me emphasize that this proportion indicates the relationship between labor cost and the actual site cost of building a house. In relation to the actual selling price of the house, site-labor cost would be considerably smaller.

In 1940 the average total site-construction cost of residential dwelling units was $4,065. The average selling price in that year was about $5,250. For September 1947 the total construction cost of a single-family house was $6,348. The selling price of such a house ranges from $8,500, on up, as high as the market could bear.

It is important to bear in mind that the actual cost to the home buyer is measured by the size of the monthly payments he must make. Virtually all housing is sold under long-term mortgages for the family buying a home. The cost of interest and amortization represents the largest share of the cost of shelter to them. Under standard FHA mortgage, the home buyer pays as much for interest and amortization over a period of years as he does for the house itself. The point I wish to emphasize especially is that in analyzing the cost of monthly payments we find that the cost of labor on the site represents a small proportion of the total cost of home purchase. Even a 50-percent reduction in the site-labor cost would reduce the monthly payments on the average single-family home only 8 percent.

CONCLUSION

The year just completed, 1947, was a banner housing construction year from the standpoint of volume. In the second half of the year, the highest rate of home building in the history of the country was attained. Yet the selling price of this new housing was so far out of reach of the average family in need of homes that this construction has had little direct effect in relieving the critical housing shortage.

Because the volume of residential building in the last 20 years lagged far behind the Nation's need for new homes, we have accumulated a huge housing deficit, made all the more severe by the lack of permanent home construction during the war. As the result, our replacement need alone is now so great that it can only be met over a period of years of maximum construction.

But new housing must also provide for growth and change. These have been intensified by wartime conditions. Our prewar rate of marriages was about 1,400,000 a year. In 1947 it was 1,900,000 and for 1948 it is estimated at 1,700,000. Before the war, the country's birth rate was at the rate of about 2,000,000 babies a year. In 1947, it was 3,730,000.

In 1947, according to the Census Bureau, 1,250,000 new families or households were established. Unable to find homes, these families are forced to increase the doubling up which has been going on throughout the war years.

According to a recent study published by Duke University, one of the most important problems to take into account in meeting the problem is the relationship between family income and prices of homes. The study showed that on the basis of 1945 family income and 1945 building costs, there would be an effective market for 15,000,000 homes between 1945 and 1960. The study showed, however, that if family income remained the same but housing prices went up 10 percent, the demand for houses would fall off by 2,000,000. If prices went up 25 percent for 1945, the market for new houses would be cut in half. Both family income and building costs have increased in the last 2 years. But family income has gone up only about 10 percent, while prices of homes went up more than 60 percent in the same period.

It is clear that the ability of the average family to secure a new home is the most important element in reaching an equitable solution to the present problem. The concerted attack that can be large enough to measure up to the size of the problem must not fall short of the long-range program which would assure a supply of housing of all types, and especially rental housing, at charges which the average family can afford.

The American Federation of Labor has long advocated a comprehensive long-range program in which all elements of the industry and the community could cooperate. Labor's approach has not been restrictive, but positive and aggressive. We urge Congress to deal aggressively with the Nation's foremost domestic problem in the interests of all Americans.

Huge Arms Costs Loom

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the military expert of the New York Times, Hanson W. Baldwin, appearing in today's Times; it is well worth the attention of Members:

HUGE ARMS COSTS LOOM—PLANS FOR SPENDING FIFTEEN TO TWENTY-FIVE BILLIONS ANNUALLY SHOW A LACK OF COORDINATION

(By Hanson W. Baldwin)

Annual military expenditures of between $15,000,000,000 and $25,000,000,000 are forecast within the next few years, if measures already authorized or projected are approved by Congress.

The President's annual budget message which asked for about $11,000,000,000 (for national defense during the 1949 fiscal year), or about 28 percent of the total budget, and the report of the President's Air Policy Commission, which recommended the additional expenditure in the next 2 years of more than $1,500,000,000 annually, indicate the trend.

These two items are only two of many involving the eventual expenditure of billions of dollars annually for direct and indirect costs of national defense. All of these measures either have received congressional authorization, or have been approved by the military and are being, or will be, considered by Congress.

BREAK-DOWN OF COSTS

Here is an incomplete break-down of the costs of various national-defense measures as now outlined:

Annual appropriations to maintain the armed forces at an average strength of about 1,423,000 officers and men (slightly below present strength)—about $10,000,000,000.

Annual appropriations to increase the strength of cur air power, as recommended by the President's Air Policy Commission—an average of about $1,675,000,000 for each of the next 2 years, plus even larger amounts later. (The Commission contemplated a military budget, not including the items outlined below, of perhaps $18,000,000,000 by 1952.)

Annual cost of universal military training—official estimates between $1,750,000,000 and $2,000,000,000; other estimates double this figure. The President included $400,000,000 in anticipation of congressional action in next year's estimated annual expenditures

Annual cost of maintaining the National Guard at its peak strength of 723,000 (to be reached by the aid of universal military training) will be, according to the President's Advisory Commission on Universal Training, about $700,000,000 of Federal expenditures, plus $65,000,000 annually of State expenditures. In the present fiscal year the Federal costs of the Guard are an estimated $110,000,000.

The Army's Organized Reserve Corps, at planned peak strength, according to the same sources, will cost $400,000,000 annually to maintain, an increase of about $340,000,000 above the present appropriation.

No estimates are available of the ultimate cost of the Navy's Reserve when it reaches full planned strength.

David E. Lilienthal, chairman of the Atomic Energy Commission, recently recommended the doubling of our prior investment in atomic euergy, or the expenditure in capital investments of about $2,000,000,000 in the next 4 or 5 years to expand our production of fissionable materials. This capital investment would be in addition to the Commission's annual operating budget of $500,000,000 to $600,000,000.

A 5- or 6-year program of stock-piling strategic materials has been approved by Congress—total recommended and authorized expenditures over this period to be $2,100,000,000.

Estimated costs of National Science Foundation to aid military research and promote scientific education—$33,500,000 first year; $122,500,000 in the fifth year.

In addition to these costs very considerable construction and capital investments are planned to provide the new weapons or the facilities for the expanded forces:

Cost of constructing the necessary new armories and facilities for the expanded National Guard (as estimated by the President's Advisory Commission on Universal Training)—$600,000,000.

Construction of new transsonic and supersonic wind tunnels (recommended by Air Policy Commission)—about $500,000,000.

Construction of new laboratories, test centers and proving grounds for guided missiles and new weapons—about $500,000,000.

Four-year construction program to modernize and strengthen the merchant marine (recommended by special Presidential Commission recently)—$600,000,000.

WOULD BE SPREAD OVER YEARS

These latter expenditures would, of course, be spread out over a period of years and they do not represent recurring costs, but each military capital investment entails a greater annual outlay for maintenance and depreciation.

These lists are by no means complete and could be greatly extended.

But they are definitive enough to prove what the President's Air Policy Commission confirmed—that there is not now and has not been any integrated and coordinated postwar plan of defense, and that individual plans and policies, largely uncorrelated, have, like Topsy, just "growed." These lists also lend great emphasis to the little-noted warning of Secretary of the Army Kenneth C. Royall, given in his testimony before the Air Policy Commission.

"We must realize," said Mr. Royall, "that there is a dollar limit on what this country can spend for national defense. There is an absolute limit beyond which we cannot go without endangering the economic security of the country."

Such a stop-look-and-listen warning sign ought to be carefully noted by Congress.

Is a Racket Being Made Out of the Use of Section 32 Funds?

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 14, 1948

Mr. MURRAY of Wisconsin. Mr. Speaker, section 32 funds are obtained by taking 30 percent of the custom receipts and setting them aside for removing agricultural surpluses. The following is the law:

TITLE 7, SECTION 612c, UNITED STATES CODE, 1940 EDITION

SECTION 32 FUNDS—APPROPRIATION TO ENCOURAGE EXPORTATION AND DOMESTIC CONSUMPTION OF AGRICULTURAL PRODUCTS

There is appropriated for each fiscal year beginning with the fiscal year ending June 30, 1936, an amount equal to 30 percent of the gross receipts from duties collected under the customs laws during the period January 1 to December 31, both inclusive, preceding the beginning of each such fiscal year. Such sums shall be maintained in a separate fund and shall be used by the Secretary of Agriculture only to (1) encourage the exportation of agricultural commodities and products thereof by the payment of benefits in connection with the exportation thereof or of indemnities for losses incurred in connection with such exportation or by payments to producers in connection with the production of that part of any agricultural commodity required for domestic consumption; (2) encourage the domestic consumption of such commodities or products by diverting them, by the payment of benefits or indemnities or by other means, from the normal channels of trade and commerce or by increasing their utilization through benefits, indemnities, donations, or by other means, among persons in low-income groups as determined by the Secretary of Agriculture; and (3) reestablish farmers' purchasing power by making payments in connection with the normal production of any agricultural commodity for domestic consumption. Determinations by the Secretary as to what constitutes diversion and what constitutes normal channels of trade and commerce and what constitutes normal production for domestic consumption shall be final.

The sums appropriated under this section shall be expended for such one or more of the above-specified purposes, and at such times, in such manner, and in such amounts as the

Secretary of Agriculture finds will effectuate substantial accomplishment of any one or more of the purposes of this section. Notwithstanding any other provision of this section, the amount that may be devoted, during any fiscal year after June 30, 1939, to any one agricultural commodity or the products thereof in such fiscal year, shall not exceed 25 percent of the funds available under this section for such fiscal year.

Mr. Speaker, the custom receipts from duties collected have been from $357,000,000 to $437,000,000 each year from 1935 to 1945. A large percentage of these custom receipts comes from duties on livestock products. If the duty collected on wool in 1946 was $150,000,000, wool then would furnish 30 percent of $150,000,000 or $45,000,000, which is just about the amount appropriated and provided for the present year for section 32, "Funds."

What happens to this money secured largely from the imports of wool and other livestock products? Here is where the special-privilege crops come in.

The following is the official report of the United States Department of Agriculture on the allocations for 1947 up to November 30:

Exportation and domestic consumption of agricultural commodities—approved programs and obligations by commodities—fiscal year 1948 (July 1 to Nov. 30, 1947)

	Approved programs as of Nov. 30, 1947	Obligations incurred	
		July 1 to Nov. 30, 1947	During November 1947
Purchases for direct distribution:			
Irish potatoes	$4,250,000	$2,614,954.59	$1,296,356.22
Sweetpotatoes	1,000,000	437,991.04	20,750.14
General vegetables	500,000	112,876.91	6,453.84
Dried fruits	4,600,000	26,323.75	26,323.75
Dried eggs	750,000	399,747.63	12,841.83
Transportation costs on prior year purchases		157.12	[1] −679.42
Total	11,100,000	3,592,051.04	1,362,046.36
Exportation: Cotton	1,000,000	676,485.66	270,953.30
Diversion: Cotton insulation	1,000,000	204,125.60	
Administration of marketing agreements	[2] 700,000	222,125.00	26,353.09
Other administrative expenses	[2] 1,060,000	575,028.45	98,008.34
Total	1,760,000	797,153.45	124,361.34
Grand total	14,860,000	5,269,815.15	1,757,361.00

[1] Erroneous payments, adjusted in November.
[2] Estimated annual obligations.

Just analyze this table. There is nothing to show that the wool men are to enjoy any benefits, but you will note that $1,000,000 is set aside to pay an export subsidy on cotton even if the Agriculture Department is asking for a 3 percent increase in cotton production this year. You will note that another $1,000,000 was allocated for cotton insulation. This subsidy is to manufacture insulation materials. Is there any provision for wool insulation? No. How about the other nonsubsidized manufactures of insulation material? How long must they compete with federally subsidized cotton insulation? One cotton Congressman tried to explain the cotton insulation on the basis of need for veterans' housing, but this subsidy was being paid before the war. On this basis the proposal to subsidize southern pine for lumber will no doubt soon be in order.

Where, I ask, in the law is there a provision to use these section 32 funds for administration of marketing agreements, or for other administrative purposes? Read the law and give the answer.

In the past other uses of these section 32 funds have been made. The official table from the United States Department of Agriculture is as follows:

TABLE IV.—*U. S. Department of Agriculture Production and Marketing Administration*

SECTION 32—TOBACCO PROGRAMS

Year	Diversion to byproducts and new uses				Exportation	
	Fertilizer experiment		Nicotine insecticide			
	Hundredweight	Value	Hundredweight	Value	Hundredweight	Value
1936			150,647	$1,090,213		
1937			179,645	1,716,756	3,469	$3,881
1938	35,000	$487,616	111,301	1,068,222		
1939	93,996	260,092	42,178	140,805		
1942			90,173	367,361		
1943			233,435	2,092,965		
1944			248,888	2,708,475		
Total	128,996	747,708	1,056,267	9,184,797	3,469	3,881

The fertilizer experiment program was designed primarily to relieve the market of surplus low-grade dark tobacco. Fertilizer produced under this program was distributed largely to institutions.

The nicotine insecticide program was originally an attempt to remove burdensome surpluses of certain types of low-grade dark tobaccos, and to assure production of needed quantities of nicotine sulfate for use in insecticides. Later, the war cut off imported materials such as derris root, and limited the availability of critical domestic materials—copper and arsenic—formerly used in the manufacture of insecticides. Nicotine sulfate, a tobacco byproduct, was used as a substitute in part for these scarce materials.

The foregoing shows the expenditure of these section 32 funds for grinding up tobacco and using it for fertilizer, and for subsidizing insecticide manufacture.

A $45,000,000 blank check to the Secretary of Agriculture should not be appropriated. It does not make sense to obtain funds from wool and spend the funds on cotton. The cotton-insulation program has long ceased to be an experiment. If the cost of food is $330 per capita and the cost of government is $371 per capita, it is an appropriate time to provide more food and less wasteful government.

The Late Honorable Clarence E. Hancock

EXTENSION OF REMARKS
OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. KILBURN. Mr. Speaker, the passing of Clarence E. Hancock was a great personal loss to me. In my opinion, he typified the very best qualities of a public man as well as a personal friend. He never stooped to demagoguery. His thinking on issues before the House was always clear, logical, and on a high statesmanlike plane.

When I first came down here nearly 8 years ago, our former colleague Bert Snell had told me that I would find Clarence Hancock kind and helpful. I had met him a couple of times before coming down and we had some mutual friends. After becoming better acquainted, his counsel, advice, and example were always a great help and comfort to me. This was especially true of complicated legal bills coming from his Committee on the Judiciary. Not being a lawyer, I many times found myself bewildered by the legal language and technicalities of some of these bills. I would go to Clarence Hancock and he would patiently and clearly outline to me the real meaning of the legislation and it was refreshing and stimulating to hear him analyze the bill.

As we all know, he had a great record in the First World War, and his strong character was put to another test in the Second World War. Never from his speech or actions could one tell of the strain he was under while his only son, John, was bombing Japan as pilot of a B–29.

It was characteristic that when he decided not to run for Congress because of ill health, he never told our New York delegation until after the adjournment of the House in order to forestall any tribute that we would want to get together and give him.

I think his dear wife and son know pretty well the affection, high esteem, and respect that his colleagues held for him, and our sympathy goes out to them. Knowing him was one of the grandest experiences of my life.

Awake, America

EXTENSION OF REMARKS
OF
HON. HARRY L. TOWE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. TOWE. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD an editorial entitled "Awake, America," written by William Schulman, national commander of the Legion of Guardsmen, North Bergen, N. J.:

AWAKE, AMERICA

The way things are going we cannot blind ourselves to the fact that growing tension between the Soviet Union and ourselves easily could produce a shooting scrape. Operating just short of the chalk line of war always involves the risk that someone will miss his step and cross it. In a real knockdown fight, the Russians will prove no pushover. They are smart, and with plenty of know-how. They are regimented to a single despotic will, and, as the Germans discovered, will not yield when the going grows tough. Under circumstances, good sense would dictate that we take every possible move to protect ourselves. Instead we have followed an opposite course, and have allowed our military defenses to disintegrate. In the United States the great bulk of aviation manufactures are either insolvent, or seeking to make ice boxes and prefabricated houses instead of planes—while the Russians plants are being expanded.

We may be mistaken in our judgments and the Russians may not want war, but they are getting ready for it.

What are we doing to meet the crisis?

Part of our plan lies in the huge international ransom by which our State Department hopes to buy peace; this, together with the Greeks, the Turks, and the Saudi Arabians, is supposed to protect us, if and when the greatest test of wills comes.

A modern military machine is a highly organized, complex apparatus. It is composed of specialists and technicians, and places a premium on technical skill, mobility, and all out concentrations of attack power. Its first principle is that the only good defense is a powerful offensive. Today the potentials of machine warfare are far advanced over what they were.

In war of the future, great bodies of men will land directly by air in the center of the enemy's territory, in lightning operations, after the way has been paved by a shattering attack of bombers and guided missiles. Except for the mopping up work, the entire operation will be primarily an air operation. Shattering surprise and massive destruction power will be brought to the highest point of military effectiveness ever visualized by man. Everything, including the supply trains, will be air-borne. Even in the case of germ and chemical warfare, the airplane will play the decisive role.

To establish an adequate air army will prove expensive, but it will not be half as expensive as the Marshall plan of international philanthropy, nor a fraction as expensive as a lost war.

With the great productive machinery of America behind such a defense establishment, neither Russia nor anyone else would dare to entertain the idea of aggression against us.

The mere act of building this air force would tend to revitalize our dying aircraft industry, whose present desperate situation is the most dangerous phenomenon in America today. Only an industrial establishment which is strong and alive can make for a military establishment which has power to win. The two are interlocked and cannot be dissevered from each other.

On the same score, private flying also should receive the sympathetic attention of Government. Aviation easily could become a necessary subject in the public schools. Subsidies to private groups who wish to learn the art of gliding or flying properly could be in order. In and out of schools, 10,000 or 20,000 such groups could exist in the United States within a year. The planes and equipment they would use would entail considerable amount of Government assistance, but the money would remain in America.

Events are moving fast and there may not be much time left. Common sense demands that we be done with the current crop of pipe dreams and illusions, and get down to cases. America can only be safe if she is strong; and strength in terms of this century means unquestionable military superiority in the air. Without this, nothing else counts, and with it, nothing else matters.

WILLIAM SCHULMAN,
National Commander,
Legion of Guardsmen.

Navy Department's Wage Policy

EXTENSION OF REMARKS
OF
HON. ROBERT N. McGARVEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. McGARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement by John P. Frey, president, metal trades department, American Federation of Labor.

I wish to compliment Mr. Frey and also his workers for the fine job they are doing.

The statement follows:

THE NAVY DEPARTMENT'S WAGE POLICY UNDERMINES CONFIDENCE

(By John P. Frey, president, metal trades department, A. F. of L.)

In the middle of November 1947 the Navy Department issued its new schedule of wages for navy yard employees. This was about a year overdue.

An examination of the new wage rates established, revealed an amazing inconsistency. There was an absence of realism, and a wholly unjustified, unbalance of wages for the same classification of labor as between the several navy yards.

In one navy yard, whose wage classification had been below the average of other navy yards, although the mechanical skill required in this yard equals that of any, none of the classifications of labor received an increase in the hourly wage rate, while 19 of the classifications were reduced from 4 to 8 cents per hour.

In another navy yard increases in the hourly wage rate up to 14 cents per hour were given to 24 classifications; 35 additional classifications received from 15 to 19 cents per hour; 58 additional classifications received increases of from 20 to 25 cents per hour, while 10 additional classifications received over 25 cents.

To accomplish this unbalance and unjustified result, the Navy Department arbitrarily set aside its long-time interpretation and application of the law of 1862, the law establishing the rule for the setting of navy-yard wage rates.

Then, to close the door to labor's right to have an adequate voice in the collection and examination of wage data from private industry, the Navy Department abolished the Navy Wage Review Board, upon which labor had an official representative since 1921.

In 1861, Congress enacted a law basing navy-yard wages upon wages being paid in private shipyards in the vicinity. In 1862 this law was amended to read—

"That * * * the rate of wages of the employees in the navy yards shall conform, as nearly as is consistent with the public interest, with those of private establishments in the immediate vicinity of the respective yards, to be determined by the commandants of the navy yards, subject to the approval and revision of the Secretary of the Navy."

When the law of 1861, amended in 1862, was enacted, the navy yards were constructing wooden warships only. It was apparent that the steam power being introduced in wooden ships, required the services of skilled metal workers. This led to the amending act of 1862.

Two provisions of the law of 1862 are vague and indefinite. How large an area would constitute "the vicinity" of the navy yard, and what construction should be placed on the words "the public interest?"

These two provisions were interpreted by commanders of navy yards according to their own judgment, judgment which led to wide and conflicting variations in wages as between navy yards. The "vicinity" of navy yards was sometime limited so as to exclude more favorable wage data for work of a comparable character in the immediate industrial area. Some navy yards were situated in large industrial areas, such as Boston, Mass., Brooklyn, N. Y., Philadelphia, Pa., Vallejo, Calif., and Bremerton, Wash. Other navy yards such as Portsmouth, N. H., Newport, R. I., Washington, D. C., Norfolk, Va., and Charleston, S. C., were more isolated but nevertheless close to large industrial areas.

As the result of wage rates formulated by navy-yard commanders, and the action upon these by the Navy Department, a wide variation in wage rates for the same classification of labor developed, particularly in the navy yards along the Atlantic seaboard. The local navy-yard wage boards appointed by the yard commanders, while well qualified as naval officers, possessed widely varying degrees of practical experience with the realities of the wage structure in private industry.

Since 1862 an industrial revolution has taken place more far reaching than the replacing of wooden ships by the present types of warships. The navy yards of our country, for many years, have required the highest degree of skills obtainable. No manufacturing establishment requires the same high percentage of thoroughly trained skilled workmen.

The Navy Department recognized the necessity of paying approximately the same wage rate to navy-yard employees as was paid in private industry for comparable work. The unsatisfactory, conflicting, and unbalanced wage rates established in navy yards, was due largely to the fact that the navy-yard wage boards, appointed by navy-yard commanders, were insufficiently familiar with the industries and the types of skilled workers employed in them, to determine the comparability of the work in private industry and the comparable skill required in navy yards.

Navy-yard labor had long protested against the inequality of navy-yard wage schedules for the same type of workmen. Navy-yard labor was insisting upon the right to collect wage data for comparable work in

private industry, and to discuss this data with the local navy wage board.

In 1921, on the initiative of Franklin D. Roosevelt, then Assistant Secretary of the Navy, and the thorough approval of Secretary Daniels, a navy wage review board was established. This consisted of two representatives of the Navy Department, and one appointed by the president of the A. F. of L. This gave labor's representative an opportunity of examining the wage data collected, and of assisting the Navy Department's representatives in determining whether some of it was invalid because it was not for comparable work to that done in the navy yards.

This board of three continued to function annually until in 1938 or 1939, when, because the CIO had organized a few of the workers in some navy yards, the navy wage review board was increased to five, three representing the Navy Department and two navy-yard labor. The Navy's majority on the board was the determining factor, but labor was in a position to give navy-yard employees a voice in the determination of the comparability of wage data.

Under the operation of this committee over the years, the Navy Department enlarged the areas to be known as the immediate vicinity of the yard. Circumstances compelled this modification for the American metalworking industry had enormously developed since 1862, and enlarged the areas in which the private plants were located so greatly that the original vicinity of the yard had become inadequate as a basis for comparisons.

The marked differences in wages paid to the many classifications of labor in navy yards was gradually adjusted so that they were on a basis of approximate uniformity for the same classifications. The unbalances which had existed prior to 1921 were largely eliminated.

In June 1947 the Navy Department abolished the Navy Wage Review Board without notifying the labor members of the Board, or the organizations which had appointed them. It then returned to the vicinity of the yard as applied in 1862. At the same time the Navy Department materially restricted the opportunity of navy yard employees' wage committees to discuss wage data with the local Navy wage board.

In doing this the Navy Department eliminated navy yard labor's opportunity to an adequate voice and to representation, at a time when other large departments of the Government employing civilian workmen had established permanent joint committees, giving to labor the right to representation and participation in the discussion and consideration of wage rates.

The present policy of the Navy Department on the question of labor's right to an adequate voice on the comparability of wage data is as reactionary and as obsolete as the wooden warships of 1862. To abolish labor representation after it had been in existence since 1921 was to move backwards, and this action was as arbitrary as it was bureaucratic, unsound, and impractical.

The Navy Department's present policy has undermined the confidence of navy yard employees, a confidence which it is necessary to have restored if our navy yards are to continue to attract the highly skilled workmen required.

The present unrealistic and autocratic attitude of the Navy Department is unacceptable to free American workmen, who long ago won their right in private industry and in most governmental departments employing civilian mechanics to have an adequate voice in the discussion and consideration of their terms of employment and conditions of labor.

The American Navy, under the Navy Department, is now by far the most efficient in the world. It is forward looking. It is progressive and constructive. It should be big enough to recognize that it cannot afford to go back to the period of wooden warships to find the basis for its present-day industrial-relations policy.

Enough Said

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. MURRAY of Wisconsin. Mr. Speaker, the following is from page 19, table II, of Publication No. 572 of the United States Department of Agriculture, showing nutritive value of various foods:

Product:	*Calories*
1 pound oleomargarine	3,327
1 pound lard	4,086
International units, vitamin A	(1)

[1] Plain oleomargarine is considered to have no vitamin A value.

The above shows that lard has 22 percent more calories. Lard can be purchased for much less than oleo. Not all oleo is fortified with vitamin A.

If anyone feels the need of vitamin A there is nothing stopping him from going to the village drug store and purchasing some vitamin A tablets.

If lard was given a shower both to give it taste and odor of butter; if lard had some vitamin A injected into it to give it some of the properties of butter; if lard was colored to look like butter, then a product with 22 percent more calories than oleo can be obtained for 25 percent less money. The price of lard has been from 17 cents to 27 cents per pound since June.

Since Europe is in need of calories, why not lard instead of oleo?

Truman Politics

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fairmont Sentinel, Fairmont, Minn., of January 8, 1948:

POLITICS

Knowing that some sort of refurbishing of the individual income-tax picture is necessary, President Truman asked for a blanket reduction of $40 a head for each taxpayer and his dependents. The loss, according to the President, should be made up from increased corporate taxes. The plan is, of course, a hasty appeasement move to placate the impatient public until a more thorough tax program can be put into effect.

The $40 reduction, on one hand, and increased rate for corporations, on the other, is as senseless as it is ineffective. The lower-income-bracket taxpayers would benefit somewhat from an immediate reduction—if it was to apply on 1947 income and paid back to the original payee—but increased corporate taxes would lead inevitably to one thing—higher prices.

Many folks in the low-income bracket, with a number of dependents, pay no income tax now and would receive absolutely no benefit from the President's current plan.

Tax reduction, to be of benefit to everyone, must be applied to everyone, big and little. Corporations cannot reduce the price of their products if more and more taxes stare them in the face. The individual can do nothing but ask for wage increases if his taxes aren't reduced, if he is in the moderate-income bracket. The lower-income taxpayer, who now pays no income tax, received no consideration from blanket reductions.

We cannt go along with an across-the-board tax-reduction program that does not prove beneficial to all proportionately.

Problems of Small Businessmen

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. LeFEVRE. Mr. Speaker, last evening I had the good fortune to be one of the many Members of Congress who attended the dinner of the National Small Businessmen's Association. I do not believe I ever attended a more enthusiastic meeting. Since I am a small businessman myself I felt right at home with this group and met several members of the association who are in my line of business. Representatives from the great majority of our States were present. These men are sincere in their efforts, and we all know that their combined forces make up the backbone of our domestic economy. These men were not in Washington with any particular gripe. All they want is a 50–50 break, and, believe me, this Congress should see that they get it.

Elmo Roper's column in today's New York Herald Tribune, which appears below, entitled "Business Seen Taking Chances in Boom," attracted my attention. I judge that the majority of the men present at last night's meeting were retailers—the men back home who operate on their main street. They are the men who guide the destiny of their community; they serve on their local school boards; they hold local municipal offices; they are expected to contribute to every local benefit; and, I am sure, they take an active part in the church of their choice.

What has the New Deal done for this group of small businessmen? Not a thing helpful. They have only been harassed with demands for ridiculous and unnecessary reports—threats of restriction on their trade—and the like. Mr. Truman wants to bring back that wartime condition by again inflicting controls upon us. What are we going to do about it?

In his article Mr. Roper brings to our attention the chances that business is taking today. These small businessmen have to carry an inventory if they are going to do business. They always have to take the chance of a falling market and an inventory loss. They are taking that chance now and facing a slap like we all took in 1920—destructive to the point of ruination in many cases. They stand ready to take the results without a whimper if the Government will only leave its hands off. If we are going to

have free enterprise, let us keep it free.

Mr. Roper's article follows:

BUSINESS SEEN TAKING CHANCES IN BOOM

(By Elmo Roper)

Last week I reported that the business leaders of the country—as polled in the Fortune executive forecast—expect prosperity to last at least through the first half of 1948. They think that the year ahead will bring record volumes of production, investment, sales, and profits.

But will the Nation later pay a price for such prosperity? What are some of the developments inherent in this golden era of boom which might well be the cause of another "bust" unless watched carefully?

Most talked about, and perhaps most important, is the future of prices. The executive forecast asked the cross section of business leaders:

"What about the cost of living? On a 1935–39 base, the Bureau of Labor Statistics Consumer Price Index was 153.3 last January; in July it was 158.4. Compared to July 1947, where do you think the index will be by July of next year?"

	May 1947	January 1948
	Percent	*Percent*
Up sharply (15 percent or more)	1	5
Up moderately (between 5 percent and 15 percent)	6	54
Pretty much unchanged (plus or minus 5 percent)	26	27
Down moderately (between 5 percent and 15 percent)	62	12
Down sharply (15 percent or more)	4	1
No estimate	1	1

In May of last year, the survey of businessmen reported that they expected lower prices, but the cost of living for most Americans actually skyrocketed to new highs. Today the same businessmen expect even higher prices. One can only wonder if there is a limit beyond which customers will be priced out of the market.

As to the reasons for the expected higher prices, clues are found in the answers the businessmen gave to the question:

"Could you indicate below each of the following what you are planning for during the first half of next year?"

	Prices you will charge	Cost of materials and products you buy	Your own labor costs
A sharp increase	2	5	4
A moderate increase	34	55	65
No appreciable change	55	34	27
A moderate decrease	6	4	2
A sharp decrease	1		
No estimate	2	2	2

According to the leaders of management themselves, the reason for higher prices will be still higher costs of materials and bigger pay rolls for labor. Others will charge that the expected higher profits will contribute substantially to the higher ultimate prices. The important news to the American consumer, however, is that more than 90 percent of these businessmen anticipate no price relief in 1948, and more than 33 percent think that prices will rise even higher.

One of the earmarks of booms has been the large degree of speculation rampant in the stock market. Much of this speculation has been curtailed by the Securities and Exchange Commission regulations, but until now the stock market has seemed to be unduly "bearish" in the face of a sizable boom. Not so in 1948, say the business executives. They expect that stock-market prices will be stable or rising this year—a signal for an increased volume of trading. They were asked:

"During the first half of 1948 do you expect generally rising, stable, or falling stock-market prices?"

	May 1947	January 1948
	Percent	*Percent*
Rising	17	26
Stable	29	33
Falling	34	17
Won't guess	20	24

Besides a large amount of activity on the stock exchanges, booms are usually marked by excess inventory accumulation. One of the factors which has always hastened any collapse has been the panic which hits dealers and wholesalers as well as manufacturers who think they are going to be caught with high-priced inventories which they cannot sell. This, of course, has always led to frantic unloading of inventories, resulting in price wars which bring on a crash.

It is not encouraging, therefore, to report that the retailers and wholesalers of the Nation are today not shortening their inventories as they were last spring. Instead, they seem to look forward to relaxing somewhat their former policy of caution. This is indicated in the question which asked retailers and wholesalers:

"For the first half of next year, apart from normal seasonal practice, are you planning to increase inventories, shorten them, or hold them at about the same level?"

	May 1947	January 1948
	Percent	*Percent*
Increase	3	8
Hold at about same level	29	60
Shorten	65	31
No estimate	3	1

These are but a few of the potentially dangerous undercurrents which are by-products of today's boom. After the last Fortune executive forecast in May it seemed that the over-all caution of business toward the boom served to limit rash speculation and unsound ventures.

Today a good deal of the caution seems to be gone from business attitudes. Perhaps this optimism about the future is justified. However, it is also possible that the wave of optimism will sweep away that ounce of caution so necessary to prevent a collapse.

Rarely in the past has the future of so much of the world depended on the decisions which American management must make in 1948.

The Strange Case of Heinz Norden

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. DONDERO. Mr. Speaker, on October 5, 1947, and on December 19, 1947, the Washington Post took occasion to charge me with injustice to two civilians who lost their jobs with the American military government. What is involved here is not merely my personal reputation but rather the ramifications within the American military government in Germany disclosed by these cases. I shall limit myself at this time to the case of Heinz Norden, who is one of those involved. I shall attempt to prove that the case demonstrates inexcusable ignorance or negligence, or both, on the part of those responsible for the American military government in Germany, and I hope that after these facts are made known there will be a searching investigation of the entire situation.

Following its usual tactics, The Washington Post, which is becoming more and more identified as the Washington edition of the Daily Worker, published the disarming denials of Heinz Norden instead of searching for the actual facts in this case. This is not the first time that the Washington Post has defended persons with Communist records.

Here is a man who, according to his own letter, published in the Washington Post of December 19, 1947, was assigned by the American military government in Germany to the work of counterintelligence and was approved for this job by Brig. Gen. Edwin L. Sibert, then Chief of Intelligence. He was later sought out by Brig. Gen. Robert A. McClure, director of information control under the American military government in Germany, and appointed editor in chief of the official magazine, Heute—Today. His record was cleared by a loyalty board of the American military government in Germany. His record and work have been approved by Maj. Gen. John Hester on March 13, 1945; by James A. Clark, chief, information control division, office of military government for Bavaria, on November 6, 1947; and by Gen. Lucius D. Clay.

What are the facts regarding this man's record? Are they such as to warrant his appointment in such sensitive posts as counterintelligence and as the official editor of a magazine in our zone in Germany? Do they warrant his clearance by the Army's loyalty board?

First. According to Heinz Norden's letter of March 6, 1942, he was a member of the American Labor Party. This organization has been repudiated as Communist controlled by numerous labor leaders of the State of New York. It has been cited as a front for the Communist Party by the Special Committee on Un-American Activities on March 29, 1944. Today it is joining hands with the Communist Party in support of Henry A. Wallace.

Second. According to Heinz Norden's letter of December 15, 1947, he was a financial contributor to the American League Against War and Fascism. If Mr. Norden did not know what he was contributing for, he certainly has no place in counterintelligence. If he did know, then there is all the more reason to bar him. The American League Against War and Fascism was active on an outright treasonable program. Attorney General Francis Biddle has declared that it was "established in the United States in an effort to create public sentiment on behalf of a foreign policy adapted to the interests of the Soviet Union." Vice chairman of this organization was none other than Earl Browder, then general secretary of the Communist Party of the United States. This organization has been cited as a Communist front by the Special Committee on Un-American Activities on January 3, 1940, and March 29, 1944.

Third. The Daily Worker of January 28, 1938, page 2, cites Heinz Norden as

a speaker at a model legislature conducted by the American Youth Congress. Former Attorney General Biddle referred to the American Youth Congress as a "front organization of the Communist Party." He said that "since its inception (it) has been controlled by Communists and manipulated by them to influence the thought of American youth." It has also been cited as a Communist front by the Special Committee on Un-American Activities, June 25, 1942, and March 29, 1944. This is the organization which booed President Roosevelt on the White House lawn during the Stalin-Hitler pact.

Fourth. In his letter of July 28, 1943, Heinz Norden has admitted being a member of the Book and Magazine Guild, an affiliate of the United Office and Professional Workers of America, a Communist-controlled union within the CIO.

Fifth. The Daily Worker of February 14, 1939, page 4, shows Heinz Norden as chairman of a City-Wide Tenants' Council. This organization was officially represented in the American Peace Mobilization at its meeting on April 5, 1941. It will be remembered that the American Peace Mobilization picketed the White House during the Stalin-Hitler pact and opposed lend-lease and our defense program in general. There is no question that the City-Wide Tenants' Council was one of a network of Communist fronts supported by the Communist press and operating in New York City. According to the Daily Worker of November 27, 1936, page 2, and Heinz Norden's letter of March 6, 1942, he was a representative of the tenants' league which was active in a housing development in New York City known as Knickerbocker Village, in which activities well-known Communists were active.

Sixth. According to the admission of Heinz Norden in his letter of March 6, 1942, he attended a meeting of the Communist Party held in Madison Square Garden and occasionally read the Daily Worker and the New Masses, official Communist publications.

Seventh. According to a pamphlet entitled "The People versus H. C. L.," page 3, December 11–12, 1937, Heinz Norden was a sponsor of the Consumers National Federation. The California Joint Fact-Finding Committee on Un-American Activities in its report of 1943 has characterized this organization as "created by the Communist Party and used for the purpose of spreading propaganda in schools and through women's clubs." It was cited as a Communist front by the Special Committee on Un-American Activities on March 29, 1944.

Eighth. According to a letterhead dated November 25, 1941, Heinz Norden was a member of the board of directors of the New York Conference for Inalienable Rights. This organization was cited as a Communist front by the Special Committee on Un-American Activities on March 29, 1944. This organization was a predecessor to the National Federation for Constitutional Liberties, which has been cited as an organization defending well-known Communist leaders by Attorney General Biddle.

Ninth. In his letter of December 15, 1947, Heinz Norden admits that "I may have 'belonged' to some Communist-front groups," although in his letter to me of January 8, 1948, he declared: "At no time was I a member of any organization dominated to my knowledge by Communists."

Tenth. In this letter of January 8, 1948, Heinz Norden admits that he joined the American Veterans Committee, which has a chapter in Munich. Observers who have returned from Germany declare that the American Veterans Committee in our occupation zone is strongly infiltrated with Communist influence.

Eleventh. In his letter of January 8, 1948, Heinz Norden admits membership in the State, County, and Municipal Workers of America. This organization later merged into the present United Public Workers, which has been openly shown as Communist controlled by facts presented on the floor of this House. The State, County, and Municipal Workers and the United Public Workers have both been headed by Abram Flaxer, whose Communist record has been exposed by the Special Committee on Un-American Activities in its report on March 29, 1944.

Twelfth. Heinz Norden was the translator of a biography of Karl Marx written by Franz Mehring, published in 1935 by Covici, Friede, Inc. The book was dedicated to Clara Zetkin, the leading woman Communist of Germany. The translator's preface states:

> In 1933, on the fiftieth anniversary of the death of Marx, a new edition was published and it is a translation of this edition which is now before the reader. Franz Mehring dedicated the first edition to: "Clara Zetkin, heiress to the Marxist spirit," and the first American edition therefore respects his wishes. * * * After Mehring's death a new era in Marxist research was opened up with its center in the Marx-Engels Institute in Moscow and many facts unknown to him were brought to light. The fiftieth edition was, therefore, brought up-to-date by means of an appendix. * * * This appendix, which the reader will find at the end of this volume, deals with all points of importance brought to light concerning Marx and Marxism.

It is evident from this note by Heinz Norden and his sister, Ruth Norden, who also occupies a post in the American military zone in Germany, that they were cooperating with Communist propaganda headquarters in Moscow in bringing forth this work.

Thirteenth. Heinz Norden and his sister, Ruth Norden, collaborated in translating the works of other pro-Communist writers, including Dawn Breaks, by Franz Carl Weiskopf; The Great Offensive, by Max Werner, and other works by the latter author.

Fourteenth. The records of the Navy Department, Bureau of Personnel, disclose the following in regard to Heinz Norden:

> Norden made application for enlistment in the naval service on December 14, 1941, and was accepted for enlistment on February 3, 1942. However, upon receipt of information that Norden had, while in New York City, close and active association with and in behalf of groups considered to have interests inimical to those of the United States, he was discharged on February 16, 1942.

Mr. Speaker, I am no investigator, and I do not have any special facilities for obtaining this information. I assume that the Department of National Defense could much more easily have obtained this information. Therefore, I state most emphatically that the employment of Heinz Norden in counter intelligence and in the post as editor of the magazine Heute, was an inexcusable violation of responsibility by the officers of the American military government. His clearance by the AMG loyalty board is all the more reprehensible. An examination of issues of the magazine Heute does not show that it was an effective organ in counteracting the barrage of slander directed from Communist sources at the United States. In answer to a specific request from me, Heinz Norden could not give any examples where he criticized the Communist Party or the Soviet Union.

I hope that the proper committees of the House and the Department of National Defense will investigate this matter thoroughly and hold the proper individuals responsible for the circumstances surrounding this case.

Bill's In Trouble—Poem by James Barton Adams

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. MACKINNON. Mr. Speaker, the ageless poem, Bill's in Trouble, by James Barton Adams, first came to my attention a number of years ago when a close personal friend of mine on the day I first filed for our legislature gave me a reprint which has been run in the Portland Oregonian. According to my information, James Barton Adams wrote this poem over 50 years ago, while serving on the Denver Post. With the convening of many State legislatures and another congressional session just getting under way, the time is appropriate for a republication of this immortal classic, which I include under leave to extend my remarks:

BILL'S IN TROUBLE

I've got a letter, parson, from my son away out West,
An' my ol' heart is heavy as an anvil in my breast,
To think the boy whose future I had once so proudly planned
Should wander from the path of right an' come to sich an end!
I told him when he started out toward the settin' sun
He'd find the row he had to hoe a mighty rocky one—
He'd miss his father's counsel, an' his mother's prayers, too;
But he said the farm was hateful, and he guessed he'd have to go.

I know thar's big temptation for a youngster in the West,
But I believed our Bill had the courage to resist,
An' when he left I warned him o' the ever waitin' snares.
That lie like hidden sarpents in life's pathway everywheres.
But Bill he promised faithful to be keerful, an' allowed
He'd build a reputation that'd make us mighty proud;
But it seems as how my counsel sort o' faded from his mind,
And now the boy's in trouble o' the very wustest kind!

His letters came so seldom that I somehow sort o' knowed
That Billy was a trampin' on a mighty rocky road,
But never once imagined he would bow my head in shame,
An' in the dust'd waller his ol' daddy's honored name.
He writes from out in Oregon, an' the story's mighty short;
I just can't tell his mother, it'll crush her poor ol' heart!
An' so I reckon, parson, you might break the news to her—
Bill's in the legislatur', but he doesn't say what fur.

—*James Barton Adams.*

State of United States Army Vessels

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. BRADLEY. Mr. Speaker, in amplification of the remarks I made under the 1-minute rule I am pleased to include herewith details of the status of United States Army vessels insofar as conversion and safety-at-sea work are concerned as furnished by Maj. Gen. Edmond H. Leavey, the chief of transportation, as follows:

Briefly, however, the status of safety work on our passenger transports is as follows: Nine vessels have already been completed (4 being conversions and safety-at-sea work, and 5 being safety-at-sea projects only); 18 vessels are now at shipyards (10 undergoing conversion and safety-at-sea work concurrently, and 8 having safety work only performed); contracts have been awarded on 6 vessels which have not yet entered yards (3 each for combined conversion and safety, and safety work only); and 4 others on which contracts have not yet been made will go to shipyards prior to March 31, 1948 (3 for combined conversion and safety, and 1 for safety-at-sea work only). One additional passenger transport will undergo safety-at-sea work only, in the Far East during the current fiscal year.

It might well be mentioned at this time that our safety-at-sea work is not restricted to passenger vessels. On both cargo transports and certain seagoing harbor craft also, our program is progressing very rapidly. It is expected that all such vessels will be fully certificated by the Coast Guard not later than March 31 in the same manner as are commercial-operated and privately owned vessels of various types.

The older vessels which are not included in our permanent postwar fleet and which we are presently operating will be retired as rapidly as the permanent fleet vessels complete their safety-at-sea work. Since these vessels will shortly be retired they have, of course, not been included in the safety-at-sea or conversion program.

A tabular summation follows:

U. S. Army passenger and troop transports—status of vessels in safety program

Vessel	Type	Nature of work	Present status
Sergeant Curtis F. Shoup, ex-*Spindle Eye*	C1-MAV-1	Conversion and safety-at-sea	Completed.
Private Elden H. Johnson, ex-*Pinkney*	ZC-2	do	Do.
Private William H. Thomas, ex-*Rixey*	ZC-2	do	Do.
Sergeant Charles E. Mower, ex-*Tryon*	ZC-2	do	Do.
General Harry Taylor	C-4	Safety-at-sea	Do.
General R. E. Callan	C-4	do	Do.
General A. W. Brewster	C-4	do	Do.
General A. W. Greely	C-4	do	Do.
General R. M. Blatchford	C-4	do	Do.
General C. C. Ballou	C-4	do	In shipyard.
General C. H. Muir	C-4	do	Do.
General D. E. Aultman	C-4	do	Do.
General C. G. Morton	C-4	do	Do.
General E. T. Collins	C-4	do	Do.
General H. B. Freeman	C-4	do	Do.
General W. F. Hase	C-4	do	Do.
General Fred C. Ainsworth	C-3	Conversion and safety-at-sea	Do.
General David C. Shanks	C-3	do	Do.
General George W. Goethals	C-3	do	Do.
General Henry Gibbins	C-3	do	Do.
General E. D. Patrick, ex-*Hughes*	P-2	do	Do.
General Simon B. Buckner, ex-*Eberle*	P-2	do	Do.
General Alexander M. Patch, ex-*Coontz*	P-2	do	Do.
General Daniel I. Sultan, ex-*Benson*	P-2	do	Do.
General Hugh J. Gaffey, ex-*Capps*	P-2	do	Do.
General Maurice Rose, ex-*Rodman*	P-2	do	Do.
USAT Hope	C1-B	Safety-at-sea	Do.
General M. M. Patrick	C-4	do	Contract let; vessel to enter shipyard in February.
General H. F. Hodges	C-4	do	Contract let; vessel to enter shipyard in March.
USAT Comfort	C1-B	do	Contract let; vessel to enter shipyard in February.
Admiral W. S. Sims	P-2	Conversion and safety-at-sea	Do.
Frederick Funston	C-3	do	Do.
James O'Hara	C-3	do	Do.
Admiral H. T. Mayo	P-2	Safety-at-sea	Contract to be let third quarter, fiscal year 1948; vessel to enter shipyard in April.
USAT Mercy	C1-B	Conversion and safety-at-sea	Contract to be let in March and vessel to go to shipyard immediately.
Pvt. Jose F. Valdez, ex-*Round Splice*	C1-MAV-1	do	Contract to be let and vessel to enter shipyard third quarter, fiscal year 1948.
Sgt. Jonah E. Kelley, ex-*Link Splice*	C1-MAV-1	do	Do.
Pvt. George J. Peters, ex-*Lock Knot*	C1-MAV-1	Safety-at-sea	To have work accomplished in theater during fourth quarter, fiscal year 1948.

Summary

Type of vessel	Safety-at-sea		Safety-at-sea and conversion	
	Completed or in shipyard	Yet to go to yard	Completed or in shipyard	Yet to go to yard
P-2	0	1	6	1
C-4	12	2	0	0
C-3	0	0	4	2
ZC-2	0	0	3	0
C1-MAV-1	0	0	1	[1] 3
C1-B	1	1	0	1
Total	13	4	14	7

[1] Includes 1 in Far East.

Speculation in Commodities

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. KEATING. Mr. Speaker, "Help wanted—male" is the sign now hung out in Washington. "No applicant will be considered who intends to use his official position as an opportunity to reap personal gain" will, I hope, be the No. 1 requirement established by those charged with the responsibility of selecting substitutes for the faithless to their trust as they begin their exodus from the Nation's Capital.

Shocking indeed is the disclosure of the name of the family of the ranking minority member of the Senate Committee on Agriculture on the latest list of insiders engaged in market speculation in commodities.

A revised standard of propriety is recognized as the foremost need in Washington officialdom in a commendably frank editorial in the normally pro-administration Washington Post, which,

under leave to extend my remarks, I quote:

INSIDE INFORMATION

Gov. Harold E. Stassen's query addressed to the President answers itself. The query is this: "Does a man who has admitted under investigation that he made approximately a million dollars ($932,703 to be exact) in personal profit by speculating since the war in increased prices of food and commodities belong in the position of assistant to the Secretary of the Army for procurement and industrial mobilization?" The answer, of course, is no. And the answer remains the same if it is asked respecting a member of the United States Senate intimately involved in agricultural problems, a physician with easy access to the seats of the mighty or any other high public official whose position might enable him to profit from inside information about the development of governmental policy.

Mr. Pauley's reiterated response to Governor Stassen that his trading was not based on inside information is beside the point. A man wagering large amounts of money on the fluctuations of commodity exchanges is, to begin with, not a man free to devote his full time and attention to his public office. However conscientious and disinterested he may strive to be, moreover, it is impossible for him—or for the public—to feel sure that his actions and motives are altogether unaffected by his private interests. Finally, such a man is a constant embarrassment to his associates. They must be always on guard lest some careless observation, some chance remark, convey the kind of inside information Mr. Pauley professes never to have gleaned. Public servants, in short, should not be persons inevitably subject to suspicion.

Strange Economics

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interesting article which was sent me by a constituent with the suggestiron that it be inserted in the RECORD:

STRANGE ECONOMICS—COUNCIL OF ECONOMIC ADVISORS' REPORT FULL OF HALF-TRUTHS, BANALITIES, SAYS ECONOMIST

(By Lawrence Fertig)

One of the most amazing documents to come out of Washington has been prepared by the President's Council of Economic Advisors. Mr. Truman will undoubtedly base his State of the Union message, to be delivered this week, very largely upon it. It is hard to recall any public statement by a group of economists which contains so many misstatements, half-truths, and banalities as this report incorporates. One shudders to think of the Nation being guided by such economic precepts.

Can you imagine anyone who thinks that increased production at the present time is inadvisable? The Council thinks so. Why? Because increased production in catching up with the market demand may force disastrous price-breaks, result in production cut-backs, and thus prove to be its own undoing. Prices are soaring because there is too much money for our present production.

In increased quantity of goods would plainly lower prices and cause a better balance and a much healthier situation. Apparently the Council thinks that less production, which would cause higher prices, and a bad imbalance, is now preferable. Dr. Nourse's committee admits that there are shortages of basic materials in many industries, but it doesn't see how increasing hours of work from 40 to 44 hours would help that.

ACCUMULATION OF CAPITAL

More work in digging a greater quantity of copper ore, and more hours of work in making more copper pipe would not, according to the Council, decrease the shortage of this product. When the average man reads this he will be forgiven for being reminded of Alice in Wonderland.

Do you know furthermore that the standard of living of the average man has been lowered by the fact that the tractor and the reaper are now employed instead of the plow and hand labor? "Accumulations of capital over the years," says the report, "have in the past involved deprivations to the rank-and-file worker."

All modern machinery, such as tractors, reapers, power-driven machines, etc., represents "accumulations of capital." By means of this machinery a worker can produce in an hour what he formerly produced by hand in a week. As a matter of fact, without these accumulations of capital the American worker might be living on the scale of a Chinese coolie or a South American peasant.

Because of the accumulations of capital represented by modern machines the American worker enjoys the highest standard of living in the world. Can you imagine anyone—no less an economist—denying these simple facts? The Council's statements are a direct paraphrase of the discredited concept fathered by Karl Marx in his famous book, Kapital. Marx stated that the worker would get less and less as industrialization increased.

EXPAND GOVERNMENT'S ROLE

Throughout the report there are overtones of the necessity of an expanding role in our economy for the Government. It points out that the Government has never prevented private schools, private physicians, oculists, dentists, and commercial ventures in music, drama, art, and radio. But, asks the report, will these private ventures "bring the level of total activity in the economy up to an acceptable total of maximum production?"

If not, the Council suggests, it may become necessary to "channel more of our resources through Government agencies in these areas." There we have the final pearl of wisdom of the new economics; Government schools of art, dancing, music, and radio in order to bring a good life, as conceived by the Government planners, into the lives of everyone.

Where in this report for the Nation's economic guidance, the reader will ask, are there specific suggestions for meeting the real danger of the day—inflation? What suggestions are made to control our supply of money, which is at the base of inflation? The answer is, nowhere. The Council thought that other matters outlined above were more important.

Annual Funds for ERP

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which appeared in last Sunday's New York Times and which may be of interest to Members:

ANNUAL FUNDS FOR ERP—EVENTS SHOULD GUIDE US, IT IS SAID, NOT FROZEN FORMULAS

(The writer of the following letter is an economist, active for many years in the international labor movement. He is the author of Famine Stalks Europe, a study of wartime food and relief conditions.)

To the EDITOR OF THE NEW YORK TIMES:

The decision of the administration to drop the original $17,000,000,000 demand for a 4½-year European recovery program and seek annual appropriations instead is all to the good. It shows President Truman and his advisers responsive to growing public and congressional resistance to long-term foreign commitments and to the statesmanlike objections set forth by Senator VANDENBERG.

Under the modified proposal, Congress will be asked to appropriate $6,800,000,000 for the 15-month period from April 1, 1948, to June 30, 1949. Succeeding Congresses will authorize appropriations for whatever aid funds may be needed during the following 3 years. Whether an initial $6,800,000,000 appropriation is too little or too much need not concern us at the moment. More important and in the long run all-decisive is the question of any long-term authorization, even as a gesture on the part of the Eightieth Congress, on which the Europeans are likely to place as much reliance as on appropriations in dollars and cents.

I am, and have always been convinced that the answer to the world's ills is not a rigid, long-range American plan of international aid. I am equally certain that the interests of both the United States and Europe will be served best by providing help as circumstances require, not by an assumption of economic, financial, and moral obligations over a period of nearly 5 years. Not frozen formulas, but events should guide our future course.

FOREIGN NEEDS AND OUR ABILITY

It is not lack of sympathies for the peoples of Europe that made me arrive at this conclusion. Nor is this a plea for a carping and niggardly aid program. It is the recognition that only by discarding long-term governmental blueprints and engaging ourselves solely to the extent determined by foreign needs and our own ability shall we be able to assist the recovery of Europe in a constructive, efficient, and mutually beneficial manner.

There is in my opinion little substance to the belief that Europe is doomed unless we commit ourselves and our resources for years ahead. The opposite might well be true. No one here or in Europe can foresee the future. Conditions might, and undoubtedly will change. The Europeans, too, might in time change their minds; they might seek ways and means different from those contemplated today.

Be that as it may, a limited year-by-year aid program will place the nations of Europe on their mettle. It will strengthen the spirit of self-help and mutual assistance. It will deflect their eyes from the hypnotic lure of seemingly inexhaustible American riches. Last, but not least, it will permit the periodic adjustment of American policies, economic, and otherwise, to whatever changes occur in the international sphere and the power balance of Europe.

These remarks are prompted by personal observations in Europe in recent months, in the course of which I had opportunity to become reacquainted with the views and outlook of European organized labor. Wherever I went I found a spirit of self-assertion and independence, a state of mind which while grateful for help from across the seas wants to make the future of Europe dependent on its own strength.

STAND OF SENATOR TAFT

Curiously enough, similar thoughts were voiced by Senator ROBERT A. TAFT, arch enemy of labor, in an address prior to approval by the Senate of stopgap aid to Europe. The Republican leader argued that the approach of the Truman administration to the problems of postwar Europe was wrong; that mere continuation of methods practiced by the administration so far would not get us or Europe anywhere.

Mr. TAFT, it must be kept in mind, was not dealing with questions of stop-gap aid. His shafts were directed against fantastic long-range commitments and the kind of Washington planning of which the whole world stands in awe.

It so happens that Europeans in all walks of life have similar apprehensions. Though they may say little for public consumption, they are plainly worried over a rigid and overextended American aid program. Their concern is, of course, not with American interests and American domestic aspects, but with the impact of an American-financed international WPA on the European economy and the livelihood of their peoples. These fears the Communists are cleverly exploiting for their own ends.

There is perhaps a lesson in it. American trade-union leadership professes strong dislike for Senator TAFT and what may be called, for want of a better name, Taftism. Yet the TAFT view of limited foreign aid, together with his insistence on independence and freedom from political and economic shackles, whether at home or abroad, strikes responsive chords overseas, particularly among the labor people. It is a strange phenomenon, and American labor which so far has contributed little to the debate on the practical aspects of the European recovery program, might well give it some thought.

ALEXANDER S. LIPSETT.

NEW YORK, January 7, 1948.

Strike of GSI Employees

EXTENSION OF REMARKS
OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of a statement by Oliver T. Palmer, chairman of the negotiating committee, Local 471, United Cafeteria Workers, UPW-CIO, outlining the position of the union in its dispute with Government Services, Inc.:

Government Services, Inc., a corporation operating 42 Federal cafeterias, has forced a strike of its employees. This strike has one very simple cause—the corporation refuses to meet and deal with the collective bargaining agency selected by the vast majority of its employees.

In precipitating this strike the corporation has duplicated in every respect the strike-breaking tactics of the most anti-labor employers of this country. The corporation has repeatedly ignored its collective bargaining obligations; it has shown complete bad faith in its relationship to the union; it has deceived its employees with respect to their rights under the law. In short, its deep-seated antagonism to the union has produced the same forms of antiunionism which typify the most open-shop employers in industry. The tactics of this employer bring us back to the flagrant type of antiunionism of an earlier day. Such conduct would be shocking if engaged in by a private employer. When, as here, it is engaged in by an employer which sanctimoniously trades on its peculiar quasi governmental status it cannot go unanswered.

In a statement issued on January 3, under the name of Maj. Gen. U. S. Grant, 3d, there appears what purports to be an account of the dealings between the union and the employer and an enumeration of the reasons which motivated this employer not to deal with the union. Before considering in detail the points made in this statement, two basic facts must be brought home to the members of the public who, after all, will be the final sufferers as a result of the action of this corporation.

1. The union involved, United Cafeteria Workers, CIO, has been the collective-bargaining agent for these employees since 1938. It is not a union certified by the National Labor Relations Board and has never been a union certified by the National Labor Relations Board. The absence of a certification is no accident. It comes as the result of the insistence of Government Services, Inc. When in 1938 the union first sought bargaining rights the corporation refused to grant barganing rights on the ground that its governmental status gave it an immunity from the Wagner Act. When the employer could no longer resist the demands of its employees for collective bargaining the employer finally consented to an informal election which was conducted by the Labor Board at the request of the Secretary of the Interior. When the union won the election, bargaining ensued and the union has operated under collective-bargaining contracts from 1938 until the end of 1947. Of course, the status of the union was no different than a great many other unions which acquire standing as a collective-bargaining agency through designation by the employees but without a Labor Board certification.

2. The second point which must be borne in mind is that the obligation to bargain, as GSI surely knows, does not depend upon certification. It is the law under the Taft-Hartley Act, as it was under the Wagner Act, that the failure to obtain a certification is not a defense to a refusal to bargain and that an employer may not as a condition of bargaining with a union insist that it be certified. Why has GSI suddenly decided that the union should obtain a Labor Board certification? It cannot be because of the requirements of the new law. The new law imposes no such requirement. As a matter of fact, the new law broadens the scope of exemptions of governmental corporations and makes even more plausible than formerly the corporation's claim to an exempt status.

General Grant, in his statement of January 3, seeks to explain this sudden change of heart. He relates as justification for this insistence that the union obtain a Labor Board certification, certain events which occurred in connection with the 1946 strike. That strike was precipitated because the rank and file rejected a management offer of a wage increase which was taken by the negotiating committee subject to ratification of the membership. This offer was smaller in amount than that offered by other Government cafeterias. The corporation has always smarted over the fact that it was unable to force on the employees this inadequate formula and was compelled to accept an arbitration award which granted the same wage increase as was granted to workers in other Government cafeterias.

General Grant enumerates the following specific reasons for refusing to deal with the union:

(a) He states that the new law is the "law of the land." As I have already noted, there is nothing whatsoever in the Taft-Hartley law which imposes upon any union the obligation to submit to the filing requirements. On the contrary, under the new law, as under the old law, an employer is required to deal with the freely chosen bargaining agent of its employees, and he cannot refuse to deal by insisting that the union prove its majority by one means rather than another. No union is required under the law to prove its majority by resorting to the services of the Taft-Hartley Act Labor Board. As I have already pointed out, this same employer has not only continued to deal with the union, although it had not been certified, but in fact insisted that the Labor Board had no jurisdiction to certify it. The new law, far from justifying this employer's sudden reversal of position, makes it more suspicious in view of the fact that previous exemptions in favor of Government entities are broadened.

(b) General Grant suggests that the situation of GSI is unusual because of its relationship to the Federal Government and that it is not free to ignore the law because of that fact. This involves a deception that the union is requiring the employer to deal with it in violation of the law. This is emphatically not the case and General Grant knows that it is not the case.

(c) General Grant next argues that he has a right to insist that the union submit to the filing requirements of the Taft-Hartley Act because "an unqualified union cannot utilize the services of the National Labor Relations Board in solving labor relations problems."

The sole purpose of the Board in connection with labor-relations problems is to redress unfair labor practices either by unions or by employers. A union by failing to qualify does not insulate itself from the jurisdiction of the National Labor Relations Board to redress unfair labor practices. Consequently, General Grant's fear appears to be that the employer may commit unfair labor practices for which the union will have no redress. This is the first time in all my experience as a labor leader that an employer has sought to justify violating one provision of the law because in the future he may also violate other provisions of the law. This is a curious contention to come from an employer who boasts of peculiar responsibilities by virtue of contracts with the Federal Government.

(d) The next point made by General Grant is that other labor unions are interested in organizing in GSI and that it might be the victim of a jurisdictional strike. Here again we find an employer seeking to plead its own wrong-doing in order to evade its bargaining obligation. It is well known that no other labor organization has any following among the employees here involved. It is true that the corporation has since November deliberately sought to promote the activities of rival labor organizations among the employees. But because these illegal maneuvers might conceivably bear fruit is hardly a justification for the refusal of GSI to deal with the union which now represents an overwhelming majority of its employees. If, as General Grant contends, jurisdictional strikes are a possibility it seems strange that no rival labor organization, despite the efforts of the corporation, has petitioned the Labor Board for an election.

(e) General Grant next suggests that contract negotiations would be pointless because unless a union qualified itself under the Taft-Hartley Act it is not legally eligible to speak for employees. This is simply not true. Literally hundreds of thousands of employees enjoy the benefits of collective bargaining agreements signed by unions who have not submitted to the requirements of the Taft-Hartley law. Contrary to the suggestion made by General Grant, the binding character of a collective bargaining contract in no sense depends upon whether or not the union

which is party to such a contract has complied with the filing requirements. It is an interesting fact that the strange theories of law which have been embraced by General Grant are not shared even by other employer operators of Government cafeterias. General Grant should know that at the very time he issued his statement the National Foods Corporation, which operates 18 cafeterias in the Pentagon Building, signed a collective bargaining contract with the same union.

(f) General Grant next suggests that the corporation has a right to insist on the "loyalty" of the union officials because of the present emphasis being placed on the loyalty of Government employees. The general ignores the fact that there is nothing in the law which requires a union to employ the facilities of the Taft-Hartley Act, and that if the union here involved, like a number of other CIO and AFL unions, has decided not to use the facilities of the Taft-Hartley Act that decision may not be reversed by his bureaucratic fiat any more than the union would have a right to insist that the corporation cancel its membership in the National Association of Manufacturers. General Grant has chosen to suppress the fact that there are thousands of employers under contract with the Federal Government whose relationship with the Government is fully as intimate as that of GSI to the Government and that none of these employers has seen fit to use its relationship to the Federal Government to evade its bargaining obligations.

This is an obvious attempt to capitalize on the witch-hunt hysteria which now dominates the Nation's Capitol. Never before has anyone, in or out of public life, raised any question whatsoever about the loyalty of the Government cafeteria employees or their representatives. We deeply resent the slur upon our members contained in GSI's argument on this issue. It is typical of the contempt management has shown for its Negro employees for the past 27 years.

Though this is not the place, it might be interesting to examine the records of the congressional committee that has been investigating GSI's operations which have already revealed GSI's "loyalty" to the Government in terms of questionable financial practices, unpaid debts to the Government, and violation of rationing regulations.

The list of reasons supplied by General Grant for refusing to deal with the union barely conceals the basic antiunionism of this employer. The background of the entire controversy supplies further proof of this employer's bad faith and animosity toward the union.

On November 28, 1947, on the occasion of the first meeting between the union and the employer, the union was confronted with an ultimatum that it would not be recognized unless the filing requirements of the Taft-Hartley Act were met. Neither at this initial meeting nor at any time until the filing of a petition for an election by the employer did the employer in any way intimate that it doubted that the union represented a majority of the employees.

This high-handed rejection of collective bargaining by the corporation was of course a violation of the law.

After refusing to meet with the union in November, the corporation distributed to each of its employees a copy of a propaganda pamphlet published by the National Association of Manufacturers purporting to "explain" the Taft-Hartley Act.

It may come as a surprise to the public to learn that an employer so closely identified with the Government would seek to influence its employees with the notoriously partisan propaganda of the NAM. However, this corporation only insists upon a "special status" when it will serve some antiunion end.

Immediately after seeking to mislead the employees with a distorted and false account of the union's obligations under the Taft-Hartley Act, the corporation sent the employees a series of letters condemning the leaders of the union and charging them with violating the law. This, of course, was a gross misrepresentation of the law but more importantly it was a deliberate attempt of the corporation to divide the rank and file from its leaders through tactics repeatedly condemned by the Labor Board. At the same time the corporation continued its attack against the union in another way. It permitted representatives of a rival labor organization into its cafeterias for the purpose of inducing defections from the union. However, this maneuver was unsuccessful and no petition for an election was filed by a rival labor organization. As a result, the corporation improvised a question concerning representation and hastily filed an unsupported election petition on or about December 18, 1947.

When the corporation's petition was rejected by the Labor Board it continued its program of antiunionism, bad faith and misrepresentation. It announced to its employees that the effect of the Labor Board's rejection of its petition for an election was to remove the union as the qualified bargaining agent. This was a blunt misstatement of the facts. The corporation told its employees in effect that the status of the union was precisely the same as though it had lost the election whereas in fact, as the corporation well knew, it had lost and the status of the union remained completely unchanged since the Labor Board had refused to hold an election at the company's request.

In addition, the corporation, misrepresenting the law again, told the employees that a strike called by the union would not be a legal strike. The employees were given no explanation and, I know of none, why a strike for recognition is not a legal strike. In order to completely intimidate the employees the corporation threatened to hire replacements for all strikers ignoring the fact that a strike instigated by an employer's refusal to recognize a union is a strike caused by the employer's unfair labor practices in which the strikers are fully protected.

Finally, the corporation announced itself as happy to grant a 6½-cent wage increase—obviously a bribe to break the strike and the union which has represented the employees for 10 years.

In addition, it announced to the employees that glad news that there no longer would be deductions for union dues and pointed out that the employees could now spend this money on themselves.

General Grant and his associates seem to be unaware that:

1. It is still a violation of the law to refuse to deal with the freely chosen bargaining agent of the employees or to impose conditions upon such an agent as a prerequisite to dealing with it.

2. It is a rejection of the collective-bargaining principle to substitute for dealing with the union an attack upon its leaders and a systematic campaign to destroy the confidence of the members in its leadership.

3. It is still a violation of the law frequently condemned by the Labor Board to refuse to deal with the majority representative and instead to encourage on company time and property organizing activities by a rival union.

4. It is still a violation of the law to threaten employees with discharge for engaging in a strike precipitated by the employer's unfair labor practices.

5. It is still a violation of the law to bargain individually with employees by offering them a wage increase and bypassing their collective-bargaining agent.

The fact that this sordid course of conduct was sponsored by an agency close to Government hardly justifies it. On the contrary, it makes it more alarming.

Finally, it is important to note that the national CIO completely supports the position of our union in this dispute and views the conduct of GSI, in precipitating the strike, as "union busting" and a matter of utmost importance to its entire membership.

We believe, moreover, that fair-minded men and women in this community will share our views with respect to the conduct of this employer and fully support the strikers.

Address of Gen. Joseph T. McNarney Before National Conference of United Jewish Appeal

---

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of address by Gen. Joseph T. McNarney, National Conference of United Jewish Appeal, Saturday evening, December 13, 1947:

It is very difficult for me to make a speech before a Jewish audience tonight. I tell you very frankly that I do not know what I ought to say. It is difficult for anyone not of the Jewish faith to understand fully what is in your hearts in an hour when all you have dreamed of, all you have fought for, and all you have sacrificed for, is on the verge of being consummated. One would have to be born into the Jewish fold to have an awareness of what it means to be a member of a people that has, for almost 2,000 years, been considered homeless, and suddenly—after the period of its greatest misery and tragedy—finds itself once again on the verge of having a homeland.

You will note that I have not said that the Jewish people already has a homeland. The United Nations has made a tremendously significant decision on the future of Palestine which, as so many have already said, is also a tremendously significant decision for the United Nations itself, and indeed for the whole world. It took more than the wisdom of Solomon to resolve a problem that has baffled the statesmen of the world for so many years, and if the solution of the problem is not a perfect one, neither is the world a perfect world. Yes, it took more than wisdom—it took courage, for the tensions and the conflicts that had grown with the years could not be expected to be wiped out overnight by the vote at Lake Success.

Democracy on a world scale is too new for that. In the United States, and in some other lands, there has been a history of experience in democracy. We have in our own country evolved a system of government whereby our internal differences are settled in the common interest of all the people through the freely expressed decision of the majority. Even here this principle was not fully accepted until after we had experienced a long and bitter War Between the States. The lack of a determination on the part of the nations of the world to settle their disputes by peaceful means has twice within our memory plunged the world into bitter strife. Having before them concrete examples of the destruction, the sorrow, the suffering caused by war, and mindful of the scientific and technological advances, which, if put to warlike uses, might well result in the destruction of our very civilization, the

nations of the world established the United Nations, agreeing among themselves to practice tolerance and live together in peace with one another as good neighbors.

The decision of the United Nations with respect to Palestine represents the opinion of the majority of these nations. I firmly believe that this decision was based on a realization that fundamental human rights cannot be ignored if the nations of the world are to live together in peace with one another. I firmly believe that this decision is in the common interests of mankind. Perfect or imperfect, it has been made. It is now incumbent upon the nations of the world to accept this decision and to insure its implementation by peaceful means. Whatever may happen, the United Nations is on trial. In my opinion, the principal reason for the failure of the League of Nations was its inability to enforce, if necessary, its decisions. We cannot ignore the fact that the current and prospective situation in Palestine constitutes a serious threat to peace. I hope and pray that it will not lead to a breach of international peace. But whatever happens, the United Nations must not fail; it must, if necessary, enforce the peace, for in modern war there can be no winners, only losers.

There is one interesting angle to the deliberations on the Palestine question. The Jewish people, as a whole, was a displaced people, without a national government. Yet, in the face of this lack of an official status as one of the constituent nations, their case was fairly heard and acted upon in the common interest of all the peoples of the world. To me this is a most hopeful sign for the future of international peace and security, and a significant advance in progressive development toward self-government in other regions of the world. It appears that this advance toward self-government should eventually result in a Jewish state with membership in the United Nations.

But if the Jewish people are at last to realize their age-old dream of a homeland, they are, by the same token, obligated to assume new responsibilities. There are no free rides in history, no matter how much injustice there has been in the past, and no matter how much suffering has been experienced. If the Jews are to be a part of the world democracy, I say to you as a friend of your people, the Jews will have to pull their own weight.

For the Jews of Palestine, this will mean a willingness to give blood and sweat and tears to the building of the new nation. It means intelligence, statesmanship, and above all tolerance in the conduct of its internal affairs. I think that the events and the achievements in Palestine in recent years are sufficient evidence that the Jews of Palestine have the will to build for themselves a new nation. Whether or not, after centuries of frustration and persecution they can practice tolerance and conduct their affairs in a spirit of true democracy remains to be seen. As a friend of your people, I hope and believe they have what it takes to do so.

For you, the Jews of America, it means a readiness to do more, far more than you have ever done before, in the way of providing the dollars without which the efforts and the intelligence of the Jews of Palestine will be futile, and without which they will lack that sense of solidarity, sympathetic understanding and interest that will give them the moral strength to carry on.

Nor can you limit your horizons to Palestine alone at this early date. There is a long hard road ahead. There are still hundreds of thousands of Jewish survivors in Europe who are desperately in need of help, and who cannot hope to leave Europe for many months—perhaps for years. As military governor I got to know the Jews, living under our flag in the United States zone of Germany. I had to know them, as almost daily cables passed across my desk or decisions had to be made which vitally affected their very lives.

When I arrived in Germany in 1945 the average displaced persons center was a depressing conglomeration of bomb scarred burned out German Army barracks, housing three to four thousand people. There was little or no material with which to patch up holes or blown-out windows. There was insufficient fuel and stoves to warm the limited floor space assigned. One saw hungry, scared, milling people everywhere. One seldom saw children engaged in play. The laundry on the clotheslines was pitiful rags. The mere maintenance of law and order presented many difficulties especially among the concentration camp victims who had an almost hysterical fear of any show of force or authority. Today the buildings look much the same with the exception that roofs have been repaired and windows contain glass. Living space is still extremely limited with several families sharing large rooms. During 1946 the Jewish movement from eastern Europe was accelerated, especially following the Kielce Pogrom. In accordance with America's historic policy we offered temporary haven to these persecuted groups. This added to our problem, but with United States Army and UNRRA funds, surplus and captured enemy equipment, we were able to house, feed, and clothe them after a fashion. But idleness, a monotonous diet, limited activities and the inability to lead normal home lives could not help but breed a feeling of frustration and lead to the progressive deterioration of this group, that wished nothing more than the privilege of living by their own efforts in freedom and dignity.

Privacy is still at a premium, but the people do look better. The children have warm clothing and leather shoes. They have their own schools. The young adults are learning useful trades and there is a limited amount of gainful employment. This improvement is largely due to the efforts of JDC. It was your contribution that has sustained their morale and has kept them from sinking into deep and hopeless despair.

I know you are aware of the fact that Army appropriations have been reduced, surplus and captured German equipment has been expended, and the International Refugee Organization has limited funds. This means you will have to do even more to help them now, than you have done in the past.

I have talked to literally thousands of Jews in Germany. I know their hopes and their aspirations. To the vast majority home is Palestine, most of the remainder look toward America. The Palestine emigration problem should now be resolved within a reasonable period. The Stratton bill permitting emigration of DP's into the United States appears to have a good chance of passing. But even so your people in Germany face an extended period of waiting before they actually embark for their new homes, and this period of waiting will be difficult for them. Only those who are familiar with the German scene can imagine just how difficult it will be.

You must continue to help them. It would be tragic indeed if they were to be let down now, after all they have been through, and after all you have done for them.

I have dwelt on the problems of the displaced persons because I know them best. But there are in other parts of Europe additional hundreds of thousands of Jewish men, women, and children who may find it possible to start again in their native lands. Many of them are in serious trouble. We all know what the situation throughout Europe is. We know of the crop failures, the fuel and housing shortages, and the wild inflation. We are cognizant of the ever-present threat of economic collapse which could bring in the wake more years of fear, of suffering, and hunger, which for your people began even before the Nazi hordes began to overrun the Continent.

I know that through the United Jewish Appeal you are performing a great task on their behalf. You are doing many things, without which they might be lost. You are giving them basic relief; you are providing orphanages and nurseries for the children; you are enabling men and women to start over again with loans and training; you are supporting hospitals, and doing endless other services. I hope you will continue to do them. I am sure you will.

I know that through the United Service for New Americans you have helped thousands of newly arrived immigrants find homes and employment and that you have cared for them during the difficult period of adjustment. This essential service cannot be neglected.

You Jews of America have done much for your people. The splendid record marked up by you who are here tonight will attest to that. But much remains to be done, you cannot falter now when what you have fought and sacrificed for is on the verge of being consummated. I believe 1948 will be the crucial year—the year in which the efforts of United Jewish Appeal may well measure the difference between success or failure.

The Late Honorable Clarence E. Hancock

EXTENSION OF REMARKS

OF

HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

CLARENCE E. HANCOCK MOURNED BY CITY

Saddening to his hundreds of friends in Syracuse and central New York was the news of the death in Washington of Clarence E. Hancock. For 19 years he represented this area in the National House of Representatives—a fact eloquent of the high regard in which he was held.

Native to Syracuse, educated here and at Wesleyan University, Mr. Hancock had consistently identified himself with the best interests of his home community. He had served it efficiently as corporation counsel before entering the wider field opened up to him in Washington.

Still earlier he had shown his patriotism and public spirit as a member of the National Guard in the trouble with Mexico. Then he continued his military career by service overseas in World War I.

To his task as lawmaker Mr. Hancock brought sturdy qualities of character and that soundness of judgment which had won the confidence of all who knew him in the days of his private practice of law. Although his party, the Republican, was for a long time in the minority, he was given important committee assignments and his opinions carried weight. When he retired in 1946, on account of his health, compliments for a faithful stewardship and fidelity to convictions were voiced.

Attractive in personality, and possessing complete integrity and a high sense of honor, Clarence Hancock was popular in social circles here and at the National Capital. Wherever he was known he will be keenly missed.

CLARENCE E. HANCOCK

The death of Clarence Hancock brings a sense of deep personal loss to Syracuse.

He was one of its best known citizens because of his long and distinguished record in military, civic, and national service.

In paying tribute to him his friends—and they are legion—will place even more stress on his appealing human qualities than they will on this public service brilliant as it was.

Clarence Hancock was a man of friendliness. He liked people, seeing the good in them, forgiving the bad. He was a man of great integrity, doing what he believed right even if it cost him heavily. He was a man of fine ability, earning the respect and admiration of his colleagues in Congress, both Republican and Democratic. He was a modest man, never claiming his just dues for his notable accomplishments. He was a quiet man, content to work behind the scenes, doing his work without fanfare, but with brilliance. Most of all, he was a good friend.

His life was one of service. He was a veteran of military campaigns in Mexico and France as a member of cavalry Troop D, ending the First World War with a distinguished record and the rank of captain. Returning to Syracuse and entering upon law practice, he soon was appointed corporation counsel. Then he was elected Representative of the Thirty-fifth Congressional District, at that time comprising Onondaga and Cortland counties.

His career in Washington covered two decades. At the time of his retirement a year ago because of ill health, he was in line to become chairman of the powerful Judicial Committee as control of Congress returned to the Republican Party. It was in this and other committees that he accomplished work that made him one of the outstanding Members of the lower House.

His death takes from Syracuse a man who served it and his country well and faithfully. He was a man of sincerity, understanding, generosity, wisdom.

Profits Are Important to Labor

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks I include herein a very enlightening and constructive statement by Mr. George H. Coppers, president of the National Biscuit Co.

Mr. Coppers shows the importance of profits to labor. He shows that the private-enterprise system not only gives more to investors—many of whom are laborers—but gives vastly more to the laboring men who work in the plants built and operated by the private enterprise system. Fair competition while it may have some weak spots gives far more to everyone especially the laboring man, than a regimented system. It also opens the channels of opportunity for advancement infinitely more than a partial or totally regimented economy. I commend to my colleagues a reading of Mr. Copper's statement which is as follows:

WHAT'S WRONG WITH PROFITS?

Because I believe that this country will ultimately be whatever the people want it to be—a free economy such as we now have or a Government controlled economy such as they have in many European countries—I think it important that we all know as much as possible about this free economy of ours and what it does for us as compared with the controlled economies of other countries and what they have done for their people.

Because millions of dollars are being spent by enemies of this country and its free economy (which they call the capitalistic system because that sounds as though it were run by capitalists) to teach the people a lot of lies about business and the evil men who run it, I think that businessmen should tell their employees all they can about this system and how business operates under it and who gets what out of it.

There are about 28,000 employees of Nabisco and they with millions of employees of other businesses are the ones who will decide whether we shall keep our free economy or exchange it for something else. And so from time to time I hope to use the pages of our magazine to talk with you on subjects that I think have been pretty badly mangled. Needless to say I don't expect to be original. I will merely try to haul out a few facts from the rubble of confusion, dust them off and hold them up so we can see them.

SOME FACTS ABOUT PROFITS

One subject that gets an awful kicking around is that of profits and who gets them. Recent polls have indicated that the man on the street believes that employees get anywhere from 10 to 50 cents of each dollar of income produced while the owners or stockholders get 50 to 90 cents. He believes it because he has been told it so often by those whose business it is to stir him up and make him dissatisfied and hasten the time when he will demand a change—communism or something else.

What are the facts? First, let us look at National Biscuit Co. In the year 1946, after payment of all expenses except salaries and wages paid to employees, there was left 39.6 cents out of each dollar of income. Of this amount 30.8 cents was paid to the employees in salaries and wages, 4.2 cents was distributed to the 60,000 stockholders as dividends and 4.6 cents was retained in the business for new plants, machinery, and other future needs.

But this is not the whole story. Out of each dollar of income Nabisco spent 51.1 cents for raw materials, supplies, and services. We cannot say exactly how much of that went to employees of other companies, but we do know from figures published by the United States Department of Commerce that from 1929 to 1945, out of every dollar of income produced from manufacturing in the United States 86 cents was paid to employees, that is, to employees of manufacturing companies directly, and indirectly to employees of suppliers. No other country in the world has such a record, least of all the countries where the Government runs business.

WHAT IS PROFIT?

Profit has become a nasty word. People think of it as something that a fat capitalist in a silk hat gets from squeezing the life blood from his workers. But what is it really? It takes about $6,000 worth of buildings, machinery, and equipment to create one job. Who puts up the money? Stockholders do. What do they get out of it? Profit—sometimes. In the 18-year period from 1925 to 1942 the average return on capital invested in the food and allied businesses was 5.24 percent; in chemicals and allied products 3.50 percent; in metal products and processes 4.67 percent; in paper and pulp products 3.49 percent; in textiles and their products 1.53 percent; and in the whole corporate manufacturing industry 3.67 percent. What's wrong with that? Your bank would charge you more for the use of its money.

Another thing to remember about profits is that they make for employment. The success of an enterprise and the well-being of all who work for it depend on profit. It is no accident that low wages and low profits occur in the same year. They are part of the same pattern. Eliminate profits altogether, eliminate the free-enterprise system and what happens to wages? In the Monthly Survey of the American Federation of Labor for July are some interesting figures comparing wages in America with wages in Europe. The article says that a basket of food is the best unit to use in measuring income. It is a basket containing items for adequate nourishment and of which the average American family of five would need about four a day. One hour's work by a factory worker in the United States in 1940, according to the A. F. of L., would buy 2.83 baskets; in Britain, 1.26 baskets; in France, 1.11; and in Russia, only .40. This means that in 1940 the American worker could buy with his wages seven times as much food as a Russian could with his. Russia has done the best job of eliminating the profit system and the free-enterprise system. It has the least individual freedom and the lowest wages.

Why Not World Peace?

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter from a veteran in my district, Mr. Eugene P. O'Grady, 2049 West Boulevard, Cleveland, Ohio, who is president of the Ancient Order of Hibernians, Division 5, whose thoughts seem most timely:

The average citizen of every country must, by this time, be asking himself the question, "What has happened to the world; why all the chaos, suffering, misery, and fear that seem to have befallen the human race within a period of a few short years?" True, we have had two world wars within 25 years, each war fought for the noble purpose of bringing peace, happiness, and liberty to the subject peoples of the world, guaranteeing to each individual political and religious freedom. These wars cost billions of dollars, millions of human lives, and untold suffering, yet, the result seems to be complete failure to accomplish these lofty ideals. Is it any wonder the people live in consternation and despair?

The answer foremost in the minds of these millions of the common people and also thoroughly understood by the leaders who have been selected to determine the final basis of peace settlements has come down, ringing through the years, in the words of a great American, when William Penn exclaimed, "Those who are not governed by God will be ruled by tyrants." But because of political and materialistic agreements, the leaders refuse to propound such a doctrine in the Council of World Representatives.

Every sane human being upon this earth must believe in a Supreme Power because it would have to be the unrelegated thoughts of an insane mind or a fool to consider man supreme within himself and that life and all within the universe is not subject to a Supreme Power. Therefore, sane people of all nations recognize a God that directs the universe and the destinies of the inhabitants thereof.

Therefore, we must conclude that God gave man a code of laws or rules to govern his

conduct while on this planet. That being so, the moral law is the basic law from which all civil law is patterned and is the code by which the lawmakers or statesmen of nations pattern the constitution which is always the guide or foundation on which the future progress of their nation depends. Those millions of Asiatics who are outside the pale of western Christianization recognize such a code of law purported to be those of the deity they worship, such as Mohammed, etc., all determining the requirements which dictate to man the order "to do good and avoid evil," proclaiming a just regard for righteousness and punishment for those who violate such God-given commands, such a conclusion has never been legitimately contradicted.

Why then should that great body of statesmen representing 57 nations, whose subjects believe in a Supreme Ruler of this universe, and who bow their heads in obedience to His never-changing law, whether such law be the Commandments given to Moses or those of Mohammed, Confucius, etc., be so inconsistent in not recognizing as the basis of peace and international justice, the moral law, which an all-wise Creator gave to man as his guiding light for all future time. Its application to mankind would bring peace, happiness, and prosperity. Consequently, it would bring the same to nations. The common people of this world believe it can be accomplished. They believe, irrespective of color or race or religion or no religion, in the divine author of the moral law as the creator of the universe. Why then should its application as the basis of international peace be sidetracked and at the same time hope for a peaceful and satisfactory settlement of world affairs? Why not be consistent?

Let us start at home to prove our point. The Constitution of this, our beloved Nation, proclaims our belief in God. We administer an oath to our lawmakers, calling on God as a witness. We ask God's guidance upon our deliberations every day in our congressional sessions and even stamp on the coin of the realm, "In God we trust," and yet, we do not seem to have the faith and courage to back up our belief by making such an application of the law of God the foundation of our membership in the United Nations. We know all people of the world believe as we do—at least all people and rulers who are blessed with normal minds. We know they will support us in applying justice to every nation and its citizens because they all want equal rights and the equality which God intended for them. We know and we believe, if we are not hypocrites, that such a cause would be blessed by God and would succeed, even as we know that God will not be mocked and will never allow success if we are dishonest. Can anyone dispute the words of Penn, already quoted, "Those who are not governed by God will be ruled by tyrants." Is it too late to realize the truth of that statement? The answer is, "No." The people of the world should never surrender to madmen who deny the existence of God, or those money-mad men who pretend to believe in a God of wisdom, justice, and goodness, but refuse to obey His laws and deny their application to His children.

We cannot suggest to any country less than freedom of speech, press, and religion, free trade, complete independence to form their own government as the majority of its citizens so decide. If we do suggest such freedoms and mean it, then the wishes of all peoples should be satisfied and world peace at last a reality, and world disarmament would become a possibility within a few years.

Of course, to the power politicians such a proposal is fantastic, unworkable, nonsense—it would destroy the power of the Big Four, the veto, it would end the brass hat rule—the war contracts would not—the easily made millions would vanish—the wastage of taxpayers' hard-earned dollars would cease—the destruction of billions of dollars in property would never occur again and the taxpayers and survivors in wrecked nations would not have to rebuild war ruins. Yes, the silly idea of such a peace would be sheer nonsense to the war lords in the ruling dynasties, who wallow in luxury—the reward they inherit from the reducing of a world and its people to ruin.

If the democratic nations advocate a positive proposal for world peace—a peace that would really mean peace for all peoples—a peace that would bring in its train the abundance of God's gifts, which God and nature intended for man's use, benefit, and progress, what could Russia's answer be? It would have to be acceptance, or her repudiation by the nations of the world.

Sane people everywhere know that the answer to the debacle at Lake Success will inevitably lead to war. Why not try seriously to offset it now by proposing a formula for world peace that would give justice and freedom to all people? There should never be a war. The statesmen at Lake Success can prevent it if they have the courage and honesty to try to do so

The Russian representative at the League of Nations in Geneva years ago offered a proposal for world disarmament which was declared fantastic, crazy. (He might do it again.)

He walked out with the result—World War II. Can we take any chances with a world war III which may be world destruction?

Why then do we refuse to apply the application of the moral law to the world and end war for all time? Can we not apply the moral law before it is too late? Ninety percent of the people of the world would cooperate in bringing about such a positive solution. The natural instinct in man craves for peace, happiness, and freedom. Why then should the world bow to a handful of individuals whose satanic impulses crave for power, greed, and destruction? Crusaders are needed to arouse a world to start on the road to an honest peace while there is yet time.

We want a fighting, virile, national or international organization of the people (not a booster's club), which will dictate its policy to all world statesmen and demand of their respective governments the enforcement of the code of law which has predated governments, constitutions, and statesmen, and which was given by an all-wise Creator to all men for all time. Obedience to such a law would guarantee to all justice and equality. What more does the world want?

Then the answer to the world chaos and misery which we see today and the hope of peace and happiness for tomorrow is to apply to the world's ills the law which man's Creator gave as the guidepost to all His children.

Heinz Norden

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

DEPARTMENT OF STATE,
Washington, January 14, 1948.

The Honorable GEORGE A. DONDERO,
House of Representatives.

MY DEAR MR. DONDERO: I am in receipt of your letter dated December 19, 1947, in which you state that according to an article in the Washington Post of December 19, 1947, Heinz Norden, former editor and staff member of the magazine Heute (Today), published in the American zone in Germany, had received praise from the Department of State. You request to be informed whether this statement is true.

Inquiries have been made in the divisions of this Department concerned with matters of this nature in the American zone in Germany. These inquiries have indicated that the Department of State has not commented on the work of Mr. Norden. It may be recalled that United States Government authorities did not renew Mr. Norden's contract as editor of the magazine Heute when his old contract expired late last year.

Sincerely yours,

CHARLES E. BOHLEN,
Counselor
(For the Secretary of State).

Shall We Break Down Our Immigration Laws and Make the United States the Dumping Ground for the World?

EXTENSION OF REMARKS
OF
HON. JOHN M. ROBSION
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. ROBSION. Mr. Speaker, under the unanimous consent granted by the House, I extend my remarks and include therein excerpts of a radio speech by me on a program of the American Forum of the Air, over a Nation-wide network of the Mutual Broadcasting System, at the Shoreham Hotel, Washington, D. C., January 13, 1948, on the question: "Shall we open our gates to displaced persons?"

Senator J. Howard McGrath, Member of the United States Senate and chairman of the Democratic National Committee, and Hon. Ugo Carusi, former Commissioner of Immigration and Naturalization and now with the State Department, for the affirmative, and Congressman Ed Gossett, of Texas, and myself, for the negative.

As the question was presented it would include all the displaced persons of all the world but the discussion mainly centered on H. R. 2910, the so-called Stratton bill. Knowing that this violates our basic immigration laws, would establish a precedent that would be very harmful to our country and would be very unfair to both native-born and naturalized citizens of this country, I have opposed and I shall continue to oppose the Stratton bill and other similar measures. With our population rapidly increasing and our resources decreasing, and with our housing shortage and demand in the near future for employment of millions of veterans and other American boys and girls, and with our country already having more people of foreign birth according to its population than any other country of the world, I feel constrained to oppose any weakening of our immigration or naturalization laws. I certainly do not want to make our country the "dumping ground" for the world.

I wish every law-abiding citizen and person in the world could have a country like ours. I have no feeling of prejudice

against any other countries or their people, but I think my oath of office requires me to do that thing and take that course that will serve the best interests of our country and our own people.

Mr. Moderator and my fellow Americans, I became a Member of Congress on March 4, 1919. Millions of aliens from Europe and Asia plan to come to the United States. Congress, in 1921, under President Wilson, passed an emergency foreign immigration bill, but the pressure of foreign immigration increased. Space in every availabe ship, especially in Europe, was booked 2 or 3 years in advance. After most thorough investigation of the entire problem by appropriate committees of the House and Senate, agencies of the Congress and representatives of the Federal Government, and after literally weeks of debate and discussion, passed our present basic immigration law in 1924 by a vote of 5 to 1. During the consideration of that bill, many nations of the world, especially Europe and Asia, maintained strong and vigorous lobbies against it. This measure was adopted, not as a matter of offense against any nation or group of people but in the best interest of both native and naturalized American citizens and our country as a whole. During my years of service in the House and Senate, I know of no measure that was more carefully prepared and the rights and interests of all groups so sincerely considered and preserved as in this 1924 act. It was designated as the "Second Declaration of American Independence." Every nation in Europe was given a quota according to the number of persons of such countries living in the United States on the basis of the census of 1910. This basic law has worked well. It was generally observed until after 1933. Since 1933, many efforts have been made to weaken and break down the Immigration Act of 1924.

WORLD WAR II INCREASES PRESSURE

With World War II over, millions of people from Europe and Asia again sought means to come to our country. In the present Eightieth Congress, 86 general bills and 580 or more special private bills have been introduced in the House and 200 or more general and special private bills have been introduced in the Senate. Of course, all of these private special bills seek to set aside or modify, for particular persons or groups, our immigration and naturalization laws. Approximately 75 percent of the general bills attempt to greatly weaken and break down our basic immigration laws. The other general bills seek to strengthen our basic immigration laws.

UNITED STATES HAS BEEN LIBERAL

The United States has been liberal in the admission of aliens. We now have about 3,500,000 aliens living in this country. They have not been naturalized and are not citizens. The 1940 United States Census listed 11,500,000 people in this country of foreign birth and over 23,000,000 who had at least one parent born in a foreign land. This same 1940 census listed 6 cities of more than 500,000 population in this country with less than 40 percent of the white population of native parentage. There were 11 cities between 100,000 and 500,000 population where less than 40 percent of the white population were of native parentage. In 1940 1,047 newspapers in this country were printed in foreign languages. These papers are read by some 10,000,000 to 15,000,000 peoples. The immigration service shows that approximately 37,000,000 aliens came into the United States in 1946 for various purposes. Of course, the most of these leave the United States. But no one can tell how many remain, but many do remain.

In no other country in the world has so many aliens entered, or has so many aliens resided and now reside, as in the United States One of the important considerations in the adoption of the immigration act of 1924 was the matter of assimilation of aliens. We did not desire to have aliens come to this country who could not and would not be assimilated and who would not seek to know and understand our Constitution, our institutions and the American way of life. I think every fair-minded person must admit that we have large numbers of aliens in this country who have refused to embrace the American way of life and persons who are opposed to our Constitution or our free institutions.

THE STRATTON BILL, H R. 2910

One of the 580 special bills before the Congress is the Stratton bill, H. R. 2910, which proposes to bring into this country from the so-called displaced persons camps of Italy, Austria and Germany, 400,000 aliens—100,000 a year for 4 consecutive years. The Stratton bill evidently is the result of a small but well-financed active group of persons who know what they want and by very extensive and misleading propaganda they have sold this proposal to many sincere persons. My distinguished colleague, Mr. GOSSETT, myself and other members of the Judiciary Committee have heard scores of witnesses both for and against this bill. He, I, and others are definitely of the opinion that it would be very unwise for the Congress to pass the Stratton bill or any other similar bill for this particular group. I list some of my objections to this bill.

1. It establishes a very unwise precedent and will be harmful and not helpful to our country.

2. It is most unfair and discriminatory as against the tens of millions of other needy displaced persons of Europe who are in much worse condition and much more unfortunate than these 400,000 persons who have enjoyed the bounty of the American taxpayers for nearly 3 years.

3. Europe must rehabilitate her cities, homes, industrial plants, and transportation facilities. There is a critical manpower shortage. If these persons are able-bodied and are good carpenters, machinists, mechanics, laborers, nurses, teachers, etc., as has been urged their services are more in need in Europe than they are in the United States.

4. There are more than 200,000 Polish veterans who fought on our side on land, sea and in the air in Britain, France and Italy. Their fine records attest their great courage and patriotic service to us, the other allied nations, and to the freedom of the world. They cannot return to Poland. They, their wives and their children are displaced in various parts of Europe. They are men without a country. Many thousands of these Polish veterans who were flyers and helped to destroy the air power of Hitler. They fought the Germans in France, and the Germans and Italians in Italy. Our Government has withheld its bounty from these Polish patriots. Our colleague, Congressman MACKINNON, of Minnesota, introduced H. R. 3620 to permit these 200,000 patriotic Poles and their families to come to this country. I have not heard the administration or other friends of these displaced persons urge Congress to pass the MacKinnon bill and bring to this country these 200,000 Poles. Why this discrimination?

WHO ARE THE 400,000 DISPLACED PERSONS?

There were about 9,000,000 persons in Europe, civilians and others whose status had been changed during the war, and approximately 8,000,000 of these displaced persons returned to their homes themselves or were aided by the Allied countries to do so. Beginning late in 1944, some persons began to attach themselves to the Allied armies, mostly the American armies. This number increased rapidly up until VE-day, and thereafter until they numbered approximately 1,000,000. Hundreds of thousands of these persons have joined the displaced-persons camps since the war was over in Europe. A lot of them were urged into our camps by the officials of certain European countries. Great Britain and France took a part of these displaced persons, but about 600,000 of them sat down on the lap of your Uncle Sam in the American camps. There was a much smaller number in the French and British camps. They became known as displaced persons. They have been better fed, housed, and clothed than other groups in Europe. They are not in concentration camps. They can leave anytime.

Our displaced persons, their wives, and children were provided food, shelter, clothing, household equipment, medical care, and schools for their children through the American Army, UNRRA, and the International Refugee Organization. The cost amounted to about $75,000,000 annually to keep them. The American taxpayers paid and are paying the bill. We have continued to provide these services and care for these so-called displaced persons for almost 3 years.

TWENTY THOUSAND CHILDREN BORN IN THESE CAMPS ANNUALLY

We have been told that these DP's desired to work but could secure no work. This is not true. Responsible people who have visited these camps state that not more than 5 percent of the people in these camps have engaged in any remunerative work. Not more than 15 percent of them have done anything more than take care of their quarters. The other 80 percent have spent their time in idleness. Our Government has suffered to the persons of these camps many inducements to get them to leave and go to other countries where there was not any danger of persecution. France insists that she needs at least 3,000,000 workers. Great Britain needs hundreds of thousands of workers. Australia offered to take 2,000,000. Belgium, Canada, and some South American countries have offered homes and work to these displaced persons. There is a great manpower shortage in Europe. France, nearly 3 years after the war, has 383,000 German prisoners of war and Great Britain has 275,000. Russia has more than a million prisoners of war. France and Great Britain claim they are working these prisoners because of the shortage of manpower. Since the war ended, we have furnished free, France, Britain, Italy, Austria, and Germany, in food, coal, and other supplies costing billions of dollars. Millions of tons of coal have been sent.

Why does not this administration be realistic and insist that we return these war prisoners to Germany and let them help to rehabilitate their own country, help feed themselves and their people, which is costing American taxpayers billions of dollars, and at the same time insist that these 400,000 DP's seek employment in France, Britain, Belgium, and other countries in Europe where their services are needed and where there is no danger of either political or religious persecution, but the friends of the DP's say that France, Britain, Belgium, and these other countries are not the countries of the DP's. Our answer to that is that the United States is not their country. Europe must be rehabilitated, and if these DP's are worth anything as workers, either as laborers, nurses, or in any other capacity, they can be more useful in Europe than they can in our country. Our taxpayers have not only supported the DP's and their wives and children but we have from time to time offered to provide transportation and from 2 to 3 months of rations if they would leave the camps and locate in one of these countries where their services are needed, but they choose to sit on your Uncle Sam's lap. While they have done very little work, they have not neglected matters of romance. There have been born in these camps more than 20,000 children annually that the Stratton bill proposes to bring to the United States in violation of our basic immigration law.

In fact, they urge the Congress to pass this special bill giving this particular group of displaced persons priority over millions of other displaced and needy persons, their wives and their children. Even the 200,000 Polish patriots, their wives and children who have been denied the bounty of the American taxpayers seem unable to enlist the sympathy and help of the backers of the Stratton bill. If we admit these 400,000, it will be charged up to the quotas of their country. Perhaps a million or more have heretofore made applications for visas and passports to come to our country and they may be among the very best citizens of their country, but if we passed this special bill, the quotas for these countries will be absorbed for the next 10 years or more. We know little or nothing of the background of these 400,000 DP's except the children that have been born in these camps. We know little or nothing of their record in the countries where they lived. They came and sat down on your Uncle Sam's lap and told their story with very little, if any, record to back up their claims. We know of no services that they have rendered to the United States or the American people, but we do know of the services of the 200,000 or more Polish patriots and other veterans, and millions of other needy displaced persons of Europe, and we do know what they would mean to our country if they were brought here.

SIT DOWN FROM 3 TO 7 YEARS

The Stratton bill proposes to bring in 400,000 DP's but an amendment will be urged when the bill comes up for 15,000 additional. These 15,000 got into this country during the war or when they saw the war was coming, on one pretext or another. The time for them to leave the country has long expired. Now it is insisted that we amend the Stratton bill, H. R. 2910, and let these 15,000 remain in this country.

The Stratton bill provides we bring 100,000 a year. It would take at least 4 years to bring into this country the 400,000 DP's. It would likely be 6 months or more before any of them could be brought over and therefore, 100,000 of them would continue to sit in the camps on Uncle Sam's lap for nearly 4 years; 300,000 for 3 years; 200,000 for 2 years, and 100,000 for 1 year. Therefore, these DP's would be sitting down for a period of more than 3 years and a part of them as long as 7 years, and of course, all of that time they, their wives, their present and future children, will be taken care of by the taxpayers of this country. We have been reminded that many wonderful people have come to this country as immigrants and succeeded in a big way. That is very true and we are very proud of each and every one of them, but if you will read the story of each of the splendid women and men you will find that they did not, as able-bodied persons sit down for a period of from 3 to 7 years and depend upon the bounty of their adopted country or anybody else. They accepted employment and took advantage of all opportunities that presented themselves. Judging the future by the past, I would rather think that these 400,000 DP's would more than likely sit down again after we got them into the United States.

If we establish this precedent, no doubt in due course, we will have demands to admit Koreans of north and south Korea, admit Chinese of north and south China, admit DP's from north and south Italy; also admit DP's from France, Jews and Arabs, as well as other countries, who can and will claim that they are under governments who have or will persecute them for their religious or political beliefs.

VETERANS OPPOSE

The representatives of the American Legion, the Veterans of Foreign Wars, and 85 other veteran and patriotic organizations appeared before our committee and expressed strong opposition to the Stratton bill, and any other bill that would weaken our basic immigration laws. They pointed out that this would establish an unwise precedent, that it was not only inimical to the best interests of our country but to the veterans and their dependents. They made it clear that there were approximately 2,300,000 young veterans taking vocational or educational training under the GI bill of rights, and that these veterans would soon be ready for positions, and they did not want their chances lessened by bringing in additional groups such as the displaced persons. They also emphasized the housing shortage, and stated that there were perhaps more than 2,500,000 veterans who have been unable to secure shelter for themselves and their families by reason of this housing shortage, and these veterans and their families are forced to double up with other persons. This is true as to millions of other American citizens.

The American Legion and the Veterans of Foreign Wars, regular veterans have gone on record repeatedly in their national conventions in opposition to any change in our basic immigration laws. They did this as late as 1947. They also emphasized that times are flush now but more than likely the time is not far distant when jobs and opportunities would be scarce and the veterans and their dependents would be seeking jobs they could not find. It matters not what anyone may say but the admission of these 400,000 displaced persons is in direct conflict with the best interests of the working people of this country. Through all the years the labor groups have opposed such legislation as this. I am somewhat surprised that some of them have changed their attitude as to this particular bill. They must know there are literally millions of needy working people and their families in Europe who would like to be supported by our Government for three long years and continue that support for 3 or 4 years more, and we have many needy veterans and other needy people in this country who are not receiving 1 penny of support from our Government. Many of these veterans fought through World War I and World War II.

Our country has been liberal to those of the Jewish faith. Dr. Rabbi Phillip S. Bernstein, one of the most noted authorities on the Jewish people and their affairs, testified before our committee that there are approximately 10,000,000 Jews in the world. Five million or more of these are in the United States. Therefore, we have in the United States about one-half of all the Jewish population of the world. Russia is next with 2,250,000. France and England have a small Jewish population. I wish again to emphasize that no country in the world has as many foreign-born, according to its population, as the United States.

FAIR SHARE

Many persons insist that we should take our fair share of the DP's, but, of course, there are millions of needy DP's in Europe alone. We have admitted tens of thousands of refugees during and since the war. We have admitted nearly 100,000 GI brides and their children. Former Commissioner of Immigration and Naturalization of the United States, Mr. Ugo Carusi, who was born in Italy, testified that the number of crossings of aliens of our borders annually is about 37,000,000. Of course, some of these make more than one crossing in a single year and the greater portion return to their countries, but out of these millions of crossings, there is no doubt but what many have remained in this country.

POPULATION INCREASING—RESOURCES DECREASING

The Census Bureau reported on October 1, 1947, that the population of this country had increased from 1940, 13,038,000. This is a tremendous increase in 7 years, and the total population of the United States was approximately 143,000,000. We have approximately 15,000,000 service men and women of World War II and several million veterans of World War I. Every year millions of young men and women are finishing their high school or college training: 2,300,000 World War II veterans are taking educational or vocational training. These young veterans and young people finishing their schooling are now, and will be in increasing numbers, seeking opportunities for their brains and hands. I have lived through two or three depressions and I know the sad story of millions of our own citizens, including veterans and their dependents, walking the streets and highways of the country seeking employment they cannot find.

By reason of a recent destructive war we have greatly depleted our natural resources—timber, coal, iron, lead, and the fertility of millions of acres of our soil. It is no time for us to bring great groups of people from foreign lands into our country to take away the opportunities of our own defenders and other citizens. I think this should be the attitude of the native-born and naturalized citizens to place the welfare of our own country and our own people first. A very large percentage of these immigrants find lodgment in our great congested cities and centers. Very few of them go to the farms. Many of them bring their ideologies with them, which are not in harmony with the American way of life, and in view of these considerations I feel that I would do a very great injustice to the people of our own country to change and break down our immigration laws which I helped to pass in 1924. I have and shall continue to oppose measures to make our country the "dumping ground" of the world. We have been especially generous to Europe in two great world wars. In the last war we gave the blood of approximately 350,000 American boys. A million others were disabled by disease or wounds. We spent approximately $350,000,000,000 in World War II. We inherited the greatest debt and the highest taxes this country or any other country has ever had. We gave about $30,000,000,000 in lend-lease during the war, and since the war closed we have given to Europe in the way of money, credits, food, material, and equipment amounting to more than $24,000,000,000. We have proved ourselves to be the most generous nation that has ever existed, and they are now calling on us for 17 more billion as a minimum. We must change our course or bring disaster upon the finest, best, and most wonderful country that has ever existed in all history.

The Road Ahead

EXTENSION OF REMARKS

OF

HON. HAROLD F. YOUNGBLOOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. YOUNGBLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to call your attention to an editorial appearing in the Italian Tribune.

Each week the Italian Tribune is delivered to my office and each week for the past year I have read its editorial page with a great deal of interest. This publication is one of the finest foreign-language newspapers, in my opinion, now printed in the United States. Its opinions are free, independent, and nonpartisan and I wish to include in my remarks a copy of the editorial appearing in the January 9 issue of the Italian

Tribune which I feel is fairly representative of the type of editorial that has been presented in this paper for a long, long time.

The editorial is as follows:

THE ROAD AHEAD

This is the age of confusion.

But that does not mean it need be an age of cynical resignation to failure—and of the gradual abandonment of rights and principles that took 2,000 years of almost continuous conflict for mankind to secure.

No one can minimize the problems that confront the nations, ranging from the terrible specter of unleashed atomic energy down to such temporary difficulties as shortages of materials. The very extent and number of these problems have added to the confusion. They have, as the old French proverb says, made it hard to see the forest because of the trees. They have obscured the fact that there is really only one basic problem, and that all the rest hinge upon it in one way or another.

That problem is easily put: Sooner or later, the peoples of the world, including the United States, will have to make a complete final choice between the chimera of security and the reality of freedom.

There is a danger in nursing such words as "freedom" and "liberty" these days. Dictators and tyrants have attempted to pervert them of any semblance to their true meanings. Hitler, after all, established his slave state and fought his disastrous war for world enslavement with freedom and liberty as his rallying call. Even so, the real free man can be described. He is free to express his opinion, whether or not it is in agreement with the majority or with the government in power. He is free to worship as he pleases. He is free to print what he thinks in a newspaper, or elsewhere, subject to the old-established laws of libel and public decency. He is free to work or not to work, and to change jobs of his own volition without dictation from employer, labor leader, or politician. He is free to run for public office on any platform he devises, or to vote for the candidate of his choice. He is free to engage in business under a competitive system which penalizes and favors none. He is free to determine his own destiny, and he is not the tool of the state or any other interest.

These are not separate, unrelated entities. Every last one of them is dependent on the others. When one freedom is lost, all the rest are endangered. No dictatorship has ever been established all at once. A right is abrogated here, another there; the state seizes business, then takes over the labor unions; new "interpretations" are placed on the rights of free speech and assembly—so it goes, step after step, until the job of despotism is completed.

Dictators trade on fear—fear of want, fear of hunger, fear of cold, all the natural, material fears. They promise a maximum of material security to the tragically confused people they entice. And this poses another question: Can a people, in return for the surrender of their freedoms, obtain more goods, a higher standard of living, greater measure of protection from adversity?

The question answers itself. The greatest material advancement in the history of the world has been in the nation where there has been the greatest amount of freedom for the individual—the United States. It is not accident that the pay of the average American worker, measured in terms of purchasing power, is 10 or a dozen times that of the average Russian worker. A still better comparison is found with present-day England, the country to which we are bound the closest by the ties of a common language, inheritance, and tradition. Socialism, which can be the vanguard of dictatorship, has aggravated every English economic problem. It has produced less goods for export, not more goods for export; less coal, not more coal; less agricultural production. Worst of all, it has sapped the energies and ambitions of the people. There can never be progress in a state where individual opportunity, initiative, and enterprise are discouraged and the government does all the thinking.

The superstate is not only spiritually barren but materially inefficient. When we attempt to trade freedom for security, we lose both. This thought was perfectly expressed by Somerset Maugham, the most distinguished living British novelist; when he said: "If a nation values anything more than freedom, it will lose its freedom; and the irony of it is that if it is comfort or money that it values more, it will lose that too." That says it all in a sentence.

The hope of this Nation is that our people will profit by example. The hope of the world is that it will be able to break the shackles of oppression. The hope of mankind lies in a reaffirmation of the rights and dignity of the individual.

Address by Rear Adm. James L. Holloway, Jr., Superintendent, United States Naval Academy

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to enclose an address by Rear Adm. James L. Holloway, Jr., Superintendent of the United States Naval Academy, at the second century celebration at Ripon College, Ripon, Wis., on Thursday, October 30, 1947.

Admiral Holloway is one of the outstanding heroes of the war. In addition to his having commanded the battleship *Iowa*, in July 1945 he took over the Training Command Pacific. At the end of the war Admiral Holloway was senior member of a board appointed by the then Secretary of the Navy Forrestal, which proposed to the Congress an integration plan whereby young men might attain permanent commissioned rank in the Navy from schools other than Annapolis. This plan was known as the Holloway plan. Fifty-two colleges in this Nation contribute to the officer strength of the Navy under this proposal, along with Annapolis, and they have equal rank with their contemporaries at the above-mentioned school, as well as equal status with graduates of the Naval Academy.

Rear Admiral Holloway was born at Fort Smith, Ark., on June 20, 1898, and he was graduated from the Naval Academy with the class of 1919. His career in the Navy reads like a storybook. For brilliance in performance of duty, courage and daring, he won many citations. For his service in Operation Torch, he was commended by the Secretary of the Navy, and authorized to wear the commendation ribbon with the following citation:

For outstanding performance of duty as squadron commander of Destroyer Squadron 10, assigned to screen the air group, western naval task force, during action off Casablanca on November 8, 1942; and in the operations connected with the amphibious landings on the west coast of Africa and the capture of Casablanca, November 8 to 11, 1942. Expertly directing the destroyer screening action, Rear Admiral (then captain) Holloway prevented the many enemy submarines in the area from delivering effective torpedo fire and, by his aggressive fighting spirit and courageous leadership, contributed materially to the winning of a decisive victory over the enemy. His intrepidity, initiative and professional skill reflect the highest credit upon Rear Admiral Holloway and the United States naval service.

In 1943, as commander of a destroyer and destroyer escort shake-down group, Atlantic Fleet, he was awarded the Legion of Merit, with the following citation:

For exceptionally meritorious conduct in the performance of outstanding services to the Government of the United States as commander of DD–DE shake-down group from March to November 1943. Responsible for the detailed operational, administrative, and material problems incident to initiating the program of this command, Captain Holloway has built up an efficient organization, turning over to the fleet competent, seagoing vessels and thoroughly indoctrinated personnel. His conspicuous success in fulfilling this important assignment, and his skill in collaborating with other commands have contributed vitally to the effective prosecution of the war.

Many intervening citations were received. As commander of the battleship *Iowa*, which participated in the strikes at Luzon, which ship, through its antiaircraft fire, accounted for many enemy aircraft, he received a gold star in lieu of a second Legion of Merit with the following citation:

For exceptionally meritorious conduct in the performance of outstanding services to the Government of the United States as commanding officer of the U. S. S. *Iowa*, flagship of Commander Battleship Division 7, during action against enemy Japanese forces in the Pacific war area from October 30, 1944, to July 24, 1945. With his vessel operating as flagship of several important striking and covering forces and as flagship of a strike group bombarding Muroran, Hokkaido, on July 15, and Hitachi, Honshu, the night of July 17–18, Rear Admiral Holloway rendered distinguished service throughout the intensive actions and by his brillant leadership and outstanding skill, contributed materially to the extensive and costly damage inflicted on the enemy. Achieving and maintaining a high standard of readiness and training on board the *Iowa* during this extended period, Rear Admiral Holloway, by his superb tactical ability, sound judgment, and loyal devotion to duty, contributed materially to the success of our forces in carrying out effective operations against the Japanese in this vital war area.

In August 1945 Admiral Holloway was appointed Commander Fleet Training Command Pacific. In September 1945 he was detached from the Fleet Training Command Pacific, and transferred to duty with the Bureau of Personnel as assistant chief of personnel for demobilization. So expeditiously was this billet handled and with such complete and thorough efficiency, Admiral Holloway received this citation:

For outstanding performance of duty as assistant chief of naval personnel for demobilization from September 26, 1945, to September 1, 1946. Serving with distinction in a position without precedent, Rear Admiral Holloway skillfully directed and supervised the Navy's personnel demobilization plan, and brought the program to a successful con-

clusion without detriment to the country's security. Coordinating the intricate activities and movement of personnel from all parts of the world, he personally visited every part of the country to insure the prompt and expeditious administration of demobilization processes. His devotion to duty throughout was in keeping with the highest traditions of the naval service.

On January 15, 1947, he was appointed Superintendent of the United States Naval Academy, Annapolis, Md., where he is now located.

Admiral Holloway married the former Jean Gordon Hagood, daughter of the distinguished Maj. Gen. Johnson Hagood, of Charleston, S. C. He has two children—Lt. J. L. Holloway III, United States Navy, and Mrs. Lawrence Heyworth, Jr., wife of Lt. Lawrence Heyworth, Jr., United States Navy.

It is always interesting to me to note that the States of Arkansas, Texas, Oklahoma, and Missouri have names and towns and places that signify their close relationship with South Carolina. Many of the Members of this House have names which are originally from South Carolina, and to this section trace their backgrounds. Historically, it is well known that after the Civil War a great immigration went to these States from South Carolina, and I am proud as a South Carolinian to say that the State contributed these men and women to those States, and that Admiral Holloway comes from Arkansas.

Admiral Holloway's splendid address follows:

It is a pleasure to be present at Ripon College and to participate in the observance of Ripon's long and distinguished record among the educational institutions of our Nation. Ripon and the Naval Academy were born in the same period of this country's educational history and have a common heritage in the foresight of the patriots of the middle of the last century. Yesterday began your precentennial observance and earlier in the week the officers and men in the Navy celebrated Navy Day. This evening I would like to focus upon the inspiration for both of these celebrations by discussing the Navy and education.

Education and training are vital factors in naval organization and planning. While it is true that a navy must be built of ships, planes, and other matériel ad infinitum, it is likewise true that all the matériel in the world is useless without men prepared to operate it. The men received by the Navy vary tremendously in intellect, capacity, and personality. They come from all parts of the United States and from every walk of life, and their background is anything but uniform. These men have to be selected and classified, rated, and advanced, rotated, and integrated according to the needs of the Navy and the abilities of the individual. These steps are all inherent in a diversified and comprehensive training program. But training is for the more immediate objectives and its implications may, in a military sense, be called tactical. The Navy distinguishes between education and training, the former conceived to be more profound, more basic and strategical in its long-range implications. Men are selected with a view to giving them, according to their talents and according to the demands of their billets, training, education, or a combination of the two. People even of minimum intellectual ability can be trained for special tasks and people of limited experience but of profound intelligence can be effectively trained in certain specialties in a very short time.

When war struck our country in December 1941 the Navy was confronted with the most challenging personnel problem in its history. We had to convert into a smoothly functioning organization some four and one-half million officers and men. We called upon the knowledge and experience of the colleges, universities, testing agencies, and industrial management, and blended this with the Navy's own experience in procurement, classification, training, and assignment. Personnel research and test development reached a new high in the Bureau of Naval Personnel that was demanded by the exigencies of time and the magnitude of the task. A unit of personnel trained in psychology was established within the Bureau under the name of the Test and Research Section. Objective evaluation was given to such factors as previous education and training, age, and occupational experience of trainees. Special attention was given to methods of measurement, follow-up studies, and predictive factors. Billets were analyzed as to their multiple requirements in regard to the type of persons suited to fill them and the training most appropriate for their successful accomplishment. Not only was an excellent study of immediate needs made but investigations were so exhaustive that paths of future research were indicated which will keep students of personnel research and test development busy for many years to come. The success of the Navy in World War II was due in no small part to selecting the right people for the right job and rendering them effective in the minimum amount of time.

In peacetime the Navy faces a different problem, both in education and training. The rapid training courses, the compressed college course of 3 years at the Naval Academy, the intensive postgraudate instruction and other speed projects are not the normal procedure. What is learned rapidly is sometimes forgotten rapidly, at least in certain fields. Furthermore, motivation was often closely associated with the instinct for self-preservation during the war and we should be highly optimistic if we thought people would be willing to carry on at breakneck pace during peacetime. In peace, time-saving is not as overwhelmingly an important consideration; too much streamlining may even be a deterrent. We are building the profound and deep-rooted foundations of military thought, processes, competence, and objectiveness. Wisdom and perceptiveness come with time and length of service in the profession. An ideal process is that of giving meaning to previous training and education through experience and creating an awareness through experience of the value of future training and education. So in the Navy training and education never end. Intellectual processes are poured on in the course of field experience and progressively integrated with that field experience. We must keep available a nucleus of professional excellence upon which we may rely and around which we may expand when it becomes necessary to mobilize for war. The professional Navy men must be prepared for the moment when they are called upon to take the enormous amount of education and talent, talent in techniques, talent in engineering, talent in almost every profession, evaluate it, select it, place it, train it, and finally deploy it objectively in battle, in campaign, and in total war.

It would be utterly impossible to evolve naval officers who would be at the same time shipbuilding experts, atomic physicists, and research men in fuels and lubricants. That we do not attempt. The role of the perceptive professional officer is to furnish objectives and high-level planning and coordination to a group of experts, to act as a centripetal force administratively. I might say, parenthetically, that coordinating a group of experts, numbering two or over, sometimes calls for considerable tact and understanding. An appreciation of broad objectives is essential.

A naval officer's education begins when he is a midshipman at the Naval Academy or in one of the 52 universities having NROTC programs. This is clearly undergraduate work. It is not concerned with research or specialization any more than would be found in any undergraduate course leading to a bachelor of arts or bachelor of science degree. The Naval Academy is the first phase of the Navy university. It occupies a position analogous to that of Columbia College in relationship to Columbia University where only 3,000 of the university's total strength of 30,000 are enrolled. The Naval Postgraduate School, although located at Annapolis, is quite distinct from the Academy. Here work is done toward the master's or doctor's degree, some of it at the school itself and some under the supervision of the school at various universities throughout the country, wherever the best facilities may be available for various research projects. This is one of the graduate schools of the Navy university. At Newport there is the general line school where a 1-year course in professional work is given to officers who have completed 5 to 8 years in the field. Here I might say that it is the Navy policy to avoid sending men into graduate work immediately upon completion of undergraduate work. Another general line school is being established at Monterey, Calif. There are the operational and staff colleges, such as the Naval War College at Newport, the Armed Forces Staff School at Norfolk, and the National War College at Washington. The area of research and development is ably represented by Bellevue in electronics, Whiteoak in ordnance, Point Mugu in guided missiles and fluid mechanics, and the Engineering Experiment Station at Annapolis. To all of these should be added the numerous research projects assigned under Navy sponsorship to many outstanding research institutions of our educational world.

The Navy realizes that our future national security is dependent upon our scientific knowledge and our ability not only to convert that knowledge rapidly into weapons but to apply it to tactics and strategy. Basic research is essentially a peacetime activity, since during a period of hostilities it is extremely difficult to conduct basic research and to convert the knowledge so gained into practical applications in time to be useful.

The Office of Naval Research was established in August 1946, for the purpose of encouraging scientific research, coordinating and disseminating to the Offices and Bureaus of the Navy world-wide scientific information, providing the necessary services for the conduct of specialized and imaginative research, and supervising, controlling, and administering matters concerning patents and inventions.

The law which established this Office provided also for the establishment of a naval research advisory committee, consisting of not more than 15 persons preeminent in the fields of science, to consult with and advise the Chief of Naval Operations and the Chief of Naval Research.

To give some idea of the work of the Office of Naval Research I should like to describe briefly the three main activities supported by it, namely, the Naval Research Laboratory at Anacostia, D. C., the Special Devices Center at Sands Point, Long Island, N. Y., and the Research Group in the Office of Naval Research.

I. THE NAVAL RESEARCH LABORATORY

Although Congress appropriated funds as early as 1916 for the establishment of the Naval Research Laboratory, it was not until 1923 that it was officially commissioned. Since that time, the Naval Research Laboratory has become the largest Government research institution in the United States, employing about 3,600 people, 1,000 of whom are scientists. Included among these are some of the most competent and well-known scientists in the country. The accomplishments of the laboratory over the past 25 years are well known and I am sure all agree that the early developmental work on radar alone

was well worth all the money the Navy has spent on the Naval Research Laboratory. Since the war, the laboratory has converted from a wartime "crash" development program to a long-term peacetime program in basic and applied research. The future program of the Naval Research Laboratory will include work in the applications of radio and radar to all the fields involved, such as communications, detection, recognition and guidance. In addition, a very active program is being conducted in studies of high temperature metallic alloys. It is essential that we produce materials which can stand temperatures far higher than any we have today before real progress can be made in the guided missiles program or in gas turbines. The development of high energy fuels for rockets and torpedoes is being continued with increased emphasis. In underwater sound work, the laboratory has been preeminent for many years and will continue to be so. I have every reason to believe that the future accomplishments of the laboratory will be on an even higher scale than they have been in the past.

II. SPECIAL DEVICES CENTER

The special devices center at Sands Point, Long Island, N. Y., has an outstanding background in the development of training equipment. This unique organization consists of about 360 people, military and civilian, of whom 94 are scientists or engineers. In addition to the development of synthetic training equipment, the center is including in its program work in human engineering in which is sought fundamental knowledge on the reactions of men as related to machines, and the adaptation of machines to man's limitations in the submarine field, the aircraft field, etc. In the realization that in another emergency, we will have to train more men to do more complex things in less time than we have ever done before, special devices center is making important investigations into the complex problems of the mass training of personnel. Television and radio techniques are being thoroughly investigated.

III. RESEARCH GROUP

The Research Group in the Office of Naval Research itself is composed of scientists, engineers, and naval officers grouped together. Their function is to plan and initiate the basic research program which we are conducting in the universities of the United States. After they plan and initiate the program it is their job to evaluate the results of the program and get those results to the people who are handling the development programs. Great good will come from the association of civilian scientists and naval officers in the Office of Naval Research in a mutual appreciation of problems. It should result in the finest guarantee of security for our country.

The basic research program itself in the universities now amounts to about $50,000,000. The work is scattered through about 100 schools and involves something more than 600 individual studies. There are certain general results which have already come from this program in basic research in the universities. One of the most important is the fact that today we have over 2,000 scientists and over 2,400 postgraduate students working on naval problems. By working on these naval problems, they are becoming familiar with the Navy's needs and could immediately be mobilized to the support of Navy programs should an emergency arise. While it is not the intent of these contracts to form a scientific reserve, actually such a thing has been done by means of these contracts.

Another general result from the program has been the financial aid which we have given the universities. Such aid has made possible the training, at the graduate or the Ph. D. level, of a considerably larger number of young scientists than could otherwise have been trained.

Summing up, we see a Navy university of tremendous scope embracing undergraduate work, graduate work, operational and staff study, research and development.

A moment ago I spoke of 52 universities having NROTC programs which together with the Naval Academy constitute the undergraduate phase of the Navy university. The naval science course pursued at the NROTC universities consists of twenty-four semester hours, plus certain drills and summer cruises. The remainder of the NROTC midshipman's time is devoted to whatever course he may wish to follow, such as prelaw, engineering, or general academic. Upon graduation, the NROTC midshipman is commissioned as an ensign in the Regular Navy and begins his service of 2 years in the fleet. At the end of the 2-year period, he may return to civilian life if he wishes as a Reserve Officer on inactive duty or he may request selection for a permanent commission in the Regular Navy. The integration of the graduates of the Holloway plan with the graduates of the Naval Academy will be of mutual benefit. The Naval Academy will provide the basic professional input of officers for the fleet, maintained at a constant level. The NROTC graduates who follow a Navy career will be an invaluable vitalizing input to the professional content of the Navy, and those who do not will constitute the best Reserve of all time, consisting of NROTC graduates who have had 2 years' active experience in the fleet.

In its beginning the Naval Academy was the sole naval educational institution. Today it is only a part of the Navy University. Until quite recently the Naval Academy was the only undergraduate college for the training and education of naval officers. This, too, has been modified through addition of the NROTC program. With changes in function have come changes in objectives. These in turn are reflected in the curriculum and organization of the Academy. To understand this, it must ever be borne in mind that the Academy is essentially a part of a large educational schematic. The needs of the service are the prime consideration in the plans of the Academy. Annual curriculum studies are made to insure that we are keeping abreast or even a little ahead of the times. New department heads are assigned every 2 or 3 years, bringing with them fresh ideas on the needs of the service. They are often all set to reform practices which existed when they were midshipmen at the Academy and are happily surprised to find that long lines of progressive predecessors have already cured the ills they planned to correct. The Academy is not static. It is ever conducting self-examination. This does not mean that change is made for the sake of change or that there are not constant factors. Indeed there are many of them. One, of course, is the preparation of high-school graduates. We keep our curriculum on the undergraduate level so that the high-school graduate may enter the Academy and succeed. This is particularly necessary since our students are nominated from every State in the Union and we wish to provide an equality of opportunity for all. Another constant is our large civilian faculty in the nonprofessional departments. In departments such as aviation, seamanship and navigation, and ordnance and gunnery, we find the most expert to be experienced naval officers.

What is the Naval Academy curriculum? It is a prescribed one. Every midshipman has the same courses, except that he may elect in foreign languages, French, Spanish, Portuguese, German, Russian, or Italian. In certain departments he may be in a regular or fast section depending on his previous training and ability. Essentially, however, it is the same course for all. The curriculum is drawn up in consideration of the needs of a naval officer both in his professional career and as a citizen of his country. It is an undergraduate curriculum that is constantly and carefully compared with the curricula of leading colleges throughout the country. The establishment of a prescribed curriculum that will have just the right proportion of social-humanistic studies, of scientific studies, and of professional and military studies is a tremendous responsibility. We realize that such a problem has no perfect answer. However, we believe we arrived at a rather good solution. Our formula is based upon our appraisal of the needs of the future naval officer and citizen, the example and advice of leading civilian educators, our curricular experience at the Naval Academy and the considerations of available time, money, instructors, and facilities.

What is the Naval Academy to contribute to the future naval officer? It is to develop him broadly so that he will become a valuable citizen of his country both in domestic and in foreign circles, to prepare him consummately for his professional career, to provide him with scientific insight built upon basic knowledge, to endow him with qualities of leadership and character, and to develop him physically so that he will have the vigor to carry out his task.

I don't believe too much emphasis can be put on the importance of approaching studies according to the fundamental concepts involved. The calculus need not be justified as a narrow range of knowledge essential to lower level operating technique. Rather, the thinking that led to the development of a thousand and one strictly naval techniques in the fields of fire control, propulsion, and electronics, orients to instinctive reactions and concepts having roots in fundamental mathematical theory presented at undergraduate level.

I do not value what we do at the Naval academy in our department of English, history, and government, solely because it develops a capacity for effective articulation, both verbal and written, and a literal knowledge of events, with some literary polish as an appendage. In addition to these and other values, literature and history and the social sciences contribute to the development of character—history is a panorama of great and good men as well as evil ones and in literature we find sentiments and thoughts of noble characters across the field of time which help to establish our standards of life and civilization.

By the same token, I am not content in the field of foreign languages that the only thing accruing to our student is linguistic facility in the narrow field of the interpreter; I hold for example that the study of Spanish must encompass also a concept of the Spanish civilization and its contributions during recorded history, the place of this civilization in the western orbit in our present world, the people and the institutions associated with this beautiful language and so on. These are concepts that, at some future time unforeseen by us, the present student may draw upon in meeting some problem and decision in policy or planning or administration in years to come.

What is the role of the Naval Academy in the over-all scheme of naval education? The Naval Academy should represent the ultimate in professional and personal standards. The Academy and its graduates should be a binding force in the creation of a solidarity of loyalty and ideals of service in the Navy as a whole. I am convinced of the paramount importance and essentialness to the service of this role. I conceive the contribution of the Naval Academy to be both spiritual and professional. The daily life is one of discipline, frugality, and subordination of personal freedom, all pointed to ideals of devotion to duty and responsibility to country. The role of the austere life in connection with training and leadership and character is well recognized by students of military education and lead-

ership. The Naval Academy is an undergraduate institution which no man should enter unless he wishes to make the Navy a life career. It is a known quantity in having a capacity to inspire large groups and high percentages of graduates of intelligence and character to stay in the Navy in years of comparative penury and hardship and to be available in the hour of war.

Both West Point and the Naval Academy face squarely this question of instilling a permanent desire for military and naval service, and have achieved a great measure of success. This professional esprit must continue to permeate the services as the touchstone and binding force in loyalty and devotion to the public interest.

In conclusion, I should like to leave with you my firm conviction that the plans of the Navy and those of civilian education are inseparably interrelated, and that this continued relationship will redound to the advantage of all, the Navy, education, and the Nation.

Arguments For and Against Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. HARVE TIBBOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. TIBBOTT. Mr. Speaker, under unanimous consent given me to extend my remarks in the RECORD, I am including herewith an article entitled "Arguments For and Against Federal Aid to Education," by M. Vashti Burr, deputy attorney general of Pennsylvania, published in State Government, December 1947.

This article is one that shows the extensive research and diligent study that Miss Burr has made on Federal aid to education:

ARGUMENTS FOR AND AGAINST FEDERAL AID TO EDUCATION

(By M. Vashti Burr, deputy attorney general of Pennsylvania)

It is a fundamental concept of Government in the United States that certain of the powers of Government are of such intimate concern to the individual and to the community that they belong solely, and must remain solely, in the several States and their political subdivisions. Any control by the Federal Government over the exercise of those powers, to say nothing of the centralization of such powers in the Federal Government, must inevitably threaten or destroy local self-government or home rule.

In the absence of a responsibility directly imposed upon the Federal Government by the Constitution, the Congress should not appropriate enormous sums for recurrent subsidies to the States, on a continuing and ever-increasing basis, for purposes which are the direct concern and prerogative of the State and local governments. It is urged, and rightly so, that the States should finance their own needs with respect to functions of government that are primarily State and local. The national debt is nearly $300,000,000,000, whereas the total indebtedness of the States does not greatly exceed $2,000,000,000. The Congress of the United States has sufficiently heavy responsibilities in finding ways and means of reducing the national debt and paying the billions required for interest on that debt, of balancing the Federal budget, of adopting measures for the adjustment of Federal-State tax relations, of aiding in postwar adjustments in fields definitely within the scope of Federal responsibility, and of meeting the world-wide emergency which requires that we give such aid as we can toward relief and rehabilitation in other lands.

If State and local governments are to finance their own needs, they must not be deprived of sources of revenue which will enable them to help themselves. Recent and continuing studies concerning the possible ways of coordinating Federal and State taxation are evidence of the realization that one of the most important keys to the preservation of home rule is an equitable division of tax sources. By assuring that the States shall have adequate tax sources, the States can enlarge the taxing powers of local units of government. As stated by Gov. James H. Duff, of Pennsylvania: "By enlarging the tax base, local communities can more fairly distribute the cost of government and be enabled thereby to solve their local problems in the way that people want them solved at home."

The comments above apply generally to proposals which would have the effect of pyramiding Federal subsidies or grants-in-aid. Here let us consider one of the most far reaching of the pending proposals, popularly referred to as Federal aid to education. This proposal, in one guise or another, has long been a source of controversy.

Among the more important of the numerous bills on the subject introduced in the Eightieth Congress are S. 199, introduced by GEORGE D. AIKEN, and S. 472, introduced by ROBERT A. TAFT, for himself and others, both bills referred to the Senate Committee on Labor and Public Welfare. The companion to S. 472 in the House is H. R. 1871, introduced by LAURIE C. BATTLE. However, the more active House bill on the subject during the first session was H. R. 2953, introduced by EDWARD O. MCCOWAN, which differed from the original S. 472 principally in that it set a different minimum allotment per child. The House Committee on Education and Labor deferred action on H. R. 2953 until further inquiries could be made regarding the need for and desirability of such legislation. The avowed purposes of the proposed legislation, and its broad scope, are indicated in the titles of the Senate bills:

S. 199. To authorize the appropriation of funds to assist the States in more nearly equalizing educational opportunities among and within the States by establishing a national floor under current educational expenditures per pupil in average daily attendance at public elementary and secondary schools and by assistance to nonpublic tax-exempt schools of secondary grade or less for necessary transportation of pupils, school health examinations and related school-health services, and purchase of nonreligious instructional supplies and equipment, including books.

S. 472. To authorize the appropriation of funds to assist the States and Territories in financing a minimum foundation education program of public elementary and secondary schools, and in reducing the inequalities of educational opportunities through public elementary and secondary schools, for the general welfare and for other purposes.

The comments in this review are directed primarily to S. 472, introduced on January 31, 1947. After extensive hearings, the Senate Committee on Labor and Public Welfare, on July 3, reported favorably on the bill, with various modifications.[1]

The modified S. 472 would authorize the granting of $300,000,000 to the States for the fiscal year ending June 30, 1949, and a like amount for each fiscal year thereafter. Apportionment among the States would be based on a somewhat complex formula whereby, as explained in the Senate committee's report, the States would be required "to develop plans for guaranteeing a floor of $50 per pupil in average daily attendance under expenditures in all local school jurisdictions within the State."[2] The United States Office of Education, a supporter of the proposal, has pointed out with respect to the bill: "Aid would be given primarily to public schools, but any State which contributed part of its own revenues to nonpublic schools could allocate a proportionate amount of Federal funds to such schools." The United States Commissioner of Education would administer the program.

The adoption of S. 472 would embark the Federal Government upon a permanent program of subsidies to the States, involving large expenditures of Federal funds, for the purpose of aiding, if not directing, the States in the exercise of functions which heretofore have been conceded to be the constitutional responsibility of State and local governments. Although the Senate committee, in its report, repeated many of the well-known arguments in favor of S. 472, it took the precaution to state: "The question of whether or not the Federal Government should establish a policy of financial assistance to the States for public elementary and secondary education was not at issue before the committee." In short, the committee washed its hands of the policy question.

Proponents and opponents of the proposed legislation both agree that educational opportunity in the United States today is unequal; that it is desirable for every child to have, so far as may be possible within the framework of our constitutional system, an equal opportunity to obtain a basic elementary and secondary education in adequately equipped classrooms; that there is an urgent need for improving the educational opportunities of children, the equipment of schools, and the occupational conditions of teachers in many areas of this country.

They also agree (and it is particularly important to bear this in mind) that the Federal Government has no constitutional power to control or supervise elementary or secondary education in this country. Local responsibility for, and control of, education is part of the bedrock of our American form of government. Proponents of the legislation are extremely careful to reiterate the assurance that Federal aid under S. 472 would not infringe in any way upon the prerogatives of State and local governments in the administration of their educational systems, and some have stated that any thought of Federal supervision or control is merely baseless emotionalism. Indeed, the bill itself purports to prohibit any department, agency, officer, or employee of the Federal Government from exercising any direction, supervision, or control over any school or any State educational institution or agency

[1] S. Rept. No. 425, 80th Cong., 1st sess.

[2] Under S. 472 as originally proposed, 23 of the 48 States would not have been entitled to any aid. The raising of the minimum from $40 to $50 per child 5 to 17 years of age in average daily school attendance, with a modified formula, has the apparent effect of making all of the States eligible. According to the figures set forth in the report of the Senate committee (No. 425, 80th Cong., 1st sess.) showing the grants-in-aid which States would be eligible to receive upon compliance with the conditions and obligations set forth in S. 472, the allotment of Federal aid would range from a low of $135,000 in the case of Nevada to a high of $22,825,000 in the case of North Carolina. The States which would be eligible to receive the major share (each approximately $10,000,000 or more) would be North Carolina, Alabama, Texas, Georgia, Mississippi, Kentucky, Tennessee, South Carolina, Arkansas, New York, Louisiana, West Virginia, Pennsylvania, and Oklahoma, in that order.

with respect to which any funds under the legislation are made available.

Proponents of the bill usually argue that "the States are not able to meet the financial load, help is needed, and the Federal Government must come to the rescue, having a responsibility for preserving the general welfare, education being naturally a vital factor in the general welfare"—or words to that effect. They argue that educational opportunity in America must be equalized and that the only way to accomplish this end is by the granting of Federal aid in such a way that disparities among the various parts of the country will be wiped out.

The United States Commissioner of Education, testifying in favor of S. 472, cautioned against Federal control of education, while at the same time insisting that only Federal aid would wipe out the educational disparities. He admitted that there is a possibility that "a system of education centrally controlled might be prostituted to propagandistic purposes of a political party in control of the Government."

Those who oppose the bill have called attention, on the other hand, to certain factors which cannot be ignored. Federal aid in the field of education is a particularly dangerous device. There is just cause for anxiety lest the proposal, if adopted, undermine the responsibility of State and local governments. It is inevitable, no matter how pious may be the declaration of principle in the bill and however well-intentioned in the inception, that Federal aid on a permanent, recurring basis as proposed would lead to some form of Federal administration, supervision, or control in the field of elementary and secondary education. This is clear from S. 472 itself. While the bill purports to throw safeguards around the constitutional prerogatives of the State and local governments, it would impose definite and essential obligations on the States receiving aid under the legislation, with the United States Commissioner of Education quite clearly having broad administrative powers.[3]

Legislation of the kind envisaged by S. 472 could not, in the absence of centralized control, genuinely equalize educational opportunity and hence would not achieve its avowed object. It is conceded that such control is not desired.

No stronger arguments against the proposal in S. 472 have been pronounced than by Senator TAFT himself, together with Senators WALSH, BALL, and WHERRY, in the minority report concerning S. 637, similar in many respects to the present proposal and considered in a previous session.[4] For example:

"We do not subscribe to the doctrine that because our public schools and our educational facilities are a vital element in our national welfare, they thereby become the proper concern and implied responsibility of the National Government.

"Our schools are one of the few remaining bulwarks of local self-government and community enterprise. They should so remain."

In that same minority report it is stated:

"The bill, therefore, does not do the very thing which it is supposed to do. Equalization, as a matter of fact, cannot be secured except by complete Federal control and direction. Everyone agrees that complete Federal control and direction are worse than the inequality which now exists. * * * Congress ought not to give away Federal funds to the States, with no Federal control over the spending of the funds. If on the other hand the Federal Government is to retain control over the expenditures and to dictate them, then it means Federal control of education * * * an alternative equally obnoxious. There is no middle ground."

To contend that Federal authorities would continue indefinitely to administer a general program of Federal grants-in-aid for equalizing educational opportunities and facilities without participating more and more in the supervision of educational systems is wholly unrealistic. The history of governments refutes any such contention.

In any event, as pointed out in the abovementioned minority report by Senator TAFT and others, "Federal subsidies to the States for matters which are clearly not within the jurisdiction of the Federal Government are certainly not justified on the ground that the States are unable to finance adequately the activities which are constitutionally assigned to them."

Another factor that must be clearly understood, though not as important as the fundamental responsibility of local government, is that Federal aid of the kind which S. 472 would provide is not needed. That is not to deny that there are some areas in the country where there is great need for improvement in the school systems. However, there is no real evidence that the States, with the exceptions of those few areas, are unable to finance adequately their own educational programs. This proposal for Federal aid has not been initiated by the States themselves; that is, their duly constituted legislative and executive authorities. Moreover, in comparison with the National Government's Treasury, the State treasuries are in good condition. In nearly every State, education is given a prior consideration in allocating the funds which are available.

It is true that local government in certain regions of the country have found it difficult or have been unable to meet entirely the financial requirements of a high standard educational system, the difficulties having been accentuated by the strains of war. However, that does not prove the need for a Federal dole. On the contrary, there has been a notable increase of activity on the part of the States within the past 3 years to mend their educational fences. For example, during the past year the legislatures in some 40 States have authorized increases amounting to about $500,000,000 in State funds for schools. County, city, and town appropriations have been increased by about $250,000,000 for the 1947–48 biennium. In addition, several State legislatures have appropriated funds for commissions to study their State school needs. Some of the States have revised and strengthened their departments of education. In some instances the tax bases within the States have been broadened and governors have recommended study and revision of their over-all tax system to bring about, among other things, more adequate support of the schools. In a recent survey by the United States Department of Commerce it was shown that, on the basis of State budgets examined, there had been an average increase of over 28 percent in the budgeted expenditures by the States for schools.[5]

The States are profiting by past experience and are assuming their responsibility to an increasing degree. Certainly it has not been demonstrated that the States themselves have urged the Federal subsidization which S. 472 would provide. Even as to the comparatively few States, mainly in the South, which could receive the major part of the aid under S. 472, it cannot be shown that they are impotent to meet their educational problems when, during the past year alone, they have increased their State expenditures for education by well over $100,000,000. The solution is not in subsidizing the States but in making it possible for the States to help themselves.

The formula provided by S. 472 for the allocation of grants-in-aid gives no assurance whatever that equalization can be accomplished in those States which are reputed to have the greatest need. In some of those States, in fact, equalization is contrary to their existing constitutions or traditional practices. Some of them have educational systems which are not well adapted to equalization of educational opportunity. An obvious example is that of segregation, with consequent duplications in the system. Perhaps it is not for the rest of us to tell the States having such a system to change it. At least, it is difficult to perceive how equalization could really be accomplished in such areas without virtual centralized dictatorship in education. Federal funds alone cannot correct errors in certain of the State school systems.

The aid contemplated by S. 472 is not genuinely needed. Through an adequate program of cooperation by the Federal and State Governments in adjusting their tax systems upon an equitable basis, and through other means, the States would be far better able to fulfill their responsibilities.[6] Then the Congress would not be harassed with proposals for ever-increasing Federal subsidies, and one of the principal threats to the preservation of local self-government in America would be removed.

It is entirely reasonable to point out that one of the best means by which the Congress could encourage the State and local government to finance their educational programs would be by reducing the nonessential Federal taxes for nonessential Federal expenditures.

It is a matter of great importance that the Congress consider what tax levies should be left to the States or should be divided with the States. The Congress has under consideration proposals relating to coordination of Federal and State taxation.

Meanwhile, there are several immediate objectives which could be accomplished. One of these is the proposal in H. R. 3653, introduced in the House by RICHARD M. SIMPSON, of Pennsylvania, during the first session of the Eightieth Congress, whereby the 80-percent credit now allowed against the Federal basic estate tax would be allowed also against the Federal additional estate tax. If such a proposal were adopted, the States would derive a considerable advantage, and one, moreover, to which they are eminently entitled. The field of inheritance and estate taxation is one which has always been recognized as of principal concern to the State governments. The increase in income to the States if the additional 80-percent credit were allowed would be considerable from their viewpoint. The slight effect upon Federal revenue from estate taxes would be more than offset by the increased ability

[3] See particularly secs. 7 and 8 of S. 472.

[4] CONGRESSIONAL RECORD, Oct. 14, 1943, p. 8318.

[5] State budgets submitted in 1947, U. S. Department of Commerce.

[6] As an example of the greater potential advantages to be gained through an equitable adjustment of Federal-State tax relations, without subsidization of the kind proposed in S. 472, it may be pointed out that, although Pennsylvania taxpayers would pay at least $30,000,000 to the Federal Government toward the administration of aid under S. 472, the return to Pennsylvania in the form of aid to elementary and secondary education would be only approximately one-third of that amount. On the other hand, the amount which Pennsylvania might obtain from its own tax sources if the 80 percent credit were allowed on the Federal additional estate tax, to say nothing of additional revenue which might accrue to Pennsylvania through a more equitable coordination of Federal and State taxation, would be expected to exceed three times the amount which Pennsylvania would be eligible to obtain under S. 472. Other States would stand to gain similarly, in varying degrees. In short, the States may gain more, in both tangible and intangible benefits, from a proper allocation of tax sources than from any allocation of grants-in-aid under S. 472.

of the State and local governments to finance their local needs.

The States, if given a chance, can finance those activities which are distinctly and constitutionally their responsibility. This can be accomplished without any semblance of undermining home-rule in the field of education. "In any event," as stated by Governor Duff, "the people back home know better than anybody else what their problems are and how able and willing they are to pay to solve them."

Up to this point, there has been no comment regarding private and parochial schools. The constitutions and laws of nearly all the States provide expressly against the use of public funds for any but public schools.

Federal legislation for educational grants-in-aid, particularly in the elementary and secondary fields, which would have the effect of by-passing State educational authorities for the purpose of giving Federal aid to private and parochial schools, could lead only to troublesome controversy. One hesitates, as a rule, to cite a dissenting opinion in support of a proposition; but truth is truth, wherever one may find it. Associate Justice Rutledge, in his dissenting opinion in the case before the United States Supreme Court involving transportation of parochial school children in public school busses in a New Jersey township,[7] made the following remark which is well worth our serious attention:

"Hence today, apart from efforts to inject religious training or exercises and sectarian issues into the public schools, the only serious surviving threat to maintaining that complete and permanent separation of religion and civil power which the first amendment commands is through use of the taxing power to support religion, religious establishments, or establishments having a religious foundation whatever their form or special religious function."

Any proposal that would open the door, however slightly, to centralized supervision of basic education, to say nothing of making Federal funds available as a favor to religious educational institutions, even on a modest scale, is a proposal calculated to inspire strong mental reservations, especially among those who are genuinely concerned with the "general welfare" of the American people. Potential advantages to be gained in some areas by a guaranty of $40 or $50 per child of school age are hardly a sufficient excuse for surrendering the heritage of unquestioned local control over elementary and secondary education.

Next to the right to worship as one sees fit—to have entire freedom of religion, free from any taint of political sponsorship, favor, subsidy, or coercion—there has been nothing closer to the hearts of the people of America than education and the determination to keep the educational system under vigilant local supervision, or under the watchful eye of "the people back home."

There seems to have been a tendency on the part of some proponents of S. 472, or of similar proposals, to refer to activities of the Federal Government in the field of education—especially aid for vocational education and rehabilitation, agricultural extension work, Indian schools, military and naval schools, school aid under land-grant legislation, aid to hospital training, veteran rehabilitation, etc.—and to compare these with the proposed aid under S. 472. There is no real comparison. Attempts to compare the proposal in S. 472 for so-called equalization in elementary and secondary education with such other types of aid are merely begging the issue.

However, we can derive a useful lesson from the experience with Federal aid under vocational education acts. They may offer a hint of ultimate experience under legislation such as that proposed in S. 472. We may cite, in this connection, the comprehensive article entitled "The Administration of Federal Grants-in-Aid to Education," written by the commissioner of the Connecticut Department of Education, a supporter of the Federal aid-to-education proposal.[8] Those who are interested may read the article. We shall quote only two excerpts:

"Of course, it is true that in any one of these items the Federal Government is in a position to deny the States funds if the concept of vocational education does not agree with that of the Federal Government. It is probable that each must embrace the concept of vocational education concurred in by representatives of the Office of Education * * *

"Again, it may be said that frequently the administrative rules and regulations devised by a bureau may extend farther than the congressional act intended. In other words, usually the congressional act allows considerably more leeway in the administration of federally allocated funds than the rules and regulations otherwise permit. Naturally, the Federal Government is concerned over the proper use of the funds allocated and, unfortunately, in many of our localities money emanating from an outside source is expended sometimes less wisely than the funds raised locally."

So we see that cooperation with the Federal Government in the administration of Federal grants-in-aid usually develops, and logically so, into a situation where the State's concept of education must agree with that of the Federal authorities.

CONCLUSION

The administration in any degree of elementary and secondary education in this country is not within the competence of the Federal Government and is not a proper subject for a permanent program of grants-in-aid on the basis envisaged in S. 472. Even while recognizing the Nation-wide concern in the improvement of educational opportunity in America, the potential byproducts of Federal intervention through a program such as that proposed in S. 472 are so much a threat to local self-government and home-rule that not even the so-called national interest or general welfare is adequate justification for the adoption of such a proposal. There are other and better ways, in the long run, to accomplish the ends desired, one of the most evident being the equitable division of tax sources in order that State and local governments may be better able to help themselves.

The Late Robert L. Norton

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Boston Post:

PRESIDENT IN TRIBUTE TO NORTON—"GRIEVED TO LEARN OF PASSING," TRUMAN DECLARES

WASHINGTON, January 7.—Official Washington today mourned the passing of Robert L. Norton.

President Truman learned of Norton's death immediately after he had delivered his State of the Union message to a joint session of Congress—an occasion which Mr. Norton had covered many times.

PRESIDENT GRIEVED

"I am grieved to learn of his passing," Mr. Truman said. "He was a fine craftsman, a good reporter, and a loyal friend."

Charles G. Ross, the President's chief secretary, and a colleague of Mr. Norton's for 25 years, was especially distressed at the news from Boston.

"Bob Norton was an old friend, in what reporters called the 'old days,'" Ross said. "We worked on many a story together. I know many men in public life and in the newspaper business who will miss him."

LOSS TO JOURNALISM

Attorney General Tom Clark expressed grief at Mr. Norton's passing. "The death of Robert L. Norton, for so many decades Washington correspondent for the Boston Post, is a loss to journalism and America, and to the entire field of public education through an informed press," Clark said

Representative PHILIP J. PHILBIN, of Massachusetts, said: "I am stunned by the news of Bob Norton's untimely passing. He has been a dear and close personal friend of mine for many years. I am very deeply moved by his loss. He was an exceptional man of amiable personal qualities—kindly, generous, warm-hearted, loyal to his friends. Sympathetic and tolerant by nature, he had a host of friends all over the country. I have never known a man in or out of public life who knew so many public figures and people in every walk of life as intimately and as well as Bob Norton, or who was more respected, admired, and loved by those who knew him.

"A widely read veteran newspaperman, editor, and commentator, trained in the traditions of the old school, he was exceedingly proud of his profession and its members. He was particularly proud of his associates on the Boston Post. He had supreme confidence in the ability of the newspaper business and its personnel to adapt itself to the demands of changing times. He enjoyed the esteem of all his fellow workers because they recognized in him outstanding ability and achievements as one of the greatest figures of their craft."

REMARKABLE MIND

"He counseled and helped countless boys entering the newspaper business and politics and was the trusted confidant and adviser of many public men. Like many others, I frequently consulted him and held his judgments and opinions in highest regard. He was imbued with the loftiest sense of honor and would never violate a confidence. Because of his warm, gentle, human qualities, loyalty and wisdom, his friends in all walks of life were legion and intensely devoted to him, as he was to them.

"He possessed the most remarkable mind—one of the finest I have ever encountered. In the true sense of the word, he was an intellectual. No college professor, no holder of high collegiate degrees could possibly excel him in gathering facts and information, not only in public affairs, which was his specialty, but in many other fields, and then selecting and analyzing and interpreting them in light of contemporary events. He was a sharp, penetrating analyst and a gifted diagnostician of political questions who always went right to the root of the problem. Although he liked to deal mostly with broad principles and concepts because his mind rose above the pettiness of detail, this attribute never limited his faculty for presenting the facts in true reportorial style, whenever the occasion demanded. His great contribution throughout the years will need and will receive more careful and extended appraisal, but it is unquestionable that in his passing Boston, the State, and the Nation will lose one of the truly great newspapermen of our generation."

WILL BE MISSED

"His genius and unique capacity, his love of his work, his wide contacts, his broad human approach, his constructive achievements, and, above all, his deep-rooted attachments to his friends and his fellowmen mark him indelibly as a man of great mind and great heart. He will be sorely missed by countless readers who implicitly trusted his brilliantly written commentary on current events, but he will be missed most by all those of us who knew and loved him for the great and noble soul that he was. I feel deeply and keenly his sudden passing and am bowed with grief. I extend my humble sympathy to members of his bereaved family to whom he was so genuinely devoted during his life and also to the publishers and staff of the Boston Post for what is indeed an irreparable personal loss. Our dear friend and happy philosopher has gone. May he find his true reward in eternal peace."

Phelps H. Adams of the New York Sun, president of the Gridiron Club of which Mr. Norton was a veteran member, bespoke the grief of club members as follows:

"I was deeply grieved to learn of the death of Bob Norton. Among the scores of newspapermen who knew him during his years of service here in the Capital, he was universally regarded as one of the ablest and finest members of the press corps. As a mark of the affection and esteem in which his colleagues held him, he was elected to membership in the Gridiron Club just 25 years ago. His passing after a quarter century of service in that organization is a profound loss to us all. As indeed it is to the profession which he chose to embrace and which he served with such distinction."

MANY MOURN PASSING

Others who mourned his passing included:

Senator SALTONSTALL: "I was distressed to learn of the death of Mr. Norton. I knew him well and liked him much. He was quick, witty, and an astute observer. I read his comments as often as I could. I am sorry we will no longer hear from him."

Senator LODGE. "I was profoundly shocked to learn of the death of my old and valued friend, Robert L. Norton. He and I had been friends for years, going back to my early days as a newspaper reporter when he helped me and instructed me in many ways.

"I saw him only recently at the Gridiron dinner. I had been his guest at the dinners several times. I had an appointment to spend an evening with him next week."

SHREWD OBSERVER

"Bob Norton was a very able newspaperman and his writing was of a very high quality. He was a most shrewd observer and many men in public life confided in him and set great store by his judgment. My deepest sympathy goes out to his family. I shall miss him and think of him often."

Senator GEORGE AIKEN, of Vermont. "I knew Mr. Norton as a fair and able reporter. I am sorry to hear of his death."

Senator FLANDERS, of Vermont. "Too bad. Too bad. Bob Norton was widely read and greatly respected in our State."

Speaker of the House JOSEPH W. MARTIN, JR., of Massachusetts. "The news of the sudden death of Bob Norton comes as a great shock. It was my privilege to enjoy his friendship for more than 30 years. He was one of the really great political writers of our time. His long experience, his wide information and his intimate friendships with Presidents, political leaders, and leaders of industry and commerce made his interpretations of events of great value. We shall miss his timely and able column as we will the capable and friendly man whose pen created it. His death is a distinct loss to Boston and Massachusetts and will be keenly regretted by thousands of his personal friends."

FINEST TYPE

Representative JOHN F. KENNEDY, of Massachusetts, who said Norton was a close friend of his and of his family for many years, expressed his grief and added, "He was one of the finest type of newspapermen for many, many years."

Representative CHRISTIAN A. HERTER, of Massachusetts. "On hearing of his death, I feel a sharp loss of a good friend—a loss not confined to those who loved him also but to the whole Nation, in that he was one of the ablest and most far-seeing members of the press."

Representative MARGARET CHASE SMITH of Maine. "I'm sorry as I can be. We had wholehearted admiration and respect for him in Maine. His death is an unfortunate loss."

TERRIBLY SHOCKED

Representative CHARLES PLUMLEY, of Vermont, called Norton one of his best newspaper friends.

"His readers," PLUMLEY said, "have sustained a great loss and his friends will never find anyone to take his place."

Representative EDITH NOURSE ROGERS of Massachusetts: "I am terribly shocked. He was a personal friend of mine for many years, and I have read his excellent articles for many years. He had a fine grasp of national and international matters."

Representative THOMAS J. LANE, of Massachusetts: "We all mourn his passing. He was one of the ablest newspaper columnists in New England. We in public life had great respect for his views. Anybody who knew him admired him for his fairness and his fineness."

Representative RICHARD B. WIGGLESWORTH, of Massachusetts: "Mr. Norton was one of the ablest men in his chosen field I have ever known. His life was rich in experience in National and State affairs. He enjoyed friendships and confidences of men in leadership in both. Through his understanding and power of analysis, combined with his integrity and independence in writing, he measured up to the highest traditions of the newspaper profession. He has been a close friend of mine for many years. His death is a great personal loss."

The Superintendents of the House and Senate press galleries, William Donaldson and Harold Beckley, expressed regret at Bob Norton's passing for the 500 newspapermen and women who were his colleagues. Mr. Norton was a member of the galleries for more than 30 years.

MRS. COOLIDGE IN TRIBUTE TO WRITER

Mrs. Grace Coolidge, widow of the late President, visiting at Columbus, N. C., gave the following tribute:

"I regret to learn of the death of Mr. Robert L. Norton, who was Washington correspondent for the Boston Post for many years, including those days when Mr. Coolidge was in the White House. We both considered him one of our good friends and appreciated his loyalty to us and to his paper."

AN ASSOCIATE'S TRIBUTE

(By Joe Harrington)

For a dozen years we shared an office in the Post with Bob Norton and a sturdy bridge of affectionate friendship grew between the two desks. The cluttered room didn't change when the news of his death came over the phone, but it will never be the same.

Though writing words on copy paper is the way we make our living, they turn out to be a feeble medium for expressing our appreciation of Bob. We can't capture in a few paragraphs the essence of hundreds of conversations, jam sessions, arguments, and the views we swapped on everything from the price of a pair of shoes to what was happening to the world at the moment.

In an attempt to appraise an old friend objectively, we'd say that graciousness was his outstanding characteristic. His first words on entering the room on his return from a trip to Washington, a political conference, or a swing around the doubtful States in an election were: "Hello, you old boll weevil. How are things with you?" Then: "How's the family? What are the kids doing?"

We're sure everyone who knew Bob Norton will have the same report to make about this side of his character.

STOOD ALONE

He carried out his thoughtfulness in little things, too. He'd come back from a luncheon at the Parker House, where his opinions were frankly sought by bankers and industrialists, and patiently listen to a garrulous ward heeler, who wanted to tell him what was wrong with the country. He'd hear the fellow out, then pat him on the shoulder and thank him for his information.

Professionally, he stood alone. Commentators blossomed in droves during the war years, on the radio and in newspapers, and most of them remained with us. But none of them could approach Bob Norton's incisiveness in dealing with an involved situation where the arguments pro and con were flavored with the political considerations of the people involved. He had an amazing faculty for cutting through the hokum that beclouded an issue and serving up the meat to the readers of this newspaper, stripped of the confusing garnishes and sauces.

Always articulate, he talked like he wrote. His conversation, as well as the "pieces for the paper" as he called them, were frequently highlighted by parallel background incidents—something that happened in a previous administration or a remark that had been made to him by a President for Bob was a top newspaperman.

DECIDED GREATNESS

There was a decided greatness about the man. Nothing irked him more than instances of human meanness or petty graft. Time and again when he was scanning the day's news he come across an item from here in the city or from some distant capital that caused him to explode with wrathful indignation. With the prelude: "Listen to this * * *" he'd let himself go with a searing identification of the perpetrators involved. It wasn't the act so much as the small spirit behind it that always got him.

Not only will Bob be grievously missed in the room in the building and wherever good newspapermen gather but assorted down-and-outers in these environs will note his absence on the streets. Through his years in writing politics from the city hall reporters' room to the international press galleries, he had a long list of fellows who had seen better days. For them he was a soft touch.

If you questioned the wisdom of his generosity he'd remind you that at one time the recipient was a nice fellow and quote the words of Joaquin Miller:

"For all that you hold in your cold dead hand, is what you have given away."

Our Most Dangerous Lobby

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. PLOESER. Mr. Speaker, the gentleman from Indiana, Mr. FOREST HARNESS, is one of the most able and distin-

guished Members. His responsibility as chairman of the Subcommittee on Publicity and Propaganda by Government Agencies and Employees has been well discharged. The Reader's Digest in December carried a very enlightening article written by Congressman HARNESS which every citizen should read. It follows:

OUR MOST DANGEROUS LOBBY

(By FOREST A. HARNESS, Member of Congress from Indiana)

Probing the operations of our most dangerous lobby, a congressional subcommittee, of which I am chairman, has uncovered startling evidence of attempts by Federal officials to make Big Government bigger and to extend, by another vast grant of power, the authority of the state over the lives of all of us.

Our committee has found that Government employees are back of the campaign to pressure Congress into passing a national compulsory health insurance law. This campaign was planned inside the Government, on Government time, supported by the Government's publicity and propaganda machine, and paid for by the taxpayer. Confronted with these facts our committee—Democrats and Republicans—voted unanimously to expose them and to turn the evidence over to the FBI and the Department of Justice for prosecution under the law which forbids Federal employees to use Federal funds to influence legislation.

Of recent legislative proposals, none has stronger, more obvious appeal to the devotees of the all-powerful, all-supervising state than national compulsory health insurance, often described as socialized medicine. Compulsory health insurance—cornerstone of every socialist regime—proposes to solve our health problems not from the community up but from Washington down. Instead of voluntary and group health insurance, backed where necessary by grants-in-aid, we would have a Federal law enforced by Federal agents. Estimates of its cost run as high as $7,000,000,000 a year. It would swell by many thousands the number of employees in the Federal bureaucracy.

Bills to launch plans of this sort were introduced in each of the last four sessions of Congress. Each time Congress was subjected to intense, highly organized pressure in their behalf. Unconvinced of the scheme's workability, and unwilling to contribute on such a scale to bureaucracy's urge to expand, Congress resisted this pressure. But, without doubt, the heat will again be turned on Congress in January to pass an even bigger and costlier bill.

Our investigations revealed that headquarters for the drive for this scheme is in the Federal Security Agency in Washington. The FSA is already a vast social service establishment with 35,000 employees. Administration and enforcement of the health-insurance law would be added to its domain. Its size and power would thereby be immeasurably increased.

Government officials at the FSA supplied the law's out-in-front promoters with ammunition for their propaganda. They sent representatives abroad, at Government expense, to bring back data on how similar schemes work elsewhere; arranged a campaign to carry the idea to the various States; and even sent a mission, loaded with proponents of the idea, to work out a health program for Japan.

The files of the Social Security Administration in the FSA bulge with information favorable to the compulsory-insurance idea. The files and SSA's staff of experts have been at the service of those advocating the bill. Staff members largely drafted the present bill—as they had its predecessors. They wrote testimony for witnesses to read at Senate hearings. "The staff and resources of the Bureau of Research and Statistics in the Social Security Administration," we found, "were devoted freely to the preparation of pamphlets and propaganda literature for the CIO, AFL, and Physicians Forum. Much of this material, prepared at Government expense, supported what certain witnesses referred to as 'socialized medicine.'" All opposing arguments were "dismissed contemptuously."

To add to the fund of material available, arrangements were made last spring to send an investigator to New Zealand, at Government expense, to bring back the story of that country's compulsory health insurance experiment. The man chosen for the mission has been "documented by the House Un-American Activities Committee for long association with Communist-front and fellow-traveler organizations." Our exposure of the facts halted this junket.

To increase pressure for the scheme, Federal job holders helped to set up two organizations—the Physicians Forum and the Committee for the Nation's Health—and have been active in both.

The Physicians Forum claims about 1,000 doctors in its membership, two-thirds of them in or near New York City. Its chairman, Dr. Ernst P. Boas, has been identified by the Committee on Un-American Activities as a member of eight Communist-front organizations. Under cross-examination at last summer's Senate hearings, he admitted that his organization is not registered as a lobby, although it had received and spent at least $10,000 for the promotion of the Wagner-Murray-Dingell compulsory insurance bill.

The heads of both the New York and Washington offices of the Committee for the Nation's Health are formally registered with the Government as paid lobbyists. Chairman of the committee and one of its principal founders is Michael M. Davis, Ph. D., formerly employed by the Social Security Administration. Dr. Davis' son is an official of the Public Health Service lately assigned, at Government expense, to the British Ministry of Health in London to observe Britain's system of socialized medicine.

On the eve of the introduction in Congress of a compulsory health insurance bill late in 1945, 10 of the most influential backers of the idea, all Government employees, met in Washington to plan a drive to stir support at the grass roots for the measure they had helped prepare. The device agreed on was the Health Workshop. This, we found, was the name given to conferences, planned for numerous States, to indoctrinate leaders of farm and labor organizations, women's clubs, church groups, and others. Instructions sent out from the Government for training Workshop leaders included techniques for the organization of citizen groups, formation of pressure groups, methods of bringing about group action.

This campaign was launched last year in Minnesota and North Dakota. Our committee held hearings on the Workshop conference which was held in Jamestown, N. Dak. Committee counsel Frank T. Bow brought out in the hearings that representatives of six Federal agencies, traveling on the Government, went from Washington and elsewhere to direct it. It was ostensibly devoted to a consideration of the health problems of North Dakota, but no North Dakota doctor was invited. The only doctors on hand were on the Federal pay roll—and they were not M. D.'s but Ph. D's.

In the literature sent in advance to each of the delegates were pamphlets published by the CIO, the A. F. of L., and the Physicians Forum, advocating compulsory insurance and urging pressure on Congress to get it. This literature was mailed from the Federal Security Administration at Government expense. No material opposing compulsory health insurance was sent to delegates or made available at the meeting. No speaker opposing it was invited or heard.

Before adjournment the delegates, representing numerous State-wide organizations, voted to poll Congressmen and candidates on their stand on the national health program. They agreed to form the Dakota Action for Medical Care Council to coordinate and continue agitation. Our committee unanimously concluded that the Workshop program "was calculated to build up an artificial, federally stimulated public demand upon Congress for enactment of legislation for compulsory health insurance."

The members of our committee, of both parties, also unanimously agreed that these efforts of certain Federal bureaucrats to organize pressure against Congress to advance their ideas and increase their authority are a threat to our representative institutions. We agreed that, with democracy almost everywhere under attack, these efforts must be exposed and fought. To that, we are sure, the American people will agree.

Navy Day

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. PLUMLEY. Mr. Speaker, under leave heretofore granted to extend my remarks, I am, by request, including the Navy Day address I made before the Rotary Club in Montpelier, Vt., October 27, 1947:

This is Navy Day. It is a day of peculiar interest to all the people and to Vermonters in particular since the first naval forces under Continental pay and control were those established in the spring and summer of 1775 by Generals Arnold and Schuyler on Lake Champlain and by Gen. George Washington near Boston.

Incidentally, I have recently read a book entitled, "George Washington, the Naval Strategist of the Revolutionary War." True it is that he determined the naval strategy of that war and is justly accorded high praise by all naval authorities for the military excellence of his plans.

On October 13, 1775, the Continental Congress voted to establish a committee to handle naval affairs. This body, called the Marine Committee, was the great-great-granddaddy of the present Navy Department. It began with three members: John Adams, of Massachusetts; John Langdon, of New Hampshire; and Silas Deane, of Connecticut.

Imagine that, three men setting out to construct a Navy from scratch and send it into action against the world's greatest sea power. But one of those members made up for a hundred ordinary. This was doughty John Adams, a "nutmeg" of a character with a blue spark to his eye and the fire of independence in his soul. He was a lawyer, but he knew how to stick to the point—the point now was an American Navy.

He drove the committee into action, and he launched the project on the same day the committee was formed. Historians put him in the book as the founder of the American Navy.

It is common in the naval service to refer to Congress as the "Father of the American Navy." It was Congress that had to legalize this fledgling and provide it with food, weapons, and clothes.

Certainly it was an infant on that October 13, 1775, when Mr. Deane, prodded by John Adams, stood up to propose that the Colonies equip "a swift sailing vessel, to carry 10 guns, for intercepting such transports as may be laden with warlike stores for the enemy."

Did Congress take kindly to the infant? Well, hands were raised in alarm. A Pennsylvania delegate said he didn't like it at all. Such naval force, he said, would be sure to anger King George. The Royal Navy would blockade the entire American seaboard. "I am clearly against any proposition to threaten," said Pennsylvania's Dr. Zubly. "The people of England will take it we design to break off or separate."

At this, Mr. Chase, of Maryland, wanted to know if it was any more threatening to fight the enemy at sea than on land. Many Members of Congress thought it was—the King would declare that sea war was piracy. This aroused John Adams, whose sarcasm could rasp like rosin on a string. Why mince matters? The fight for freedom was on. And with a few warships of their own, the Americans could force Great Britain to keep a large fleet on the job and expend much to gain little.

So, in truly democratic fashion—all sides being heard—the Navy was born.

From the Journals of Congress we learn that on Wednesday, July 3, 1776, the Continental Congress resolved, "That the Marine Committee be empowered to contract with shipwrights to go to Lake Champlain on the following terms:

"To allow each man 34 dollars and two-thirds per month; 1 month's pay to be advanced on their giving security, if required:

"Each man to be allowed a ration and a half, and one-half pint of rum per day:

"Their tools and arms to be valued.

"Two-thirds of their wages to be paid monthly, to whomsoever they shall leave the power of receiving it:

"Their pay to commence from the day they sign articles, and continue untill they are discharged, with an allowance of 1 day's pay for every 20 miles between the place where they are discharged, and their respective homes."

The lake force to which I have referred, and to the growth of which the men furnished under and by virtue of the resolution contributed their services, saw no important service for a year, and was then defeated by a greatly superior British squadron, though it gained a strategic victory by delaying the invading British Army.

THE BATTLE OF MACHIAS

If I ever knew it I had forgotten that the first sea battle of the Revolution was fought by a crew of lumberjacks off Machias, Maine, a few weeks after the battle of Lexington. To Jeremiah O'Brien and his wood choppers goes the honor of waging and winning the earliest American engagement. As the historians tell the story it goes as follows:

The fight took place off Machias, Maine, a few weeks after the Battle of Lexington. In May 1775, British General Gage sent two sloops and an armed schooner to Machias to commandeer a load of lumber for the redcoat garrison in Boston. Instead of lumber, the British got a load of O'Brien—a fighting Scotch-Irishman with hair as red as their coats.

Entering the harbor of Machias, the British war schooner under command of a haughty young midshipman, was surprised to find this O'Brien and a crowd of some 40-odd loggers waiting on the wharf. The young mid directed his two sloops to tie up, and then, holding His Majesty's schooner off-shore, he hailed to learn what the crowd on the wharf wanted.

For answer there came a bellow from O'Brien, "Surrender!" and the lumberjacks brandished muskets, axes, and pitchforks.

The English sailors had to laugh. His Majesty's schooner was armed with three 3-pounders and four swivel-guns—enough to blow the whole village of Machias to matchwood. With a sneer for the rabble on the wharf, the Britons simply turned their backs on the scene and sailed out to the harbor entrance to stand by. So a knight might have refused to do battle with a serf, considering the fellow unworthy of his steel.

This irritated O'Brien and his boys into seizing one of the lumber sloops and giving chase. Piling up lumber along the gunwales for protection, the loggers worked furiously while O'Brien steered the craft straight for the enemy. In the harbor mouth, the schooner turned to fight, her guns roaring out, like a lion wheeling on a small and annoying badger. The Americans replied with a rattle of musketfire and sharp marksmanship that, at first volley, didn't strike the Royal Navy men as so funny.

Cannon balls vs. bullets, the one-sided battle raged for over half an hour—one-sided for the Americans who riddled the British and dropped the young midshipman on his quarterdeck. The sloop, protected by its jerry-built bulwarks, closed in. Swinging the axes, rifle butts, and pitchforks, and led by indomitable O'Brien, the lumberjacks swarmed aboard the Englishman like timber wolves, and down came King George's flag.

Up went a strange new flag—a fitting flag for valiant lumberjacks—a white flag on which a green pine tree stood above the legend, "An Appeal to Heaven." The first American naval encounter had ended in victory for the Americans.

Considering the odds, it was something to be proud of. And it was symbolical, this victory achieved by "made in America" valor, sharpshooting, and New England pine. The lumberjacks of Maine had felled a long-standing giant—the tradition that the King's Navy was invincible—and reared in its stead the tree of liberty—your Navy.

WASHINGTON'S RAIDERS

Washington's fleet, known as Washington's Raiders, saw effective service preying on the sea communications of the British Army in Boston, and in capturing British prizes carrying ammunition, much needed by the American soldiers. This all happened before Congress in October 1775 adopted the resolution providing for the fitting out of two Continental ships, which act was the legislative birth of the permanent Continental Navy. Congress appointed a Naval Committee, which directed the purchasing, outfitting and the operations of the earlier ships, prepared legislation organizing the new naval service.

The first Continental Fleet put to sea in February 1776, proceeding to New Providence (Bahamas) landed and captured a large supply of munitions with which it put out to sea again and delivered its spoils of victory to our Army at New London, Conn.

NO NAVY AT ALL

After the Revolutionary War the Navy went out of existence completely and was not reestablished until 1794, when Congress provided for the construction of six new frigates. In 1798 we bought more ships and went to war against the French. Closely following this 3 year quasi war with France came the Barbary wars. Captain Edward Preble was the highest ranking officer of the squadron under his command with the frigate Constitution as his flagship. Under his command and leadership the loosely knit Navy of that day became a unified fighting force for the first time, and this unification has lasted until now.

Today the Navy is 172 years old. The observance of Navy Day was inaugurated in 1922 by the Navy League of the United States. The date, October 27 was selected because it is an anniversary of the birth of Theodore Roosevelt, often and justly called the father of the modern Navy. It is not a holiday, for no executive order, so far as I know, or proclamation was ever issued establishing this day as a holiday, nor has any congressional action ever been taken authorizing it. But today all over this country people are participating in ceremonies in honor of the Navy and its achievements.

Theodore Roosevelt once said, "Whatever arms have cost us they have made and kept us a great Nation."

Peace at any price for generations has been anathema to Americans. Perhaps that is one reason why we have come to believe that peace has no price. The record disproves that belief. The record shows that peace demands its own price, though an infinitely small fraction of the price war demands. The record shows that a nation can achieve peace only by waging it, by relentlessly working for that objective with the same unity and the same determination with which war is waged. Passive defenselessness has never won peace and probably never will.

OUR OPPORTUNITY

The world stands tonight on the threshold of its greatest opportunity. I believe we will seize that opportunity. I feel that this may be humanity's last opportunity. I pray God the day may come when there is no longer a need for any Navy or any Army.

The arrival of that day can be speeded by the reasonable maintenance of America's might until the hopes and dreams of today are translated into the living, effective world organizations of tomorrow. That happy event will be postponed and perhaps may never materialize unless America retains and develops a navy which will be capable of snuffing out any threat against the just and enduring peace for which the entire world yearns.

I hope I appreciate the opportunity which has been afforded me over some 7 years to learn something of what the Navy means to us. We take too much for granted; are too easily destructively critical; treat our blessings too lightly, and hardly ever stop to think of the hours of nerve-racking toil and study somebody has had to contribute to protect us and preserve us as a nation.

We have been fortunate on these shores, more fortunate than any nation in history. God has granted the American people a supreme opportunity to try a new way of life that pledges every man justice and equality. We have never employed this great gift with half the strength and devotion of which we are capable, but we cherish it as the heart of the American tradition.

NAVAL AIR POWER

May I take a few minutes to suggest that I have learned that out of the experiences of the Pacific war and the Battle of the Atlantic, came reaffirmation of the fact that integration of air, surface, and subsurface forces is essential to successful naval operations. But out of the experience of the Pacific war there also emerged a newer fact—that the influence of naval air power on sea power is decisive. The demonstration of that fact began on that day of infamy when Japanese naval air power struck us at Pearl Harbor. It gained strength when our carrier supremacy frustrated the enemy's supreme effort to move against Australia—at the Battle of the Coral Sea. It was conclusive when our carrier supremacy scattered an enormous Jap invasion armada at the Battle of Midway. Naval air power flanked and supported the strides along New Guinea which were pointed at the Philippines. Naval air power wrote finis, in the early days of the war, to the enemy's use of Rabaul, once a powerhouse as an important naval base. The Gilberts, the Marshalls, the Marianas, the Philippines, Iwo Jima, and Okinawa were all made vulnerable to our surface and land forces by our carrier-based air supremacy. Naval air power is the punch of a modern navy—and of any future navy. That is why when we speak of the Navy, we speak of a combination of air and sea power For naval purposes air power is indistinguishable from sea power. The plane,

as much as the surface vessel and the submarine, is the symbol of our modern Navy, our air-sea power.

THE PEOPLE'S NAVY

Thus, America faces the future with the most modern, efficient Navy in the world. Today it prepares to defend the Nation from attack, to defend this hemisphere from attack, and to make our power available for use against any would-be aggressor or international criminal. How well your Navy will be able to discharge these responsibilities depends largely upon the people of the United States who own this Navy.

I doubt if there exists in this country today widespread public appreciation of the task that lies ahead. No people ever supported its fighting forces as well as the American people backed up their fighting men in this war. No other people ever supported their fighting fronts with such a prodigious increase of uninterrupted production. No other people were ever in such complete partnership with their government in financing a war. The unrelenting effort, the stamina, and the determination of the American home front is one of the most thrilling chapters of this war. Unfortunately, no other people, when wars end, let their armed forces become impotent as quickly as we do.

Today we are not certain that democracy will survive. The world was not made safe for democracy in 1920. The world was not made safe for democracy by World War II. Never did such a situation confront America as now challenges us to a duel to the death in order to keep alive our democratic ideals. New forms of totalitarianism have arisen, extended their territories, increased their prestige. Some are saying that we must abandon democracy in America. Others are saying that we must make it work in America, and can do that only by isolating ourselves from the world. More than in 1917, we must recognize that democracy cannot be safe in a lawless world, continually threatened by totalitarian wars.

The American people must learn to look squarely in the face the implications of their political desires for democracy, security, peace, and prosperity in the world in which they live and from which they cannot escape. Their institutions and systems of life cannot be defended behind material ramparts. There are no ramparts in this world which aggressive powers equipped with the latest devices of science cannot penetrate. The ramparts to defend are the ramparts of law, and the place to defend them is the place where lawlessness begins.

IN RETROSPECTION

It seems hardly possible that on the 7th of November it will be 2 years and a half since Germany surrendered unconditionally to the Allies—and one-half of World War II was over. As the guns fell silent in Europe, the Pacific front blazed with the battle of Okinawa. Day after day Navy ships ringed the island. Destroyers and destroyer escorts took their picket stations, keeping close radar guard, instantly warning the land forces of the approaching Jap air attacks. Heavier ships were on day-or-night call for precision shore bombardment. Transports and supply ships fought their way into the beaches and out again. All the vessels in the area were exposed to the fanatical Jap airmen, aiming their planes—often in flames and carrying a 500-pound bomb—for the bridge of the target ship. For 82 days the battle raged, with heavy casualties in American ships and men because of the suicide air attacks of Japan's last "secret weapon," the Kamikaze Corps. But when Okinawa fell at last Uncle Sam gained sea, air, and ground force bases on Emperor Hirohito's doorstep.

Every day the big B-29's battered Jap cities. Roaming close to the shores of Japan, Admiral Halsey's Third Fleet methodically smashed to pieces the last remnants of the Imperial Navy. Clearly the knockout was coming soon. Yet when it did come, the knockout blow staggered the world, for it was struck with a fantastically powerful new weapon—the atomic bomb. Two of these bombs, in the development of which Navy experts had played a vital part, leveled the Jap cities of Hiroshima and Nagasaki. On August 14, 1945, President Truman announced that Japan had surrendered.

Japan signed the surrender terms on September 2 (Tokyo time) on board the great battleship *Missouri* lying in Tokyo Bay. She and her comrades of the fleet had come a long, perilous way since the Japs fired the first shot—the shot that backfired 'round the world.

PHILOSOPHY OF FREEDOM

Today America has become the last great nation of the world which puts her complete faith in a philosophy of freedom, a philosophy which recognizes the inherent rights of every citizen—freedom of speech, freedom of religion, freedom of enterprise.

That philosophy in a century and a half made this country the greatest Nation on the face of the earth. That philosophy made America strong enough to win the war.

Our people want peace and security. The peace of the world and the security of all requires the maintenance by us of a strong national defense. Congress has provided and will continue to provide the necessary funds for the maintenance of an army, a navy, and an air force to guarantee that the United States will continue to be supreme on the land, on the sea, and in the air.

Americans from the very first have dreamed great dreams and done great deeds. And so long as America dreams, and when the peoples of other nations comprehend the meaning of the American dream, I know there is inspiration and hope and opportunity for humanity.

On the wall of the room in which Victor Hugo died in the Place des Vosges, in Paris, is written, over his signature, this prophecy: "I represent a party which does not yet exist: The party of revolution, civilization. This party will make the twentieth century. There will issue from it first the United States of Europe, then the United States of the World."

Tomorrow keeps new yesterdays in store. Who knows—the prophecy of Victor Hugo may come true.

Dr. Frank D. Fackenthal

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. JAVITS. Mr. Speaker, Columbia University, which is one of the outstanding institutions of learning in my congressional district, is fortunate in having had on its staff for the past 45 years an educator of outstanding ability, Dr. Frank D. Fackenthal, who took over the duties of president of Columbia University when Dr. Nicholas Murray Butler retired.

Under leave to extend my remarks, I include the following article on this subject from the magazine section of the New York Times of January 11, 1948:

HONORS FOR DISTINGUISHED ANONYMITY—COLUMBIA REMEMBERS THAT DR. FACKENTHAL HAS SERVED HER 45 YEARS AND WITHOUT PUBLICITY

(By S. J. Woolf)

Columbia University next Thursday will award the Alexander Hamilton Medal for distinguished service and accomplishment to one of its alumni. It is the second award; last year the medal was bestowed upon Nicholas Murray Butler. This year at a dinner at the Waldorf the alumni will honor the man who has served as president of Columbia for 2 years and has devoted his life to his alma mater.

In preparing his speech of acceptance Dr. Frank D. Fackenthal decided to gather as much material as he could concerning Hamilton, Columbia's most famous alumnus. A professor at Rutgers said to him: "I'll tell you why Hamilton went to Columbia. He originally intended to enter Princeton, but it was too strict for him, so he went to your college because there he could do what he wanted."

Dr. Fackenthal tells this story with a smile, as something of a commentary on educational fashions. In Hamilton's day, of course, the elective system had not been adopted. Dr. Fackenthal rejoices that it is no longer as popular as it was for a time after its introduction and that students are now required to take a certain number of specified courses so that they will not go out into the world as uneducated specialists. Dr. Fackenthal considers this modification of the elective system one of the great advances he has seen in his academic career.

"In the old, old days," he says, "the colleges and universities were sanctuaries of study. Courses were strictly prescribed and although a well-rounded education was provided, the needs and aims of the individual student were not considered. Then, largely through the efforts of Dr. Charles W. Eliot, of Harvard, came the adoption of the elective system and the pendulum swung to the other extreme. Young men and women selected courses without regard to what they eventually wanted to do. In many cases they were too young or immature to make their own decisions and often they selected 'easy' courses.

"Now, although we have not gone back to the old-fashioned immutable programs, and notwithstanding that this is an age of specialization, we see to it that engineers know something about poetry and mathematicians are not entirely ignorant of history. All our courses are to a degree interrelated and even our instructors are encouraged to take up the study of subjects other than those they teach.

"When I was a young man, students could enter either the law or medical school after graduating from high school. Now they must attend college for at least 2 years before they can take up their professional studies.

"After all, the function of colleges and universities is to provide programs of study, instruction in classroom and laboratory, participation in the academic life, all so carefully planned that they will graduate educated men and women whose thinking will be on a high level, and who will be prepared to play their part in a rapidly changing world. In order to do this certain courses in literature, sociology, and history, to name but a few, are essential, irrespective of what line of activity each student intends to follow."

He was posing in my studio as he spoke. His appointment had been for 10 o'clock, and although the weather was bad he apologized for being 2 minutes late. Meticulousness seems to be a characteristic of this man who has spent most of his life within academic walls, and whose only hobby has been his university.

Yet he is no pontifical pedagog, no dry-as-dust professor. The cloistered life has not dulled his humaneness; his intense blue eyes beam sympathetically and a broad smile spreads often over his face. Although he is inclined to weigh his words, at times they have a certain lightness to them.

"I must be careful about what I say," he told me, laughing. "I almost got myself into trouble the other day. I was talking with some students from India who complained about their lack of money. Jokingly, I said

to them that most of our difficulties could be solved if we did away with money entirely. Unfortunately, they thought I was serious and I began to hear reverberations about my peculiar economic ideas."

Unlike Dr. Butler, Dr. Fackenthal has never played a part in public affairs, has not often made public addresses, and his talks to students have been marked by brevity. He is shy and retiring and does not even wear his Phi Beta Kappa key. For years he has been content to rest in the shadow of anonymity. Though for a long time he has carried a heavy burden in the administration of the university, it is only since he became acting president, 2 years ago, that his real worth has come to be generally recognized. The last 2 years, the most difficult in the history of higher education, have been two of Columbia's most successful years.

Yet, while his work is now appreciated, the man himself remains unknown to many of the students; as he climbs the broad steps leading to his office in the Low Memorial Library, he is as often as not unrecognized. This does not worry him. He has neither flair nor desire for publicity.

He regards it a privilege to have worked so long with Dr. Butler and he has enjoyed his work—enjoyed it so much that he has not had a regular vacation in 40 years and except on Sundays has been at his desk every day.

For long before he became acting president, Dr. Fackenthal played an important part in running an institution with an enrollment approaching 40,000 and an endowment of almost a hundred million dollars. The university, founded as Kings College in 1754, now embraces Columbia, Barnard, and Teachers College, as well as schools of law, medicine, engineering, architecture, journalism, business, dentistry, pharmacy, library service, and graduate faculties. In addition, it is connected with institutes concerned with the problems of education, sociology, and public health.

Most of its buildings, including a dozen residence halls and a library containing about 2,000,000 volumes, are on Morningside Heights, but its school of medicine, the college of physicians and surgeons, is located at the medical center overlooking the Hudson at One Hundred and Sixty-eighth Street, and its college of pharmacy is on West Sixty-eighth Street. Much of Rockefeller Center is built on land belonging to the university.

Columbia also owns an estate of 67 acres at Irvington, where, largely through Dr. Fackenthal's interest, a laboratory has been erected to house a gigantic cyclotron. But this is not his first connection with atomic energy. During the war he had a part in organizing the research in atomic fission carried on at Columbia. And after the war he had a share in reconverting the laboratories to peacetime use.

During the time he has served as president many new projects have been inaugurated. The American Press Institute was established and men selected by the newspapers live on the campus and meet the leaders in many fields of journalism. He has also been tremendously interested in the new School of General Studies in which adults who are employed may obtain a complete academic education in late afternoon and evening classes. In addition, he used his influence to obtain both for the faculty and the non-academic staff an increase in salaries.

In his opinion Dr. Butler was the perfect university president—a public figure, an able administrator and executive as well as a scholar. He says that running a university is as big a task as running a city. There are ever-present problems of both finance and education. These mean conferences with deans and heads of departments, with financial advisers over allotment of funds, with representatives of the student body, and, last but by no means least, with the board of trustees.

He pointed out that these duties required primarily administrative ability coupled with a humane outlook and a deep concern for the students as individuals. While scholarship is desirable in a president, it is not essential so long as the man is willing to listen to the advice of members of the faculty. What is important is that the head of a university should have the ability to instill confidence and arouse enthusiasm in the students and make them aware of their social responsibilities.

He feels that our young people realize these responsibilities today more than they did in the past.

"They are more serious and more interested in what is going on in the world than their parents were a generation ago," he told me as he leaned back in his chair and clasped his hands in his lap. "Before the last war the young people were brought up with the idea that wars were a thing of the past. They were rudely awakened; they found that much that they had been taught was false and became a disillusioned lot. Now that the war is over they are determined that the same thing shall not happen again."

"At the end of the First World War there was a veering away from anything German. Students shied off from studying the language or learning anything about our former enemies. Now just the reverse has happened. Today there is a remarkable interest among our students not only in the Germans but also in the Japanese and courses relating to these two peoples are extremely popular." (A copy of Mein Kampf occupies a prominent place in the bookcase in his office.)

"This is partly owing to the number of veterans who are with us, many of whom have been either in Germany or Japan and want to learn more about the countries and the people. This to me is a most encouraging state of affairs, for with an understanding of other nations comes a better chance for a lasting peace. And right here I want to say that the influence of the GI's has been all for the good. They are a serious, intent group whose experiences have broadened their outlook on life.

"The world has grown smaller since I entered Columbia 45 years ago," he went on. "No longer do mountains or oceans or distances form barriers between peoples. The economic, social, and political interests of the world are so closely intertwined and communications are so rapid that all nations are affected by happenings anywhere. The barriers that remain are those of misapprehension and misunderstanding. One of the functions of our institutions of learning is to help remove them.

"In order to help accomplish this we have inaugurated at Columbia new courses in languages as well as a School of International Affairs covering the laws, economics, history, and literature of different nations."

One of the nations studied is Russia and when Dr. Fackenthal spoke of it I asked him how a university could stop the spread of subversive ideologies.

"By telling the students what these ideologies are," he replied, "And by showing them how much better democracy, as we understand it, is.

"Democracy is a stimulating system under which to live because it is not static but changes and varies. Free and uncontrolled education fits the people to select the changes they desire. Having been made fully aware of the fundamental principles of the democracy under which we live, the citizen will prefer to make warranted changes in it rather than discard it. Recognizing its guarantees of freedom, he will not be fooled by such words as 'democracy,' 'progressive,' or 'liberal' applied to systems about which he has been taught and which he knows are basically different from our democracy.

"We are not afraid to let our students learn the truth. We know they will make up their minds that an organized society which fears independent thinking is unworthy of man's God-given intelligence. Our colleges and universities stand for three centuries of refutation of such a doctrine—for three centuries of belief in the exhilarating and unlimited possibilities of life under a free government."

Dr. Fackenthal went on to tell about some of the problems he has had to face as acting president. One of the most serious was the increase in the number of students. Today, with an enrollment almost twice as large as it was 3 years ago, Columbia maintains the same thoroughness in teaching and bestows the same attention on the individual student. This, he points out, has not been easy to do.

The increase has been largely the result of the GI bill of rights. Notwithstanding his praise of the veterans as students, and despite the fact that their tuition is paid by the Government, he does not favor lump-sum Federal grants for privately endowed institutions except for special research problems, for fear that such grants might be the opening wedge for political control over the schools of higher learning. However, he does approve of the establishment of scholarships by the Government.

Looking at the educational field, he sees a new responsibility forced upon colleges and universities by the break-down of family life and the neglect of religion, affecting two of the most important factors in the molding of character.

Frank D. Fackenthal was born 54 years ago in Hellertown, Pa., where his father was a maker of furnaces. When he was 13 his father was made manager of Peter Cooper's glue factory in Brooklyn, and when the family moved to that city, then known for its baby carriages and rubber plants, rather than for a tree that grew there, the boy went to a public school. During his vacations he obtained a certain amount of business experience. He sold cigars at the Brighton Beach Hotel and later was a cashier in a trust company.

When he was 19 he entered Columbia, and during his early years there had to travel by trolley and elevated to the comparatively new buildings on Morningside Heights. It was not until he was in his junior year that the subway was completed. Then he began traveling on that and has been doing so daily ever since. A bachelor, he still lives in Brooklyn with his 94-year-old mother.

At Columbia he was business manager for the college paper, the Spectator, and occasionally appeared in dramatic shows. Before he was graduated he joined the staff of the secretary of the university and was put in charge of obtaining employment for students. Since then his entire career has been connected with his alma mater. He was successively chief clerk, secretary, and provost. In that office he played an important part in directing the over-all administration of the university. He received authority, under the direction of the president, to act on most matters relating to academic administration.

But the president was ailing and by degrees most of his duties devolved upon the provost. When Dr. Butler retired in October 1945, Dr. Fackenthal was made acting president and moved into the office which Dr. Butler had occupied. There, in a setting of tapestries and books, he carried on his work at a desk presented to the university by A. T. Stewart. It was characteristic of him to have a partition put up, behind which he could modestly retire when Dr. Butler made his occasional visits. It was like him, too, when Dr. Butler died, to have the desk removed to another building where objects connected with the history of the university are on exhibition.

One of the innovations for which he is largely responsible, and which he considers exceedingly important, is the university development plan, which provides for the growth and future of Columbia, and he envisions not only Columbia but all universities playing a more and more vital part in the making of a better world.

"It rests upon them," he says, "to raise the standards of conduct, dispel the hallucination of aggressive war, increase the regard for

the rights of others, and so clear the way for the ever-higher life of generations to come. This is education's true role."

But Dr. Fackenthal's influence on education will not cease when General Eisenhower becomes president of Columbia on June 7. He is already a trustee of the university and as soon as he retires as acting president he will become chairman of the trustees' committee on education and in this post he will continue to play a leading role in guiding Columbia's academic policies.

Some Problems of the United States Merchant Marine

EXTENSION OF REMARKS
OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. BLAND. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an article entitled "Some Problems of the United States Merchant Marine," by Frazer Bailey, president, National Federation of American Shipping, appearing in the November-December 1947 issue of the Grace Log. The article is as follows:

SOME PROBLEMS OF THE UNITED STATES MERCHANT MARINE

(By Frazer Bailey, president, National Federation of American Shipping)

The relation of ocean shipping costs to the value of goods moving in international trade is little understood by the average person, and the relative amount often credited to shipping is frequently exaggerated.

There has been much press and public comment concerning the early exhaustion of the United States loan of $3,750,000,000 to Great Britain, and some intimation that ocean transportation charges absorbed a substantial part.

In an effort to establish the facts, the National Federation of American Shipping has been in communication with the interested Government departments in Washington. It has analyzed a speech in the British House of Commons on August 7, 1947, by the Chancellor of the Exchequer, Mr. Dalton, in which he gave a complete accounting with respect to the American loan.

SUMMARY OF FACTS

The following is a summary of the facts established by this investigation:

1. British purchases of American commodities for the year ending June 30, 1947	$1,540,000,000
Exports to United States of America	340,000,000
Trading deficit with United States of America	1,200,000,000
Purchases in other parts of the Americas	
Canada (mainly food)	$220,000,000
Central America (mainly oil and sugar)	260,000,000
South America (mainly meat and cereals)	135,000,000
Total	615,000,000
Total gross purchases from Americas	2,155,000,000

2. Applying estimated average freight rates to tonnage exported from the United States to the United Kingdom and Eire in the same period, the following are liberal estimates of the ocean transportation charges for such exports:

By American vessels:	
Third quarter 1946	$13,000,000
Fourth quarter 1946	7,000,000
First quarter 1947	12,000,000
Second quarter 1947	16,000,000
Total	48,000,000
By British and other vessels:	
Third quarter 1946	20,000,000
Fourth quarter 1946	13,000,000
First quarter 1947	20,000,000
Second quarter 1947	24,000,000
Total	77,000,000
Total payment, vessels of all flags	125,000,000

3. On the basis of the foregoing, the total aggregate ocean transportation charges from the United States to the United Kingdom and Eire amounted to 8.1 percent of the dollar expenditures in the United States under the British loan—American vessels receiving 3.1 percent and British vessels receiving 5 percent.

4. A portion of the amounts paid for transportation in the United States vessels was disbursed for necessary expenses in foreign ports. These expenditures, payable in foreign currency, still further reduced the small dollar drain from shipping. While it was customary to use 25 percent of the total freight charge to estimate such disbursements, the federation in its calculation used only 15 percent in view of the substantial proportion of bulk cargoes involved. It concluded that the net payment in dollars to United States ships amounted to less than $40,800,000, or 2.6 percent of the value of the total British purchases of United States commodities for the period.

5. If all ocean transportation now carried on United States vessels were transferred to British vessels, a minimum of 25 percent of the freight charges would have to be made in dollars, in order to pay port disbursements and meet other expenses of purchases and services in the United States. If all transportation to the United Kingdom and Eire now being carried aboard American vessels were transferred to British vessels, the British dollar shortage would be reduced by less than $28,800,000, or 1.8 percent of the British loan.

6. The proportion of United States shipping participation in the United States-British trade is continually diminishing as additional British ships become available. The following are the latest percentages for April: Foreign, 57 percent; United States, 43 percent. For May: Foreign, 62 percent; United States, 38 percent.

7. It should be noted that the amount expended for tobacco, alone, during this period was 12 percent of the total purchases, or $185,000,000. That is more than 450 percent of the dollar currency used for ocean transportation to the United Kingdom and Eire by United States ships. The purchases of films represented 4 percent of the total purchases, or $62,000,000 and 152 percent of the dollar currency used for ocean transportation by American ships.

DOLLAR EXCHANGE

8. It is also interesting that $615,000,000 of United States currency was expended in purchases in other parts of the Americas. Those nations were unwilling to take sterling for their exports but required dollar exchange which they could in turn use in purchasing requirements in the United States market. During the same period large expenditures of dollar exchange were made by Great Britain to other European nations for food and other items for similar reasons.

9. Mr. Dalton did not, in his speech of August 7, make a single reference to ocean transportation costs. He explained the heavy drafts upon the loan as due to: (a) Increase of between 40 percent and 50 percent in commodity costs in the United States since the loan was concluded, (b) a set-back to our hopes of the export drive, and (c) the speedy growth in dollar starvation all over the world. His explanation shows the necessity for British purchases with dollar currency in countries other than the United States.

WAR-BUILT SHIPS FOR FORMER ENEMY NATIONS

The people of the United States favor every reasonable effort to assist in the recovery of the devastated European nations. This should, however, represent the generous effort of the whole people of our country and should not be a disproportionate burden upon the coal, wheat, flour, railroad, or shipping industries because they are more directly involved in the relief effort.

The National Federation of American Shipping is opposed to recent proposals to turn over United States war-built ships to Germany and perhaps to other former enemy nations. The ships would be used primarily to transport relief cargoes with foreign crews.

Such actions would lead only to long-range damage to our merchant marine entirely disproportionate to any saving in immediate outlay for ocean transportation for these relief commodities. It is necessary that this statement be made to prevent public misunderstanding of the factors involved.

The effect of such a proposal, if carried out, could bring about incalculable damage, not only to our merchant marine, but to our national defense, to our foreign commerce (including its effect upon our economy), and not least, its effect upon our position in world affairs if we are weak upon the seas.

A proposal that recipients of relief and of reconstruction aid should be put in a position to come and get it with a decrease in burden upon the United States taxpayer naturally has appeal upon first consideration, but it ignores less obvious factors to the contrary.

First, let us consider the immediate economy in relief appropriations. No one will deny that ocean transportation of relief supplies costs money. But so do the relief supplies themselves—and in many times greater proportion. The idea originated with former President Hoover. He estimated a saving of $40,000,000 in ocean transportation of relief cargoes, including United States military supplies and personnel. This estimate was based on the assumption that 75 United States Liberty ships would be turned over to the Germans. The War Department reduced the estimated savings to $14,000,000.

No one can begin to estimate correctly, at this time, what relief cargoes, military supplies, and personnel need be transported to Germany, Japan, or any other former enemy country. To say, therefore, that the turning over to such former enemies of any number of our reserve fleet will result in a specified saving to United States dollar outlay is pure conjecture.

There are, however, certain facts we do know. While no contention is made that these constitute a rigid precedent, it must be admitted they furnish a logical guide for reasonable expectancy. Mr. Dalton's figures gave a complete accounting with respect to the United States loan, and conclusively showed that our flag carriage of United States exports and imports is continually dimishing as foreign fleets increase and as the volume of relief cargoes diminishes.

The following are the latest percentages:

	United States-United Kingdom trade		United States-world trade	
	United States ships	Foreign ships	United States ships	Foreign ships
	Percent	*Percent*	*Percent*	*Percent*
January	39	61	61	39
February	41	59	61	39
March	37	63	61	39
April	43	57	56	44
May	38	62	53	47

If we use the latest British experience as a guide, with our diminishing participation, there appears no justification for turning over to our former enemies 75, or any other number, of our war-built vessels to be manned by foreign crews to haul relief cargoes.

Next, let us consider the long-range effect of the proposal. Because of additional deliveries from foreign shipyards, foreign fleets within the next few months will, in the aggregate, reach the level of their 1939 capacity, at which time they were transporting more than 70 percent of United States imports and exports. The Maritime Commission estimates that the active United States postwar fleet will approximate 11,400,000 dead-weight tons, only slightly more than prewar. This includes all oceangoing passenger, cargo, and tank vessels. An active fleet of this size is far short of the minimum requirements to support our defense even in its initial stages. In this situation, is it not ill-advised to place any additional obstacles in the way of our merchant shipping?

ECONOMY

It is not denied that some economy would result in the cost of the recovery program if a substantial number of United States vessels were turned over to former enemies to be manned and operated by them. It must be obvious upon reflection, however, that such economies will fall far short of the long-range damage to our shipping, commerce, and national defense.

Consideration must be given to the damage which will result to the foreign commerce of the United States if it becomes dependent upon foreign-flag carriers. It requires no persuasive evidence to show that trade follows the flag. Not only is this true in the sympathetic and attentive handling of the shipments which comprise our imports and exports, but it is equally true for passenger service for the business executives and salesmen who promote these international transactions. We do not have to look further than the consistent policy in support of American shipping by the Foreign Trade Council of the United States. They have declared, "Two wars within a generation have found us with a merchant marine inadequate to the needs of our national defense and of our commerce when the foreign ships upon which it so largely depends were withdrawn. The convention reaffirms the stand it has taken for the past 31 years for the development and maintenance of a privately owned and operated merchant marine capable of serving as an auxiliary to the armed forces, and of carrying a substantial part of our foreign trade."

The United States is noted for its achievements under pressure and equally for its ability to relax and to await in apparent complacence the need of another supreme effort. Even a laid-up fleet is only a partial answer. What is required in an emergency is an active fleet, manned by trained officers and crews. We have been reminded by our military leaders that we must not rely this time upon much advance warning. Military preparedness, having the support of an adequate active merchant fleet, will discourage those who would risk international conflict. In any event it would materially shorten the duration of such a conflict with the obvious savings in life and wealth. When we are pouring out our wealth to Europe to save the lives and economies of unfortunate people, a relatively lower cost in ocean transportation should have no serious consideration.

This is particularly true when it is proposed to turn certain of our defense assets into the hands of certain European governments which, it is an understatement to say, are unstable. These ships might conceivably be used against us.

The shipping industry has no confidence in the return of vessels after relief cargoes cease. Some people have proposed that the vessels be transferred temporarily to foreign governments. Whatever the original agreement may be, we would fully expect to face their competition in an international trade manned by cheap-wage foreign crews. We cannot forget the 95 ships turned over to Russia (then our ally) under a similar wartime arrangement. The State Department can neither obtain their return, nor even get a reply to requests or demands.

The instability of many European governments must not be overlooked. Any American property entrusted to a present regime carries the risk of falling later into the hands of a new government, of a possibly different ideology or affiliation, and its possible use against us later—commercially or otherwise. Former enemy nations are far from free of this risk.

The Japanese press (Nippon Times, Yokohama, June 4, 1947) applauded the Hoover suggestion and indicated the expectation that United States war-built vessels would soon be manned by Japanese crews.

The State Department is reportedly opposed to the plan, primarily upon the ground that inasmuch as Congress refused to charter American ships to any foreign nation, including our allies, we should not enter into such an arrangement with our former enemies.

The Maritime Commission submitted a report to the Bureau of the Budget. While not specifically opposing the proposed plan, the Commission set forth a number of reasons why it should not be submitted to Congress.

At its annual national convention in New York City, on August 31, 1947, the American Legion adopted the following resolution: "and that we aggressively oppose any sales, charter, or deliveries of American war-built vessels to nations, persons, or organizations of those nations who were at any time enemies of the United States during the course of World War II."

There is no more justification for manning United States ships engaged in hauling relief cargoes with German crews than for using former enemy personnel to raise the wheat, mine the coal, or man our railroads.

Shall our officers and seamen be "beached" and their jobs turned over to former enemies? Shall we deliver into the hands of former enemies war-built vessels which in the future will compete against our own ships with low-wage foreign crews?

The Jewish Problem

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable John Hilldring at the National United Jewish Appeal Conference, Atlantic City, N. J., December 13, 1947:

This is my first speech in over 30 years as a private American citizen. I am glad that it is to this conference of the United Jewish Appeal that I make this maiden speech. My experience in the Government, particularly since the beginning of the war, has given me a unique vantage point from which to observe Jewish affairs at a critical juncture in history. I would like to share some of my impressions with you, in the hope that they will be of assistance in your planning for the future.

The most vivid recollection I have is naturally the United Nations decision of November 29, 1947, to create in Palestine a sovereign, independent Jewish state. This event should be—in fact must be, the key point of your deliberations here in Atlantic City. You have every right to rejoice in the event and to take full pride in the important part which you played in its achievement. It is also true, however, that you must take cognizance of the enormous task that lies ahead in giving reality to the United Nations decision, and to make appropriate plans for the part which it seems to me you must play in converting a simple decision into an effective, economically self-sufficient nation in 9 short months. I will return to this point later.

My mind goes back also to our frantic efforts, even before VE-day, to revive the handful of Jewish survivors liberated from the concentration camps by our advancing armies. I remember those who were nearly killed with the kindness of our own troops. There were some who were so emaciated and disease-ridden by their Nazi tormentors that they were literally unable to survive the wholesome food furnished them by our armies. Our problem then was to keep them alive. We rushed special food to them, doctors and nurses, and called heavily upon the Joint Distribution Committee, which was in the forefront of the advance.

I remember our feeling of amazement at the stamina and recuperative powers of these concentration camp survivors. In the main, they nursed themselves back to health. Soon they were running schools, editing newspapers, and learning new trades.

While the Government of the United States assumed toward the displaced persons in the occupied areas of Germany, Austria, and Italy primary responsibility for food, clothing, and medical care, this was not and could not be enough. World Jewry, and particularly American Jewry, rallied instantaneously to the challenge that was theirs and which was reflected in the desperate plight of their coreligionists in Europe. The Jews of America, through the United Jewish Appeal, assumed with great energy and intelligence the unprecedented task of raising, through voluntary contributions, the sum of $100,000,000, plus an immense volume of donations in kind of food, clothing, amenities, and medicines for the alleviation of the suffering and misery of their people. Slowly but surely the downward slide into the abyss was halted. Slowly but surely the eloquent upward march toward human dignity was begun.

Not only was the task just mentioned one of alleviation of pain and misery, one of assuaging the pangs of hunger, one of mending broken bodies, one of rehabilitating tortured minds. Its most important purpose and result was to bring to these frightened and dismayed survivors of Hitler's scourge the realization that they had somewhere in the world friends—real friends. These gifts and sacrifices of American Jews kindled hope in the hearts of the oppressed Jews of Europe which to them at that time was, if such a thing were possible, more important than food and clothes and lodgings. As one who witnessed the event from the sidelines, I can testify that a magnificent job was done.

But it was not long before we realized that we were not coming to grips with the Jewish problem simply by ministering to the needs of those few who had managed to live. The Jewish problem was not so simple. We were soon faced with the so-called infiltrees. How undescriptive this term is. The infiltrees were mostly Jews fleeing anti-Semitism in Poland. I stated last year, and I repeat now, that I am proud that my country did not bar these unfortunate people from their only haven in Europe. Our problems were increased, but precious human lives—more than 160,000 of them—were saved. Despite all the help given by the Army and UNRRA, I do not think that it would have been possible to have saved these lives, had it not been for the assistance given by the agencies of the United Jewish Appeal.

As recently as last summer it became clear that it was not possible to isolate the problem of Jewish displaced persons from the condition of Jews in other parts of Europe. When conditions in Rumania became unbearable for many Jews they fled to the only safe haven they knew—the United States zone of Austria. How they got there I do not know, but they did. I must admit that they caused considerable concern—even consternation. Some of our military and political officials, with no bias against Jews, wondered where the end would be if Jews oppressed in any country fled promptly to the United States zone of Germany or Austria. It seemed to me that this was the final proof that the answer to the Jewish problem in Europe lay neither in closing the borders of our zones nor in offering temporary haven in them. The only real answer lay in finding areas of the world where Jews might live in security and in peace.

I found, I am ashamed to say, that there are not many such areas left in the world. I found also that most of the Jews had already reached the same conclusion themselves and yearned for a homeland of their own where, at least internally, they could be masters of their own fate. It was therefore a great privilege on my part to be able to participate in the deliberations of the General Assembly of the United Nations which resulted in the historic decision to set aside part of Palestine as a Jewish state.

I hope that the decision of the General Assembly will be viewed in its true perspective—as the considered opinion of the nations of the world. It was perhaps inevitable that the inflamed passions involved in the complicated Palestinian situation should have produced all sorts of charges and countercharges. The United States delegation was accused on the one hand of doing too little and on the other hand of doing too much in support of the modified majority plan. It has been alleged, as well, that there was a wide gulf between the Department of State and the United States delegation at Lake Success as to the methods which should be employed in eliciting the adherence of other nations to the partition plan. It has been said that, except for the heavy hand of the Department, the United States delegates would have brought in the votes at any cost and by any means. I wish to take advantage of this opportunity to categorically deny these rumors. There was never the slightest difference of opinion between the Department and the delegation on this important issue.

The United States Government took the position that every member of the United Nations, large or small, interested or disinterested, was entitled to its own independent judgment on the merits of the problem. To this policy the United States delegation subscribed wholeheartedly, not only out of a sense of loyalty, but even more so from deep conviction. Certainly, we tried as best we could to persuade other countries of the logic and justice of our position. I am glad that we succeeded. But we succeeded not because of threats, intimidation, or pressure indulged in by any member of the United States delegation or by any official of your Government. I am sure that the cause of the new Jewish state is immeasurably more secure and that the hearts and minds of all Americans, Jews, and non-Jews alike, will be comforted and reassured by the knowledge that its officials did not resort to sordid tactics in the Palestine dealings.

I am glad and proud to be able to say that in my judgment the overwhelming vote in the General Assembly of the United Nations was a voluntary and heartening recognition by the nations of the world that the Jews of Palestine and the homeless Jews of Europe must be given an opportunity to live their lives in a country they can call their own.

We are naturally all disturbed and concerned about the violence which has continued in Palestine since the decision of the General Assembly. Personally, I have confidence that these disturbances will be minor in nature and will not endure for long. The truth is that some violence was inevitable regardless of what solution was adopted by the United Nations. I am convinced that even more violence would have occurred if no decision at all had been taken. It is important that you should understand this. Otherwise, I am afraid that after the many years of strife and tension and discouragement there might be a tendency to despair at this late hour. I am convinced that there is no cause for despair. On the contrary, there is every reason to be optimistic about the future of the Jewish state in Palestine.

However, with all optimism about the absence of serious violence, it is nevertheless true that from this very night until October 1, 1948, not an hour too much is available for the accomplishment of a colossal task.

We have so far only a decision to create a state. It remains now to actually create it. The machinery of government from the township to the national level must be produced. An army must be built and trained and equipped. A financial structure must be born and reared and ready to function. Vast economic arrangements must be developed. The highest attainments of statesmanship must be available to the leaders of the new Jewish state to bring all of these forces to bear in the proper manner at the proper time if the new state is to emerge as the vital and vigorous nation that Jews all over the world and their friends fervently hope and expect.

It ill behooves me to lecture or advise my Jewish friends about their duty. However, may I not as a friend, with propriety point out that the job in Palestine is by no means done. Particularly for the next year, there will be great need for patience with the people of the new Jewish state and with their leaders. Especially should we all understand the magnitude of the burden that rests on the shoulders of the leaders of the Jewish people, and we should, while withholding criticism and irrelevant and unwanted advice, stand ready to respond to the requests of the Palestinian leaders for assistance.

If we will dedicate ourselves to these objectives—if we will have understanding of the size of the problem, if we will eschew carping criticism, if we will hold ourselves ready to help when our help is needed, if we will pray for wisdom and courage and strength for the new leaders of the new Judea, then I am confident that there will emerge in due course a virile, a prosperous, and a happy land in Palestine.

In any case it is self-evident that, despite its tremendous achievement to date, the year 1948 will be by all odds the greatest challenge in the history of the United Palestinian Appeal.

In providing for the future development of Palestine I hope that you will not forget the Jews who must still pass another winter or perhaps other winters in Europe. At the maximum rate of absorption into Palestine many hundreds of thousands of Jews who desire to emigrate there will have to remain in Europe for months or even years. They must not be abandoned, especially when their goal is so certainly in sight.

You should also remember the important responsibilities which you have undertaken, and must continue to undertake, for the reception of displaced persons in the United States. At the time of your last conference only a few inveterate optimists like myself believed that there was any chance of obtaining emergency legislation to admit displaced persons into the United States as immigrants. It has been most heartening to observe the upsurge of official and popular sentiment in support of this idea. I am now quite confident that the Congress will pass this legislation at its next session. Meanwhile the United Service for New Americans has been performing outstandingly in arranging for the reception of Jewish displaced persons entering the United States under the President's directive of December 22, 1945. So efficiently has UJNA developed its operations that it has been advising non-Jewish agencies with less experience on how to organize for the great task which will be theirs if the desired legislation passes. I cannot emphasize too strongly the importance of continuing to support the United Service at the highest possible level.

I would like to say a word about the International Refugee Organization. Under the inspiring leadership of Hallam Tuck, I think that it is now operating as effectively as could be expected under the circumstances. I know that the IRO will render all possible assistance to the Jewish DP's. Nevertheless it must be realized that budget limitations necessarily confine IRO to what has been properly called an austerity program for all DP's. And it must also be remembered that IRO does not handle the great burden of the Jewish problem consisting of persons who are not displaced.

I hope that the days of talking of anguish and sorrow are past—the days of extermination and frustration and indignation. The nations of the world have at last recognized the Jewish problem for what it is—a challenge to the collective conscience of mankind. They have met that challenge without flinching. They have given the Jews the opportunity they have sought for 2,000 years. As one who has observed the courage and resilience of the Jews of the Old World in times of direct distress, I am supremely confident that they will respond to this opportunity with vigor and enthusiasm and determination.

We in America must help them to do so.

Foreign Policy in Modern Society

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1948

Mr. BENDER. Mr. Speaker, under authority granted me to extend my remarks in the RECORD, I wish to include excerpts from an address recently given by Mr. Cyril J. Bath, of Cleveland, Ohio, before a group of representatives from the Departments of State and Commerce, Carnegie Institute, and members of the United Nations Associations.

EXCERPTS FROM AN ADDRESS BY CYRIL J. BATH

Eight billion seven million dollars for our national expenses in 1939 was considered inflationary. But $42,520,000,000 in 1947 has brought inflation with it, and this is taking its toll from every pocket in the Nation and proving a higher burden than taxes. Even if we expect our foreign policy to prove futile in maintaining the peace and regard war as inevitable, it is still obviously necessary that we take realistic steps to recognize the extent of our resources and the nature of the problems we face economically. Indeed, the national planning that we fear abroad and scorn at home may prove to be our gravest diplomatic and military weakness.

The Marshall plan contains within its ample outlines conceptions that may be well suited to helping Europe to help herself, but if the funds to do it are an overdraft on our existing economy it will fall short in delivering goods and it will add to the scarcity at home while raising prices in both markets. Mr. Krug may figure out in detail that we can afford the Marshall plan of so many billions but the facts are that the raw-commodity prices are already proclaiming an existing imbalance between prices and available goods; an imbalance of the gravest nature and any further expenditure can only aggravate the situation. We are, and there is no blinking the situation, approaching the limit of our resources and wheat, as usual, is only the bellwether of the raw-commodity flock. We in the cities, after all, are only the remakers of things. The raw commodities are what count. Food, the prime munition of war or peace or of any human endeavor, comes first and the demand is reflected in wheat and corn, cattle, butter, hay, and oats. And then clothing, reflected in the prices of wool, cotton, rayon, and hides comes close after. And then lumber and all building materials and coal and petroleum. These things have a market the world over. We must remember that most of the world is engaged in the simple business of living, eating, and getting some sort of loin cloths and shelter. Significantly, too, are the raw prices of copper, scrap iron, and tin. The average of the prices of the raw commodities is the raw-commodity index. It is the most significant and the most important line in modern life.

In the 150 years that we have kept records there has never been a depression with the raw commodity lines moving up and we have never failed to get a depression when they went down, and the depth and the intensity of the depression depended upon the severity of the decline. Now we are facing a raw-commodity price level that spells a worse inflation than this country has known since the civil war. This price level is a product of supply and demand. It used to be violently affected by changes in gold-currency value too, but that is now gone. The value of the money by which we judge prices today is the value of the circulation notes of our Nation, that is, our money, our promise to pay good on demand. As we issue more promises than we have goods, the goods go up in terms of the money—the price rises, and as it rises it is an evidence of the loss of faith in the dollar itself and this induces further increases in prices as against goods. We cannot watch this movement so readily in fixed priced goods but they will follow the raws and the raws are galloping up. The plain truth is that to restore the value of dollars we must either reduce our expenditures or increase our production. Dollars are the outward and visible sign of a sound or an unsound economy. They are the product of a double-entry system of bookkeeping. Any protracted imbalance between the promises to pay that we have made and our inability to produce will result in a fall in the value of dollars, our promises to pay, our circulating notes if you like, or our national stock if you like.

To add a Marshall plan to the present imbalance without some constructive correction of the balance sheet is to invite grave disorder in our domestic affairs and discredit in our international undertakings.

I recommend a review of our expenditures and our productive capacity. Let us call in men like Pearson of Cornell, and similar students of food and crops and farm prices, to tell us about our overworked land and what we can do about increasing its productivity. (Note their recent reports—"Starvation, Half Truths and Untruths.") Let us look into the taxes that prevent our steel mills from increasing the supply of steel scarcely less vital than wheat, and why machinery, the muscles of production, cannot be purchased economically by our manufacturers. Let us look at the opposite side of the ledger and see if we must spend such enormous sums on Army and Navy and to support our military policies around the world. Let us, in other words, call on the best auditors we can muster to examine the economic background of our economy. Perhaps they will note too that profit sharing and proper recognition of the dignified partnership of labor give a highly productive element. With such a report, let us seek the support of sensible business people throughout the Nation. I think particularly of life insurance presidents and their boards to whom the present route in dollar values spells very grave administrative costs and very fearful problems for their insured. I think of manufacturers of all kinds who are caught by the tax laws in such a manner that they are forced to report as earnings funds that really represent the liquidation of their businesses because they cannot replace plant and equipment at the exaggerated costs without a consequent increase in depreciation which at present they are not allowed to take.

We might form a commission to study the economics of peace and prepare an audit. I am rather confident that the course of events will provide us an audience.

National Defense

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, January 16 (legislative day of Wednesday, January 14), 1948

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at 10 o'clock this morning before the Women's Patriotic Conference on National Defense, at the Statler Hotel, Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am very grateful for the opportunity to speak this morning to so splendid a group as the Women's Patriotic Conference on National Defense.

Annually you gentle people make a pilgrimage to Washington for the purpose of doing your bit to see that this Nation of ours shall never again suffer for the want of an adequate and sound national defense. There has never been a time in all the years you have been coming to Washington when the defense of our Nation occupied such an important position in the structure of governmental responsibility as it does today.

It was only Monday of this week that the President of the United States sent up to the Congress the largest peacetime budget in the history of the Nation, for the fiscal year 1949. In that budget message, the President said, among other things, the following:

"The expenditures of the Federal Government are still inescapably dominated by war and its aftermath. In the fiscal year 1949, 79 percent of our expenditures directly reflect the costs of war, the effects of war, and our efforts to prevent a future war."

The President of the United States was talking about veterans' benefits, interest on the public debt, and international affairs, most of which are financial burdens of World War I and World War II. National defense and part of the funds for international affairs are budget items which the President believes necessary to protect our safety and our security, and possibly to prevent another war. In other words, out of the total of $39,688,000,000, requested by the President, 79 cents out of every tax dollar will be used for the payment of obligations incurred in past wars and for our future protection through a sound and adequate national defense. This 79 percent represents an enormous sum of money. By itself, it is almost four times as much as the cost of running the Federal Establishment in the years before the recent war.

I take no satisfaction from the size of this expenditure. I hoped, as I am sure all of you did, that when we brought the war with Japan to a close, we could sign peace treaties with the nations with whom we were at war, and through the medium of genuine international cooperation, settle down to a long period of peace and prosperity—that swords could be beaten into plowshares—and that mothers and fathers of sons growing into young manhood need have no fear that their sons might be called on to take up arms against aggressors who proposed to jeopardize the security of the United States. We learned all too soon after the end of the war that although hostilities had ceased, a lasting peace could not be brought about immediately, nor was it in early prospect. Today in China, Palestine, India, and other parts of the world, war continues to take its toll.

What is our patriotic duty in such circumstances? It seems to me that our duty is twofold. On the one hand we must continue to have faith in the United Nations organization, with the fervent hope and prayer that sooner or later the peoples of the earth, regardless of their race, creed, or color, will be able to find a solution to the troublesome problems of the world, and work out a way by which we may all live in peace. The many obstacles that have been thrown in the path of the peacemakers by the leaders of the Russian Government make this problem a perplexing one for the legislative and executive branches of our Government. It is, however, a problem which this generation of Americans must take the lead in solving.

Americans are idealistic, but in a crisis we become realists in the true sense of the word. Realism in the situation in which we find ourselves today involves weighing carefully the activities of the forces of world communism, stemming from Moscow, and trying to find a formula under which the peace-loving members of the family of nations can live under the same roof with communistic Russia.

Certainly the rulers of the Russian people have given us little indication of their desire to live in peace with us. But of one thing I am certain—that while we strive for peace, under no circumstances must our defenses be weakened. They must grow stronger in the days ahead. God forbid that war may come again, for if it does, it means the utter collapse of civilization in this atomic age. If such should happen, I am equally certain that those who might be left on earth would have no further worry about the expansion of communism.

For this and many other reasons I cannot understand the activities of the leaders of our powerful and late ally in the world forum of international affairs. To characterize them most mildly, they have been obstructionists at every turn. They have abused the veto power in the Security Council of the United Nations organization. They seem bent on wrecking the only organization which holds any promise of being able to create a permanent peace. In Greece, in Turkey, they actively menace the security of those countries through their Communist satellites. In France and in Italy, their fellow Communists are creating as much confusion as possible, with the view of weakening the struggling Governments of those countries. Everywhere we turn in the world we find evidence that they are trying to undermine free governments and to create that seedbed of chaos in which the doctrine of communism is able to take its firmest root.

We have seen how nation after nation in the eastern half of Europe has fallen under the dominiation of the rulers from the Kremlin. One by one governments have fallen like ripe apples from a tree into communistic hands. In the conquering of European countries through cold war the Kremlin knowingly and willingly violated the pledge of free elections agreed upon at the Yalta Conference.

The countries of Poland, Hungary, Romania, and Yugoslavia were victims of Red terrorism and economic chaos. The peoples of those countries had no choice. Any demonstration of resistance to the communistic rule meant indefinite internment in concentration camps, or death.

Another potent factor which helps convince me that we are going in the right direction is the attitude of the Russian Government toward the Marshall plan, and, indeed, the attitude of Communists all over the world. The Communists understand, perhaps, much better than we do that the success of the European recovery plan will defeat their program of Communist expansion throughout Europe and Asia. The plans being made by the Comintern throughout Russia's satellite countries as well as the efforts of the Communists in the western democracies of Europe to sabotage the Marshall plan should be sufficient to convince doubtful Americans as to the advisability of moving forward with the Marshall proposal. Those who oppose the Marshall plan, I think, should suffer some slight embarrassment in finding themselves in complete agreement with the Communist party line.

My friends, I should like to make it crystal clear that the Marshall plan is not a relief plan. The concept of this experiment has its roots in the economic, political, and monetary recovery of the 16 European nations banded together for the first time for the purpose of studying and solving economic problems common to them all. When this country makes grants or loans under bilateral agreements the money involved will not be frittered away. The sanctity of contracts between nations will be faithfully adhered to, otherwise cancellation or annulment will be in order.

In sponsoring the Marshall plan, I obviously look to the immediate results to lift these nations from their economic lethargy, but it will be only after complete fulfillment of the plan that the people of western Europe, through the help of this Nation, will have laid the foundation for long years of freedom, economy, prosperity, and political stability. If my conclusions are correct such a program guarantees that no limitation shall be placed upon the liberty and the freedom which Americans so cherish and enjoy. In such a program, too, lies the best and, what seems at the moment, the only hope for a lasting and permanent peace in the world.

In this statement, I do not want to be misunderstood. I recognize in the Marshall plan a calculated risk. It is not a fool-proof formula for world peace and prosperity. But I pose this question—what is the alternative to the Marshall plan? Here it is as I see it:

We can forget about Europe and tell the European nations they are no concern of ours; that they must work out their own destinies; bring our armies home; give Germany to the Kremlin; reorient our foreign policy; retreat once again into the isolationism which we once embraced as a Nation; and then become the hated enemy of every nation in the Old World.

Only Wednesday of this week, Secretary of the Army Kenneth Royall said that if the Marshall plan failed, the Department of the Army would seek additional appropriations for national defense. I undertake to say we could spend three times the seventeen billions required for the Marshall plan during the next 4 years, preparing the Western Hemisphere for another war.

My friends, I have tried to set forth briefly what I conceive to be the world-shaking issues in the Marshall plan. The debate upon a plan which seeks to encourage a real economic federation in Europe as well as to secure our liberty and economic freedom at home poses a serious challenge to the Members of the Eightieth Congress. They look down the road of world recovery for years to come and down that road lies the way to peace. My hope is that the Members of Congress who oppose this plan will be open and frank about it. One is either for or against it. There should be no ducking or dodging. This plan is too important to the peace of the world to be defeated by half measures through indirection. It is too important to have the debate degenerate into reams of figures and technical detail over the precise number of dollars necessary to do the job. If we are going through with the Marshall plan, we must do it right. Too little and too late is worse than nothing at all. General Marshall said, "An inadequate program would involve a wastage of our resources with an ineffective result. Either undertake to meet the requirements of the problem or don't undertake it at all."

I sincerely hope that the debate may be kept on a high level, a debate, if you please, that can take its place side by side with other historic debates on international issues which affected our national sovereignty.

This debate should not be marred by petty puny politics and complicated technical arguments on which the major opponents of this bill like to dwell. This is true for many reasons. Two of them which should appeal to the opposition seem to me to be as follows: For many years we have had in Congress a bipartisan foreign policy, sponsored by Senators VANDENBERG, Republican, from Michigan, and CONNALLY, Democrat, from Texas. These two great Americans have labored side by side for years in the advocacy of a foreign policy which would accomplish a peace with honor. No two Members of Congress in the history of this Republic have been faced with such momentous problems. In their patriotic cooperation to render high public service in a world crisis, I have yet to see a shadow of partisan politics enter their deliberations.

We are fortunate indeed to have Gen. George Marshall as Secretary of State. It is doubtful that the world has ever produced a greater military genius than General Marshall. And when the time came for him to retire from his long service in the Army of the United States, he did not hesitate to accept important world assignments committed to him by the President of the United States. General Marshall is the architect of the Marshall plan. As Secretary of State, he commands the respect of the nations throughout the world. In the presentation of this plan to the people and the Congress of the United States, he stands forth with no political ax to grind and wholly devoid of any personal ambition. It was only a short while ago that he told the American people that he was not a candidate for any public office, and that he was not available for any elective office under any conditions. So here stands a man in whom the American people and the Congress of the United States can place their trust. Here is a conscientious Secretary of State who is presenting a plan for world recovery in the highest American tradition. Here is a man laboring for the country he loves with complete unselfishness. In these gigantic, world-shaking undertakings, it seems to me that the people of the United States who are unable to examine all of the details of such a program must place their trust and confidence in someone, and George Marshall should be that man. As for myself, I thoroughly believe in General Marshall. I know of the outstanding service he has rendered to the Nation in time of war. I recognize what this fine American hopes to do for his country in time of peace.

Not only am I going to support the Marshall plan, believing as I do that it is one of the strongest links in our chain of national defense, but I am also going to support to the hilt the President's proposals dealing with the security of our country. The President's recommendation in the budget for $6,100,000,000 is for veterans' services and benefits. The veterans' program must be carried out with efficiency and expedition. Their cause is a just one.

The President also recommends $7,000,000,000 for international affairs and finance, which includes the sum required for the first year of the Marshall plan. The President also requested $11,000,000,000 for national defense. Insofar as the national defense item is concerned, I am willing to go further. I think the time has come when we must make plans immediately to build the air force and the Navy's air arm to a point of world leadership. We held that position immediately following the war. So long as the world remains in turmoil and trouble, we must be supreme in the air. I shall support any additional appropriations which make that supremacy possible. We must be everywhere armed, everywhere vigilant. Our precious liberties must be preserved at any cost. Yet, while we must be adequately prepared for attack from any aggressor, it is also imperative that we continue working night and day with the help of God toward preserving the peace of the world. I am confident a well-prepared, united, and informed America is the only instrumentality in the world today capable of ultimately finding the way to peace.

Address by Hon. Charles A. Halleck, of Indiana, Before the National Small Businessmen's Association

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, January 16 (legislative day of Wednesday, January 14), 1948

Mr. WHERRY. Mr. President, on January 14, before the National Small Businessmen's Association, at the Wardman Park Hotel, in Washington, D. C., the Honorable CHARLES A. HALLECK, the majority leader of the House of Representatives, delivered a very able address. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Well, here we are together again. We met on the Capitol steps this morning, and I assume that during the day you have been busy carrying out your "Mission Washington."

It was rather rugged up there on the Capitol steps with freezing temperature. There you encountered the "just one more club"—the news photographers of Washington, whose motto is "just one more picture."

You know that it is not all pictures and banquets in Washington. As you mingled with Members of the Congress and others in the Government you found that a lot of hard work is done here. Literally tons of literature pour into a Congressman's office during a session of the Congress.

I understand you have come to Washington to see the operation of the Government at close range. Your president tells me you have not brought a special ax to grind—that you are here to learn and to cooperate. That certainly is a patriotic purpose.

I feel right at home in a group of small businessmen. I come from a comparatively small community, and I know that a great part of the economic strength of our country is in the millions of small business enterprises—the small shops and factories, retail stores, and service establishments of every kind.

Therein lies the real genius of the American way of business life. Therein has been proven the old saying that from small acorns huge oaks grow.

And I hasten to add that therein also lies the graveyard of many an ambitious dream, because the small businessman has to fight with all his might to keep his enterprise alive.

When we talk about small business we are in fact talking about the American business system, because 98 percent of all the approximately 3,500,000 business units in the United States come within the ranks of small business.

In war and peace the small businessman has to struggle to keep afloat. You will recall those years of stepped-up national preparedness prior to World War II. Remember the difficulty that small businessmen had in getting tied into the preparedness program so that they could pull their patriotic load? It was back in 1940 that we Republican Members of the Congress, though in the minority, established an unofficial committee to study the plight of small businesses.

Speaker MARTIN, who at that time was minority leader, appointed a committee of which I was chairman, to make the study, and we held hearings in many communities. Hundreds of small businessmen attended and expressed their views.

Later the House of Representatives established an official committee on small businesses, and I was ranking Republican member of it. We had to fight then and during the war to protect the rights of small businesses and to see that they were treated fairly in priorities, allocations, and in getting their rightful share of Government business.

We are still fighting for the rights of small businesses. During the first session of the Eightieth Congress we passed a bill to require that small-business representatives be consulted by every Government agency in making the transition from war to peace on the industrial front. And the Eightieth Congress is going to continue to do its utmost in assisting small businesses.

You have come to Washington on a mission, and when you return to your respective homes you will be asked by your friends and business acquaintances to report your impressions.

And so I am going to take advantage of this opportunity to do a little missionary work on my own.

We Members of the Eightieth Congress need your help, your active cooperation, in preserving our American way of life. We need your help in resisting constant pressure, under one disguise or another, to change our system of government.

Congress needs this kind of cooperation to save the American competitive enterprise system.

This is the system that has been handed down to us by the founding fathers through the generations.

It is the kind of government and way of life that has made America a bulwark and lighthouse for liberty-loving peoples all over the world.

It is a way of life that rolled up the knockout punch for victory in the war.

It is the way of life that has brought to our people the highest standard of living of any nation on the face of the globe.

And it is the way of life that has produced the goods that the whole world is now drawing upon for recovery from the war.

Yet, incredible as it may seem, there are among us people preaching alien philosophies of government. Some of them are skillful in their efforts. They set up so-called front organizations and they sugar-coat their totalitarian schemes. They talk democracy and practice tyranny.

We don't like Communists at home and we don't like Communists' aggression anywhere.

I am quite confident that with your help and with the help of the overwhelming majority of the American people, who are alert to the dangers of government regimentation to our way of life, we shall maintain our citadels of freedom.

Small businessmen have vivid knowledge of regimentation, directives, rules, and regulations and snooping into their affairs by busybody bureaucrats.

The Eightieth Congress is doing its utmost to establish and maintain a healthy economic climate in which small businesses may flourish.

Now I would like to discuss some of the major issues before the Eightieth Congress. In the premise they are problems that confront the American people.

As far back as I can remember the dawning of each new year has brought forth the weighty, rumbling warning that this is a year of decision. Sometimes it is varied to something like: We are at the crossroads.

In all seriousness I want to say that this year 1948 is, indeed, a year of momentous decisions. Of course, we are going to have a Presidential election this year, but I did not come here to make a partisan, political address.

In the brief time available, I want to discuss some matters of overwhelming immediate concern.

Let's look at prices. We all know that many prices are too high. High prices are the result of inflationary causes. The years of deficit-spending by the Government, during and prior to the war, vastly increased the supply of dollars.

Unloosing of demand for peacetime goods pent up during the war; industrial strife in 1945 and 1946, and the tremendous volume of exports from our short supplies, these are among the basic issues of the inflation that has fired the boilers of high prices.

I need not paint for you small businessmen the tragic effect that production stoppages had on our national economy. The year 1946 was the blackest year in our entire history in the matter of strikes and lockouts.

The people demanded action and the Eightieth Congress passed the fair and just Taft-Hartley Act. It is doing the job demanded by the people and intended by the Congress. Given proper administration, it will be very helpful in keeping production more constant.

Workers are finding from experience under the act that it is protecting their right to organize, to bargain collectively, to control their unions, and to strike if they believe that is necessary.

The Congress passed an anti-inflation bill. As you know, it calls for voluntary cooperation by industries, bankers, farmers, and miners in combatting inflation. It was never intended as the complete answer to the price problem.

The Government already possessed powers to combat exorbitant prices. Members of Congress in voting for the anti-inflation bill did so with confidence in businessmen cooperating in the interest of all the people.

We voted for the bill with the firm belief that the men and women engaged in business know more about their respective problems than do bureaucrats in Washington. But you know as well as I do that there must be leadership. Therefore, I am looking hopefully at the steps being taken by the administration to carry out the purposes of this act of the Congress.

Now, on Government expenditures: The cost of government is outrageously high and the American people want a drastic reversal of the ruinous trend.

Economists tell us that one out of every $4 in the national income is being consumed by Federal, State, and local taxes. In other words, about fifty billion of the $200,000,000,000 of national income. I believe that is an alarming situation.

With Government expenditures and taxes remaining firm and the national income declining—though I do not forecast a substantial business decline—it can be readily seen that the burden upon the people would be well-nigh unbearable.

The Congress has been asked to appropriate nearly $40,000,000,000 for expenses of the Federal Government during the fiscal year 1949; that is, the 12 months beginning next July 1.

That forty billion is more than four times the Federal budget in 1939, more than twice all the profits made by American industry in the year 1947, and it is $13,000,000,000 more than the entire Federal public debt at the close of World War I.

We are in the third year after World War II and confronted by the highest Federal budget in the entire peacetime history of our country.

The Eightieth Congress is going to cut that budget. It means that every item in the budget will be scrutinized closely and not a dollar that cannot be justified will be appropriated.

You know as well as I do that several billion dollars can be wrung out of that budget without hurting anyone. But it requires resistance to pressure groups, each having a pet project to consume the taxpayers' money.

We are going to make certain that our country's defenses are adequately provided with funds. And we are going to see to it that no necessary function of the Government shall be eliminated or crippled.

Appropriation committees of the Senate and House are now working on the budget. Subcommittees for the various Government departments, boards, and bureaus are combing money requests with fine-toothed combs.

This is going to take months to accomplish, but I assure you that the present Congress is economy minded and we wil' do the job the people want to be done just as we have been doing since January 1947. You have heard already from responsible leaders in the Congress that we are going to pass a tax-reduction bill. We are going to reduce taxes, not increase them.

The tax bill that the Congress passes will be geared to production of goods that are so urgently needed by the people. We shall reduce taxes so that the workers will have more

take-home pay, and we will reduce taxes so that the people will find it profitable to risk their earnings in investments that result in production and more jobs.

I cannot tell you now what the total amount of tax reduction in dollars will be. There is a substantial surplus in the Federal Treasury and we are surveying the Government expenditures to uncover the soft spots where cuts must be made.

In closing I reiterate that we in the Congress need your support and the active support of every segment of our population in saving the American system of competitive enterprise.

We shall do our part and we are counting upon you, so that we may keep America strong and a citadel for the republican form of government.

World Government

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1948

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Raleigh News and Observer:

[From the Raleigh (N. C.) News and Observer of December 28, 1947]

THE DANGER OF BIGNESS

"What is the chief evil and danger of our generation?"

That question was asked in the early 1920's of Justice Louis Brandeis, who was truly regarded as the wisest and most learned liberal of his day.

"Bigness," was the answer of Judge Brandeis. He pointed out how, when industry, commerce, and Government grew into overlarge proportions, they were too big for the best human direction. The truth of that diagnosis has come to be accepted as monopoly has mulcted the people which calls for the enforcement of antitrust laws, and giant governments overexpanded have invited their own destruction.

And yet—and yet—in the light of what Brandeis said and the experience of Hitler's dream of world domination in worship of bigness, there are many who still worship the great god "bigness." It is this faith, misplaced, in the power of bigness which causes placing faith in an organization of one world in which every country in the world would live under a single government, all of every tongue and continent and race united in a supergovernment. They believe the hope of a peaceful world lies in a single parliament with one legislative body, one executive, and a single armed force.

Is that ideal based on experience or wisdom?

Look about the Europe of today, with the great British Empire "on which the sun never sets" surrendering its diadem of India and destined to be reduced under the spirit of the Atlantic Charter; with the strong empire of Germany not long ago master of most of Europe disgraced, defeated, and down and out; the old-time Spain with its domination of South and Central America and ruling the sea, now a tenth-rate power under the rule of a stooge of Hitler; the story of France, destined to lose its African empire, just emerging from the German occupation; and Russia under Communist rule with ambitions that endanger its future and the peace of the world.

And then compare the bigness of these countries and their wars and misgovernment with the small countries in Europe—Switzerland and Luxembourg, which have been models of the sort of government that has blessed their people. While nearly every other country has been cursed by wars, the little republic of Switzerland has had no avid eye on other lands, content to live in independence under a government that has kept it out of war. It stands as a warning to countries aspiring to expansion by forcible conquest. Because of its peculiarly isolated position as a free republic, the peacemakers after World War I chose Geneva as the site of the League of Nations, and today the magnificent buildings are open to international economic and peaceful organizations.

The other European country whose history disproves the argument for one world government is Luxemburg—called "a 999-mile paradise in a nutshell." It is a small country, with room for everybody, beautiful, well-kept, whose citizens like to call it "Little Switzerland." There are no beggars there and little poverty. It did not escape the hard hits of war, lying in the path of Nazi onrush to conquer France. A writer in Newsweek, after a recent visit to Luxemburg, says "it is a little paradise snuggled down in the folds of a heaving, agitated continent."

The history of Switzerland and Luxemburg disprove the theories about the dream of one-world government. Their history ought to silence those who worship at the shrine of bigness.

[From the Raleigh (N. C.) News Observer of January 7, 1948]

WORLD FEDERATION

The failure of the United Nations to secure the promised peace has caused men hopeless of world peace to fly to the arms of consolidated "bigness." They tell us the only way to reach the goal is to have one government for all the world—a sort of Tower of Babel for our century.

Former Justice Roberts is the ablest advocate of embracing what Justice Brandeis said was the greatest danger to America—Bigness. Until the United States is lost in the one-world government, Mr. Roberts would have Uncle Sam adopt universal military training. He tells us that western Europe, far from being bankrupt, is actually rich in freemen, and these are the best assets we have outside of the United States. He proposes a trans-Atlantic convention representing all the democracies to advance the one-world government.

Uncle Sam will not permit himself to be swallowed or lose his identity.

We Must Save Europe Without Losing America

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Friday, January 16 (legislative day of Wednesday, January 14), 1948

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "We Must Save Europe Without Losing America," which appeared in the NEA Journal of January 1948.

This statement was formulated by the legislative commission of the National Education Association, which consists of the following members:

H. M. Ivy, Meridian, Miss., chairman; Arthur F. Corey, San Francisco, Calif.; Frank C. Heinisch, Omaha, Nebr.; J. Easton Parratt, Salt Lake City, Utah; Forrest Rozzell, Little Rock, Ark.; Mrs. Grace Dodge, Boothbay, Maine; A. O. Mathias, Cincinnati, Ohio; Robert Wyatt, Indianapolis, Ind.

It was approved as a statement of policy by the executive committee of the National Education Association, consisting of the following members:

Glenn E. Snow, St. George, Utah, NEA president; Pearl A. Wanamaker, Olympia, Wash.; Ivan R. Amerine, Columbus, Ohio; Edgar G. Doudna, Madison, Wis.; Gertrude E. McComb, Terre Haute, Ind.; Martin P. Moe, Helena, Mont.; Corma A. Mowrey, Clarksburg, W. Va.; L. V. Phillips, Indianapolis, Ind.; Beulah Keeton Walker, Dallas, Tex.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WE MUST SAVE EUROPE WITHOUT LOSING AMERICA

World War II ended in victory over the forces of fascism. No sooner had it ended, however, than a bitter struggle between the two conflicting ideologies of communism and democracy arose.

It is perfectly clear that democracy and the system of free enterprise are under vigorous attack in western Europe. It is also clear that they are seriously threatened even in our own country.

Today the American people are called upon to support democratic ideals around the globe. There is no other choice. Retreat into isolation is impossible in today's world.

The future of freedom throughout the world is indissolubly linked with our own.

AID GRANTED ABROAD

Congress has in recent years granted large amounts of aid to western Europe and China.

It has just appropriated over $500,000,000 of immediate stop-gap aid. The next few years, under the Marshall plan, may require from twelve to seventeen billion dollars of aid.

If it will help to keep the peace, to get Europe on its feet, to stem the tide of totalitarianism, this aid will be a small price to pay compared to the three hundred billions spent on the last war.

It is of the utmost importance, however, in the trying years ahead, that we strengthen our defense at home as well as abroad.

We must conserve and develop our human resources with care and foresight. The basic defense of our Nation and of the cause of freemen resides in the intelligence and physical well-being of all citizens.

There is no surer means of strengthening the enemies of democracy than by neglecting these two basic human factors in American life.

THE PRICE OF IGNORANCE

To tolerate ignorance within our Nation is to invite disaster. The alien propagandists would wish for nothing better than for large numbers of our young people to reach adulthood in ignorance, without a deep and abiding faith in the American way of life.

Unless every child in his early years acquires a thorough knowledge of, and a love for, the democratic institutions in our great Republic, he inevitably is a potential threat to the security of our country.

It is a shocking fact that, while the Federal Government wisely appropriates billions of dollars for foreign aid of all kinds to help turn the tide of human affairs strongly in the direction of democracy, it has so far refused to spend even a few million dollars to help public elementary and public secondary schools to eliminate the ignorance which invites acceptance of alien ideas at home.

THREATENING CIRCUMSTANCES

Advocates of communism, for example, find strong potential allies in such threatening circumstances as the following conditions within the United States:

Five million children were without opportunity of becoming well grounded in the foundations of American life because they were not in school at all, according to the United States Census of 1940.

Some communities in some States in 1940 spent 60 times as much for the education of a child as did some communities in other States.

Ten million adults in 1940 had so little schooling as to be almost illiterate.

Three million of this number had never been enrolled in any school whatsoever.

Twenty-five percent of our people over 25 years of age in 1940 had 6 years or less of schooling.

Educational neglect caused selective service in World War II to reject the equivalent of 20 combat divisions, almost as many combat divisions as were deployed in the entire Pacific area during the war.

Right now, in 1947–48, there are: 100,000 teachers employed on emergency substandard certificates—1 in 9 as contrasted with 1 in 200 in 1939–40; large shortages of qualified teachers in many States; salary schedules so low in many States that often the ablest high-school graduates shun teaching as a career; not less than 2,000,000 children denied proper instructional opportunities as a direct result of the teacher shortage; overcrowded classrooms and heavy teacher load in every State; educational slum areas in many States and communities; millions of children denied adequate school buildings, equipment, and instructional supplies.

Such conditions are tragic. They provide the kind of soil in which alien ideologies most readily take root and flourish.

The State legislatures in 1947 did a commendable job of providing the funds to start the schools back on the road toward their prewar status.

The additional appropriations, however, do not offset the decline in the purchasing power of the dollar and overcome the wartime deterioration in our schools.

A BREAK IN THE DIKE

The lack of good schools from which vast numbers of our youth suffer today is a major break in the dike of security for American democracy.

Many States lack the ability to finance good schools for all of their children. The States that are poorest are, as a rule, the ones that have relatively the most children to be educated; yet, as a rule, these less able States make the greatest effort to operate good schools.

Without Federal aid the States with less economic ability will, in the years ahead, continue to have large numbers of children who do not have a fair chance to become citizens well-grounded in the meaning of American democracy.

With Federal aid this grave threat to the American way of life can be averted.

CONGRESSIONAL PROPOSALS

Pending in the Eightieth Congress are two bipartisan bills, S. 472 and H. R. 2953, which authorize $300,000,000 per year to assist the States in more nearly equalizing educational opportunity through public elementary and public secondary schools.

This legislation provides for (a) the maintenance of State and local control over educational instruction and policy; (b) the distribution of funds to the States so that the largest amounts will go to those in greatest need; (c) the expenditure of Federal funds for the same purposes for which State and local school revenues, under State constitutions and State laws, are spent; and (d) no discrimination in the use of Federal funds for separate schools operated for minority racial groups.

The pending Federal legislation places its greatest emphasis upon the improvement of the public schools where they are most meagerly supported. A minimum acceptable standard of educational opportunity is the immediate objective.

To this end, the Senate Committee on Labor and Public Welfare has recommended the enactment of S. 472 by the United States Senate. The House Subcommittee on Education has favorably recommended H. R. 2953 to the House Committee on Education and Labor.

This, or similar, legislation should be enacted at the earliest possible moment.

FOR A NEW ERA

The Nation requires today a school program which will equip our youth for a new era in national and world affairs. Restoration of the State systems of education to their 1940 status is an ill-conceived and dangerous objective. The public schools of the Nation must be lifted to a level far above that of 1940 if this great Republic is to be successful in the drive to make secure the way of free men.

Financial aid to other nations of the world is but part of our obligation. An equally important part is the strengthening of defenses in our own country.

This part of the job must be done in the Nation's front line of defense—its public schools.

It is time for the Federal Government to share in the support of public education, which is our greatest bulwark against the foces which seek to destroy freedom within our own country.

It is commendable to expend billions of dollars to halt the march of communism abroad, but it is the height of folly, at the same time, to refuse to spend a few millions to complete the bulwark at home against the same forces in the minds of otherwise neglected and forgotten American children.

IN THE MINDS OF MEN

Every citizen who is concerned about the preservation and the strengthening of the American way of life has a vital stake in the ideological war that is now raging.

The battleground of the world is in the minds of men.

The victory for freedom must be won on both the foreign and the home fronts.

It cannot be won on the home front without good schools for all children and youth.

Only thus can we develop in the coming generation an imperishable faith and conviction in the ways of freedom and give to our children the knowledge and foundation skills with which to make democracy work.

The Battle of the Family Budget

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, January 16 (legislative day of Wednesday, January 14), 1948

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Battle of the Family Budget," by Richard L. Neuberger, which appeared in the New York Times Magazine on January 11, 1948.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BATTLE OF THE FAMILY BUDGET—A REPORT ON HOW A HOUSEHOLD OF FIVE STRUGGLES TO MAKE ENDS MEET ON AN INCOME OF $250 A MONTH

(By Richard L. Neuberger)

PORTLAND OREG.—A 6-cent spurt in the price of hamburger a few weeks ago was particularly unwelcome to Martha Andrews. Martha is a 28-year-old housewife with a husband, Ted, aged 34, and three small children—Ted, Jr., aged 8; Jane, 2, and Robert, 7 months. While Ted was off fighting in Europe with General Patton's Third Army his mouth watered for Martha's baked hams and veal roasts. However, meat loaf, hamburger patties, and spaghetti with meat balls have become the regular diet in the wartime housing unit in which the Andrews live, and that is why the rise in the cost of hamburger from 42 to 48 cents a pound at the corner butcher shop did such damage to Martha's budget.

The Andrews are an average American family. Ted earns $250 a month pumping gasoline at an independent service station and garage 4 or 5 miles east of Portland, on U S 30 along the timbered shores of the Columbia River. This is $75 more than he earned at the same work before he went to war in 1942. Of the three children two were born after Ted returned from the Army with a medical discharge early in 1945.

For a time the rising cost of living merely inconvenienced the Andrews. Now it has passed far beyond the casual stage. Ted is not sure what the family would do if it had a serious illness. A small legacy left by Martha's parents is down to $350 and that is their only reserve. Half a dozen series E War bonds were cashed to pay for Christmas presents.

The Andrews take some comfort from the fact that practically all their friends seem to be in a similar predicament. Martha is certain of that from her conversations with other housewives who live in the housing project which was occupied by Henry J. Kaiser's shipyard workers during the war. She also gets letters from her married sister in Spokane, and Ted hears occasionally from men with whom he served in the Army.

All these sources indicate to the Andrews that their experience is by no means unique in this period of the highest prices in American history. Indeed, Martha says, "I suppose there must be millions of families all the way across the United States in just exactly the same boat. If they can keep afloat, I guess we can, but it's getting harder all the time."

How have the Andrews made out thus far? What fate do they think 1948 holds for their strained and battered budget?

It is easy to tell where the money goes today. The two chief items are food and rent. Forty-four percent of the monthly income, or $110, goes for food; rent, including light, heat, and water, is $49.50. And the remaining $90.50 of Ted's salary seems to disappear like a snowman in the noonday sun. Ted insisted on having a telephone installed when the new baby was on the way; this costs $2.75 for a four-party line. He spends $16.50 a month to carry his GI life-insurance policy. The family has no car, and transportation for Ted to and from work comes to $9. They budget $15 a month for medical care and prescriptions, and the total is nearly always spent.

All of this comes to over $200, and still some big items must be taken care of. So far as clothing is concerned, Martha improvises all she can. Jane is very much a little girl, but she wears slickers, "Dr. Dentons," and overalls which her brother Ted, Jr., long

ago outgrew. Martha paid $20 to a crippled friend with sewing skill to make an old coat into a trim suit, complete with the "new look." Ted wore his GI shoes to work until the uppers split away from the composition soles, and then had to count out $15.50 for a new pair which would withstand grease and gravel.

With five $500 deductions, including his own, Ted Andrews' income taxes are small. He pays $42 a year to the Federal Government and $6 to the State of Oregon. Ted says he has no complaint about taxes, but he and his wife resent the high prices that keep them from saving. "After a few dentist's bills and other odds and ends," says Ted, "we don't even have enough left when the month is over to pay for a week's summer vacation 75 miles away at the beach."

Martha allocates $25 for food each week. Last week she spent $24.89, in this way:

Meat	$7.00
Milk (9 quarts)	2.07
Cheese	1.00
Eggs (3 dozen)	2.13
Bread (7 loaves of 1½ pounds each)	1.47
Staples (sugar, coffee, flour, etc.)	2.25
Fruit (canned and fresh)	3.00
Vegetables (canned and fresh)	3.00
Margarine (3 pounds)	1.32
Baby food (canned)	.72
One quart ice cream	.43
Ted's contribution to coffee-and-soup fund at garage	.50

Before the war, with less money, Martha was able to serve leg of lamb or even prime ribs for Sunday dinner and some kind of meat or fish the other 6 nights. Now she buys roasts only occasionally, and on at least two evenings a week the principal course consists mainly of rice, macaroni, or noodles. Many months ago Ted cut out the irregular indulgence of a hot lunch at the diner across the highway from the garage. He and the other workers bring sandwiches and make coffee or heat canned soup over a hotplate.

Only on Sundays does Martha serve ice cream to her family. Otherwise they finish the principal meal with fresh fruit from the grocery store or peaches canned at home. At breakfast only the children get the juice of fresh oranges; the parents drink canned juice, which is cheaper. Eggs are the great luxury all enjoy; it was to enable Ted to start for work with two fried eggs under his belt that, nearly a year ago, the Andrews gave up butter. The one time that Martha entertained the other wives in the housing unit she served a big golden omelet and homemade applesauce.

Martha says all the culinary skill taught her by her mother has vanished in the onrush of inflationary food prices.

"I used to be famous for meat loaf," she tells me. "Everyone raved about it. The recipe was my mother's. But now I have to fill the meat loaf so full of bread crumbs or rice to stretch the hamburger that it has no resemblance to the original. Thanksgiving Day also upset some notions which had lasted since childhood. Even on the farm turkey was a delicacy—yet Ted and I treated ourselves to a Thanksgiving turkey because it turned out to be only a few cents more a pound than hamburger."

She is indignant at warnings from the Government not to waste food. "How many families do they think are able to waste any food at these prices?" she asks, her dark eyes flashing. "That Thanksgiving turkey lasted us a whole week. We had it roasted, warmed over, served in cold slices, creamed and made into hash, croquettes, and soup. I don't believe I threw out enough of that turkey to fill a coin purse."

High prices have forced on the Andrews many economies. They get books at the public library instead of buying them at a bookstore. Except when a jovial customer has thrust a pack in his direction, Ted has not smoked a cigarette since the end of 1946. A pipe satisfies his taste for tobacco. Martha puts up her own jams, jellies, fruits, and vegetables. She and other housewives in the Vanport housing project even buy jars and lids in big quantities to get them cheaper. During the summer months Ted, a 6-footer who was star tackle in high-school football, often spends a Sunday helping cultivate a nearby truck garden along the Columbia bottomlands. Then he comes home laden with heads of cauliflower, bags of peas, and ears of golden corn.

Martha cuts the children's hair, washes her own and gets a permanent but once a year, and then at a beauty school for less than half the regular price. Ted postpones his haircuts as long as he can; when he finally does get one, it is from a beginner at a local barber college for 40 cents instead of at a commercial shop for $1.

The high cost of hamburger and bread long ago ruled movies out of the Andrews budget. However, Ted discovered that by joining the Portland auxiliary police force he could get into shows free, and occasionally he sends Martha into a movie which he tells her is really colossal, while he stays at home with the children. He and Martha can't go together because they can't afford a baby-sitter. Teen-aged youngsters in the neighborhood want 50 cents an hour.

In his spare moments at the garage Ted works with the two mechanics. Within the next 9 or 10 months he expects to be tuning up motors and straightening out bent fenders. Then his salary will jump to $300, or perhaps even $350. However, he believes the increase will do him no good "unless somehow prices are brought into line." The worst of it is, says Ted, is feeling that he is on a treadmill. "At these prices," he says, "you can't build or buy a house, you can't get an automobile, you can't save for a vacation, you can't even put away some money for your children's education. That's the worst of the whole thing. We're just standing still. We can't get ahead of the game. Prices eat up every cent I earn."

The Andrews are resentful of economic conditions in general but their resentment is channeled in no particular direction. They didn't like it when in September their rent was raised $7 a month. The units of their housing development are of flimsy construction and the squeak of boards in the apartment next door is clearly audible in the Andrews home. But their special interests do not shape their whole philosophy. A member of the auto mechanics union, Ted believes organized labor "made it tough on the white-collar fellow by getting pay boosts the white-collar fellow had to help pay for, without any assistance from a union of his own." Ted also thinks business profits are too high and that "the rich man is getting richer."

Ted and Martha are registered as Republicans, principally because they were brought up in rural Oregon, which is predominantly Republican. Ted worked on a farm until he and Martha, the daughter of a German-born wheat rancher, were married in 1938. They moved to Portland a few months later and Ted greased cars while Martha was a member of a championship girls' swimming team.

The Andrews voted a straight Republican ticket in November 1946. They admit they are disappointed, for they thought even then that prices had risen far higher than they should. "We hoped the Republican Congress would bring down the cost of living," says Martha. "Instead, prices are worse now than they were at the time of the election—much worse. I don't know how we will vote this year, but I'm sure it will be for the party we think will do the most to end these fearful prices."

There doesn't seem to them to be anything they can do directly. "I thought at first that buyers' strikes might be the answer to high prices," says Ted. "That was all right when it came to automobiles, radio sets, new refrigerators and even shoes and clothes. But you can't save on food when you have three little children. I believe I'd buy my children milk with the last dollar in my jeans, even if it was 43 cents a quart instead of the 23 it is now."

Ted and his wife have strangely conflicting fears. On the one hand, they fear that inflation may get further out of bounds, that prices will go higher. Ted predicts that his next raise will simply keep him where he is now. Yet the Andrews also fear a deflation, the possibilities of a crash. "If we have another big depression, where will I be?" Ted asks.

When they express these fears, Ted is grim and his wife somber. Yet, on the whole, the Andrews are not a gloomy or melancholy family; in fact, they are quite the contrary. The three children are chubby and cheerful. The parents likewise are in excellent health. Martha, straight and trim, still can flash 100 yards through the water in 66 seconds. And Ted, when he takes a rusty set of clubs and rides on the trolley to a public golf course, can negotiate 18 holes in the low eighties.

Ted had hoped to study civil engineering at Oregon State College, but the $90 a month of the GI bill of rights was not enough to feed five mouths at 1946 prices, let alone those of 1948. Ted overcame that disappointment, and now he takes solace in the belief that some day he will be an expert auto mechanic.

Despite their fears, Ted and his wife are hopeful that both the luxuries and necessities of life will again be available at prices which make sense and that the adjustment will come before the country suffers permanent economic damage.

Admiral Nimitz's Valedictory

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Friday, January 16 (legislative day of Wednesday, January 14), 1948

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the final statement made by Fleet Adm. Chester W. Nimitz, United States Navy, on the day of his departure from the Navy Department. This article, which amounts to the distinguished admiral's valedictory, I believe so well expresses the situation prevailing today that every Member of Congress and the people throughout the country should read it. Hence, I am taking this opportunity to make it a part of the CONGRESSIONAL RECORD.

I also ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial from the New York Herald Tribune of January 7, 1948, summarizing the context of Admiral Nimitz's study.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of January 7, 1948]

ADMIRAL NIMITZ'S VALEDICTORY

Admiral Nimitz's valedictory study of the function of the Navy in a possible next war displays a mind alert to the lessons of World War II. Though he calls upon history to prove that the basic pattern of naval warfare and the use of sea power has not changed

since the seventeenth century, he finds it quite consistent to weave into that pattern the use of all the new weapons of defense and offense and dwells not so much on sea power alone as on air-sea power as occupying the leading role in the initial stages of a future war. In other words, here is a highly distinguished sailor, who has recently retired as Chief of Naval Operations, who is very obviously abreast of the times.

Several points obtrude in the text of his study. One is that surface ships, and particularly transports and cargo ships, are as essential to successful naval operation as they ever were, perhaps more so; that a vast importation of supplies, which they alone are capable of handling, will be necessary; that for national protection against sneak attack an all-encircling radar screen must be set up on land and sea and by the use of submarines under the sea, and that both for the defense of vital areas and for offensive purpose, when and where necessary, we should establish floating air bases replete with supply and repair vessels which can maintain themselves at sea for months at distances far removed from land bases and on which task forces, battleships, and so on can depend as they would on land bases.

Though he doesn't say so, those would obviate the diplomatic difficulties relating to the creation of such establishments on foreign territory (as witness Panama's rejection of the United States request for land bases to guard the Canal). There would also be, as the admiral points out, the great advantage of secrecy and mobility with power to penetrate offensively the enemy's territory for several hundred miles inland. Such floating bases were first devised by the Navy in the Pacific campaign. One is now operating in the Mediterranean. Admiral Nimitz strongly urges a development of the system.

He also calls attention to our shortage of military manpower, the intimation being that he strongly favors universal military training. One can readily understand his sentiment in this respect.

DEPARTMENT OF THE NAVY.

On the day of his departure from the Navy Department, Fleet Adm. Chester W. Nimitz, United States Navy, forwarded to the Secretary of the Navy the attached paper, prepared in his office, expressing his views on the function of the naval forces in maintaining the future security of the United States.

The paper states that the Navy provides the first line of defense on, under, and above the sea. It states further that if war cannot be prevented, the Navy's function is to carry the war to the enemy so that it will not be fought on United States soil.

"STATEMENT BY FLEET ADMIRAL NIMITZ

"THE FUTURE EMPLOYMENT OF NAVAL FORCES

"1. Sea power: Sir Walter Raleigh declared in the early seventeenth century that "whosoever commands the sea commands the trade; whosoever commands the trade of the world commands the riches of the world, and consequently the world itself." This principle is as true today as when uttered, and its effect will continue as long as ships traverse the seas. That this period extends beyond the foreseeable future is apparent when it is realized that the 100,000 long tons of cargo which 44 ships can transport from San Francisco to Australia monthly would require for the same purpose 10,000 four-engined C-87 airplanes manned by 120,000 highly trained personnel, plus 89 seagoing tankers to provide gas along the route and at the far end of the run. Cargo-carrying aircraft will no more replace vehicles of the same type on the seas than they will those on land. In fact, cargo-carrying ships will become increasingly important to the United States both in peace and in war. Our national resources in petroleum products alone are inadequate for the prosecution of a long war. A realistic appraisal of the requirements in matériel for this Nation to engage in war shows that an uninterrupted stream of imports will be essential, and that the volume of these imports is such that they must come by sea.

"2. The United States possesses today control of the sea more absolute than was possessed by the British. Our interest in this control is not riches and power as such. It is first the assurance of our national security, and, second, the creation and perpetuation of that balance and stability among nations which will insure to each the right of self-determination under the framework of the United Nations Organization.

"3. Our present control of the sea is so absolute that it is sometimes taken for granted. As a result, there is a faulty tendency, under the assumption that any probable enemy in a future war possesses only negligible apparent fleet strength, to give no major offensive role to the Navy—only a supporting role and the prosecution of antisubmarine warfare. Opposing fleets have been eliminated, it is reasoned, hence ours should be reduced to a mere support force and its appropriations transferred to certain types of aircraft which would be the answer to all our problems of offense and defense. The answer is not so simple. Technology in warfare, as in all else, has simplified some details but has greatly complicated the aggregate. The submarine and the torpedo, far from eliminating combatant surface ships, produced the depth charge, sonar and electronic sounding, and the antisubmarine aircraft which in two wars have successfully defeated them. Similarly, the airplane in its application against naval forces has already given creation to the proximity fuse, homing missiles, electronic ranging and gun control, and carrier attack aircraft which, during World War II, repeatedly defeated concentrations of Japanese land-based aircraft wherever encountered.

"4. Our present undisputed control of the sea was achieved primarily through the employment of naval air-sea forces in the destruction of Japanese and German sea power. It was consolidated by the subsequent reduction of these nations to their present impotence, in which the employment of naval air-sea forces against land objectives played a vital role. It can be perpetuated only through the maintenance of balanced naval forces of all categories adequate to our strategic needs (which include those of the nontotalitarian world), and which can flexibly adjust to new modes of air-sea warfare and which are alert to develop and employ new weapons and techniques as needed.

"5. Employment of naval forces in the past: A report made in 1657 by one of Cromwell's admirals that: 'After we destroyed the ships we plied our guns against the forts,' indicates that the purpose of achieving sea power and the recognized practice of applying pressure against an enemy wherever he can be reached by naval forces has not changed from that day to this. The basic objectives and principles of war do not change. The final objective in war is the destruction of the enemy's capacity and will to fight, and thereby force him to accept the imposition of the victor's will. This submission has been accomplished in the past by pressure in and from each of the elements of land and sea, and during World Wars I and II, in and from the air as well. The optimum of pressure is exerted through that absolute control obtained by actual physical occupation. This optimum is obtainable only on land where physical occupation can be consolidated and maintained. Experience proves that while invasion in some form—of adjacent sea areas, covering air spaces, or enemy territory itself—is essential to obtain decisions in war, it is sometimes unnecessary to prosecute invasion to the extent of occupying a nation's capitol or other vital centers. Sufficient of his land, sea, or air territory must be invaded, however, to establish the destructive potential of the victor and to engender in the enemy that hopelessness which precedes submission. The reduction of Japan is a case in point.

"6. Naval forces have always played a vital and often deciding role in warfare by invading adjacent sea areas to project their pressure on enemy territory. Before the invention of gunpowder, in the days of Greece and Rome, there was no such thing as a fleet in being. Naval forces were built as they were needed, and the transport had equal standing with the man-of-war. The latter served to clear the narrow seas for the transport to discharge its force of men and weapons upon enemy territory where the decision was obtained. In the long history of British domination of the seas, it is safe to say that the Royal Navy fought as many engagements against shore objectives as it did on the high seas. Singularly it was the defeat by his shore batteries of a Royal Navy squadron off Toulon that gave Napoleon early in his career a disdain for British seapower. It was this same British seapower, in the form of a tight blockade which denied world intercourse to him but assured it to his enemies, and in the victories of Copenhagen, the Nile, and Trafalgar, which was the controlling factor in his eventual defeat. Also the great British strategic bastion of Gibraltar was captured in 1704 by a force of Royal Marines and seamen landed from a naval squadron which had first pounded the Spanish garrison into a state of confusion and despair.

"7. The naval history of our own Civil War is a vivid portrayal of the employment of naval forces against an enemy without a fleet. Naval forces were a controlling factor in the Confederate defeat and in shortening the war. The Confederate States had no fleet. They were a consolidated land power with the advantage of interior lines and the possession of several large sea and river ports affording access to world commerce which they vitally needed. The Federal States outlined their naval missions as (a) the blockade of southern ports along a coastline of more than 3,000 miles; (b) the reduction, in conjunction with the Army, of Atlantic and Gulf strongholds; and (c) the occupation and control of the Mississippi and its tributaries. The blockade was established and soon Confederate commerce, as such, ceased. Naval operations started on the western rivers in the first year of the war—November 1861. They were mainly in conjunction with the Army, but frequently objectives were accomplished by naval gun and mortar fire alone. By April 1862, with the passage of Farragut's squadron past the Mississippi entrance forts and the capture of New Orleans, the Confederate States had been sealed on the western, Gulf, and Atlantic boundaries. It is safe to state that had they been unmolested by sea power and had they received money, men, and munitions from Europe, South America, and Mexico they might well have consolidated their secession.

"8. The development between World Wars I and II of naval aviation provided naval forces with a striking weapon of vastly increased flexibility, range, and power. The development and use of this weapon in World War II against both sea and land objectives is one of the great achievements in modern warfare. It spearheaded our Pacific attack. First, it swept the sea of all naval opposition. Then it became the initial striking weapon in the capture of Guam, Saipan, and Iwo Jima—the advanced bases from which long-range bombers were able to strike the vital centers of the Empire. Finally, like the British squadron in 1657, our Navy "after destroying the ships it plied its guns against the forts" and participated directly in the destruction of those vital centers on Okinawa and the home islands by gunfire and bombing; in spite of the concentration of Japanese air power our Navy made possible the success of our gallant Ground Forces.

"9. In all of these operations the employment of air-sea task forces demonstrated the ability of the Navy to concentrate aircraft strength at any desired point in such numbers as to overwhelm the defense at the point of contact. These operations demonstrate the capability of naval carrier-based aviation to make use of the principles of mobility and concentration to a degree possessed by no other force.

"10. Employment of naval forces in the future: In addition to the weapons of World War II, the Navy of the future will be capable of launching missiles from surface vessels and submarines and of delivering atomic bombs from carrier-based planes. Vigilant naval administration and research is constantly developing and adding to these means. In the event of war within the foreseeable future, it is probable that there will be little need to destroy combatant ships other than submarines. Consequently, in the fulfillment of long-accepted naval functions and in conformity with the well-known principles of warfare, the Navy should be used in the initial stages of such a war to project its weapons against vital enemy targets on land, the reduction of which is the basic objective of warfare.

"11. For any future war to be of sufficient magnitude to affect us seriously it must be compounded of two primary ingredients: vast manpower and tremendous industrial capacity. These conditions exist today in the great land mass of central Asia, in east Asia, and in western Europe. The two latter areas will not be in a position to endanger us for decades to come unless they pass under unified totalitarian control. In the event of war with any of the three, we would be relatively deficient in manpower. We should, therefore, direct our thinking toward realistic and highly specialized operations. We should plan to inflict unacceptable damage through maximum use of our technological weapons and our ability to produce them in great quantities.

"12. Initial devastating air attack in the future may come across our bordering oceans from points on the continents of Europe and Asia as well as from across the polar region. Consequently, our plans must include the development of specialized forces of fighter and interceptor planes for pure defense, as well as the continued development of long-range bombers. Offensively, our initial plans should provide for the coordinated employment of military and naval air power launched from land and carrier bases, and of guided missiles against important enemy targets. For the present, until long-range bombers are developed capable of spanning our bordering oceans and returning to our North American bases, naval air power launched from carriers may be the only practicable means of bombing vital enemy centers in the early stages of a war.

"13. In summary it is visualized that our early combat operations in the event of war within the next decade would consist of:

"Defensively:

"(a) Protection of our vital centers from devastating attacks by air and from missile-launching submarines.

"(b) Protection of areas of vital strategic importance, such as sources of raw materials, our advanced bases, etc.

"(c) Protection of our essential lines of communication and those of our allies.

"(d) Protection of our occupation forces during reinforcement or evacuation.

"Offensively:

"(a) Devastating bombing attacks from land and carrier bases on vital enemy installations.

"(b) Destruction of enemy lines of communication accessible to our naval and air forces.

"(c) Occupation of selected advanced bases on enemy territory and the denial of advance bases to the enemy through the coordinated employment of naval, air, and amphibious forces.

"14. Of the above activities or functions there are certain ones which can be performed best by the Air Force and certain others which can be performed best by the Navy—it is these two services which will play the major roles in the initial stages of a future war. The Eightieth Congress took cognizance of this fact when, in the National Security Act of 1947, it specifically prescribed certain functions to the Navy, its naval aviation and its Marine Corps. In so doing the Congress gave emphasis to the fact that the organizational framework of the military services should be built around the functions assigned to each service. This is a principle which the Navy has consistently followed and is now organized and trained to implement.

"15. Defensively, the Navy is still the first line the enemy must hurdle either in the air or on the sea in approaching our coasts across any ocean. The earliest warning of enemy air attack against our vital centers should be provided by naval air, surface, and submarine radar pickets deployed in the vast ocean spaces which surround the continent. This is part of the radar screen which should surround the continental United States and its possessions. The first attrition to enemy air power might be by short-range naval fighter planes carried by carrier task forces. Protection of our cities against missile-launching submarines can best be effected by naval hunter-killer groups composed of small aircraft carriers and modern destroyers operating as a team with naval land-based aircraft.

"16. The safety of our essential trade routes and ocean lines of communication and those of our allies, the protection of areas of vital strategic importance, such as the sources of raw material, advanced base locations, etc., are but matters of course if we control the seas. Only naval air-sea power can insure this.

"17. Offensively, it is the function of the Navy to carry the war to the enemy so that it will not be fought on United States soil. The Navy can at present best fulfill the vital functions of devastating enemy vital areas by the projection of bombs and missiles. It is improbable that bomber fleets will be capable, for several years to come, of making two-way trips between continents, even over the polar routes, with heavy loads of bombs. It is apparent then that in the event of war within this period, if we are to project our power against the vital areas of any enemy across the ocean before beachheads on enemy territory are captured, it must be by air-sea power; by aircraft launched from carriers, and by heavy surface ships and submarines projecting guided missiles and rockets. If present promise is developed by research, test, and production, these three types of air-sea power operating in concert will be able within the next 10 years critically to damage enemy vital areas many hundreds of miles inland.

"18. Naval task forces including these types are capable of remaining at sea for months. This capability has raised to a high point the art of concentrating air power within effective range of enemy objectives. It is achieved by refueling and rearming task forces at sea. Not only may the necessary supplies, ammunition, and fuel be replenished in this way but the air groups themselves may be changed. The net result is that naval forces are able, without resorting to diplomatic channels, to establish offshore anywhere in the world airfields completely equipped with machine shops, ammunition dumps, tank farms, warehouses, together with quarters and all types of accommodations for personnel. Such task forces are virtually as complete as any air base ever established. They constitute the only air bases that can be made available near enemy territory without assault and conquest; and furthermore they are mobile offensive bases that can be employed with the unique attributes of secrecy and surprise—which attributes contribute equally to their defensive as well as offensive effectiveness. Regarding the pure defense of these mobile air bases the same power projected destructively from them against the enemy is being applied to their defense in the form of propulsion, armament, and new aircraft weapons whose development is well abreast the supersonic weapons reputed to threaten their existence.

"19. It is clear, therefore, that the Navy and the Air Force will play the leading roles in the initial stages of a future war. Eventually, reduction and occupation of certain strategic areas will require the utmost from our Army, Navy, and Air Force. Each should be assigned broad functions compatible with its capabilities and limitations and should develop the weapons it needs to fulfill these functions, and no potentiality of any of the three services of the Military Establishment should be neglected in our scheme of national defense. At the same time each service must vigorously develop, in that area where their functions meet, that flexibility and teamwork essential to operational success. It should also be clear that the Navy's ability to exert from its floating bases its unique pressure against the enemy wherever he can be reached—in the air, on sea or land—is now, as it has been, compatible with the fundamental principles of warfare. That our naval forces can be equipped defensively as well as offensively to project pressure against enemy objectives in the future is as incontrovertible as the principle that every action has an equal and opposite reaction.

"20. In measuring capabilities against a potential enemy, due appreciation must be taken of the factors of relative strength and weakness. We may find ourselves comparatively weak in manpower and in certain elements of aircraft strength. On the other hand we are superior in our naval air-sea strength. It is an axiom that in preparing for any contest, it is wisest to exploit—not neglect—the element of strength. Hence a policy which provides for balanced development and coordinated use of strong naval forces should be vigorously prosecuted in order to meet and successfully counter a sudden war in the foreseeable future."

The Causes of Industrial Peace

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, January 16 (legislative day of Wednesday, January 14), 1948

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech on the subject The Causes of Industrial Peace, recently delivered by Mr. Clarence Francis, chairman of the board of the General Foods Corp., before the fifty-second annual congress of American industry, National Association of Manufacturers, in New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CAUSES OF INDUSTRIAL PEACE

(By Clarence Francis, chairman of the board, General Foods Corp.)

There is something both ironic and hopeful in the fact that we should be discussing the causes of industrial peace here today.

It is ironic that Americans, the most advanced people technically, mechanically, and industrially, should have waited until a comparatively recent period to inquire into the most promising single source of productiyity, namely, the human will to work.

It is hopeful, on the other hand, that the search is now well under way. And perhaps the delay is not so strange, after all. Medicine was centuries old and the doctors were still bleeding people when the first hesitant steps were taken in preventive medicine. Along the path of progress the most obvious signposts are often the least noticed. It is obvious today, but it came as a great discovery, that a cause of freedom from disease is health. We are learning now that a cause of freedom from industrial strife is healthy human relations. Just as there are degrees of health, so there are degrees of industrial peace. The sort we seek is a vibrant, affirmative, productive peace. We know that it can exist because we have seen it exist. There have been few times within recent memory when we have lacked examples of this fact.

Yet, ignoring these signposts, we have lived amid the din of industrial disorder from the start. Our economic expansion has been marked by periodic disruptions from the days of the anthracite and rail strikes of the 1870's through the sit downs of the 1930's, right on down to the present.

Why has this been so? Basically, I think, it is because too many employers somehow fell into the grave initial error of treating labor as a commodity, because management and labor leaders became preoccupied with the rules of industrial warfare, because we concentrated on the vocabulary of difference—demands, grievances, disputes, prerogatives, rights, and all the rest, and because, by implication, we accepted the notion that the interests of labor and management are basically opposed.

That's an irony, surely, since the interests of 60,000,000 Americans at work are served not by the cultivation of disunity and discord but by unity and cooperation. The tragedy is that millions of working Americans, whether organized or not, are suffering from the nonexistence of mutual endeavors to create smooth relationships.

You are not the kind of men who came to responsibility by leaving things to chance. I do not believe any industrialist—ever again—dares leave the development of good working human relationships to chance.

To me the ideal in industrial peace would be—not 15,000,000—not 30,000,000, but 60,000,000 Americans working together in well-planned and understood human relationship. Think what that would mean in terms of national unity, production, and prosperity. When we consider such a goal, we are necessarily compelled to adopt the broadest possible outlook in our quest for total industrial peace.

For this reason, I beg to be excused from dwelling at length on the Taft-Hartley Act, the Wagner Act, or any of their legislative predecessors. I do not mean to discount the importance of labor legislation. But conceding its importance, we must grant that it is but one of a number of trees in a very large forest. The rules of the Marquis of Queensbury have their application, but they will hardly suffice as a philosophy of life.

In other words, you can legislate the conditions under which management and labor can quarrel.

You can legislate the conditions under which management and labor can maintain an armed truce.

You can even legislate the conditions under which management and labor can enjoy a negative sort of peace without fighting at all.

But you cannot legislate harmony into the hearts of men.

To attain positive industrial peace, we need something more than bylaws and compulsory rules. We need productive teamwork. We need men working willingly together toward known goals. We need, in short, workers who are informed workers who enjoy a sense of security, workers who are given a feeling of individual dignity, workers who are properly and fairly paid, workers who are given nonfinancial incentives.

You will notice that this list lays little stress on wages as such. This might once have aroused the protests of the old-school, hard-headed employer whose philosophy was "treat 'em rough and tell 'em nothing," who said with finality, "loyalty goes with the pay envelope." But I think you will grant with me today that it may be possible to be hard-headed without being practical. I don't think it is practical to assume that wages are all-important. I just don't happen to think it is true.

Look back over the history of labor relations. The industries that have been wrecked, stymied, and disrupted by strikes most often—the industries most plagued by low morale, slow-downs, and feather-bedding—are among those in which the highest wages are paid. In those industries, I believe, both management and labor have been barking up the wrong tree for decades. Unfortunately, they do not seem much closer to true harmony today than they ever were. And I think we must all agree that you cannot expect a high degree of efficiency from an industry beset by quarrels.

On the other hand, I happen to know of a company that established two almost identical operations during the war. Both plants were making the same item with the same equipment under virtually the same set-up. The only important difference between the two operations was this: One was located in an area where the whole psychology is one of militancy and agitation over rights and prerogatives. The other was located in a small city off the beaten path where the employees were newly recruited to industry with no background of chronic conflict and mutual antagonism. The measured man-hour productivity in the second of those two plants exceeded that of the first by 25 percent.

This and many similar examples indicate that employee attitudes are a vital factor in positive industrial peace. Can we go one step further and conclude that employee attitudes, over the long run, are conditioned by management attitudes toward employees? I believe we can. For it has always seemed to me that:

You can buy a man's time.

You can buy a man's physical presence in a given place.

You can even buy a measured number of skilled muscular motions per hour or day.

But you cannot buy enthusiasm; you cannot buy initiative; you cannot buy loyalty; you cannot buy the devotion of hearts, minds, and souls.

You have to earn those things.

Now we cannot safely assume that we know the employees' attitude unless we inquire. There are today means by which attitudes can be measured. I have seen such measurements taken under conditions which permitted employees to confide freely to a third party their real feelings about their jobs, their immediate superiors, and their company. I have seen some very cocky supervisors—and managers at high levels, for that matter—get some severe shocks when the returns came in. And many of these studies, believe me, covered people who were mighty well paid.

I realize that there was a time when any employer who so much as advocated an interest in employee attitudes would have been cried down as a softy, a Santa Claus, a namby-pamby, a Pollyanna, a wet nurse, or what you will. Today no one of us should fear to stand up on his hind legs and proclaim that improved employee attitudes can be vindicated on a business basis in terms of cold, hard dollars and cents.

The real irony is that of the employer who rushes out of his office past scores or hundreds or thousands of people whom he doesn't understand and who don't understand him and goes home for the week end to spend hour after hour trying to earn the confidence of a dog in order to teach him to hunt or to earn the confidence of a horse in order to teach him to jump.

When will we learn the wisdom of Pope's admonition that "the proper study of mankind is man"? I think we are learning. Turning from irony to hope, it seems to me that the brightest star on the industrial horizon is the rise of education and practice in human relations. This is a matter both of philosophy and techniques applied at the places where people work. Through the years, slowly, haltingly, and after many failures, we are evolving a code. Experience is giving us a body of techniques and, better still, a set of tested principles. Call it human engineering, industrial relations, personnel management, or what you will, it is a code and it is growing. Thomas G. Spates, one of my immediate associates, prefers to call it personnel administration, and in the hands of a man like Tom Spates it becomes something vastly broader than any set of rules for conducting contract negotiations or keeping personnel records.

In today's complex industrial structure, the development of better understanding between management and labor can't be left to chance. When you want to get to know a man better you don't begin by writing letters to his lawyer. You try to find some way of demonstrating your good will and communicating it to the man himself.

This is just as true of dealings between management and employees as it is of dealings between individuals outside working hours. Techniques and organization are needed—in small companies as well as big ones. And I am prepared to stand before you and say that, when the techniques, organization, and principles of good human relations are carefully applied, the end result is bound to be a greater measure of industrial peace.

Do I speak from experience? Partly—but I wouldn't want you to get the impression that any company, including General Foods, has attained the ultimate in good personnel administration. But this I will say confidently: A number of companies in a number of industries—including many that are represented in this room today—have carried the code of human relations forward with conspicuous success. Some of them, indeed, have been islands of harmony in a sea of unrest. So I think today we may say, on the basis of evidence, that good personnel administration is practical and desirable because it has worked. And on the reverse side of the medal we are brought face to face with the conclusion that the company which suffers repeated and prolonged labor troubles has no one to blame but itself.

As recently as 10 years ago, it might not have been possible to point out the pattern of a personnel administration program leading to industrial peace. Today I believe we have learned enough about the principles to enumerate them roughly step by step.

Step one, to me, is top management self-analysis. If management attitudes determine employee attitudes, we must begin by determining our own. Why are we in business anyway? Are we simply in it to make money or do we acknowledge a stewardship toward employees, stockholders, and consumers? Do we believe that what is good for America is good for business—or vice versa? Have we a management policy, a code of our own? Do we believe in our own validity and can we ask others to believe in it?

Do we, above all, believe in the freedom and dignity of the individual in a free American economy? Do we believe in the Bill of Rights? This is not flag waving. This is a concrete question of motivation.

As a nation we have fought wars—and today we are making unprecedented moves in foreign affairs—because of our belief in freedom. These things have direct, fundamental bearing on our own destinies, as individuals and as businessmen.

Do we then believe that political and economic freedom are inseparable, and that they are equally the rights of employers and employees? There is no literal warrant for this interpretation in the Constitution, but I happen to be one of those who believes that you cannot put freedoms in separate compartments or maintain one kind of basic freedom without the other.

Next, what experience do we want the people who work with us to have? Do we value cooperative attitudes? Do we want our employees to get a sense of dignity, achievement, satisfaction, and security through working harmoniously with others in a well-organized, rational, productive industrial structure and at fair wages?

Above all, are we willing to work to create these conditions?

And finally, are we willing to say that we will?

Even today relatively few managements have put their personnel policies on record for all to see. I do not happen to believe in panaceas in industrial relations. Far too often we have been beguiled by the belief that some one thing—profit sharing, the guaranteed annual wage, incentives—would prove a cure-all. Industrial peace is a lot of things. But of them all, I believe the most neglected and the most promising is the fairly simple matter of a written personnel policy. If you write it down you have got to live up to it or die trying. If you set a high standard, you will fall far short of perfection. But your performance, simply because you have pledged yourself to the standard, will be better than it would be if you lacked a specific goal.

Now there may be those who will say: "Well, this is all well and good for companies that are just starting to experiment with relatively peaceful backgrounds. But what about the company that is already pinned down by conflicts and restrictions involving not only itself but perhaps a whole industry?"

I think we've got to be realistic and recognize that such situations exist. But my answer—based on the examples of a number of companies—would be this: there is no situation so bad that it can't be helped materially by the application of human-relations principles just as there is no patient so ill that he can't be helped by health measures. And step 2, to repeat, is a formulated policy.

In 1936 our company set out to prepare a statement of personnel policy. There were few companies on whose experience we could draw. It was the work of months to evolve a document to which the various levels of management and supervision could subscribe. Finally we nailed to the masthead a simple set of principles and policies relating to organization, administration, consultative supervision, employment, hours of work, wages, working conditions, and benefits. I can't quote it in full here but to me the real substance of it has always lain in this conclusion:

"The officers of General Foods want to make clear that, in addition to other responsibilities, each operating executive, manager, and supervisor who directs the work of others will be held responsible for the wholehearted and effective execution of the principles of personnel administration and employee relations set forth here. We want, and need, the cooperation, interest, and loyalty of all employees. We want employees to be happy in their work relationships and well informed regarding the enterprise in which we all are engaged. We want this business to be conducted in an efficient manner and in a spirit of friendliness to the mutual advantage of employees, management, stockholders, and consumers."

Back of that is a memorable statement of management philosophy made by Colby M. Chester when he was chairman of our board:

"An employee is a human being and as such is entitled to the respect and consideration which one honorable person automatically extends to an equally honorable person."

Mr. Chester didn't reduce that to writing until 1944, but he has lived it through a life of sterling business leadership, making it a part of the character and moral code of the business.

Now, assuming that the first two steps—management self-analysis and the preparation of a written policy—have been taken, the third follows naturally. Management has subscribed to a set of principles. All levels of management must now proceed to make those principles effective. This means that both the personnel administration and public-relations functions—which add up to human relations—must be represented in the highest echelons of management to provide the techniques and assist in the formation of policies by which the principles are made effective. Incidentally, it is significant, I think, that, in a recent organizational change at General Foods, both the personnel administration and public-relations departments report directly to the chairman.

After step three has been taken the process branches out into new discoveries, new activities, new methods of securing the utmost in the effective utilization of the entire personnel. Among the visible effects are not only a greater freedom from friction but a positive improvement in organizational effectiveness, in lowered turn-over, better morale, greater productivity, and reduction in unit costs. We have seen real results. But we still have far to go. I can't go deeply into techniques here, but I just wish I had time to tell you of some of the things we have learned about evaluating, training, and organizing management itself to do a better job. This is just one phase of a broad, overall program—and we have barely scratched the surface. We have had our problems, and I rather think we've been lucky at times. But we have been at it long enough to convince ourselves that sound personnel administration does pay.

But let us face the even bigger issue: Just as health is necessary to physical survival, so today I believe that good human relations at the places where people work are necessary to the survival of private enterprise.

"No human institution," says Howard Chase, another of my immediate associates, "whether it be a State, a church, a lodge, a labor union, or a corporation, can survive for very long the sustained mass disapproval of man." And he adds: "The American people have never demanded perfection; they have mistrusted anyone who promises it. But they do demand from their industrial and political leaders the will to progress toward the great and simple goals."

Beyond doubt we live in a questioning age. All over the world people are looking dubiously at established institutions—hopefully at new ones.

On the negative side we know that we simply cannot afford the consequences of industrial conflict. We cannot allow the terrible danger of class consciousness to weaken our internal structure. We cannot permit the collapse of the world economy. We dare not let hunger and poverty lead millions into communism.

All true. But, on the positive side, let us consider not what we have to lose but what we have to gain. Why should our policies be dominated by a negative dread of communism instead of a positive confidence in America? As Gardner Cowles said in a recent significant speech: "No one flees toward Russia." Communism is a dream. It has never worked and it never, in my opinion, will work. America is the symbol of an active reality which has already accomplished more for human betterment than any system on earth.

There's the real challenge.

All the raw materials of a great future are at hand for the American people and for the world. People want leadership. People need hope. They want to hear from us about plans and progress. They want to help us build a better future. They want to be on the team—not just with it. And if we have confidence in our system, in ourselves, and in those who work with us—and if we give the facts—we cannot fail.

Marshall Foch once said: "The most powerful weapon on earth is the human soul on fire." Can't we unleash the constructive impulses of people in a war on poverty and misery in a drive toward peace and plenty?

The process, to repeat, begins here at home in the places where people work. It calls for (1) management self-analysis; (2) written personnel policies; (3) functional representation of those policies at the highest levels of management; (4) constant striving for ever higher standards of personnel administration with emphasis on management personnel; (5) analysis of employee attitudes and elimination of genuine causes of dissatisfaction.

And of these the greatest is management self-analysis. Are we building? Are we striving to improve the system we represent? Are we vindicating ourselves as leaders of people? Do we believe in the creation of human satisfactions as well as in the creation of things? Will we discharge the responsibilities as well as the prerogatives of leadership? Will we act in time?

On the answers to these questions, I believe, will depend the future not only of free labor and free management in America but of freedom itself in the world.

Labor and the St. Lawrence Waterway

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, January 16 (legislative day of Wednesday, January 14), 1948

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject Labor and the St. Lawrence Waterway, delivered by Mr. Matthew Woll, vice president of the American Federation of Labor, before the New England Projects Conference at Boston, Mass., January 12, 1948:

LABOR AND THE ST. LAWRENCE WATERWAY

When the St. Lawrence seaway proposal came before the American Federation of Labor for consideration in 1940 it met with emphatic disapproval. A special committee had then been appointed, of which I was chairman, together with its secretary-treasurer, Mr. George Meany, and vice president, Mr. George Harrison, to inquire into the report on this subject to the executive council of the American Federation of Labor. Our committee unanimously reported opposition to the construction and maintenance of the St. Lawrence deep waterway and power project.

This report received the unanimous approval of the executive council and of the American Federation of Labor. Its findings and decisions have not been altered, changed or modified since. To the contrary, time and subsequent developments have not only vindicated and confirmed conclusions set forth at that time, but have strengthened

the soundness of the findings and decisions noted.

Today, in view of changing world affairs and relations affecting our national well-being and security, it is more important and urgent than ever that we refrain from venturing into an enterprise that can in no way profit our people but which does contain elements of grave danger to large sections of our working population, and undoubtedly will cause untold losses and hardships to business due to dislocations of some of our enterprises.

At the outset it is not to be assumed that labor claims for itself the right, nor does it seek to prevent public benefits merely because of an immediate and passing injury to the interests of labor. If the development of the St. Lawrence seaway and power project carried a great public benefit with only a slight impairment of the interests of a small segment of American labor, labor would hardly be justified in manifesting opposition. Labor, on the other hand, is an important, indeed, an essential part, of the American population. Its interests constitute a significant part of the general public interest.

If, therefore, it is doubtful whether the development of transportation and power by the St. Lawrence project would or would not benefit the country generally and at the same time it is clearly evident to inflict a clear and definite damage to certain localities, certain business enterprises, and to large and important segments of American labor, then the enterprise should not go forward.

It is only speculative oratory that presents a doubtful general public benefit. Contrarywise, there is evidence in abundance to prove injury will be inflicted on specific localities, specific industries, and specific segments of labor if this enterprise is to come to pass. That is exactly the case with the St. Lawrence seaway and power project.

Let us assume, for purpose of argument, that the 7-month canal proposed could, and would, take care of the transportation needs of the country as well—that is to say as cheaply—as the 12-month railroads, bus, and trucking industry and that transmitted water power would be as cheap through the area as local power from steam and/or oil plants. Where does that leave us?

A recent publication of the Department of Commerce evidences that the proposed canal would not only undermine but actually render useless the Port of Buffalo, its mills and grain elevators, and build up Montreal as a shipping point. It also makes clear that the small lake carriers would go into the scrap heap and that ocean shippers from the Canadian Port of Montreal—probably European bottoms—would carry grain from Montreal to Liverpool, bypassing the Port of New York as well as of Buffalo.

This report throughout shows, not only for the grain shipments but for Brazilian and Cuban ores, that Montreal would be built up as a transshipping point, that oil tankers from abroad would change bulk at Montreal or supply pipe lines at that point.

Montreal would be built up as a coal handling center and jobs would be created for the port-labor of Montreal at the expense of the port-labor of New York, Buffalo and other American ports.

To accomplish this destruction of our industries, trades and callings, and do an irreparable injury to some of our cities and populations, it is proposed that an enormous amount of funds be supplied by the American taxpayers. In addition, the bulk of work entailed is to be performed in Canada, employing Canadian labor and using Canadian materials in the construction itself. Every consideration—approached from an American point of view—leads to the conclusion of inadvisability of entering into an enterprise of this character.

This proposal is not only inequitable and unfair in that it enriches Canadian interests at the expense of our home industries; it likewise unjustly discriminates against home interests having so largely contributed to our national growth and well-being. Moreover, it seriously affects the employment opportunities of a large segment of our American working population in favor of an extremely doubtful and temporary advantage to a few commercial enterprises and foreign interests.

It is of utmost importance to note that the St. Lawrence development is a high capital, low operating cost development while our railroads, our trucking and automobile industry and as well our steam and oil power plants are low capital developments with somewhat higher operating costs. What that means for labor is that the St. Lawrence project would give much employment during the 5 or 6 years of the construction period and that when completed, the party would be pretty well over as far as labor is concerned.

Our railroad plant and rolling stock, our trucking and automobile facilities, and our oil and steam-power plants, on the other hands, are continuously expanding to meet the market needs which provide a constantly increasing high and continuous employment without time limit to the labor that maintains and operates these enterprises and systems.

The coal miners, the railroad crews, the truck and bus workers, the operators, distributors, and maintenance workers of our oil and steam powerhouses—all these constitute a very large segment of our population. They represent just about the highest type of stable and of steady labor in the world.

Assuming the total cost, throughout the life of the St. Lawrence project, would be precisely the same for construction and operation as the total cost in the same period for construction and operation of railroads, bus, and trucking, erection and operation of steam and oil powerhouses and the labor employed, nevertheless, the timing element would be entirely different. With the St. Lawrence, it would be feast followed by famine.

The huge expenditure on the St. Lawrence project—if undertaken will be made largely by employing first one trade, and after completion of their work followed by another and still another, etc., successively turning each group of workers loose to shift for themselves. These men would be attracted from their homes. When finished in their work, they would largely become floaters and add to a growing itinerant class. Their families, if any, would either have to pull up roots or be separated from the head of the family. This is not the habit nor the wish or desire of American workmen.

Moreover, the steadily increasing round-the-year employment of workers of the railroads, bus, and trucking industries, the local steam and oil powerhouses means a much more real income for the American workers than the broken time which would go with field labor under interruptions common to construction problems due to the difficulties of coordination, work in the open, and particularly so under the rigors of northern winters.

It is self-evident that both the seaway and power developments involve gravely the future interests of the coal industry and its workers in both the United States and Canada. Their interests are menaced not alone by a possible and highly probable replacement of white power development, but also by a possible and highly probable rivalry at some future date when Russian coal mined by workers whose standards of living is far inferior to that of the workers of Canada and the United States will enter into competition with the coal industry of both the Dominion and the United States. Coal may easily be transported as ballast in foreign ships to Canadian ports and to the Great Lakes section on the American side, and thus add to the element of possible and ruinous competition from abroad.

It is quite true that in a progressive society there is ever-present a constant shifting of the character of employment and of property investments, including the rise and fall of communities and of peoples. However, one would hardly advocate substituting artificially, politically or by ill-founded legislation, one character of property investment and character of employment of a large section of the Nation's population and of industries for an extremely doubtful and at best highly limited field of investment and uncertain and unstable form of employment, and for the sole benefit of a comparatively small section of our national population.

It is not the miners, railroad employees, trucking, and automobile workers and those dependent upon these industries and enterprises for their livelihood who will be adversely affected by the St. Lawrence project. The La Follette Seamen's Act, passed for the express purpose of insurig fair wages and decent American standard of living for our seamen in the merchant marine is threatened by this proposal.

If this project is carried through, ships flying foreign flags will be free to engage in commerce between all the Great Lakes cities and the ports of Cuba, Mexico, and South America. What chance will American vessels have, paying high American wages, maintaining high standards of living, in competition with ships flying the French, Chinese, British, and Italian flags. The waterfronts of Buffalo and of other large American lake cities would ultimately become blighted because of this unfair competition.

Advocates of the St. Lawrence River power project would have us believe the competitive situation of our New England textile mills would be greatly improved by the purchase of electric power from the St. Lawrence River to the textile mills and other New England enterprises. As a matter of fact, the planners of the St. Lawrence project intend giving to general industry little if any share in the economies which they say it will bring about.

To that end, they have invented quite an ingenious soothing sirup for industrial power users in that they allege that an enlarged volume of residential and rural electric loads to be attracted by the St. Lawrence development will somehow produce savings in distribution costs which it is said can ultimately be shared with industrial customers. This is more than a snare and delusion. It might fittingly be described as a misrepresentation.

It is to be noted that the output of the St. Lawrence power from New York State to other States is of a doubtful character because of New York law and because of the inescapable cost of transmission. These requirements and provisions and limitations that are to govern make the service to be rendered in other States of a most uncertain and doubtful character—both as to the volume and as to cost.

With regard again to the textile industry, it is well known, of course, that power costs are already a small percentage of total costs. A further reduction of electric costs will and can not, therefore, provide any substantial help in competing with southern mills. The remedy in this regard is of a more complex and more difficult nature.

There is embraced in the whole of this proposed development and resultant trends by far the greater danger of giving impetus and an incentive to the furtherance of nationalization of railroads by reason of grave additional burdens imposed, excessive difficulties to be faced, and dangers to be encountered by our railroads in taking care of peak loads in time of inoperation of the St. Lawrence seaway and in the great loss of trade, patronage, and income to be suffered at a

time of operation of the seaway. Add to this the potential danger in the power proposal which may lead straightway to nationalization of the electric-power companies, if we take past performances of the Tennessee Valley as a yardstick, and one can immediately foresee and at a glance note the ultimate dangers to which we are heading.

Reference to a supplemental agreement signed last year by the Corps of Engineers and the Power Authority of the State of New York evidences that the State of New York is authorized to sell power in other States, but only to municipalities and to cooperatives in those other States. In other words, the free-enterprise systems in Vermont and New Jersey or other communities could not buy St. Lawrence power direct from the Power Authority of the State of New York. A little TVA, as a go-between, would have to be set up. The whole of the arrangement seems well designed to undermine the structure upon which our American economy has thus far been founded.

Then again, omission from the resolution, in any authoritative form, of a plan for the disposal of the proposed electric-power output is in line with absence of guiding principles for determining toll rates and disbursing toll revenues.

The supporters of the St. Lawrence project present a glowing but quaint, if not highly modernistic, picture of its contribution to the future building up of industry in the State of New York. That is absolute nonsense. From 8 to 10 times as much construction work and investments to pay for it have to go into the typical factory as into the power plant to supply its energy requirements. For high-grade industry the cost of the energy may run 2, 3, or 4 percent of the cost of running the manufacturing plant.

If the power could be had free, gratis, for nothing, it wouldn't be as great a help to building up industry and giving employment as could be had from a resassurance of the stability of our free American economy and the absence of unwarrantable governmental interference or of governmental competition. The canal and its power development would on both of these accounts injure the industry of the community.

The argument that the project is vital to national defense, on which proponents relied heavily, was completely demolished before the Senate subcommittee last year by the then Under Secretary of War, Kenneth Royall. He flatly said it is not vital to national defense. While affirming its helpfulness in that direction, he added: "The committee will note that the views I express are somewhat less positive than those previously expressed by the War Department. It would mean an added defense commitment which would require more men and equipment and money than would be necessary if the seaway were not constructed."

Those conversant with military affairs have clearly and definitely emphasized that that part of the country most vulnerable to enemy attack by rocket and bomber is the St. Lawrence section. One well-placed bomb, from rocket or plane, would wreck the project. Vice Admiral Wilson (former Navy Chief of Staff) and Major General Bradley (retired) testified before the Senate subcommittee that the defense value of the project had progressively declined in the last 15 years, and that on the score of national defense it could not be justified.

Were additional evidence necessary to support that testimony, it is to be found in the report made to Congress on December 1 by Brig. Gen. Joseph C. Mehaffey, Panama Canal Zone Governor. That report, concurred in by the Joint Chiefs of Staff, disposes of the national-defense argument.

Finally, what is the answer the advocates of the St. Lawrence seaway and power project give to all of these questions? Perhaps no better authority might be cited than statements and explanations made by one of its chief advocates; I refer to Senator GEORGE D. AIKEN, of the neighboring State of Vermont.

Ruth Montgomery of the Daily News asked the Senator about his plan to develop the St. Lawrence Valley industrially by bringing several million English citizens over there and colonizing them along the St. Lawrence. The Senator said, "Well, I didn't know that I had said anything about that to anybody," and then he went on to say that the stretch in the Province of Quebec, "could become the greatest industrial region of the whole world."

He was asked whether he would change our immigration laws to permit more people to come to the United States. That was a question of high political import which he dropped quickly by saying, "Well, they would come in on the Canadian side. The British would settle in Canada. They could do that. Canada could absorb 15 or 20 million of them."

Now that is all very well. But the Senator must have had in mind something more serious than the limited amount of power that the St. Lawrence would develop for New England if he was going to take care of 20 million Britishers.

However, what interests labor most is that he hopes to spend United States money in Canada to help make that part of Canada the greatest industrial region of the whole world and quite regardless of its demoralizing influence upon our home industries and those dependent upon them. The arch advocate of the St. Lawrence development has so far forgotten his New England that he would set up an industrial region in Canada to compete with the fine industries of New England and of the rest of the United States in the world markets, possibly even including the United States.

While interested and concerned in having the necessities of British labor taken care of in a very real way, one can hardly picture using United States money to hire Canadian labor to build up the greatest industrial region of the whole world in order to make ghost factories out of our high-grade American enterprises at the same time killing off American railroads, injuring our own bus and trucking industries, undermining our coal mines, depopulating our American ports, destroying some of our American cities, and inflicting an irreparable damage to the wage earners of America.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, January 16 (legislative day of Wednesday, January 14), 1948

Mr. WILEY. Mr. President, my attention has been called to an editorial which appeared on Monday, January 5, 1948, in the Detroit News, on the important subject of the St. Lawrence seaway. As my colleagues know, this subject is scheduled for consideration before the end of this month. I ask unanimous consent that the text of the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT IS TIME TO STOP FIDDLING

Senator WILEY, of Wisconsin, urging early action on the St. Lawrence seaway, said Congress has "fiddled around with this measure for 14 years."

It has been far more than 14 years, and "fiddling" inadequately describes the shrewd obstructionism of interests opposing the project. However, we follow the Senator without difficulty and understand the feelings that inspired his outburst.

Here is a project advocated by every President since Taft as promising vast benefits to the Nation, and particularly, of course, to this Great Lakes region.

Here is a project whose promise again and again has been proved by actual events.

In both World Wars, for example, it would have saved untold millions and, by official estimate, speeded victory.

It would have enabled direct ocean shipments from war industry centers to war theaters and added Great Lakes shipyards to the twice narrowly won effort to outbuild the U-boat threat.

At the present moment, its contribution of 2,200,000 horsepower of hydroelectric energy would be answer to the approaching menace of a national power shortage. It would ease, as WILEY says, the strain on our overseas shipping capacity and solve out of hand the Midwest shortages of fuel, gasoline, and building materials.

Here is a project more than comparable to the Panama Canal as a national asset, a project that, built in the beginning, would have paid for itself over and over.

And here is a project that, after 30 years, remains unbuilt—because its great promise has been seen as a great threat by vested interests opposed to progress and change.

The power, transportation and commercial interests that have opposed the seaway have not "fiddled".

They have fought with every tool, including a lavish use of money, known to the propagandist's trade.

They have succeeded in convincing millions that a project urged by seven Presidents is only a dream—even while they fought it for an obviously contrary reason.

There truly has been "fiddling" aplenty in the seaway's long history, though all on the part of its advocates.

Congressmen from the Great Lakes States have fiddled, while the project's enemies have been busy. The Congressmen have fiddled because people back home, succumbing to a kind of battle fatigue, also have fiddled. They have been silent when they should have been shouting their own demands for action.

The future of this whole area and its citizens depends on the seaway—most literally, now that Great Lakes iron ores are nearing exhaustion.

The future of the Nation may depend on it, for in a new war the seaway readily could represent the margin between defeat and victory.

It is time to stop fiddling and start demanding. It is time Detroiters in particular begin demanding of Michigan Congressmen that they win this fight.

Censorship Through Fear

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, January 16 (legislative day of Wednesday, January 14), 1948

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a brilliant and courageous article, Censorship Through Fear, by William Wyler, which appears

in the December issue of the Screen Writer. Mr. Wyler, as we all know, is one of the outstanding directors in the motion-picture industry, and is the director who has won the last two academy awards.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CENSORSHIP THROUGH FEAR

(By William Wyler)

The demand for Federal censorship and house cleaning of the film industry is predicated on the assumption that Hollywood is dominated by Communists. The Hearst press claims: "So, of course, there has been a continuous and persistent production of communistic films."

Of course, this is one of the grossest misstatements of fact ever perpetrated by newspapers of large circulation.

It would not have been possible to make this statement had it not been for the groundwork of the Motion Picture Alliance and the House Committee on Un-American Activities. Those groups have been making this unsubstantiated claim for so many months that by now the mere repetition in print of the words "communistic films" causes people to believe there are such films.

Responsible opinion in the industry and in such sections of the press as the New York Times and Herald Tribune knows that such a claim is the sheerest nonsense. If there were any pictures which even attempted to undermine the American way of life, it would be impossible to keep them a secret.

So, of course, there is absolutely no need for Federal censorship.

The demand for it, as well as Mr. Thomas' demand that the industry clean house, is designed to keep all liberal and progressive persons off the Hollywood pay rolls, and to make sure that the films produced conform to Mr. Thomas' and Mr. Hearst's peculiar and arbitrary standards of entertainment and Americanism.

I use the word "peculiar" advisedly. To me, persons who attempt to destroy the basic safeguards of American freedom guaranteed by the first amendment to the Constitution, in the name of preserving that freedom, have a peculiar view of Americanism, to say the least.

But of more direct concern to me than the future danger of censorship is the present danger of self-censorship through fear.

An incipient form of blacklist already exists. Some producers would just as soon "play it safe" and not hire certain writers with a known progressive background. "Why look for trouble? Why hire someone who might be subpenaed by the Thomas committee?"

Also, some producers are starting to eliminate "doubtful" stories, scenes, and lines. By "doubtful" they mean controversial. So prevalent has the fear become that these producers are beginning to doubt their own patriotism, or their ability to determine what is patriotic.

My answer is that by playing safe, these short-sighted producers are accepting the standards of the Thomas committee and are merely inviting further trouble. The men in and out of public office who have attacked our industry would like nothing better than to have the Producers' Association adopt a hush-hush policy.

Unless these two trends are sharply reversed, this self-censorship will destroy our free screen, result in financially unsuccessful pictures, which in turn will affect the livelihood of every man and woman who works in the studios.

As far as I know, there has never been any way to preserve liberty and individual rights except by openly attacking any attempt to curtail them.

Our Congress

EXTENSION OF REMARKS

OF

HON. RAYMOND E. BALDWIN

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, January 16 (legislative day of Wednesday, January 14), 1948

Mr. BALDWIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Our Congress," published in the New York Daily Mirror for January 12, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR CONGRESS

O for the good old days when Congress delivered grandiloquent addresses on the tariff and similar simple matters.

Nowadays each Senator and Congressman must be an expert on the state of some 50 countries.

He must know the policies and purposes of ibn-Saud and Tito, of Pauker and Hoxha, of Chiang Kai-shek and Mao Tze-tung. He must know the geography of Pakistan and Turkestan, of Iran and Iraq, of France and Greece.

He must be a walking State Department and he needs to be able to discover when an employee of the Government of the United States is practicing diplomacy on him—diplomacy being the gentle art of lying about trivialities and fabricating about major issues.

He must be a super FBI to discover the wiles of the hired hands who pad the pay rolls and other Government expenses.

He must know that the teeth of the children of Georgia require dentistry and that foot-and-mouth disease threatens our food supply. He must know the value of a super air fortress over a submarine.

And so the Senators and Members of the House of Representatives no longer come to Washington for a few weeks of each year. They have an all-year-round job.

Those who take their committee appointments seriously never finish their work. It goes on and on.

And when smart-alecks talk about congressional junkets to Europe or Asia or South America, they give the impression that these representatives of the American people vote themselves fancy vacations.

It is precisely the opposite.

This year more than 100 Members of Congress traveled in Europe and out of it came, for one thing, the work of the Herter committee—the most solid study of the so-called Marshall plan.

It is no longer possible for the little fellows in the State Department to bluff the Congress by hiding reports and not knowing how to answer questions. Plenty of Members of Congress are better informed than plenty of so-called experts.

An excellent example of that was on the Town Meeting of the Air a few days ago. William C. Bullitt and Congressman Walter H. Judd were debating Owen Lattimore and Richard Lauterbach on the subject of China.

Lattimore is one of the smart experts close to the White House in Roosevelt's day; now director of the Walter Hines Page School of International Relations at Johns Hopkins University.

What Congressman JUDD did to Lattimore in this debate should not happen even to one who is not an expert.

JUDD knew. Lattimore opinionated.

JUDD hurled facts at Lattimore which he and Lauterbach dodged. And when Bullitt hit an intellectual solar plexus, you could hear it all the way between New York and Nanking.

The American people are to be congratulated on their Congress. No harder-working men exist anywhere. And they are truly representative of the varieties of Americans.

Maybe some New Yorkers do not like some Congressmen who come from the South and West—and it is certain that lots of folks in the South and West dislike some New York Congressmen. But that is the kind of people we are, and the Congress mirrors the nature and character of our people.

Maybe the good old times were easier or even better—but for what we face today, it is sound to put your trust in Congress.

Disabled American Veterans' Program

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I obtained consent to insert in the CONGRESSIONAL RECORD a statement made by Mr. John L. Golob, national commander, Disabled American Veterans, before the Committee on Veterans' Affairs on Monday, January 19, 1948. The very sincere and comprehensive statement follows:

As national commander of the Disabled American Veterans, I want to express the appreciation of our organization for the opportunity to present that part of our major legislative program which will be considered by the Committee on Veterans' Affairs. Today we are observing a traditional annual custom wherein the commanders of veterans' organizations appear before you in turn to submit the highlights of their legislative programs, and as we understand it, there will be hearings on some of these measures at later dates.

There is no real necessity for me to outline the purposes of the Disabled American Veterans to members of this committee, but, for the record, I might say we are a congressionally chartered organization which has been in existence since 1920. Our membership is confined to the war wounded and disabled veterans. Our aims and efforts are directed to assisting them, their dependents, and families of deceased veterans. We have some 400 full-time paid national service officers throughout the Nation to assist all disabled veterans and members of their families.

During the first session of the Eightieth Congress this committee favorably reported a number of legislative proposals. If we are to have completed congressional action on these, and such other bills as may be reported by your committee before adjournment, it will be necessary for the House to consider them at an early date. The Senate must yet act upon some of them. We are appreciative of the fact that during the first session of this Congress your committee favorably reported a number of our legislative proposals and it is earnestly requested that you take the steps necessary to see that they are brought to the floor of the House.

Included in these measures which have been favorably reported and which the DAV has adopted resolutions to support are:

H. R. 3016, authorizing the Administrator of Veterans' Affairs to furnish stenographic assistance for the use of paid, full-time representatives of organizations recognized by

act of Congress, and who have been assigned office space in the Veterans' Administration.

H. R. 3748, to increase service-connected death rates of compensation for widows, children and dependent parents of Spanish-American War, World War I and II veterans.

H. R. 3889, to establish by statute a presumption of service connection for certain enumerated chronic and tropical diseases which are shown to exist within 1 year from discharge from active service, or within the incubation period of such tropical diseases.

H. R. 4242, to increase annual income limitations governing the granting of pensions to veterans and death-pension benefits to widows and children of veterans.

H. R. 4243, to provide for a disability rating of 100 percent for arrested tuberculosis for the first 2 years of arrest, then 50 percent for 5 years, with a minimum thereafter of 40 percent for those diagnosed as moderately advanced or less.

In addition to the foregoing favorably reported bills, there is another measure still pending before your committee which we consider of prime importance. It is H. R. 2716, introduced by Mrs. ROGERS, which provides for the payment of an allowance to the dependents of service-connected disabled veterans. Letters reaching our Cincinnati and Washington offices reveal many deplorable conditions existing among the families of disabled veterans, particularly where such families are attempting to exist on disability compensation checks. We have made a Nation-wide survey on this subject, and at the time of hearings on the dependency-allowance bill, we shall submit detailed information pertaining to individual case histories to show the extreme hardships many of these families are undergoing. During wartime Congress considered the plight of soldiers' dependents and made provisions for payments to his wife, children, or other dependents in excess of his base pay. We are now asking that the veteran receive similar consideration.

I would like to cite at this time one typical example to show the pressing need for this legislation. Just the week before Christmas our Washington office received a telephone call from Walter Reed Hospital. A master sergeant, married, with two children, was being hospitalized there. With his allotments and combat infantry pay he received $269 per month. He had been in the Japanese death march and suffered from recurrent draining osteomyelitis. It was the hospital authorities' opinion that this veteran should be discharged to a Veterans' Administration hospital where he could receive the same medical treatment as he is receiving at Walter Reed General Hospital. These veterans are being discharged because appropriations have been cut and all patients with chronic disease or injuries that are in need of further hospitalization are going to be discharged shortly after the first of the year. In this case the master sergeant on being discharged from the Army would receive $138, or $131 less per month, and because of the nature of his disability would be unable to work. This is but one example of thousands of such cases. The DAV pleads with you to consider H. R. 2716 at an early date and to report it favorably to the House.

The members of this committee are fully aware of the tremendous increase in the cost-of-living index in recent months, until now it is estimated that a family of four must have an income of about $3,400 per year to live. This is more than double the compensation received by a totally and permanently disabled veteran.

There are many other bills pending before your committee which have our endorsement but as to which no hearings have been held. One of these is H. R. 1279, authorizing the insertion in the rating schedules of the Veterans' Administration a minimum rating of permanent partial 10 percent for wounds incurred in line of duty during World War I or II. We recommend the early passage of legislation to increase the subsistence allowances for men training under Public Law 16. We also urge the immediate construction of the many veteran hospitals now in the blueprint stage. This is an urgent need of the disabled veteran.

Legislation should be enacted to rate a veteran on entering a Veterans' Administration hospital as 100 percent disabled for the duration of his hospitalization.

Another major objective of the DAV is to assist disabled veterans to find suitable employment. The end result of the aid and assistance needed for hospitalization, rehabilitation, and vocational training is the ultimate absorption of the disabled veteran into suitable employment. To accomplish this transition every possible assistance must be given him and the DAV has adopted a national employment plan, coordinated on the National, State, and local levels to bring about the disabled veterans placement in suitable, gainful employment.

Large numbers of disabled veterans will require service and assistance of various kinds over a period of years.

The peak service load of compensation for disabled veterans of World War I was not reached until November 1941. It is estimated that the service volume for World War II disabled veterans will reach its maximum around 1968.

The Disabled American Veterans, chartered by Congress to cooperate with the Veterans' Administration, is particularly qualified and equipped to handle the problems of these men, from the time they leave the hospital until they have been placed in suitable jobs.

Indicative of the manner in which the DAV employment program is being received, I would like to read several short quotations from some of our outstanding, nationally known businessmen. Robert R. Wason, past president, National Association of Manufacturers, stated: "The DAV is not appealing for your sympathy nor to your patriotism, but is presenting a practical plan for making useful, independent citizens of our disabled veterans. It is to be commended for its excellent work." H. W. Anderson, vice president, General Motors Corp., has stated: "General Motors' experience has demonstrated that successfully placed handicapped workers cease to be handicapped from the standpoint of earnings and productivity." Henry Ford II has stated: "No man at the Ford Motor Co. is disabled * * * there are 6,286 men and women who are physically limited * * * all of them have handicaps similar to those we find in many returning veterans * * * every one of these employees does a full day's work * * * receives a full day's pay * * * their absenteeism and accident rate are considerably lower than those of other employees. No jobs were created for them. Instead they were fitted to the job."

Our last national convention adopted a well-considered program pertaining to employment of the service-connected disabled veteran. It is too lengthy to submit in detail, but some of the outstanding points of that program include:

1. Extend effective preferences for veterans, their wives, and widows for all governmental jobs for which qualified.

2. Condemn efforts to remove benefits already extended by Congress by Veterans' Preference Act of 1944 or other laws.

3. Amend the Veterans' Preference Act to grant 10-point preference to widowed unremarried mothers of any deceased person who died while actively serving in the United States armed forces, or of a veteran who died of a service-connected disability, or of any war veteran who is permanently or totally disabled.

4. Liberalize regulations of the United States Civil Service Commission relative to reductions in force, suspensions, transfers, dismissals, demotions, and reinstatements.

5. Liberalize civil-service retirement.

The DAV strongly advocates the enactment of legislation to authorize and direct the Veterans' Administration to make reimbursement to the several States, all State workmen's compensation benefits paid out under the provisions of any workmen's compensation act for compensated service-connected disabled veteran employees.

While not a subject for consideration by this committee, we look to this session of Congress to provide the necessary funds so that the Veterans' Administration may furnish efficient and adequate service to the veteran and his family.

Immediately prior to the convening of this session of Congress it became necessary for me as commander of the DAV to call to the attention of the members of the Appropriations Committees an existing deficit in the Veterans' Administration. This letter reads, in part, as follows:

"Following complaints reaching us from various sections of the country, we have conducted a survey which discloses the fact that out-patient service, including medical treatment and necessary physical examinations of America's wartime service-connected disabled, has been sharply reduced and restricted. This is due to a reported shortage of approximately $32,000,000 allocated to this phase of the medical program to complete the current fiscal year.

"We are convinced that you, too, believe that the required medical treatment of America's war disabled is as important as any action this Nation may take toward the care and rehabilitation of Europe's war refugees. With this thought in mind, we ask that you urge the convening Congress to act immediately to clear up an unfortunate condition, lest its continuance prove disastrous to thousands of our own war disabled."

This will be a subject which will be considered by the House and Senate Appropriations Committees, but we know the deep interest that each member of this committee has in the proper functioning of the Veterans' Administration. We hope the expert knowledge possessed by you in this field will be passed along to members of these Appropriations Committees.

Another bill before your committee which has our endorsement is H. R. 486, to provide follow-up out-patient treatment for war veterans with non-service-connected disabilities following hospitalization for such disabilities.

The Disabled American Veterans, like most veterans' organizations, adopts a large number of resolutions at our annual national convention, but one of our most important mandates requests that "First things should be done first." This in Disabled American Veterans' language, means adequate provision for America's wartime service disabled veterans should be a primary obligation of our Nation.

We are hopeful our national defense will be maintained at the necessary level to deter future warlords against acts of aggression or transgression. We hope our national security will be strengthened through appropriate laws to protect our free American institutions against the subversive forces within our midst.

Housing for veterans should receive immediate attention by the Congress in order to alleviate the deplorable conditions in which the veterans, their families, and dependents are required to live. Our resolutions on housing, while general in nature, urge the Congress to adopt a realistic housing program which will make available adequate, low-cost, multiple rental units in sufficient quantity to satisfy the demands of the veteran. In addition the resolutions urge the Congress to protect the disabled veteran by providing proper preferences or priorities for him. In this connection, however, we are not in favor of loading additional administrative duties on the Veterans'

Administration which will result in a decrease in the service now being rendered the disabled veteran.

The Veterans' Administration was established primarily for the benefit of the service-connected disabled veteran, and any lessening of that service due to excessive administrative functions not directly attributable to such prime objective will be strenuously opposed by us.

I have outlined some of the major points of our legislative program. The past record of your committee indicates you are sympathetic to the cause of the veteran and his family. We believe you will continue your considerate attention. With this hope, I again express my appreciation to the chairman and members of the committee for this opportunity to meet you and to appear before you.

LEGISLATIVE PROGRAM OF THE DISABLED AMERICAN VETERANS, 1947–48

I. Preserve America and its freedoms by (1) maintaining adequate specialized, modernized armed forces, backed up by an adequate reserve of trained young men, through universal military training; (2) such preparedness for war as will best preserve our peace; (3) cooperating with our allies to enforce the preservation of peace; (4) protecting our representative form of government against subversive forces and influences; and (5) so promoting our democratic institutions and methods as to accord equalized opportunities for all Americans.

II. Promote welfare of America's disabled defenders by (1) greater uniformity and simplification as to their various types of benefits; (2) providing living-cost allowances for their dependents; (3) increasing all compensation and pension payments proportionately to increases in the cost of living; (4) providing adequate hospitalization and medical treatment for all extending their disabilities; (5) of equalized opportunity for their suitable employment by (a) requiring the Veterans' Administration to make reimbursement of all benefits paid, under the operation of any State Workmen's Compensation Act, as to any service-disabled veteran employee, and (b) by greatly extending their opportunities for vocational training and permanent employment with Federal agencies.

III. Promote the welfare of the dependents of service-disabled veterans by providing living-cost pensions to the widows, children, and dependent parents, (1) of those who shall have died while serving actively in the armed forces of the United States or by reason of service-connected disabilities, and (2) of those who, during their lifetimes, were handicapped by compensable disabilities.

IV. Promote the welfare of America's war veterans by (1) extending social-security credits to them for all of their military service; (2) more effective preferences as to all governmental employment; (3) hospitalization and domiciliary care for all those in need thereof; (4) greater liberalization and uniformity as to all governmental insurance policies; and (5) living-cost pensions for those who become unemployable.

The World Problem We Face

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, January 19, 1948

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent that there be printed in the Appendix of the RECORD an interesting and timely address by John Cowles, of the Minneapolis Star and Tribune, entitled "The World Problem We Face." Mr. Cowles recently visited Europe.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

After I had consented to talk to the Life Insurance Association of America on such a sweeping subject as The World Problem We Face, I began to realize what a presumptuous title that was.

I also began to realize that life insurance executives, by the very nature of their business, are accustomed to deal in concrete facts rather than loose generalities. Life insurance is based on actuarial tables, not rhetoric. Consequently, I am going to be as specific as I can in discussing the world problem as I see it.

I believe all of us would agree that our aim is to try to sustain and strengthen freedom in as much of the world as we reasonably can, in the interest of our own national security if nothing else.

We are preparing to spend billions of dollars in an unprecedented effort to bring about those conditions whereby we may have European and consequently world economic recovery, peace, and prosperity with individual freedom.

The problem is how to make our efforts effective, so that there will be at least a chance that we may be successful. I believe there are widespread misconceptions in the United States about some phases of the problem and I want to discuss those in some detail.

Of course we should give to France, Italy, and Austria at the earliest possible moment, food, fuel, and fertilizer as emergency stopgap aid. If we did not do this, there would be extreme suffering this winter. In addition, the slowing down of production and employment as a result of the lack of food and fuel might result in such social and political disintegration as to make probable a successful seizure of power by the Communist minority.

Congress should also appropriate immediately perhaps $50,000,000 additional for the United States Information Service, and our State Department personnel engaged in this activity should be completely overhauled and reorganized. The Voice of America should be enormously expanded. It is now little more than "the whisper of America." We should tell the people of Europe what we have given and are giving in food, fuel, and fertilizer. Wherever possible, our products should be marked with the American flag. Russia has claimed credit for much of the aid that we have sent, either directly or through UNRRA, to Europe. Few Europeans have any idea of the volume of aid America has furnished and is furnishing.

Byron Price, who is now the Assistant Secretary General of the United Nations, should be drafted to head our United States Information Service. Price did a superb job with the Office of Censorship during the war and has the confidence of Democrats and Republicans alike. If American newspaper editors were polled as to who in America was best fitted to head the United States Information Service, I believe Price would receive more votes than all others combined.

Since we are obviously engaged in fighting a cold war with Russia to win men's minds in Europe, there is little point in feeding their stomachs if they think that Russia is their benefactor.

Much of the press on continental Europe is now, as it always has been, venal and corrupt. Many editors or owners are now on the Russian pay roll.

We need a competent, hard-boiled organization in Europe, to get to the people with the facts about the United States and about Russia.

Our Government also should have ample funds to support and protect those political leaders and their families, now living inside the iron curtain, who would rejoice at a chance to escape to a place of refuge where they could tell the world of the Moscow terrorism, without endangering their lives.

An American like Gen. "Wild Bill" Donovan, who successfully organized and conducted OSS during the war, would be invaluable in the American set-up in Europe.

We should also be doing much more to get the people of western Europe the facts about conditions behind the iron curtain.

We should tell them, day after day, of the millions of slave workers in Russian concentration camps. We should tell them the fact that Russian workers are only a fraction as well off, in terms of what their wages will buy, as are the poorest people in America. We should tell them how the Russians have looted the countries that have gone Communist.

We should do everything possible to unify the American, British, and French zones of Germany and to get western Germany to producing again. Before the war, the Ruhr was second only to Britain as the source of coal for Europe. Recovery in western Europe is impossible until German coal and steel production is greatly increased.

Before we can make sound decisions to the long-range Marshall plan, we should disabuse our minds of various fallacies and misconceptions. Here are some of the things Americans need to understand:

Terrible as the war destruction in Europe was, the problems confronting Europe today stem less from the physical ravages of the war than from the ideological consequences of the war years.

The economic policies which almost all the European governments are following today are actually retarding recovery. These policies are based in part upon the sincere but mistaken views of the governments currently in power. They are based in part upon the fact that the governments are too weak politically to do anything other than continue on their present course, even though they may privately recognize its unwisdom. The Communists, moreover, in their determination to prevent western Europe's recovery, seize every opportunity to throw sand into the gears.

We should realize that it is naive to assume that we will necessarily stop the spread of communism permanently in western Europe simply by pouring in our dollars for a few years. Too many Americans suppose that bountiful financial aid will alone achieve that greatly to be desired result. Loans or gifts may help greatly, but most people are inclined to oversimplify the problem. We should rid our minds of the idea that there is anything even remotely scientific in the estimate of the Paris sixteen-nation conference that western Europe needs $25,440,000,000 to cover its prospective dollar deficiency and to provide currency stabilization in the next 4 years.

No one can have the slightest accurate information as to what the cost would be. It depends upon the future economic policies of the different governments, the weather and crops in the next 4 years, the world price level, what actions the Communists may take, and many other unknown factors.

We must not think that most Europeans understand our motives in connection with aid to western Europe—they do not. Many officials and businessmen in Europe regard the Marshall plan as a clever scheme whereby the United States, under the guise of altruism, can export unmanageable surpluses, and

in that way, postpone a serious price recession and business slump in America. Europe has not the slightest understanding of the fact that the commodities which we are sending abroad are contributing to our serious price inflation here at home.

We should abandon the widely held idea that we ought not to attach conditions or stipulations to our aid. It is senseless even to consider large-scale aid unless we do attach conditions, and thus give ourselves a chance, at least, to accomplish our purpose. Aid from the United States will have only a temporary value, if that, unless the country aided changes the policies that are retarding or preventing its economic recovery.

I think it is a mistake to maintain the fiction that the funds that we advance under the Marshall plan are loans which presumably will be repaid. I don't believe that they will be repaid, and I believe that we will clarify our thinking if we will regard them as gifts.

In my judgment, there is little chance that the Marshall plan funds will produce economic recovery in western Europe unless we use the gift of those funds as incentives to persuade European nations to change those economic policies which are now impeding recovery.

The agreement made by the 16 countries at Paris should be an integral part of any arrangements we make with the separate nations.

In the Paris agreement each nation, at least in general terms, undertook to do certain things and to cooperate in certain ways for the recovery of western Europe. If a nation is not doing what it promised to do, and if it is not meeting its production targets, we should be in position to turn off the spigot and stop further aid.

Great tact and diplomacy, in addition to basic economic intelligence, will be required of the individual who has charge of our European aid program. Lewis Douglas, the American Ambassador in London, could probably perform this function better than any other individual.

Perhaps the single most important thing that western European nations could do to stimulate production and trade would be to devalue and make their currencies freely convertible into other currencies. Italy recently did this. Almost all of the other European currencies are now over-valued in relation to the dollar. They have fixed rates for conversion into the dollar and into each other that are completely unrealistic. International trade and production both would be enormously stimulated if the currencies were allowed to find their true levels.

Inflation is growing rapidly throughout Europe. We ought to insist that governments receiving American aid adopt policies that will stop or at least slow down the rate of further inflation. We ought to insist, within reason, that the European nations meet the production targets set up at the Paris conference.

By using our Marshall plan funds to persuade the European nations to abandon those price controls that are retarding production, we would also be helping to bring about real recovery. Artificially low fixed prices on wheat and an overvalued franc are perhaps the two basic things that are wrong today in France.

Of all the misconceptions held by Americans about the Marshall plan, none seems to me so preposterous as the assumption that it is "immoral" for us to impose conditions in connection with our huge financial gifts.

In addition to using our Marshall plan aid to persuade the beneficiary nations to remove those price controls that are retarding production and to end the overvaluation of their currencies, I believe that the sooner we end price controls and the sooner we devalue the currencies in western Germany and in Japan, the better.

Of course, we should also insist that civil liberties must be maintained in all the beneficiary nations as a condition of their receiving continued financial aid under the Marshall plan.

Congress should set up an independent agency, working under the general direction of the State Department, to procure all the commodities we intend to give Europe. By following a unified procurement program, we can minimize the inflationary effect as compared with permitting competitve bidding for American supplies by various foreign nations.

Congress ought to stipulate, moreover, that insofar as possible, we should spend the American dollars abroad, and not within the United States, to buy the commodities which we propose to give to Europe. If we can buy grain in Argentina, for example, instead of in the United States, it will reduce the serious inflationary situation that confronts us here at home.

The more one sees of Europe, the more one realizes that preserving a strong and sound United States is the single most important contribution we can make toward world recovery.

Some of the proponents of the Marshall plan seem to me hysterical in their attitude that we should pour $20,000,000,000 or $30,000,000,000 into Europe without imposing any real conditions and without any consideration of the effects upon the American domestic economy. I am interested in seeing the recovery program prove effective and, consequently, succeed. I don't believe it will succeed in bringing about economic recovery in western Europe unless we insist upon the European nations doing those things that are essential for bringing about recovery. I am sure, moreover, that there is a limit to the amount of aid that America can provide without serious risk of run-away inflation and a wrecked economy here at home.

There are strong reasons for believing that the amount of American aid which has been suggested is excessive. It is entirely possible that more good could be accomplished if the amount were substantially reduced from the totals suggested by Secretary of State Marshall and Secretary of Commerce Harriman.

Only a detailed analysis would disclose how much this reduction should be. It would be most unfortunate, however, for the public to assume that it is unpatriotic or an act of isolationism to suggest that the administration's proposals should be carefully scrutinized and probably reduced.

American aid can be extremely helpful in getting western Europe back on its feet if the aid is wisely given and if it is used as an incentive to encourage European nations to do those things which are essential for recovery.

Every American should understand, however, that simply pouring goods and dollars into western Europe, unless the program is administered with great wisdom and ability, will neither insure economic recovery nor stop permanently the spread of communism.

America will shortly make one of the most momentous decisions in its history. I hope we will give generous aid to Europe—extremely generous. But I also hope that we will be intelligent and realistic, as well as idealistic. Only by such an attitude is there much likelihood, I fear, that American funds will prove effective in bringing about real economic recovery in Europe. And unless our billions of dollars prove effective and do bring about genuine economic recovery, we can't have the peace and prosperity and individual freedom in the world for which America is striving.

Human Relations: The Key to Corporate Survival

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. JAVITS. Mr. Speaker, if our United States private economy is to prosper we must all remember that men and not machines will make it possible.

The following article entitled "Human Relations: The Key to Corporate Survival" by Howard Chase, director of public relations, General Foods Corp., is an excellent analysis of the effort to make average working men and women feel that they have a vital stake in our industrial economy:

HUMAN RELATIONS: THE KEY TO CORPORATE SURVIVAL

(By Howard Chase, director, department of public relations, General Foods Corp., New York)

A dozen approaches to this dramatic subject have convinced me that I have only three things to say:

1. In all the history of man the periods of freedom have been measured in years, but the periods of serfdom have been measured in centuries. If the values and traditions of a free people wither away, the free corporate structure cannot survive.

2. The sense of human frustration in the world today is the most dangerous enemy of freedom. Frustration does not bludgeon a man into slavery. Its attack is more insidious. As the vampire bat which sucks blood while its victim sleeps, human frustration undermines the will to be free and plants the seeds of blind rebellion.

Man, whose motivations and impulses are the grist for your mill, lives 24 hours each day. However convenient it may be to compartmentalize him into an 8-hour producer, a 4-hour consumer, and a 4-hour citizen, such a policy from the beginning of time has produced frustration.

My second point in essence, then, is a warning. Perhaps Alexander Pope best stated it: "The proper study of mankind is man."

The warning: Study the 24-hour man, study his consuming practices, to be sure, but also his hopes and aspirations, his family loyalties, his religion, his fellow-worker relationships.

With the analytical techniques at your disposal, you can be and should be advocates of seeing man whole. If you use your talents to that end, you become the enemy of human frustration, and thus your profession can become a great new supporting force for freedom.

3. My third point borders so closely on the obvious that I almost hesitate to share it with you. It is simply this: No human institution, whether it be a state, a church, a lodge, a labor union, or a corporation can survive for very long the sustained mass disapproval of man.

* * * * *

Now, how solid are the foundations of our system of freeman and free business? How solid is any human institution? There is a little story about a conversation between Mrs. Woodrow Wilson and Queen Mary which may be illuminating. Mrs. Wilson asked the Queen what she thought of freedom of the seas.

The Queen, who took British rule of the seas as a simple fact of life on this planet,

chillingly replied that she hadn't quite made up her mind about mixed bathing.

We know now that Britannia no longer rules the waves. A 300-year-old domination is ended; yet the British battleships, cruisers, carriers, destroyers, have never been so numerous nor looked so impressive—nor been so relatively impotent.

The American corporate business system of mass production is less than one-third the age of the once all-powerful British Navy. Like the fleet, it, too, has advocates who curiously resemble the doughty Queen—aware perhaps that new forces threaten old patterns and privileges. But they keep the stiff upper lip at all costs.

HYPNOTIZED WITH BATHTUBS?

Like the fleet too, the fabulous historical accomplishments of American business are written on the record. A dynamic business system has provided the steel sinews for victory in two great wars. The evidences of men and women cooperatively at work are everywhere about us in great cities, magnificent transport systems, the farms which are literally feeding the world, great educational and cultural systems which may be our temporary despair but which remain the envy of other peoples.

All these are the fruits of a corporate system, using the cooperative and freely offered services of freemen.

Why, then, has this business system lost steadily in the competition for men's minds and men's loyalties?

The tangible fruits of our common efforts, the brands, the things we make and deliver, are synonymous around the world with high standards of living. A so-called subsistence standard in America would be princely living for 75 percent or one and one-half billions of the world's people.

Is it possible that we have so exalted our ability to deliver brands and physical products that we have lost sight of the human needs of the 24-hour man?

Have we so hypnotized ourselves with bathtubs, telephones, central heating systems, and automobiles that mass production has become an end in itself, a kind of twentieth century worship of the golden calf?

Can it be that the American corporation, crying its wares and not a way of life, as the Pharisee cried his virtues in the public place, will suffer the Pharisee's infamy in history?

How is it, in the face of incontrovertible evidence, that what freemen produce is good, that the sands of despotism close in on the few remaining oases of freemen?

These questions I pose as worthy of your attention. It is important that 3 to 4 out of every 10 Americans are prepared to say yes to almost any question that reflects discredit on our corporate system. Any review of the process of historical change confirms its importance.

For instance, the phrase human relations is derived in part from humanism—and humanism represented a fifteenth century revolt from 1,200 years of dogma. In this revolt, western civilization broke through rigid medieval traditions of scholasticism and theology. The Encyclopedia Britannica says sweepingly, "This movement * * * is the parent of all modern development, whether intellectual, scientific, or social." The existence of your own profession is witness to the power of that revolt and the freedom of inquiry it made possible.

CAN CAPITALISM SURVIVE?

Certainly the high priests of feudalism swore that theirs was the best of all possible worlds. But mass movements toward greater dignity and freedom of the individual destroyed feudalism in the western world after 1,200 years of its existence. Many high priests of today's mass production cry out that this is the best of all possible worlds. Can we be sure that capitalism—an infant of less than 200 years—can survive a new human groping for spiritual satisfaction?

I propose that we have no such assurance and that only superhuman effort—first to comprehend human wants and aspirations, and then to move convincingly toward satisfying them—can prevent the tragic decline of a system magnificently productive of things.

I have wished from the beginning of this article that I could plunge into description of techniques by which tangible objectives in human relations could be obtained. I suspect you wish the same thing. But experience has taught me that ideas precede techniques—that long lists of shiny techniques with money-back guarantees are useless unless the spirit and heart and mind are the rocks upon which techniques are built.

Are we ready for techniques? Do we share with Tom Spates, the General Foods vice president of personnel administration, this belief:

"If those things which you hold most dear to your hearts as American citizens are to survive much longer, then something more than has been done up to now must be done if we are to retard progress of the creeping collectivism which is clogging the wellsprings of freedom in this land. I say to you with the conviction born of a quarter century of studious application to the subject of human relations that there is only one remedy left to cure this fatal malady. This last remaining remedy is stored in the heads and hearts of top executives of American business. It must be released and put to use—by the devotion of an ever-increasing proportion of their time to the problems of people—to the discovery of the human resources and liabilities which comprise pay-roll expenditure, and their transformation into an inspired team with unity and purpose."

This is the positive expression of a philosopher whose life is devoted to fighting human frustration of men at work.

THEY FELT EXPENDABLE

But what are the manifestations of frustration? An associate of mine told me about her experience in a New York department store. His fellow clerks said that the employees' cafeteria was run at a loss purposely by the company "so they can write it off on their income tax." The extra-low cost desserts were attributed to the bosses' desire to provide calories "so we'll work harder." That there was no other moderately priced food in the vicinity, that space devoted to the cafeteria could have been put to money-making uses—these facts went unappreciated. No one had assured these girls that they were anything but talking, selling, mechanical dolls. Above all, they felt expendable and they were rightly bitter.

Management had fallen far short in two ways in dealing with individual and mass frustration. First, we have failed for the most part to understand the basic needs and aspirations of people. We have been preoccupied by the unrealistic belief that men work for wages alone. A study just made in one of our own plants reveals that, despite a recent prolonged strike, there is an amazing residue of loyalty toward General Foods, greater than that expressed (in this study) by any other part of the community or the Nation. This holds although the majority of employees believe that another company may pay higher wages. The implication of the fact that men and women almost automatically tend to rate their company as a better place to work, as engaged in finer research, as making better products, as giving the public more for its money—these implications have not yet been understood or capitalized by American management.

The man with a job wants to believe that where he spends his working hours is the best place for him to be.

A JOB FOR EVERY DAY

The second failure of modern management is to tell its story, to identify its activities with the good life, to show by word and deed, not once a year but repetitively, that its goals are linked with the best interests of its employees, its customers, its owners, and the general public.

If I talk in parables and lean heavily on human experience in attempting to describe why human relations are the key to corporate survival, it is because from experience are derived the human attitudes. If these attitudes are positive and loyal to a system, they can and will support it through good times and bad. But if they are attitudes born of human frustration, any system that depends upon them is founded upon the sand and will fall.

A LOOK AT CITIZEN SAM

Gordon Allport describes Citizen Sam:

"Take, for example, Citizen Sam, who moves and has his being in the great activity wheel of New York City. Let us say that he spends his hours of consciousness somewhere in the Bronx. He wakens to grab the morning's milk left at the door by an agent of a vast dairy and distributing system whose corporate maneuvers, so vital to his health, never consciously concern him. After paying hasty respects to his landlady, he dashes into the transportation system whose mechanical and civic mysteries he does not comprehend. At the factory he becomes a cog for the day in a set of systems far beyond his ken.

"To him (as to everybody else) the company he works for is an abstraction; he plays an unwitting part in the 'creation of surpluses' (whatever they are) and though he doesn't know it, his furious activity at his machine is regulated by the 'law of supply and demand,' and by 'the availability of raw materials,' and by 'prevailing interest rates.' Unknown to himself, he is headed next week for the 'surplus labor market.' A union official collects his dues; just why he doesn't know. At noontime that corporate monstrosity, Horn & Hardart, swallows him up, much as he swallows one of its automatic pies. After more activity in the afternoon, he seeks out a standardized daydream produced in Hollywood, to rest his tense, but not efficient mind. At the end of the day he sinks into a tavern, and unknowingly victimized by the advertising cycle, orders in rapid succession Four Roses, Three Feathers, Golden Wedding, and Seagram's which 'men who plan beyond tomorrow' like to drink.

"Sam has been active all day, immensely active, playing a part in dozens of impersonal cycles of behavior. He has brushed scores of 'corporate personalities,' but has entered into intimate relations with no single human being. The people he has met are idler-gears like himself meshed into systems of transmission, far too distracted to examine any one of the cycles in which they are engaged. Throughout the day Sam is on the go, implicated in this task and that—but does he, in a psychological sense, participate in what he is doing? Although constantly task-involved, is he ever really ego-involved?"

And what is the effect of this life in terms of attitudes toward his business system?

Depth studies of Citizen Sams today reveal these prevailing beliefs:

1. Management is more interested in the dollar sign than in humanity.
2. Management manages without heart.
3. Management has to be forced to provide decent working conditions.
4. Management has to be forced by Government and by unions to share profits.
5. Management still makes fantastic profits.

A WAY TO LABOR PEACE

But where management has recognized Citizen Sam as a human being, where genuine effort has been made to make him feel

that he is an appreciated vital part of an important operation, where management has talked turkey about its problems in terms Citizen Sam understands, there has been greater labor peace, greater understanding, and ultimately better production. These are the fruits of an all-out planned attack on human frustration, the enemy of free man and free institutions. My third and last point, if you can remember that far back, was simply that neither your company nor the economic system you represent can survive if the majority of the people decide firmly that they disapprove of the cut of your jib.

If they disapprove, conflict is inevitable and cannot be legislated out of existence. In today's complicated and fast-moving society, conflict can only be resolved by communication between groups, and this Mayo refers to as "the outstanding problem facing civilization today."

HUMAN PROBLEMS FIRST

In no sense does this comment cast discredit on the technologies and the managerial, marketing, and sales skills that make mass production possible. It is another way of saying, however, that whereas in the past perhaps 95 percent of management's brains and energies were devoted to solution to technical problems, and only 5 percent—if that much—to human problems, in the future management of corporations that survive will devote the major share of their brains and energies and sympathies to human problems.

KEY TO CORPORATE SURVIVAL

I am convinced that this process of identifying business with the great goals of the human race, the great but simple goals, is all that can maintain today's free corporate system. We have achieved mass production, in peace and war, and nowhere have achieved mass serenity of the peoples of this land. Instead, we have only contributed to their growing frustration, their decreasing stability, their reduced happiness. Examine the knots and tensions in your own lives for evidence.

Let us never for one moment give up our magnificent technologies. But do let us use our every power to identify the owners and managers of those technologies with the simple goals—better education for everybody's children, better health and nutrition, better housing, better opportunities based on ability, more security for the aged and infirm, more respect for the opinion of any man who has opinions.

These are the qualities that add to human relations. These are the industrial goals to which today's brass hats, and those whose ideas will be around tomorrow, must pay first allegiance. The American people have never demanded perfection; they have mistrusted anyone who promises it. But they do demand from their industrial and political leaders the will to progress toward the great and simple goals.

The politicians have always understood this. Corporate survival depends on how quickly corporate management catches on.

To summarize once more, liberty and freedom are always on trial. Again and again they have been retired to the shadows where they gather rebellious strength during eras of human suppression; they are on trial today.

Secondly, the greatest asset of those who would destroy free men and free institutions is the sense of human frustration which we—in our mad rush toward technological, but not human progress—have allowed to develop. The future, not only of a business system but perhaps of western humanitarian civilization, hangs upon the willingness of today's men of business to concentrate their brains and energies into an all-out attack on human frustration.

It may be unorthodox to conclude with a definition. Be that as it may, the dictionary's first definition of "corporate" is, "Combines into one body; united." The second definition is, "Formed into a body by legal enactment." We can evaluate the success of our combined attack on human frustration if our fellow-workers in our shops and plants choose of their own free will to be "combined into one body; united."

For if they do, it will be a token that we will have played our role in the restoration of human satisfaction, in the restoration of stability. We will have given back to modern man what he most needs and wants: A sense of participation in a way of life, a dedication to a common cause in which every man can play a vital part.

Shipments of Heavy Industrial Equipment to Russia

EXTENSION OF REMARKS
OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, January 19, 1948

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Charles K. Morrill, commander of the AMVETS of Essex County, Mass., relating to shipments of heavy industrial equipment to Russia.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COUNTY COMMANDER,
AMVETS OF ESSEX COUNTY,
Newburyport, Mass., January 5, 1948.

CHARLES A. ALLEN,
State Commander, AMVETS,
State House, Boston, Mass.

DEAR COMMANDER ALLEN: My trip to Washington, D. C., during the last week of the Eightieth Congress to make a personal protest of shipments of heavy industrial equipment to Russia and her satellites was a move of progress. While there I conferred with the State Department, Commerce Department, Armed Forces Committee, Senate Committee on Appropriations, Interstate and Foreign Relations Department, and numerous Congressmen.

Therefore, with the information I had received before going to Washington and the additional information I was able to obtain in Washington, due largely to the efforts of Representative GEORGE J. BATES, of Massachusetts, senior member of the Armed Forces Committee, I request that you bring the contents of this report to the immediate attention of the State executive board which meets on Sunday, January 4.

I would like to see that the Massachusetts Department of AMVETS receives full credit for starting this protest which originated with me on November 15, 1947, and was the first protest in the Nation to reach official Washington.

While in Washington, I also conferred with National Commander Edgar C. Corry. Commander Corry is calling a national executive meeting so that the national organization can take an official stand on shipments to Russia.

I offer the State executive board the following resolutions with all sincerity, as I feel that the world today is at the crossroads of civilization and that it will take the combined efforts of all World War II veterans to prevent a World War III.

1. That the United States Government curtail all shipments of heavy industrial equipment to Russia and her satellites.

(A) During the year 1946 we exported to Russia $352,000,000 of American products; $152,000,000 was in lend-lease items.

(1) Electrical machinery	$43,789,000
(2) Machine tools	41,307,000
(3) Internal combustion engines	15,214,000
(4) Mining and pumping machinery	13,856,000
(5) 290 steam locomotives	22,000,000

(B) During the first 9 months of 1947 we exported $113,683,722 to Russia.

(1) Lend-lease "pipeline" goods	$16,200,000
(2) UNRRA relief goods	31,900,000
(3) Machine tools	18,364,000
(4) Electrical machinery	14,252,000
(5) Mining, well, and pumping machinery	10,707,000
(6) Construction and conveying machinery	6,246,000

2. That the United States Government curtail all shipments of petroleum products to Russia and her satellites.

(A) Exports of petroleum products in 1946.

	Gallons
(1) Aviation motor fuels	42,000
(2) Motor fuel and gasoline	42,000
(3) Gas, oil, and distillate fuel oil	42,000
(4) Lubricating oil	42,000
(5) Residual fuel oil	42,000

(B) During the first 9 months the exports were in the same amount as in 1946.

3. That the United States Government issue no further credit to Soviet Russia.

(A) An agreement signed on October 15, 1945, granted the Russians a $250,000,000 credit covering the estimated volumn of goods still in inventory or procurement in the United States at that time.

(B) This credit was granted in order to enable American manufacturers to complete their Russian orders without suffering serious losses.

4. That the United States Government make public the list of individual firms that have been doing business with Russia during the current year through the cover-up of private purchasing agencies who have been acting on behalf of the Soviet Union so that the American people will know what firms are more interested in the dollar than in national security.

5. That the United States Government place a broader scope on export controls and final destinations of American products. At present only 25 percent of United States exports come under Government control; the other 75 percent is left up to the desecration of private business.

6. That the United States Government have an equal exchange of visas with the Russian Government. Over 3,000 unrestricted visas were granted to Russia so far this year. Less than 80 restricted visas were granted to the United States.

7. That the United States set up control commissions in European nations that are receiving lend-lease to see that the final destinations of lend-lease items are going where the American people are led to believe and not being reshipped to satellites of Russia.

8. That the United States Government have all lend-lease items separately identified by American flag markings so that the people of unfortunate European nations will know what America is doing to help them reestablish themselves and their nations.

9. That the United States Government order that all ship manifests be made public so that the American people will know the type, amount, and destinations of cargo leaving this country.

10. That copies of these resolutions be sent to the 48 State commanders of AMVETS and that they be requested to take them up immediately with their executive boards, and after adoption to send same to all the Congressmen in their respective States demanding action at once.

In closing I would like to point out that Communist Russia has overrun more nations since World War II than Nazi Germany did in starting the war. Russia has conquered, absorbed, or now controls all parts of Estonia, Latvia, Lithuania, Finland, Germany, Yugoslavia, Poland, Austria, Rumania, Czechoslovakia, Outer Mongolia, Albania, Hungary, Bulgaria, Kuriles Islands, Dairen, Port Arthur, and Sahkalin. Russia has also requested or demanded Spitzbergen of Norway, two provinces of Turkey and the Dardanelles of Turkey.

America has repeated mistakes which followed World War I, and led to World War II. We have junked our Army, stripped our Air Forces, scuttled our Navy, talked tough to a dictator—shipped war tools to this dictator.

Fifteen million veterans could have kept this from happening, but eleven million of them failed—failed because they failed to join the old-line veterans organizations, and failed to help organize a new organization through which they could speak for themselves.

Yours in comradeship,

CHARLES K. MORRILL,
County Commander, AMVETS, Essex County, Newburyport, Mass.

The Food Situation in the Agricultural West

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, January 19, 1948

Mr. CAPPER. Mr. President, I have received a very interesting letter from Mr. Gerald Gordon, secretary-manager of Associated Industries, Topeka, Kans., in which he gives valuable information as to the food situation in the agricultural West. I send it to the desk and ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ASSOCIATED INDUSTRIES OF KANSAS, INC.,
Topeka, Kans., January 12, 1948.

Senator ARTHUR CAPPER,
United States Senate,
Washington, D. C.

DEAR SENATOR CAPPER: We note that the Senate Banking and Currency Committee is beginning hearings on price controls, allocations, and rationing as of today, January 12. We of Associated Industries of Kansas sincerely hope that the Eightieth Congress will not tinker with price controls and rationing. Considering the fact that the Republicans are in control in Congress, such actions are startling, to say the least. We realize that there are some ideas among Senators, especially those from the eastern part of the country, that a real meat shortage is about to plague our country. In this regard, please consider some of the following facts:

Cattle slaughter in the last 3 months of 1947 was half again as great as prewar; herds are smaller now because livestock raisers killed their cattle to cash in on high meat prices and to avoid high cost of feeding—a very natural procedure. Secretary of Agriculture Anderson predicts that by spring per capita meat supplies will be down to an annual rate of 125 to 135 pounds per person. The average per capita consumption in 1947 was about 157 pounds, but in 1939 the per capita consumption was 133 pounds. Despite Secretary Anderson's low estimate on meat by spring, the Agriculture Department has predicted that meat supplies for 1948 as a whole will come to about 144 pounds per person. This would afford a much higher consumption rate than prewar.

In closing, we ask you to remember that rationing of meat was not successful even in wartime. If rationing were attempted at this time it could not possibly work; too many people learned how to avoid it during the war years, and last, but not least, while some of the high-priced hotels and restaurants might have plenty of meat, rationing would bring a scarcity on the shelves of local butcher shops and grocery stores. Working people would still pay high prices for meat—if they could get it. We believe the rank and file of Americans are pinning their faith in the sound actions of this Congress—we sincerely hope they will not be disappointed. From these hearings they have reason to be apprehensive lest meat rationing should prove merely to be a "foot in the door" for further regimentation and rationing by a "police state" minded administration.

Cordially yours,

GERALD GORDON,
Secretary-Manager.

California Good-Will Milk Ship

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. JOHNSON of California. Mr. Speaker, California Maritime Academy is located near the city of Vallejo in the Third Congressional District of California, which I have the honor to represent.

I am very proud of the California Maritime Academy and the work that they are doing. Last Wednesday afternoon, January 14, 1948, the training ship of this Academy, *Golden Bear*, started on a 4-month trip and during that time the *Golden Bear* will be known as the "California good-will milk ship."

As the name implies, the ship is filled with milk which has been donated by California for the use of distressed Europeans. By the time the ship leaves San Diego, in holds of the ship, there will be 1,500 tons of dried and evaporated milk which, of course, means many more tons of natural milk.

The food is being sent to Europe by private citizens of California and will be deposited on docks of Marseilles, Genoa, Naples, and Athens.

Vallejo, the home port of the *Golden Bear*, was the first town to make its deposit. Present at the ceremonies when the ship took off was Gov. Earl Warren, who said:

This is a great day in the life of the State, and this is the greatest cruise any training ship has ever made from the California Maritime Academy.

The drive was really started by the Vallejo Chamber of Commerce under the leadership of Mr. L. E. Gibson who is a member of the Academy Board of Directors. It is interesting to note that the *Golden Bear* was a man-o'-war a few years ago. We hope that it epitomizes the change that may occur in the next 50 years when men-o'-war will become peace ships and when the world will be so strongly organized and knit together for peace that the original use of battleships will be unnecessary.

Under leave to extend my remarks, I include an article about the California milk ship which was printed in the Vallejo News-Chronicle on Wednesday, January 14, 1948:

WARREN LAUDS SPIRIT OF CITY'S FRIENDSHIP CROWD SEES FIRST LOAD GO ABOARD

California Maritime Academy's training ship *Golden Bear* sailed from Morrow Cove this afternoon on the first leg of her mission of charity and goodwill to France, Italy, and Greece with the "Godspeed" and best wishes of Gov. Earl Warren and Vallejo civic leaders and officials.

The Governor, who spoke from a gaily decorated platform to the hundreds of visitors and Friendship drive workers, said, "This warm-hearted thing you are doing is a great thing and worthy of the people of California. I am grateful to the people of Vallejo for placing the first cargo on the Friend Ship and for being here today to wish Godspeed to the *Golden Bear*. I too wish the ship Godspeed and hope we shall be here to welcome them on their return."

GREAT DAY

Governor Warren, who was introduced by Luther E. Gibson, member of the academy board of directors and Vallejo publisher, told the spectators. "This is a great day in the life of the State, and this is the greatest cruise any training ship has ever made from the California Maritime Academy."

In paying tribute to the unidentified Vallejoan who originated the Friend Ship plan, he said, "It is a fine thing to know this idea originated here. It is a very happy thought and I think this unnamed gentleman should be identified."

"The boys and officers of the academy realize the great purpose of this trip. Vallejo's great idea spread rapidly and was soon translated into action. There is no finer thing the State could do and no finer way to express our friendship than sending this ship to Europe," he continued.

DOUBLE MEANING

The Governor pointed out the relief mission had a double significance. "Over and above the precious cargo, the fact that the food will be distributed by 100 of the finest boys in the States is important. These boys represent a cross section of the hearts and homes of California. When in Europe, they will represent us with dignity and honor in every respect."

Mr. Gibson, in his introduction of the chief executive, said, "A beautiful day to do a beautiful deed for our fellow men. This ship, a man-of-war a few years ago, is now transformed for this annual cruise into a ship of good will and mercy. It represents truly the big hearts of the citizens of Vallejo and Solano County and the people of California in the desire to help the less fortunate.

"I have been given the privilege and pleasure of introducing to you a man whose heart is as big as all California. It was our own Governor who has led the State-wide appeal to fill the *Golden Bear* with the necessities of life in order that those starving and unclothed people of Italy and Greece and France might have food and clothing. His energy and enthusiasm have inspired all of us."

HIGH HONOR

Mr. Gibson added, "I personally cherish this high honor. The Governor, with his great heart, has gone forward to lead the people of the State to gather tons of food and clothing for the starving of Europe. This great heart of our Governor is as big as our great State. I present to you Governor Warren."

WELCOME GOVERNOR

The combined Vallejo High School and Junior College band played for the colorful ceremony at the academy docks. As the crowd cheered, three little girls in costumes of Greece, France, and Italy welcomed the Governor when he arrived.

Commodore Russell M. Ihrig, United States Navy (retired), commandant of the academy, and Capt. R. M. G. Swaney, commanding officer of the *Golden Bear*, escorted the Governor to the speaker's platform where he was joined by cochairmen of the drive, fraternal, civic, naval, and governmental officials.

HONORARY CADET

Loading of the *Golden Bear's* cargo from Vallejo-Solano County, which included 22 tons of food and clothing, continued during the festive ceremonies at the pier. The midshipmen, including the honorary cadet for the voyage, Earl Warren, Jr., paused only for the brief presailing program in their duties to prepare the ship for sailing.

Banners and pennants waved in the breeze and decorated the ship during the Carquinez Straits ceremony in the sunshine. The program, which was photographed by newspaper and newsreel cameramen, concluded with the blessing of the Very Reverend Thomas F. Byrne, pastor of St. Basil's Catholic Church. A Boy Scout guard of honor stood before the speaker's rostrum during the program.

OTHERS SPEAK

Al St. John was master of ceremonies for the farewell fete and introduced city and county officials and representatives. Among those who spoke briefly, wishing the *Golden Bear* and her crew bon voyage, were Hollis Gray, president of the junior chamber of commerce and cochairman of the friendship drive; Rear Adm. Frank J. Lowry, United States Navy, commandant, Mare Island-Vallejo area, United States naval base, San Francisco; Capt. Wallace R. Dowd, United States Navy, commandant, Mare Island Naval Shipyard.

Dr. D. B. Park, president of the Vallejo Rotary Club, drive sponsor; Ernest D. Wichels, cochairman of the drive; Commodore Ihrig; Frank O. Bell, chairman of Solano County Board of Supervisors; Ellis Randall, president of Vallejo Chamber of Commerce; Russell F. O'Hara, civic leader; Mayor George Demmon; H. E. Gamble, mayor of Suisun; A. T. Alistaire, Fairfield-Suisun Chamber of Commerce, and midshipmen officers.

St. John also offered a bon voyage to John L. Cleek, Times-Herald staff member, who is making the trip as far as San Diego with the *Golden Bear*.

The Academy's greatest day was climaxed with the *Golden Bear's* sailing shortly after 1 p. m. The training ship, with a crew of 100 midshipmen, started up Suisun Bay for Stockton for another loading tomorrow. Cargo will be taken on Friday and Saturday at Oakland, Sunday at San Francisco, January 21 and 22 at Long Beach, and January 23 and 24 at San Diego.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, January 19, 1948

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Read It Carefully, Senators" from the Detroit News of yesterday.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

READ IT CAREFULLY, SENATORS

The minority report of the St. Lawrence Seaway Subcommittee in the Senate urges defeat of the project to enable further study.

This is an entertaining suggestion, made of a project that has been studied by this country and Canada for better than 30 years.

The report says new factors have arisen, naming the finding that the seaway will help national defense and the proposal, now before Congress, to make it repay its cost by charging ship tolls.

The national defense aspect is not in fact new, by any means. But the tolls idea is. It is a concession made with the purpose, it was thought, of softening up the opposition in the seaboard States. The tolls would handicap seaway shipping and thus, it was hoped, would make eastern and Gulf port interests less resentful of the competition they fear from it.

That hope was in vain. The report merely falls back on prepared positions, arguing now that the tolls would not pay for the project, because shipping—the very shipping feared as competition—would not use the seaway. Four Senators sign this document—all from seaboard States.

The report is otherwise entertaining, as when it speaks of a need for further study of the cost of deepening Great Lakes connecting channels.

This additional burden on taxpayers, it says, has been conveniently ignored by advocates of the project. The fact, conveniently ignored by the report, is, of course, that the channel deepening is and always has been included in the total seaway cost, as agreed with Canada and now before the Senate.

Or, again, where the report chastises seaway advocates for irresponsibly failing to consider the effect of winter freezing on the hydroelectric power to be developed by the St. Lawrence dams.

This, in view of the 30-year history of the project, would be a truly remarkable oversight, if it were an oversight, which it naturally isn't.

The minimum wintertime head (71.3 feet) and water flow (180,000 cubic feet a second) have been calculated and rechecked, not once but many times, being basic to the international agreement on water rights.

Incidentally, the thing really of interest in this is the comparatively slight variation—as also at Niagara Falls—between the summer and winter flow, a fact making the St. Lawrence a superlative power source.

The report is excellent at ignoring whatever else its arguments find dispensable. It shortens by 2 weeks the ice-free season on the Great Lakes chain, ignoring readily available Government records on the point. It raises again the bogy of fogs in the St. Lawrence estuary, though it is of record that marine insurance for vessels plying that terrifying waterway is no higher than anywhere on the oceans.

In its entire discussion of the tolls question, the report ignores official findings that tolls as proposed in fact will repay the seaway's cost. It ignores in any case the unique novelty of this concession to the seaway's enemies. No tolls ever have been charged on other inland waterways, nor for that matter on seaboard harbors improved at Federal expense.

The report says of the project's defense aspect that the 1941 findings on that score now are invalid, since the new concept of transpolar bombing has shown it ot be peculiarly vulnerable to attack.

This ignores the finding of the Joint Chiefs of Staff, no earlier than last year, that the seaway has "distinct military advantages and would materially increase the industrial and transportation potential of the United States."

In that connection, the report again becomes amusing when it dismisses the imminent exhaustion of Lake Superior iron ores as a reason for opening up the seaway.

It speaks learnedly of developments in the concentration of low-grade taconite and jasper ores on the Mesabi Range as dispelling any fears of ore shortage. Yet the alleged vulnerability of the seaway to transpolar air attack surely would be shared by these concentration works, which, if we rely on them exclusively, would become the bottleneck of the whole steel industry and of the national economy.

It would seem wise, in war especially, to have two iron ore sources—Lake Superior, plus the rich deposits in Labrador. But the report, needless to say, ignores that.

We would not want to leave the impression that this report is a laughably implausible document. It isn't. We do not remember ever reading a piece of antiseaway literature that failed to contrive, for the careless reader, a plausible case. The powerful interests opposing the seaway lack neither the money nor the talent to see to that.

The report, in fact, is highly plausible, and we are just afraid that some Senators who will be voting this spring on the seaway will not be careful readers.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, January 19, 1948

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a letter from Mr. Southworth Lancaster, the present traffic manager of the Boston Port Authority, concerning the St. Lawrence seaway and its effect on the port of Boston, which appeared in the Boston Sunday Herald yesterday.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FACTS ON ST. LAWRENCE

To the EDITOR OF THE HERALD:

The editorial of January 10, entitled "St. Lawrence Bogey," is a good summary of the objections to the so-called seaway project. I have only one comment.

It says that the project would damage the port of Boston by diversion of trade. This is true. It then adds that this diversion includes coastwise shipping. This probably will not follow so far as the general cargo trade is concerned. Such coastal shipping would receive scarcely any direct ill effects because the seaway will be almost useless for the domestic traffic which coastal steamship companies seek. Ultimately there would be certain harmful indirect results, but practically the entire impact would fall upon Boston's export and import trade.

The tonnage which the seaway is expected to move has been variously and ingeniously computed by its proponents, who show a different total each time a new argument is needed. Very roughly, this tonnage would be made up of 60 percent domestic freight and 40 percent foreign cargo. Quite apart from any question of the economic morality of the project, these ratios should be attained if the seaway is to fulfill the claims of its supporters. But this proportion of domestic freight cannot possibly be realized.

Consequently the principal seaway tonnage would be the foreign cargo, the lesser component, which would not be enough in volume to keep the seaway occupied for the seven ice-free months of the year nor to yield tolls sufficient to make the seaway pay for itself. Yet, paradoxically, it would be enough in volume to deal a knock-out blow to Boston by cutting heavily into the export and import tonnages which are the heart of the port's development. In dollars, this diversion of foreign trade has been reliably computed as a minimum annual loss to the port alone of $1,280,000. The actual loss might be twice as great.

With this drastic shrinkage in foreign trade, it would then become a question whether the coastal traffic remaining could support plans for the port's expansion.

This would be the result of the millions in tax money to be poured into the shallow ditch of the St. Lawrence River. New England must contribute its share. St. Lawrence proponents are not satisfied with cutting Boston's throat. They want Boston and New England to help pay for the knife.

SOUTHWORTH LANCASTER.

CAMBRIDGE.

The Freedom Train

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, January 19, 1948

Mr. HILL. Mr. President, a distinguished former Representative from Alabama, my colleague when I was a Member of the House, Hon. W. B. Oliver, has brought to my attention a letter written by Miss Patti Bees, on Why I want to see the Freedom Train. The letter won first prize in a recent contest held by the Montgomery, Ala., Advertiser and Journal for the best letter written on the subject by an Alabama high-school student. Miss Bees is a student in the Seale High School, at Seale, Ala., and the State of Alabama is proud of her. I ask unanimous consent that her letter be printed in the Appendix of the RECORD, as it appears in an article from the Montgomery Advertiser and Journal.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

YOUNG CITIZENS EXPRESS VIEWS ABOUT FREEDOM—PARTICIPANTS IN LETTER CONTEST SEE RENEWAL OF FAITH IN DEMOCRACY

Of all the excellent letters entered in the contest, that of 16-year-old Patti Bees, a senior III of the Seale, Ala., high school, was finally selected as the winning entry. Miss Bees wrote with sincerity and simplicity and summed up the reasons why most of the American people today are making every effort to visit the Freedom Train.

CHANCE FOR ALL

She wrote:

"Symbolic of our American heritage and way of life, is the Freedom Train. It brings to all Americans, everywhere, a chance to see and explore the documents granting them the right to live and prosper in a great country which God, by His goodness, has granted us. Seeing this train comes as an unprecedented opportunity to me, who will now be able to view rare and precious documents that previously have been secluded from the public eye.

"It brings to mind that we are one United States, and that our Government is 'of the people, by the people, and for the people.' It will flourish always, through the leadership of stalwart and courageous men who have fought and will continue to fight so that other Americans might enjoy that which rightfully belongs to them and theirs.

"It will cause me to stop and renew my faith in my flag, my country, and my forebears, in order that I and my successors might live in a land, forever free and democratic."

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, January 19, 1948

Mr. AIKEN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD editorials relating to the St. Lawrence waterway project, the first from the Brattleboro Daily Reformer of January 14, the second from the Rutland Herald of January 13.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Brattleboro (Vt.) Daily Reformer of January 14, 1948]

Whatever the merits or demerits of the St. Lawrence waterway project, it would seem that after nearly 30 years of service as a controversial topic it might be possible for opponents and sponsors of the project to present their cases without resorting to demagoguery. At the moment it is the opposition that is taking the honors in the field of misleading statements. The Boston Herald recently stated: "New England is against this project and must win this fight." This simply is not a fact, since New England (meaning all its citizens) has never voted on this issue. And in New York, Mayor O'Dwyer labels the project as "Roosevelt boondoggling"—ignoring the fact that Roosevelt was the fifth, and not the first, President to recommend the project. The complexity of the issue is so great that Joe Citizen should be spared the further confusion of misstatement.

[From the Rutland (Vt.) Herald of January 13, 1948]

SEAWAY OPPONENTS

Vermonters who attended the forums where the St. Lawrence seaway project was discussed, or who followed the series of articles on this subject published in the Herald, will not agree with some of the arguments being advanced against the proposal.

Typical of these were the remarks of Carroll B. Huntress, chairman of the national St. Lawrence project conference, an organization actively fighting the seaway. It's interesting to note that his objections were discussed and answered not only at Vermont forums but in the articles in this newspaper.

As a result Vermonters have a broader base of knowledge to use in evaluating such attacks. While some of these arguments may be accepted at face value by those in some other States, they have already been discredited in several particulars by facts with which many Vermonters are familiar.

The appeal to local or State interests is commonplace in attacks such as Huntress made. But Vermonters know that the main factor favoring the seaway is not what Vermont or New Jersey might get out of it, but its value and importance to a large section of the Nation.

High Tax on Big Incomes Held Hurting Production

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 19, 1948

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a newspaper article entitled "High Tax on Big Incomes Held Hurting Production," by Francis P. Douglas, which appeared in the Sunday Star, Washington, D. C., on January 18, 1948. In my opinion, it is a very important article, and is appropriate to the subject which is before the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HIGH TAX ON BIG INCOMES HELD HURTING PRODUCTION—ADVOCATES OF LOWER LEVY AGAINST WEALTHY MAINTAIN RICH MAN'S CAPITAL COULD BE BETTER UTILIZED TO HELP NATION

(By Francis P. Douglas)

Public discussion and polls are directing attention anew to the high rates of taxes those in the upper income brackets pay.

The propriety and statesmanship of taking more than half a man's income in taxes is being called into question by responsible individuals and organizations. One line of reasoning behind advocacy of going easier on the rich is that the country needs the rich man's money in a form other than taxes. That form is capital, to expand production.

There is no unanimity in this, by any means. The claim of the lower brackets to the first call on relief from the tax burden has been stated often and ably. Outlining the current attacks on the high rates at which taxes are assessed against incomes in the upper brackets does not indicate any disposition to disregard or minimize the other arguments.

50 PERCENT TOP URGED

The United States Chamber of Commerce and the National Association of Manufacturers both urge that a ceiling of 50 percent be placed on income taxes. A number of other organizations are supporting their position.

As for individuals who advocate this policy, they include one Republican candidate for the Presidency—Harold E. Stassen, former Governor of Minnesota. Neither the State nor Mr. Stassen are given to reactionary policies.

One organization of high standing, however, the Committee for Economic Development, does not urge that the top rates be cut back to less than about the level of 1935.

In that year the New Deal turned to what it called a taxation for social reform program, traceable to the earlier share-our-wealth campaigns. In the doldrum days of the depression the share-the-wealth idea was attractive to many.

People sang the song about the rich getting richer and the poor having children. Its catchy tune belied its cynicism, but many thought there was some truth in the words. There was a widespread feeling that the rich were too rich and the poor were too poor.

FEWER MILLION-DOLLAR MEN

In 1935 individual surtaxes were boosted beginning at 31 percent on $50,000 and reaching 75 percent on amounts over $5,000,000.

A good deal of social reform in this line had already been accomplished by the depression. In 1929 there were 513 persons

with million-dollar incomes; in 1935 the number had fallen to 41.

With the war all taxes were upped until the man with a million-dollar income was taxed about 90 percent. That is the case today. And in the more modest brackets, a man who earns $18,000 finds that if he earns another thousand the Government will take half of that in taxes.

In the words of the Committee for Economic Development, the taxpayer from then on has only a minority interest in his income.

The argument for the need of capital for production, from those in the upper brackets, runs about like this:

Prices are high because too many people with money are competing with one another for the available supply of goods. To get prices down and lick inflation it will be necessary to reverse this condition. Goods must be supplied in such abundance and at such prices that the sellers will compete with one another for the consumer's dollar.

CONANT'S VIEWPOINT

It is now practically impossible to produce more goods at no extra cost because almost every employable person in the country is working. If you lengthen the hours you run into overtime and higher production costs.

The way to do it is by supplying the worker with more efficient tools and machines and by developing new companies and new industries. That means the investment of huge amounts of capital.

One of the chief sources of new capital is people with big incomes. But why should a man with a big income risk his money when, if his venture is successful, he is allowed to keep less than half of the return? Why should a man work hard and take chances when he will have only a minority interest in the profits resulting?

The last part of this argument received unexpected support from President James B. Conant of Harvard. He warned that the present tax system is having a profound effect on the incentives which thus far in our history have contributed to the taking of risks and the seizing of opportunities.

"Americans believe in the equality of opportunity in a fluid society without hereditary privileges," he said, and that belief is reflected in high inheritance taxes. High taxes on earned income have the reverse effect on the fluidity of our society, he maintained. "Therefore, insofar as the national expenditures permit, the case for keeping income taxes low is overwhelming, both in terms of social ideals and incentives."

STASSEN'S REASONING

Mr. Stassen, in his book, "Where I Stand," said he believes that a government that demands more than 50 percent of a citizen's labors, or ingenuity, or inventiveness, or other incomes is a government killing the future of its average citizen and weakening the long-range strength of its economic system.

In explanation of that last point is this passage:

"In order to operate successfully our system requires enormous capital. If that system is to continue striding forward it needs great sums of venture capital, risk capital, dynamic capital. We have now reached the point where our tax program is a real threat to the long-term future sources of dynamic capital."

Laurence Arnold Tanzer of New York, testifying on behalf of the United States Chamber of Commerce before the House Ways and Means Committee, said that the Government taking more than half of any person's income inhibits individual effort so severely as to amount to stifling it in most situations.

By reducing higher surtaxes, he said, the Government stands to gain, not lose revenues.

The Treasury, apparently feeling it had to reply, recently issued a study of The Tax Treatment of Earned Incomes in which it examined the question of taxes reducing incentive.

Offsetting the adverse effect of high taxes on incentive, according to the Treasury, are considerations "based on the high demand for income by many individuals who desire to maintain relatively fixed or even increasing levels of consumption and saving. If taxes take larger proportions of their incomes, the incentive of these individuals to work tend to be increased rather than decreased. They will try within the limits of their abilities, energies and opportunities to earn more and maintain the desired incomes after taxes."

The study conceded, however, that there is no doubt that the response of some individuas to high taxes is a reduction in effort.

NAM'S PROPOSED SCALE

The National Association of Manufacturers is advocating a tax revision which would start with a rate of 12 percent instead of the present 19 percent and progress to a top rate of 50 percent on taxable incomes in excess of $100,000. In addition it urges a couple of measures which would be beneficial to the white-collar worker.

Don G. Mitchell, president of Sylvania Electric Products, Inc., and chairman of the taxation committee of the NAM, asserts the need of venture capital cannot be met, except in small part, out of the savings of the low-income groups.

"There are, in fact," he told the NAM at its convention last month, "only two sources from which we may expect the bulk of the necessary venture capital. These are retained corporate earnings and savings from the middle and upper incomes."

"Mr. Mitchell, citing Commerce Department figures, says the deficiency of capital formation since 1930 amounts to $125,000,000,000. However, not all of this has to be made up. For example, a machine tool which normally would be replaced after 5 years, but which is used for 10 years need be replaced by only one machine, not two.

President Truman in his State-of-the-Union address to Congress saw the need as not so great. He said, "$50,000,000,000 would be needed over the next few years."

POLICY IS CHALLENGED

Reverting to the NAM's insistence on tax cuts for the upper brackets, it should be recorded that such a policy has not by any means passed unchallenged.

For instance, Stanley H. Ruttenberg, assistant director of research for the CIO, testifying before the Senate Finance Committee at the first session of the Eightieth Congress, quoted Business Week magazine as saying that an answer to the tax problem must be found in this question: "Should the tax system be designed to encourage consumption or to minimize restraints on enterprise and new investment?"

Mr. Ruttenberg's answer was simply this: "It does little good to encourage such new investment if the low-income individuals do not have sufficient money to buy the items thus produced." The guiding principle of a sound tax program, he said, must be first to reduce taxes upon low-income individuals, certainly not to lower taxes upon the wealthy or on corporations.

Mr. Truman concurred in the argument that the low-income groups need relief, recommending a credit of $40 for each taxpayer and an additional credit for each dependent to offset the increase in the living cost. And to make up for this tax loss, estimated at $3,200,000,000, Mr. Truman suggested that corporations can well afford to carry a heavier share of the tax load at this time.

WOULD HELP CORPORATIONS

This runs counter to the program of the Committee for Economic Development. The CED did not urge a ceiling of 50 percent on individual tax rates. Its long-range program calls for an initial rate of 11.5 percent instead of the present 19 percent, hitting the 50 percent rate at the $150,000 bracket and graduating the scale on up to a top of 77.5 percent on incomes of $1,000,000 or more.

But the CED would provide more relief for corporations and there is a substantial body of opinion believing this would provide capital more speedily. It would place the corporation tax rate at 30 percent instead of 38 percent and drop it to 11.5 percent when revenues permit. It also would alleviate the double taxation on money paid out in dividends, allow businesses to carry losses forward and backward and give greater leeway in depreciation allowances.

Whether the NAM or the CED program would yield more capital is not going to be proved by the adoption of either one of them by Congress in the near future. But they do chart some of the considerations to which the framers of tax bills will give their attention.

Nor are we going to see shortly the reduction of the income tax on the top brackets to 50 percent. The soak the rich policy, however, is being reexamined to see just what the results are.

The Jewish War Veterans of the United States

EXTENSION OF REMARKS

OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, January 19, 1948

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a résumé of the history and objectives of the Jewish War Veterans of the United States of America, who will hold their fifty-second annual memorial service on May 18, 1948, in New York City.

There being no objection, the résumé was ordered to be printed in the RECORD, as follows:

In 1896 veterans of the Jewish faith who had borne arms in the tragic struggle between the American States inaugurated an observance that has been regularly conducted on the Sunday nearest Memorial Day for more than half a century. These Americans, among them men who had earned the Nation's highest decoration for valor, constituted a small segment of the 10,000 men of their faith who had served in the contending armies of their country's fratricidal conflict. Let it be marked that they came together in peace because certain of the basic principles for which they had offered themselves in war were under threat by misguided and unreasoning men. For there was abroad in their time a canker that has not yet ceased to afflict the vitals of mankind. Mean and disruptive devices of religious calumny sought to becloud their military contributions, while their coworshippers were subjected to indignities ominously reminiscent of Old World bigotry.

They assembled in the house of their faith to venerate the memory of those of their coreligionists who had fallen in the battles of the Republic and to plead for strength of spirit to meet the tests of peace. They emerged with a concept of civic responsibility. This statement of principles, conceived more than a half century ago, is the preamble to the constitution of the Jewish War Veterans of the United States of America:

"We, citizens of the United States of America, of the Jewish faith, who served in

the wars of the United States of America, in order that we may be of greater service to our country and to one another, associate ourselves together for the following purposes:

"To maintain true allegiance to the United States of America; to foster and perpetuate true Americanism; to combat whatever tends to impair the efficiency and permanency of our free institutions; to uphold the fair name of the Jew and fight his battles wherever unjustly assailed; to encourage the doctrine of universal liberty, equal rights, and full justice to all men; to combat the powers of bigotry and darkness wherever originating and whatever their target; to preserve the spirit of comradeship by mutual helpfulness to comrades and their families; to cooperate with and support existing educational institutions and establish educational institutions and foster the education of ex-servicemen and our members in the ideals and principles of Americanism; to instill love of country and flag and to promote sound minds and bodies in our members and our youth; to preserve the memories and records of patriotic service performed by the men of our faith; to honor their memory and shield from neglect the graves of our heroic dead."

These are the principles which today guide more than 100,000 veterans of our last four wars who make up the present membership of the Jewish War Veterans of the United States of America. How mindful they have been of their heritage was demonstrated last October on the occasion of their fifty-second annual encampment at St. Paul, Minn. More than 2,000 delegates, representing every section of the country, adopted a series of resolutions attesting to their organization's awareness of its responsibility in contributing to the peacetime safety and stability of our country.

They voiced a plea for legislation to provide this Nation with a military and civilian defense establishment of sufficient strength and preparation to cope with any emergency. To speed the economic rehabilitation of more than a half million war veterans who continued to draw unemployment allowances under the GI bill of rights, they asked for a national conference of business, labor, and governmental representatives that might formulate a program to absorb our jobless veterans into the Nation's productive economy. They dedicated themselves to year-round observance of National Employ-the - Physically - Handicapped Week and pledged themselves to urge upon business and industry the employment of our war-injured veterans in the many occupations to which handicapped persons can adapt themselves gainfully. They asked for consideration of such increases in governmental allowances to the widows and orphans of our war dead as would enable these deserving citizens to keep pace with the post-war rise in living costs. They urged humane and judicious assistance to those deserving nations overseas whose struggles to establish free governments are being handicapped by hunger and illness, by inadequate shelter and lack of productive machinery. And they reaffirmed their historic opposition to totalitarianism, reminding avowed or proven Communists that there is no place for their kind in the ranks of the Jewish War Veterans of the United States of America.

To implement these and many other decisions of similar import, they chose as their national commander for this year my friend, Col. Julius Klein, of Chicago. Colonel Klein is the first midwesterner so to be honored in the 53-year history of this organization. One of the foremost citizen-soldiers of the State of Illinois, Colonel Klein is descended from a distinguished family that settled in the city of Chicago more than a century ago. He is a veteran journalist, editor, and soldier who served in both World Wars.

As a war correspondent and Army officer in World War I, he won the praise of the Honorable James W. Gerard, our Ambassador to Germany in the administration of President Wilson. In World War II he commanded troops in the South Pacific and in the Philippines.

He holds the Legion of Merit with two oak leaf clusters, the Bronze Star, the Soldiers Medal for Heroism, the ribbon of the French Legion of Honor, and the Philippine Distinguished Service Star, awarded him personally by former President Osmena. He was also special assistant to the former Secretary of War Patterson, and was commended by that Cabinet officer for his services following VJ-day.

In 1933 and 1934, Colonel Klein, then a member of the Illinois National Guard, was assigned to conduct an investigation of subversive activities in the Middle West. That investigation produced the first dossier of disloyal elements in this country.

His election as national commander of the Jewish War Veterans of the United States of America has been applauded by leaders in all areas of American life. Gen. Douglas MacArthur expressed the view that "no better choice could have been made" by the organization.

General Eisenhower wrote: "Under your leadership, I am certain this fine association of former servicemen and women will uphold the patriotic ideals which have characterized it throughout its history."

General Bradley, in voicing his congratulations, said: "In addition to being one of our oldest veterans' organizations, your group has consistently demonstrated a true spirit of service to the veteran and to the Nation. Please accept my cordial congratulations upon your election."

Lt. Gen. Robert C. Richardson, under whose command Colonel Klein served in the Pacific, wrote: "With your rich experience on all levels of the Army, and with your fine background and knowledge of the world, you should be able to do a great deal for the organization, which is a real power for good in the country."

In adding the congratulations of the United States Navy, Fleet Admiral Chester W. Nimitz took occasion to note the following: "In following the convention of the Jewish War Veterans of the United States of America, it came to my mind that men of the Jewish faith have always been fearless in the defense of our country. It is Navy Day as I write and names like Jones, Barry Truxton, Decatur, and Perry are in the minds of the American people. Too few know of the tremendous importance to our early American history of names like Salvador, Lushington, Franks, and Russel. Commodore Ordroneaux and Commodore Levy are names reflecting great bravery and the making of splendid naval traditions. To all these men of the Jewish faith our country is grateful. World War II again found the Jews ready to serve and die. This they did, and our country is stronger for their sacrifices."

The sentiments of these and other military leaders were echoed by the leadership of our major political parties, the most notable figures of Jewish religious and private life, by newspaper editors and State officials in every section of the country, and by thousands of former enlisted men who served under Colonel Klein in wartime.

At this juncture, I should like to introduce into the record, editorial comments by three major newspaper organizations relative to Colonel Klein's election as national commander of the Jewish War Veterans of the United States of America.

The Chicago Herald-American wrote:

"Col. Julius Klein, a Chicagoan, who has given exceptional service to the Nation in two World Wars, will now give further important service as head of the Jewish War Veterans of the United States.

"He will be elected president of the Jewish War Veterans at the organization's convention in St. Paul, October 15 to 19, having been endorsed by the State departments of Illinois, California, Virginia, and other States.

"Colonel Klein has received many decorations, in both the First and Second World Wars, for gallantry in action and for meritorious service.

"To his service in the Second World War, Colonel Klein added effective postwar service in furthering the Army's readjustment program.

"For this work he received a letter of warm personal commendation from former Secretary of War Patterson, to which General MacArthur added a postscript, saying: 'He (Patterson) said nothing more than you deserved.'

"In these disturbed and dangerous times, the Nation is fortunate that such men as Colonel Klein are willing to serve their country in peace as well as in war."

The Chicago Daily News said:

"For the first time in its history, the Jewish War Veterans of the United States have turned to the west for leadership. Chicago takes pride in the election of one of its citizens, Col. Julius Klein, as national commander, in which post he will guide the influence of the 800,000 Jewish war veterans on national affairs.

"In 6 years of World War II service Colonel Klein made a distinguished record. He was cited for heroism under fire in the South Pacific. Among his other honors, President Osmena of the Philippines gave him a Distinguished Service Star and President Roosevelt awarded him the Soldier's Medal. War Secretary Patterson and General MacArthur had paid him high personal tributes.

"Colonel Klein is a man of unusual energy and a keen interest in public affairs. The Jewish war veterans have chosen one who will combine aggressive leadership, seasoned judgment, and faithful integration of their welfare with the over-all interests of the Nation."

They were joined by the Gannett newspapers, who wrote:

"At the convention of Jewish War Veterans in St. Paul, Minn., Col. Julius Klein, of Chicago, was elected national commander.

"Colonel Klein saw active service in both World Wars. He was awarded the rare Soldier's Medal and won other decorations and citations for 35 months' service in the South Pacific and the Philippines. After VJ-day he was appointed special assistant to the Secretary of War.

"He now becomes spokesman for 800,000 Jewish veterans of the two wars, bringing to the task aggressive leadership combined with seasoned judgment and devotion to the Nation's interests."

The Chicago Tribune reported Colonel Klein's election as follows:

"Col. Julius Klein, of Chicago, today became the first midwesterner to be elected national commander of the Jewish War Veterans of the United States.

"Colonel Klein, who is 46 and veteran of both world wars, was elected on the first ballot at the concluding session of the organization's fifty-second annual encampment. He defeated Jackson J. Holtz, Boston attorney.

"Klein succeeds Milton A. Richman, of Hartford, Conn. The Jewish War Veterans organization has a membership of 104,000 and has 612 posts.

"Klein is a public relations consultant and former newspaperman. He saw 35 months of action in the South Pacific and the Philippines during World War II, and after VJ-day was special assistant to the War Secretary.

"In acknowledging the election, Klein pledged himself to a program of 100-percent Americanism, without deviation to any 'ism,' communism or fascism.

"He said that the organization has a dual purpose: 'To work with the American Legion, Veterans of Foreign Wars, and other veterans' groups as the spokesman for the

550,000 Jewish veterans of World War II and the 250,000 veterans of World War I, from whom the membership is recruited, and to work with all organizations, Jewish and nonsectarian, for the furtherance of the principles of American democracy.'

"Klein described world communism as the greatest threat to world peace, asserting it is part of 'an imperialistic pattern that seeks to enshrine the state over the rights of the individual man.'"

Under the leadership of this distinguished American, the Jewish War Veterans of the United States of America can be expected to grow in stature and to expand its usefulness to our country's institutions. Its veterans' service program has already been broadened to supplement existing Federal and local programs on a scale that is saving the taxpayer many thousands of dollars annually. This organization's service offices, now established in the major cities of our country, are aiding more than 6,000 veterans and their dependents monthly. Its ladies' auxiliary is serving the welfare and morale needs of as many more veterans who are recovering from battle injuries in hospitals of the Veterans' Administration. Under Colonel Klein's administration, plans have been initiated to expand these services greatly and to develop still further the organization's programs for carrying the spirit, as well as the letter, of Americanism into all strata of our daily society.

There can be no comfort in this organization for the forces that seek today to assail our way of life both from the left and the right, from beyond our shores and within our gates. The very existence of a Jewish war veterans' organization signals the abiding determination of the American people to stand united against any challenge to the inheritance willed to us by all the men of our history who served their God in separate tabernacles and their country in a common faith.

Cooperative Housing Venture Pays Off

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, January 19, 1948

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Cooperative Housing Venture Pays Off," from the Washington Post of yesterday. The article deals with the problem of housing, which is certainly one of the important problems before our country. It is a very interesting account of how the housing problem has been solved in one community in Maine by a cooperative housing venture, which has resulted in the production of housing adequately at somewhat less than one-half current costs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN MILLINOCKET, MAINE, COOPERATIVE HOUSING VENTURE PAYS OFF

(By Earl Aronson)

MILLINOCKET, MAINE, January 17.—Tidy new homes rising rapidly here to ease the housing shortage are monuments to the cooperative spirit in this little northern Maine paper manufacturing town.

The people, the Great Northern Paper Co., and a bank joined the community endeavor which is providing dwellings at a cost of about $575 per room, compared with approximately $1,500 elsewhere.

With many willing hands pitching in, new houses—complete with cellar, electricity, plumbing and heating—are going up at costs of $4,000 to $6,500. Without the cooperative action, the cost would be approximately double.

The paper concern, principal industry for the 6,300 inhabitants, began the enterprise a year ago. It laid out 51 lots. Seven others were laid out elsewhere by individuals. The company constructed sewers and built streets.

The Great Northern reserved five lots in scattered parts of the development and on them is building six-room houses to rent to employees for $45 a month. These homes, not part of the cooperative plan, cost $8,500.

AVERAGE LOT COST $240

The other 46 company lots—averaging 100 feet deep with a 60-foot frontage—were sold for an average of $240 each on an easy monthly payment basis. The purchasers planned to build their own dwellings, hiring what labor was necessary to do work they and their friends couldn't accomplish.

A dozen men went into the woods to cut logs for lumber. Others began casting cement blocks for construction.

Paper-company officials offered their business experience to determine the best means of financing the new buildings.

Since many lot owners were war veterans, they first called in Veterans' Administration officials for discussion, and the Millinocket Trust Co. presented an attractive proposition with loans which can be liquidated in 10 to 15 years The interest rate is 5 percent.

Great Northern helped to trim building costs. It offered special rates for use of its horses and trucks by men who felled their own logs and for milling. The company furnished without charge—except for overtime—a bulldozer and operator to excavate and backfill; a cement mixer and operator and several sets of form panels and miscellaneous equipment. It also provided services of several expert carpenters to instruct the inexperienced.

This helped cut the cost of cellars from $700 to $150.

Company assistance was not limited to employees or war veterans or to the original project or any one section of town.

DIFFERENT HOME DESIGNS

Ground for the first house was broken last April. Eight homes were completed and occupied by mid-December. Frank Bowler, chief engineer of Great Northern's sprucewood division, said then that by this month "25 families will be living in their own homes in the 51-lot project on the east side of Millinocket stream."

Work will continue through the winter when weather permits. Construction has started on all but six lots.

The typical dwelling has five or six rooms and a bath. Some are bungalow style; others have two stories. Walls are insulated. Garages will be built later.

The houses are not monotonously similar. The individual owner's taste in design and color is carried out as practically as possible. Company architects who planned the five company houses also designed the others.

The original cooperative plan for small groups of volunteers to work a few hours in the evening or on days off was outgrown quickly. Volunteers increased and as many as 40 worked on a single building at one time. They brought their own tools.

The owner of one finished home supplied electric current to illuminate night work on nearby houses. When the Bangor Hydro-Electric Co. learned of his generosity, it whittled his bill to average monthly size.

When spring comes again a sandy area—which used to be an estuary—leading to Millinocket stream, will be graded and beautified as a public park. A Great Northern employee versed in landscape architecture is blueprinting the project. Katahdin Garden Club will collaborate.

Double Harness for the St. Lawrence

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, January 19, 1948

Mr. AIKEN. Mr. President, in the New York Times magazine of yesterday there appeared an excellent two-page spread, with photographs of the proposed St. Lawrence development, the best I have ever seen anywhere. Accompanying the photographs, which, unfortunately, cannot be reproduced in the RECORD, was a good factual statement relating to the proposed St. Lawrence development.

I ask unanimous consent that the article, entitled "Double Harness for The St. Lawrence," which, as I have said, appeared in the New York Times magazine of yesterday, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOUBLE HARNESS FOR THE ST. LAWRENCE

The tremendous proportions of the St. Lawrence River project are shown in the accompanying maps and drawing. For 50 years the complete development of the river has ben vigorously debated. Today what is officially called the St. Lawrence seaway and power project is before Congress for action. The resolution reported to the Senate approves an agreement between the United States and Canada to complete the project.

The pending measure provides for (1) development of 2,200,000 horsepower in a major hydroelectric project in the International Rapids section of the river; and (2) improvement of relatively short sections of the existing Great Lakes-St. Lawrence seaway to provide a continuous channel with a minimum depth of 27 feet.

Improvement of the International Rapids section would remove the chief bottleneck against navigation and at the same time create, engineers say, a huge volume of low-cost energy. It is estimated that the cost of the works will amount to $513,884,000.

The St. Lawrence, with the Great Lakes as its reservoirs, is unique among the rivers of the world. It has a relatively constant flow of water and the river at the International Rapids section can be harnessed to give an annual output of 12,600,000,000 kilowatt-hours of energy.

The key to the development is the International Rapids section. The powerhouse here would operate the year around, and engineers of the power authority say that the seaway and power project would serve directly about one-third of our population in an area of 300,000 square miles.

The three great features of the project in the International Rapids section are the Barnhart Island powerhouse, the Long Sault Dam, and the canal and locks to carry vessels around the barrier formed by the dam and the powerhouse.

According to the plans the powerhouse will be the longest in the world and its transmission towers will carry electricity to switchyards on the American and Canadian shores of the river. The dam, 3,000 feet long and 150 feet high, is designed, with the powerhouse and dikes, to impound the outflow of the Great Lakes and drown out the rapids.

These locks would be the same size as the MacArthur Lock at Sault Ste. Marie, Mich., and the eight locks of the Welland Canal bypassing Niagara Falls—already completed links in the seaway project. Most of the oceangoing cargo vessels would be able to navigate all of the locks in the 2,340 miles from the mouth of the Gulf of St. Lawrence to Duluth at the head of Lake Superior.

The Cost of Foreign Aid

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, January 19, 1948

Mr. WHERRY. Mr. President, on behalf of the junior Senator from Wyoming [Mr. ROBERTSON], I ask unanimous consent to insert in the Appendix of the RECORD an article written by Frank C. Waldrop, which appeared in the Washington Times-Herald of Sunday, January 18, 1948.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT'S YOUR MONEY

(By Frank C. Waldrop)

If you are not interested in $183 of your money, now is the time to skip this item and turn to something else, for this is a factual report on your money. And everybody knows that figures make dull reading.

So if you're flush with cash, with all your bills paid, including taxes, and plenty of meat in the refrigerator, don't waste your time here. This is for poor folks.

The poor folks who have to worry about their money ought to know at the outset that this report is available through the courtesy of Senator JAMES P. KEM (Republican of Missouri), who fell to wondering just how much money the Marshall plan will cost his constituents if it goes through as put by General Marshall on his "take it or leave it" demand basis.

Now for the dismal figures.

Between July 1, 1940, and July 1, 1947, according to the Library of Congress legislative research reports, the United States Government has run up bills totaling $73,092,058,013 for loans, property credits, advances, relief, and rehabilitation grants and other authorizations to foreign governments.

Call the 1940–45 money all for war purposes, says Senator KEM, and just consider the $24,099,211,087 of the 2 years between July 1, 1945, and July 1, 1946, aid in support of reconstruction and peace.

On the basis of the last official census of the United States of America, that works out to $183 a head for every man, woman, and child in the county. On the basis of the average United States family, that's $616 for each American household.

To put it another way, the average American family spent $25 a month for those 24 preliminary months of aid to foreign nations while the Marshall plan was being trimmed up and drafted for demand upon Congress to appropriate more and bigger piles of cash.

That same average cut per family would pay the whole income tax bill for a married man with two children, making $4,000 a year.

So you see, foreign aids and relief have already come to a considerable amount.

Senator KEM drew the comparison even closer home by comparing the anual tax receipts of each county in his home State of Missouri, with the foreign aid already granted and that asked by General Marshall, calculated as if each person in each of those counties had to pay the $183 per head, as aforesaid.

Taking the per capita basis above cited, he showed that since VJ-day, the bill rolled up already and now proposed by General Marshall averages out against a typical Missouri county, that of Macon up in northeast Missouri, at $7,039,284—more than Macon County has collected in taxes for 20 years, all added together.

Out in the Ozarks there is Taney County, which spends about $90,000 a year on county roads and schools. The foreign-aid project averages out to 10 times that much per year for Taney countians.

Or take a look at the way it works out for Kansas City, that up-and-coming town. Recently, after much wrangling and wrestling between politicians there, Kansas City voted $41,500,000 worth of bonded debts upon itself for self-improvement, to be strung out over a 15-year period.

On the other hand, the averaged-out cost to Kansas City for 2 years of foreign aid, much as it may well surprise Kansas City, equals $73,049,524. Add to that the Marshall plan, and Kansas City has $58,000,000 more of finance for foreign aid loaded upon it in the next 4 years.

As Senator KEM pointed out, Kansas City couldn't even tax itself to provide for its own improvement as per the bond issue above noted, without a two-thirds majority vote of its own people. But the foreign aid and the Marshall plan—what two-thirds vote?

Don't say it's unfair to use average figures, and claim it's silly to tell the people of Taney County, Mo., that the foreign aid works out on them at 10 times their annual tax bill.

Who pays the money, in the short and long run? If more than average taxes are collected in actual first-hand cash from Kansas City, still Taney County feels it eventually in higher prices that pass the bill on.

The route by which the tax collector gets to you may be obvious or devious, but he gets there just the same. The estimate of tax obligation on the basis of per capita and average, is the only one that can possibly serve to indicate just how pervasive and oppressive this foreign relief is in fact to the people of the United States of America.

Here in Washington, the taxpayers are going around in dizzy circles because the government for the District is asking something more than $101,000,000 for 1 year of administration in this world capital.

What would happen if it ever penetrated these already dazed characters' brains that their foreign debts laid up against them for the 2 years aforementioned work out on the basis of the Library of Congress' figures, to $146,500,000, more or less?

Don't ever tell it around town. Some civic-minded luncheon speaker would, for sure, jump up and say we're slackers and haven't done enough.

State of the Union

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of January 9, 1948:

STATE OF THE UNION

Harry S. Truman stood up in the House of Representatives in Washington on Wednesday and gave the customary Presidential report on the state of the Union. It is well that Americans of all classes, creeds, and varied origins understand each other so well and particularly have such a basic knowledge of politics. Otherwise, from the violent reaction to the Truman speech by the party of the opposition, the citizens would surmise that the Nation was in a mighty sorry state.

There are lots of things the matter with the United States. It is not a perfect Union. One of the greatest body of laws man ever conceived, the Constitution, has been amended and amended again down the years, to meet conditions which arose in each generation or to take care of abrasive points which the founding fathers, with all their celebrated wisdom, overlooked.

But with employment the highest in history, with production still lagging which means jobs for the future, with the forthcoming wheat crop looming better than anticipated, with the Nation beginning to buckle down to the solution of the housing problem and with no war really imminent, it may be that we are, on the whole, doing so well that some of us are getting captious.

On the other hand, although the principal and most vehement critics of Mr. Truman's speech, are outstanding members of the GOP, perhaps they are right when they say that the Truman remarks were pure politics. In an election year, running for a second term, Mr. Truman would hardly be human if he did not put his best foot forward.

But the members of the Republican Party who so eagerly—as soon as he finished his oration—put their best feet forward also, for the purpose of tripping him up in the ambition to remain in the White House, are not, like Caesar's spouse, above suspicion. Some of the most indignant deriders of the Truman declarations as "demagoguery" are themselves candidates for the same post to which the man from Missouri aspires.

Only too recently we pointed out that the big issue before Congress this year, bigger than curbs on inflation or complete passage of the Marshall plan, was the question of who would be President of the United States when January 1949, rolls around. What Mr. Truman said yesterday and the scolding he has since received confirms that thought. It would be too bad if politics took precedence over important matters such as taxes and high prices, but that's the democratic way of it. The alternative is dictatorship and we will not stand for that.

What was amazing about the reaction to what President Truman said was the shock, real or simulated, expressed by opposition leaders because he plumped so strongly for additional social betterment. One would gain the impression some folks had the idea that all social progress, affecting particularly the little man, came to a close when Franklin D. Roosevelt reached the end of the road in his rose garden at Hyde Park.

A long time ago in this country, a man had to own property in order to vote. In a time, not so long ago, men worked 12 hours a day, for $1 a day. Since then we have come a long way. The mass of the people are living better and giving their children greater opportunities, while the Nation, all around, enjoys historic prosperity.

Perhaps Mr. Truman's altruistic aims went beyond the times in which we live. But some of the planks for making America better for more people in the future, indicated that in these matters he would like the Nation to continue to go forward. In the main, we do not think the bulk of Americans are too

worried about that direction. They are concerned we know, at the moment, about what may happen if impetus which the war gave us stops.

A High Farm Income Is in the Public Interest

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. CURTIS. Mr. Speaker, although this Congress has many pressing problems where time is important, we also have a responsibility to look ahead. We must do those things that will assist and safeguard the American economy in 1949, 1950, and in the years that follow.

A high national income is imperative if the United States Government is going to carry the burdens he has already undertaken, discharge the national debt, and maintain the defense of our country. Without a high national income our Government will have difficulty in securing the revenue needed for these things. The way out must be the way of private enterprise or we will find ourselves facing greater problems. The way to maintain a high national income is to maintain a high farm income. This is a truth that has often been expressed from the floor of this Congress. It means that if America is to avoid a depression or a slump we must avoid a depression or a slump in farm income.

It is gratifying to know that a number of my colleagues have been giving definite attention to this principle. Through them I have received a brief prepared by Carl H. Wilken, economic analyst; Dr. John Lee Coulter, consulting economist; and J. Carson Adkerson, mining consultant.

Mr. Speaker, I would like to submit certain figures and tables prepared by these men. The first one covers the years 1929–41, inclusive, and the year 1946. That table is as follows:

Relationship of gross farm income

Year	Gross farm income (billions)	Percent of national income	Retail sales (billions)	Percent of national income	National income (billions)
1929	$13.0	14.8	$47.1	54.0	$87.3
1930	10.5	14.0	41.3	55.0	75.0
1931	7.6	13.0	34.5	58.6	58.8
1932	5.7	13.7	26.4	63.0	41.6
1933	6.4	16.4	25.7	65.0	39.5
1934	7.8	16.0	31.0	63.7	48.6
1935	9.0	15.7	34.5	60.8	56.7
1936	10.0	14.9	39.2	58.8	66.9
1937	10.6	14.4	42.2	57.3	73.6
1938	9.4	13.9	39.7	58.9	67.3
1939	9.9	13.6	42.0	57.9	72.5
1940	10.3	12.6	45.4	55.8	81.3
1941	13.1	12.6	53.7	51.0	103.8
Total	123.3	14.1	502.7	57.5	872.9
1946	27.1	15.2	102.0	57.3	178.0

This table bears out the principle that for every dollar of farm income we have $7 added to our total national income. It follows then, that if the farm income is increased by $5,000,000,000 the national income is increased $35,000,000,000.

By the same token, should farm income be reduced by $5,000,000,000 the Nation suffers a loss of $35,000,000,000 in total national income. Again, I suggest that the time is now to be thinking about our income level for next year and the years that follow.

Mr. Speaker, the gentlemen whose brief I have referred to have also prepared a table showing a comparison of food expenditures to the national income, which is as follows:

Comparison of food expenditures to national income

Year	National income (millions)	Expenditures for food (millions)	Percentage of national income
1930	$75,003	$18,125	24.1
1931	58,873	14,779	25.0
1932	41,630	11,394	27.3
1933	39,584	10,915	27.5
1934	48,613	12,263	25.2
1935	56,789	13,702	24.1
1936	66,941	15,326	22.0
1937	73,627	16,508	22.4
1938	67,375	15,762	23.3
1939	72,532	15,786	21.9
10-year average			24.28
1946	178,532	42,905	24.1

Universal Military Training

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a recapitulation or tabulation of a national poll on universal military training conducted by George Gallup, which discloses that the citizens of the United States are in favor of universal military training 2 to 1.

Mr. Speaker, in view of the fact that this important matter will come before the Congress for action in the near future, I feel that it is of interest to the Members of Congress, as well as to the country as a whole that they might be informed as to the position of the people of our country in regard to this matter; hence I am submitting the complete tabulation of the poll, as follows:

VOTERS 2 TO 1 FOR PEACETIME TRAINING

(By George Gallup, director, American Institute of Public Opinion)

President Truman's request to Congress for a peacetime military training bill finds public sentiment receptive. However, the proportion of voters in favor of universal military training is smaller today than it was 6 months ago.

If the country were to vote in an official referendum on the much-discussed UMT program, approximately two-thirds would favor it today, as shown by the results of a Nation-wide unofficial sampling referendum by the institute.

The vote:

"Do you think Congress should or should not pass a law to require every able-bodied young man (who has not already been in the armed forces) to take military or naval training for 1 year?"

	Percent
Should pass law	65
Should not	24
No opinion	11

A previous poll on the issue, reported July 25, 1947, showed a vote of 75 percent in favor, 18 percent opposed and 7 percent without opinions. The question read: "In the future do you think every physically fit young man (who has not already been in the armed forces) should be required to take military or naval training for 1 year?"

In measuring attitudes on this controversial issue facing the new Congress, the institute used its new, multiple-question technique which makes it possible to probe opinion from many aspects.

VETERANS FOR IT

For example, the survey tested voter awareness of the arguments for and against military training, recorded intensity of sentiment, measured the attitudes of people who have a member of the family of draft age.

It found that:

1. Majorities in every section of the country favor peacetime training.

2. Veterans of World War II show a higher percentage in favor than the population as a whole.

3. The best argument for UMT, in the opinion of the people questioned, is the need for preparedness and protection while the world is upset. The second best reason given by voters is that it is good training and good discipline for young men.

4. The strongest reasons against UMT, voters say, are that it is unfair to young men to take a year out of their lives, disrupting their education, and that it will encourage war and warlike attitudes.

5. Persons who have a male member of the family of draft age vote in favor of military training by almost the same percentage as those who have no family member who would be affected by UMT.

6. Although some labor-union leaders have opposed UMT, the rank and file of union members questioned in the poll showed a vote of approval of nearly 3 to 1 of the training program. The occupation group least in favor is the farmers of the country.

7. Intensity of sentiment is about the same on both sides of the issue.

Opinion on peacetime military training has been measured periodically since 1942, always with a majority found in favor. The trend follows:

	Favor	Oppose	No opinion
	Percent	*Percent*	*Percent*
December 1942	66	27	7
November 1943	63	29	8
December 1944	70	25	5
November 1945	75	21	4
July 1947	75	18	7
Today	65	24	11

PREPAREDNESS PARAMOUNT

Detailed results of today's poll are given in the following tables:

"What would you say is the strongest (best) reason for universal military training?"

	Percent
Preparedness, protection	72
Good training, good discipline for men	17
Show Russia we can't be pushed around	6
No good arguments in favor	4
Don't know	5

"What would you say is the strongest (best) reason against universal military training?"

	Percent
Unfair to interrupt careers and education of young men	18
Will encourage war, make men warlike	13
Undemocratic, breeds regimentation, nationalism	7
Hard on parents, young people needed at home	6
Cost too great	4
Not needed, atomic age makes obsolete	3
Miscellaneous	4
No good arguments against	30
Don't know	17

Both the above tables total more than 100 percent because some people gave more than one argument.

"Do you think Congress should or should not pass a law to require every able-bodied young man (who has not already been in the armed forces) to take military or naval training for 1 year?"

	Should	Should not	No opinion
BY SECTIONS			
New England and Middle Atlantic	Percent 64	Percent 26	Percent 10
East Central	65	25	10
West Central	67	24	9
South	68	16	16
Far West	66	22	12
BY OCCUPATION			
Professional and business	65	26	9
White collar	70	21	9
Farmers	56	30	14
Manual workers	69	21	10
Union members	68	24	8
Veterans	73	21	6
BY EDUCATION			
College	67	25	8
High school	68	23	9
Grade or no school	64	24	12
Those with relative draft age	63	26	11
Those with no relative involved	66	23	11

"How strongly do you feel about this—very strongly, fairly strongly, or not at all strongly?"

	Very	Fairly	Strongly
	Percent	Percent	Percent
Those in favor of UMT	51	43	6
Those opposed to UMT	49	40	11

Surplus

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1948

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Bay City (Mich.) Times of January 13, 1948.

SURPLUS

(By Mark Foote)

WASHINGTON.—President Truman shows a remarkable lack of faith in the continuing productivity and prosperity of America when in his budget message he predicts a surplus of $12,290,279,054 during the next 18 months and still opposes tax reduction. This estimated surplus of revenues over expenditure assures passage of a tax reduction over his veto.

The President invariably year after year has indulged in this sort of underestimation. By predicting a $12,000,000,000 surplus this time, he convinces even the most skeptical that a tax cut of $5,500,000,000 retroactive to January 1, 1948, is not only desirable but safe and practicable.

There can no longer be any doubt, that the congressional state of mind in an election year will be such as to assure an overwhelming vote for an immediate tax decrease. And it will come in time for the March 15 declaration and payment.

Two provisions of the pending House tax bill which will command such support as to assure its passage, are the increase in personal exemptions from $500 to $600 and the community-property permission for married couples to split their collective incomes for tax purposes.

These two features of the bill are calculated to cost the Treasury $2,600,000,000. But that becomes relatively a small item when it is considered the President predicts a $12,000,000,000 surplus, even after allowing all he asks for foreign relief and a grandiose program of socialistic experiments, which will not be granted.

No sooner had President Truman taken the White House oath of office than his Government experts, including Henry Wallace, then Secretary of Commerce, the Treasury, and the Bureau of Labor Statistics, made predictions of depression and unemployment as high as 8,000,000.

Apparently the President ever since then has been operating with these dire predictions in mind. He has sold America short in every one of his budget messages. In his last previous budget message, of January 1947, he estimated the tax revenues for the present fiscal year ending next June at $37,700,000,000. But now he revises that figure to read $45,200,000,000. This was an underestimate of revenues by $7,400,000,000, or 20 percent.

He was even further off as a prognosticator in his estimates for the last fiscal year, ending last June. A year ahead he had estimated the receipts at $31,500,000,000. But when the figures were in they showed receipts to be $43,300,000,000, or 39 percent higher than estimated.

Republican sponsors of tax reduction, on the other hand predict continuing boom prosperity for several years, with increasing tax liability. Also they say that lower rates will not mean a proportionate loss of revenue, because of the encouragement reduction gives to new industrial enterprise.

Ratings for Service-Connected Arrested Tuberculosis

EXTENSION OF REMARKS

OF

HON. GEORGE W. SARBACHER, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. SARBACHER. Mr. Speaker, on July 19, 1947, the Committee on Veterans' Affairs, House of Representatives, favorably reported the bill I introduced, H. R. 4243, Eightieth Congress, a bill to provide minimum ratings for service-connected arrested tuberculosis.

The purpose of the bill is to insure that veterans who have incurred active tuberculosis in the service of their country, either in time of war or peace, will receive compensation proportionate to the degree of disability resulting from arrested tuberculosis so long as they live.

Under existing regulations of the Veterans' Administration, provision is made for payment of compensation for service-connected arrested tuberculosis for specified periods following an arrest of active tuberculosis. In some instances where pronounced symptoms of the disease are manifest after arrest, ratings of 20 or 30 percent are authorized for life. However, in certain other cases where pronounced symptoms of tubercular disability are not manifest, veterans having arrested tuberculosis are ultimately rated as no percent disabled.

The committee, after extensive hearings and thorough consideration of the matter, is convinced that an active tubercular process has residuals which continue throughout life and that a veteran having arrested tuberculosis should be relieved of the fear that his compensation may be terminated notwithstanding the fact that his disability continues.

The following table shows the differences between ratings made under existing regulations of the Veterans' Administration and those proposed by the bill:

Rating for arrested tuberculosis under Veterans' Administration regulations

Period:	Percent disability
6 months after arrest (may be continued for successive periods of 6 months, up to a maximum of 2 years, under certain conditions)	100
Balance of 5 years	50
Next 5 years	30
After 10 years—	
(A) If veteran had far-advanced active lesions, for life	30
(B) If veteran had moderately advanced lesions and residuals continue to show certain evidence of disability, for life	20

Ratings for arrested tuberculosis proposed by H. R. 4243

Period:	Percent disability
2 years after arrest (may be reduced to 50 percent for failure to follow prescribed treatment or to submit to examination when requested)	50
Next 5 years	50
After 7 years (for life)—	
(A) If tubercular condition is diagnosed as far-advanced	40
(B) If tubercular condition is diagnosed as moderately advanced or less	30

Under the terms of the bill, at the rates of compensation now provided under Public, No. 2, Seventy-third Congress, and the veterans regulations issued thereunder, a veteran having arrested tuberculosis incurred in wartime service will be entitled to at least $41.40 per month so long as he lives. A peacetime veteran having the same disability will receive at least $31.05 so long as he lives.

I am firmly convinced that the bill is meritorious and should be promptly enacted to insure the welfare of veterans having arrested tuberculosis.

Tax Reduction

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes:

NATIONAL AFFAIRS
(By Thomas L. Stokes)

WASHINGTON, January 9.—Was President Truman being a bit puckish in his proposal to Congress for a $40-a-head tax reduction that would remove about 10,000,000 persons—and that many potential voters—from income-tax rolls and cut taxes for everybody else?

The question is merely raised.

Whether he was or not, he must indeed be chuckling now over the angry shrieks from big business interests and their friends in Congress—the latter now numerous—whom President Roosevelt kept in a perpetual tizzy. Mr. Truman, it may be recalled, suggested that the $3,200,000,000 cost to the Treasury of his tax proposal, which would chiefly benefit low-income groups, be made up by higher taxes on corporate profits, now at an all-time peak.

"Demagogic," was the outcry. Maybe so.

But nothing has so dramatized the unbalanced state of our economy today—the lush "take" of big corporations, on the one hand, and the scrimping in millions of households, on the other—as this simple factual paragraph in the President's message that preceded his tax proposal:

Many of our families today are suffering hardship because of the high cost of living. At the same time profits of corporations reached an all-time record in 1947. Corporate profits totaled $17,000,000,000 after taxes. This compared with $12,500,000,000 in 1946, the previous high year."

The President, of course, does not expect Congress to enact his tax program. The Republicans, who control Congress, have their own. He was simply engaging in the familiar political poker game—raising the player across the table. It is such an old game that the howl from Republicans, who play it, too, had a slightly synthetic ring.

The Republican offer in the bill prepared by Representative KNUTSON (Republican, Minnesota), House Ways and Means Committee chairman, is not so generous to the low-income groups. The Republicans do theirs differently by increasing the exemption from $500 to $600. The President's proposal would be translated into an exemption of about $700. The Knutson proposal would relieve from income tax about 7,000,000, who now pay it, as compared with 10,000,000.

The Republican scheme would cost the Treasury more. The figure is $5,600,000,000, compared with $3,200,000,000 of the President's plan. That is because it relieves taxpayers in the higher brackets to a greater extent than the Truman proposal. Maybe the President's offer will induce Republicans to do better for the little fellow. Certainly his two vetoes of the bill sponsored by Republicans in the last session, in which he revealed how little it did for the small taxpayer and how much for the big one, must have been influential in the much more gracious Republican offer to low-income groups this year.

The President's pungent remarks about profits direct attention, too, to the present campaign of the National Association of Manufacturers to try to "kid the public" about the size of big-business profits, as it is put in an illuminating article by Nathan Robertson in the revived Progressive magazine.

Mr. Robertson explains how the NAM is taking advantage of the public's blind spot on statistics by the suggested sample newspaper advertisements it is sending to its members. In these a profit figure based on sales would be used instead of profits measured on net worth, which is the standard prescribed by economists. Bluntly the NAM said, "The average American does not distinguish between profit on sales and profit on net worth."

As an example, Mr. Robertson took recent advertisements of General Electric Co. telling how its profits are only 7 cents on each dollar of sales, or 7 percent, whereas they are just short of 22 percent—an all-time peak—when figured on the basis of the company's net worth as given by Moody's Investment Manual.

Maybe this helps to explain General Electric's recent price cut that it advertised so widely.

Could somebody have a guilty conscience?

Wholly Political

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1948

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Detroit Free Press of January 9, 1948:

STATE OF THE UNION—WHOLLY POLITICAL

President Truman's State of the Union message was a campaign document.

Nobody expected anything else.

The exigencies of the domestic political situation rather than of the Nation dictated its contents and tone.

With Mr. Wallace bidding for the "lunatic fringe" of the Democratic Party it became necessary for Mr. Truman to shift far to the left of center and attempt to outbid Wallace.

The President of all the people stood up before Congress as a partisan candidate for nomination on a platform of undiluted New Dealism, which even F. D. R. soft-pedaled in 1944.

What a spectacle. The conservative whom F. D. R. chose for a running mate, as an antidote to Wallace radicalism, forced by Wallace's third-party threat into vying with him for left-wing votes.

The President promised to ask Congress to enact laws protecting the civil rights of all citizens.

The Government, if Mr. Truman has his way, will be given authority and money to raise and equalize health and educational standards throughout the country. A special Department of Health, Education, and Security would be created.

An increase of the minimum wage from 40 cents to 75 cents an hour is proposed.

"Within the next decade," said Mr. Truman, "we must see that every American family has a decent home."

All of these noble goals are to be attained, of course, at the cost of further centralization of power in Washington and further expansion of an already topheavy bureaucracy. They offer "security" in exchange for freedom.

The 10-point anti-inflation program which President Truman outlined to Congress on November 17 must be promptly enacted. Otherwise he will not be responsible for the runaway inflation and subsequent depression, which he sees ahead.

The legislation which this program envisaged, if Congress had enacted it, would have revived OPA, with its subsidies, subterfuges, and black markets. At one time Mr. Truman repudiated all such controls as belonging to a "police state."

Yet he now demands that a Republican Congress spread them upon the statute books. As ingenious as anything in the message is its tax-reduction proposal.

A tax credit of $40 would be given every income-tax payer and a similar credit for each dependent. This would cost the revenues $3,200,000,000.

As a means of recouping the Treasury the tax on corporation profits would be hiked by $3,200,000,000.

The possibility that this device for redistributing wealth might impair the ability of corporations to sustain or expand employment does not seem to have been explored sympathetically by Mr. Truman's political strategists.

Congress is also asked to "act promptly" on the European Recovery Program—"this decisive contribution to world peace."

Without rearguing here the hashed and rehashed pros and cons of this adventure in power politics, we may pertinently ask who under the sun can yet say whether tossing another $17,000,000,000 into Europe will be decisive for peace or anything else.

We haven't bought peace in Greece.

A Republican Congress was elected as a revolt of the American people against the New Dealism which Mr. Truman has now taken down from the shelf and dusted off. This Congress could not accept the state of the Union message, as a course of action, without violating its mandate.

The political planners in the White House know that. They have asked for the impossible, and, if they don't get it, they will seek to make campaign capital out of their opponents' truculence.

The Republican leaders can escape the trap only by coming up with domestic and foreign policies of their own, which will meet the situation, without forcing this Nation further down the road to socialism.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

NO ROOM FOR COMPROMISE

Not long ago, after Senator FULBRIGHT, of Arkansas, had delivered the Marfleet lectures at the University of Toronto, Canada's leading newspaper, the Globe and Mail, said of him: "No one who has listened to or read the words of Senator FULBRIGHT could fail to be impressed by his breadth of vision and sound grasp of facts. * * * He is of the caliber of world statesmanship."

It was a high compliment, and a deserved one. The Arkansan's reputation as one of the Senate's ranking authorities on international affairs is no accident. He has devoted much of his public service to the advocacy of and intelligent and effective American foreign policy. He speaks with authority when he estimates the current situation in Europe, as he did this week in a Little Rock address, and reduces it to this stark simplicity: Beyond a doubt communism will dominate all of Europe, Africa, and Asia unless the economic collapse of the western nations is prevented.

The Marshall plan, Senator FULBRIGHT believes, can prevent that collapse and the critical threat to American security it implies. But the Marshall plan, he says, is facing grave dangers in this divided Congress.

"Although I feel certain that Congress at this session will pass some form of aid for the western European countries, my principal fear is that the Marshall plan may be whittled and pared until it is insufficient to meet the needs of those nations. A half-way measure will be worse than none at all, for it will fail to accomplish its purpose and allow the collapse of Europe while at the same time making certain permanent improvements from which Russia will benefit."

Yet, already the threat of congressional opposition to the Marshall plan has forced the administration into a major compromise. In his state of the Union message President Truman, upon the recommendation of his senatorial advisers, abandoned his previous insistence that the plan be established on a 5-year basis and asked only for financial commitments for the first year of operation. This is not important in itself, perhaps, but it is symptomatic. The Marshall plan, as Senator FULBRIGHT insists, must have wholehearted, consistent support if it is to succeed; otherwise we shall only write another tragic chapter in history under the heading: "Too little, too late."

National Defense

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Clifford Ward from the Fort Wayne News-Sentinel:

GOOD EVENING

(By Clifford B. Ward)

Several thousand flesh-and-blood American marines, mostly kids, like your boy and my boy, are on their way to the Mediterranean area to implement the Truman doctrine, which has gone sour as many of us predicted it would. When it was proposed to stop communism in Greece and Turkey by merely spending huge amounts of American dollars there in ways that native politicians on the scene advised, some of us asked if this wasn't where we had come in and if we were not again meddling in a manner that a bunch of American kids would have to lay down their lives to correct.

Maybe those marines going overseas to edge themselves into the path of bullets from two sides haven't any parents and haven't any claims to a modest amount of security during peacetime but I doubt it. I imagine most of them are lads who like to hear the Brooklyn Dodger games over the radio, follow the college football returns during the autumn season and have dates on Saturday nights with their favorite girls. If you asked any one of them what the Truman doctrine is, they wouldn't know and if you asked them what our foreign policy is, all they would know is that to some of the folks who are loudly interventionist, no American lives, except their own, are too precious to surrender for the sake of a foreign quarrel.

It's a terribly ghastly and unpatriotic thing to be an isolationist, except when the interventionists want to be isolationist. They wanted to be isolationist in Poland, in Latvia, in Lithuania, and Esthonia. They want now to be isolationist in China, but not in other areas.

Today, the interventionists are loudly insisting that millions of American boys be required to give 1 year of their lives to military training. I am for military training as a physical thing, but against it as a moral thing. Except in war, this country has no right to confiscate a year of a boy's time except as a punishment for a crime. Those behind UMT don't want it as a defense measure, they want it as a means of indoctrinating the youth of the country with the idea that it is a privilege to stop a fight between a Greek and a Turk, a fight between a Jap and a Chinese or a fight between a German and a Frenchman. Maybe it is, but I am difficult to convince.

This country needs a strong national defense, but the defense should be against the weapons that threaten it. Those weapons are atom bombs and germ warfare. Massed manpower on a huge scale can't defend this country against atom bombs and bacterial warfare.

There is a new war brewing and the war is against an ally whom we made victorious and then appeased with plunder that we should never have approved. But the dragon's teeth for this new war coming up, let us remember, were shown at such places as Tehran and Yalta, where we entered into secret deals that wouldn't stand the honest light of day and where an American President made a mockery of the high-sounding principles that we enunciated when we entered the war.

The Russians are burglars, but even burglars respect honest men who tell the truth and keep their words. It is even possible to reform burglars, but not by trying to be better burglars than they are. We tried to win the admiration of Russians at Yalta by attempting to be better burglars than they are and today the Russians are black-mailing us.

It's odd, isn't it? We won't let one man in the country treat an old lady for a cold in the head unless he can prove to a State examination board that he knows all about medicine, but we will let almost any stupid playboy who has donated the proper amount to a party campaign fund, become a diplomat in a position to start a war.

Christmas Greetings

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. RAMEY. Mr. Speaker, the most treasured gift I have ever received from Ohio's greatest poet, who is known as the James Whitcomb Riley of Ohio, is a Christmas greeting this year on which he has placed this message:

Homer, believe it or not, but you were the inspiration for these verses, written years ago.

LEW WILLIAMS.

The poem follows:

CHRISTMAS GREETINGS

Just give me the throb of a human heart;
The clasp of an honest hand;
A cheery smile on a lonely mile,
A kindly word or two the while,
And a friend who can understand.

Then may I plod the long trail again
With no fear of worry or strife;
And the way will be smooth and easy to wend
For my Christmas gift is the heart of a friend
Who has brightened the highway of life.

—Lew Williams, the Buckeye Poet.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WNBF on January 17, 1948:

Dear friends of the Triple Cities and my congressional district, this month the Townsend Clubs of America are celebrating the birthday of Dr. Francis E. Townsend who reached his eighty-first year of age this past Tuesday, January 13. It is a great pleasure to me to join these millions of crusaders for justice in this event, honoring the founder and leader of this magnificent American movement.

In the 13 years since the Townsend program was launched social security has become a dominant issue in this country. Dr. Townsend is, indeed, to be congratulated for founding, steering to Nation-wide prominence, preserving, and strengthening this great movement. I fail to recall another individual who has gone so far or achieved so much for the benefit of his fellow countrymen out of his own efforts and leadership. Joining the millions of my fellow citizens who support his efforts in recognizing the opportunity he has created for all of us to unite, from one end of this country to the other, for the purposes of justice is, indeed, a happy pleasure. At this time, with nearly 150 Members of this Congress already having joined the effort to get a complete showdown on the Townsend bills in this Congress, I think it is a very encouraging situation. To Dr. Townsend I say, "Congratulations and best wishes for another 13 years of the service you are so able to render to the American people."

To my friends, the Townsendites, I say, "Go out and finish the work you have carried to so high a position. No effort has ever yet done so much good for so many people. We are just beginning to see hope of really valuable results. It is a fight and it is getting to be a hot one. That is what we want. That is the forge from which great achievement will come. America and its people need, as never before, what only you can give, namely, power and invincible support to this magnificent work."

As I get reaction from home from day to day I am beginning to discern rumblings of dissatisfaction.

Whether we realize it or not, people are asking, How much is this whole aid program going to cost?

Can't we do more for less money?

Will communism be drowned under the flow of dollars to foreign countries or will the Communists succeed in cutting in on these millions?

Are the American people going without the necessities of life as the result of so much being shipped out?

Should Congress set aside half the sum demanded to carry out the Marshall plan and use this to rebuild our air forces?

Are we neglecting our own defenses, jeopardizing our own economy, impoverishing the American people and generally weakening our own powerful position by participating in this gigantic venture into feeding and equipping the entire world?

No, this is not just your Congressman asking these questions. They are included in countless letters I receive every day from the rank and file Americans I represent.

They have the right to ask these questions. They have the right to answers also.

I am asking them now before I take any stand in favor of the Marshall plan or any other plan. I am a Representative in the American Congress, not the British Parliament or the French General Assembly. My first duty is to the Americans I represent.

Then, too, there is another question. How about the private holdings in this country of thousands of foreign subjects. They amount to millions upon millions of dollars.

Should not moneys such as these be considered as dutifully applicable to foreign aid as the tax dollars American citizens are being called on to pay for this purpose?

British capital or French capital or Dutch capital or any other capital ought to be on tap to help the needy in Europe as readily as ours. Yes, and a little more readily.

The very cheapest we can get out of helping Europe and Asia, I'm told, is to the tune of several billions, already spent.

If that's the case, then the United States will eventually be called upon to pay the whole shot.

Let's make this thing more equitable. We have our burdens, others should have theirs. We haven't yet begun to pay for the recent war, to say nothing of paying for the winning of the permanent peace.

America must be kept strong at all costs. America must be saved along with the rest. I for one want to preserve and keep our country because she is dearer to me than all the other nations of the world put together.

The High Cost of Living

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. KEATING. Mr. Speaker, the New York World-Telegram in the accompanying editorial deals with the boomerang caused by the President's attempt to find a scapegoat upon whom to pin the blame for the high price of commodities.

There is no doubt that speculation in grain is one of the causes, although a much more important one is the reckless spending policy of the administration. Both of these can only be remedied by an internal house cleaning.

THE GREAT GRAIN SNOOP

Speaking here, Secretary of Agriculture Clinton P. Anderson complains that the great grain snoop now going on in Washington is making it more difficult for the Government to employ first-class men.

The great grain snoop is what Mr. Anderson calls the current search by a Senate committee for Government insiders who have profited recently in commodity-market speculation.

But Mr. Anderson's complaint raises a question: Who brought on this great grain snoop? To which the answer is: Mr. Anderson's boss, President Truman, brought it on by trying to pin the blame for high food prices on commodity speculators. Suppose Mr. Truman hadn't said so much about the greed of gamblers in grain and other commodities who, according to repeated statements from him, were profiting in human misery and kicking the cost of living about like a football. In that case it's safe to say the Republicans never would have started the hunt for Government insiders.

Considering what has come out, however, we can understand Mr. Anderson's distaste for the great grain snoop.

First there was Edwin W. Pauley, President Truman's good Democratic friend and appointee as special assistant to the Secretary of the Army. Mr. Pauley, having claimed that he got rid of his commodity holdings at great loss when he learned that Mr. Truman disapproved of speculation, later had to admit making a $932,000 profit.

Then there was Brig Gen. Wallace Graham, the President's personal doctor. He said he didn't know what speculation was or what commodities were; that he never understood what his broker was doing; that he lost his socks by getting out of the market when he learned what Mr. Truman thought of speculators. But later he had to acknowledge a $6,165 profit.

And there's Democratic Senator ELMER THOMAS of Oklahoma, in Congress for 25 years, a good many of them as chairman of the Senate Agriculture Committee which has a powerful influence on the Government's farm-price policies. His constant theme has been that the Government should do everything possible to make farm commodity prices higher and ever higher. He now concedes that he and Mrs. Thomas have speculated in commodities for many years, always on the "long" side—the side that made money when prices went up—and he sees nothing improper in that.

But for Mr. Truman, as we've said, the Republicans probably wouldn't have started "the great grain snoop." However, we can't see Secretary Anderson's plaintive objection inducing them to stop it now.

Henry Wallace and a Third Party

EXTENSION OF REMARKS
OF
HON. E. E. COX
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by George E. Reedy:

Henry Wallace is learning that founding a third party isn't all beer and skittles. Sometimes its nothing but a morning-after headache—with no aspirin in the house. That, is just about his situation, according to reports from Chicago.

The so-called Progressive Citizens of America are holding their big convention in the Windy City. It is an appropriate place for such a meeting. So far, about all that has been produced is a long string of speeches praising Henry.

The delegates have been unable to decide a single question—not even the best method of nominating Wallace for the Presidency. But they have disclosed some interesting back-room arguments that might well kill the whole third-party idea.

It seems that the delegates are only agreed on two major points. They want to see Wallace run for the Presidency—and they don't care if Truman is beaten by a Republican. Outside of that, there is nothing except organized confusion.

The reason for this situation is obvious. The delegates represent every point of view, from extreme left-wing to mildly middle-of-the-road liberal. Trying to find a program that will fit all these people is like trying to feed a lion and a gazelle out of the same bowl.

The mild liberals, of course, stand no chance against the left-wingers, who know where they are going. But the Communists are afraid to go too far, because they might frighten the few remaining liberals out of the organization.

The result is a policy that recalls the famous character who jumped on his horse and rode off madly in all directions. That way, you usually meet yourself coming back.

The situation is best exemplified by the confusion over the stand that the new organization will take on the congressional elections. Some of the delegates are determined to support liberal Democrats or Republicans, no matter how they stand on Russia.

That, of course, is not a tasty prospect for the left-wingers who are swarming through the convention. Their only real purpose is to do a few peculiar things to American foreign policy. The rest is merely a cover-up.

A good example is the stand the so-called progressive citizens are taking on Paul Douglas in Illinois. He is running for election to the Senate against "CURLY" BROOKS, who now holds the seat.

Douglas, a former Chicago University professor, is a New Dealer by any definition. He is the personification of all the domestic policies the progressive citizens are supposed to stand for. Yet they are preparing to oppose his campaign.

If anybody wants to know why they will oppose him the answer may be found in a rather simple fact. Douglas has been very critical of the Soviet Union. That is enough to cast him outside the pale with many of Wallace's followers.

Other delegates can't quite follow this line of reasoning. They don't get the idea, but they are beginning to get suspicious. If they should pull out, of course, there may be nobody left to support Wallace—except a few very shady left-wingers.

That is the last thing the Communists want. It wouldn't be worth their while to back a third party in which they were the total membership. Therefore, they would pull out, too. It may well be that the whole organization will break up, and there will be no third party on the 1948 election ballot.

Oil

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Secretary of Defense James Forrestal before the Special Subcommittee on Petroleum of the Armed Services Committee of the House of Representatives, January 19, 1948:

In response to the invitation of your chairman, Mr. SHORT, I am pleased to have this opportunity to testify on the subject of oil. It is gratifying to those of us who

are immediately concerned with the grave responsibilities of safeguarding our national security to have congressional committees such as yours give us the opportunity to discuss with you problems so intimately connected with national life as those relating to oil. Full knowledge of facts is an indispensable element to successful operations in any field of endeavor, and in the case of this Government of ours, full knowledge of facts is a "must" if we are to have orderly functioning of democratic processes between the executive branch and the legislative branch.

I propose to consider the following four general topics in my testimony today. In the first place, I wish to underscore the importance of oil to the National Military Establishment. Secondly, I will explain the new administrative set-up within the National Military Establishment to handle oil matters. Thirdly, I will outline the National Military Establishment's attitude toward oil production and reserves within the Western Hemisphere, particularly within continental United States; and fourthly, I will give consideration to the National Military Establishment's attitude toward foreign oil outside the Western Hemisphere, particularly Middle East oil.

Petroleum is the primary source of motive power for military forces. It is the lifeblood of a war machine. In World War II our armament depended on oil. Without oil, our Army could not have marched, our Navy could not have sailed, and our Air Force could not have flown to final victory. There was a time when the major item of supply to a fighting force was food, as Napoleon graphically pointed out when he said that an army marches on its stomach. In World War II, however, the volume of liquid fuel shipped overseas was nearly 16 times that of food. Petroleum and petroleum products amounted to over 60 percent of the overseas military shipments. During the last war the peak consumption of oil for military purposes and for programs supported by the military was 1,375,000 barrels a day.

With respect to the future, it is not anticipated that any new source will soon replace petroleum for military motive power. Indeed, rather than writing down the military value of oil, our future strategic needs of oil must be calculated on the basis of a greater rate of oil consumption than we had during the last war. The maximum military requirements of petroleum in the event of a war emergency are now estimated nearly to double the requirements of World War II. Further, the essential civilian requirements—especially in the light of wide change-overs from coal to oil for domestic and industrial purposes—are anticipated to be appreciably higher than during the last war. It now appears that the United States military and civilian needs for a major war effort would exceed by at least 2,000,000 barrels a day the foreseeable production from the continental United States. The basic fact that oil is an absolutely essential commodity for the fulfillment of the mission of the National Military Establishment is incontrovertible.

The second item of my testimony agenda is to explain the new administrative set-up in the National Military Establishment whereby oil matters will be handled.

At the meeting of the Munitions Board of January 8, a format for the charter of the Armed Services Petroleum Board and for the charter for the Armed Services Petroleum Purchasing Agency were approved. Briefly stated, the Army-Navy Petroleum Board is to be reconstituted as the Armed Services Petroleum Board.

This new Board is to be established as a joint board of the three Service Departments and will consist of six members. Three of the members will be designees respectively of the Chief of Staff, United States Army; of the Chief of Naval Operations; and of the Chief of Staff of the Air Force. The remaining three members will be the Quartermaster General of the Army; the Chief of the Bureau of Supplies and Accounts of the Navy; and the Director of Maintenance, Supply and Services of the Air Force; or their alternates.

The Armed Services Petroleum Board is to be charged with a dual responsibility. First, it is to be responsible to the three secretaries for inter-service planning and coordination of efforts in the field of petroleum. Secondly, the Board is to be responsible for making recommendations to and performing such services, duties and functions in petroleum matters as may be required of it by the Munitions Board, the Joint Chiefs of Staff, and the Research and Development Board as they exercise their respective statutory functions for the Secretary of Defense.

The new Board will be responsible for its own internal regulation and administration, and personnel and facilities requirements will be met by the three military departments.

A word would appear appropriate on the reason for the reconstitution of the Army-Navy Petroleum Board. Briefly, the reorganization of the military establishment by the National Security Act of 1947 prompted the reconstitution of the Army-Navy Petroleum Board. It was felt that the old board could not adequately coordinate petroleum activities among the agencies and departments in the National Military Establishment. To keep in step with the changes effected by the National Security Act and to carry out the Congressional mandates expressed in the act, the Armed Services Petroleum Board is being organized. Because of the particular importance of petroleum to all military operations in war and peace, it was determined that there is still a need for some agency under the three Secretaries which will assist them in the day-to-day performance of their duties with respect to petroleum products. It was also believed that the new petroleum board would be a convenient and economical vehicle for obtaining coordinated recommendations from the Departments for use of the Munitions Board, Research and Development Board and the Joint Chiefs of Staff.

The Armed Services Petroleum Purchasing Agency is to be established as a joint agency of the three military departments and is to be responsible for all purchase functions relating to petroleum and petroleum products within the National Military Establishment. This agency will consist of the Quartermaster General of the Army; the Chief of the Bureau of Supplies and Accounts of the Navy; and Director of Maintenance, Supply and Services of the Air Force. As in the case of the Armed Services Petroleum Board, the budgetary, staff, space and facilities requirements of the Petroleum Purchasing Agency will be met by the Departments of the Army, Navy and Air Force.

The Petroleum Purchasing Agency will have all the powers necessary for it to fulfill its purpose of streamlining the purchasing of petroleum and petroleum products for the armed forces. For example, it will solicit and analyze bids, negotiate, award, execute and administer contracts, obtain all necessary clearances in connection with any of its contracts, and so forth.

The creation of the Petroleum Purchasing Agency is also prompted by the National Security Act of 1947. That act has as one of its objectives the coordination of procurement activities among the armed forces. The Petroleum Purchasing Agency has been determined to be the means whereby such coordination is to be achieved so far as petroleum and petroleum products are concerned. The agency will provide a single point of contact between the petroleum industry and the Departments of the National Military Establishment with respect to purchase.

The third point which I propose to consider is the National Military Establishment's attitude toward oil reserves and production within the Western Hemisphere, particularly within the continental United States. The strategic importance of the location of oil can hardly be overemphasized. During the last war we enjoyed the tremendous military advantage of possessing on our shores or close to them a vast fund of oil. The difficulties which we encountered in the early days of World War II with German submarines in the Caribbean area, which is relatively close to home, is a forceful reminder of the urgency of maintaining ourselves as self-sufficient as possible in our petroleum needs, and such self-sufficiency is the primary goal of the petroleum policy of the National Military Establishment.

In terms of accessibility of petroleum resources, those within the continental limits of the United States are obviously first in importance. The latest estimate of proved crude reserves for the United States is 21,000,000,000 barrels plus, which is about 31 percent of the total proved reserves of the world. The proved reserves of the rest of the Western Hemisphere amount to about 11,000,000,000 barrels or 16 percent of the total proved reserves of the world, and roughly three-fourths of this amount are concentrated in Venezuela and 10 percent in Mexico. In connection with the oil of Mexico, Venezuela and other countries in this hemisphere, it is our hope that exploration of the subject at the forthcoming Bogota conference will lead to further development of petroleum resources of the Western Hemisphere.

Regarding the quantity of reserves as a fund which supports a certain optimum withdrawal, it is clear that the National Military Establishment favors policies which will promote discoveries of new petroleum reserves. In line with this point of view, the National Military Establishment wishes to support the development of the great area of Alaska. Discoveries and development of large crude pools in Alaska could have a heavy impact on the efforts to balance the availability of petroleum with requirements in the event of war. Alaska has shown considerable promise in respect to petroleum resources. I believe that continued Government support of the exploration being conducted at naval petroleum reserve No. 4, in Alaska, under the sponsorship of the Office of Naval Petroleum Reserves is well warranted.

Naval Petroleum Reserve, No. 1, in California is also of military value because of its strategic location on the west coast. Naval reserves other than the two I have just named should be returned to the Department of the Interior, and steps to effect such return are going forward.

In the commercial field it is believed that exploration for new pools still represents great potential for increasing our petroleum productive capacity. The tidelands areas in particular are believed to hold great promise in adding oil to our available resources. It is the view of the National Military Establishment that development of the tidelands areas should proceed as rapidly as possible and that all necessary action should be taken to permit rapid development of those areas. Delays in the development of the oil potential in the tidelands is considered contrary to the best interest of the United States from the viewpoint of national security. I do not mean to imply that the National Military Establishment would in any way condone or favor practices that are contrary to sound conservation principles but I do wish to emphasize that undeveloped oil fields provide no power for the machines of either war or peace. The National Military Establishment, together with the Department of Justice and the Department of the Interior, is currently engaged in drafting a statute dealing with the tidelands, and it is my hope that this statute will be ready for your consideration in 30 to 60 days.

The production story of the Western Hemisphere in 1947 is here briefly summarized. The United States accounted for slightly over three-fifths of the world's production and the rest of the Western Hemisphere, another fifth. As with petroleum reserves, production in Western Hemisphere countries other than the United States was concentrated in Venezuela with over 14 percent of the world's petroleum production and Mexico with slightly less than 2 percent. In terms of barrels, the latest estimates for 1947 production are as follows: The entire Western Hemisphere, 2,433,000,000 barrels; continental United States, 1,855,000,000 barrels; the Western Hemisphere exclusive of continental United States, 578,000,000 barrels; Venezuela, 433,000,000 barrels, and Mexico, 57,000,000 barrels.

To be sure, these figures by themselves sound imposing, but let us now reconsider our anticipated petroleum demands in the event of an emergency. As I stated earlier in my testimony, the United States military and civilian needs for a major war effort would exceed by at least 2,000,000 barrels a day the foreseeable production of the United States. The daily average production for the United States last year was a little over 5,000,000 barrels. Emergency demands for petroleum, therefore, would require United States production to be stepped up by at least 40 percent or would require heavy reliance by us upon foreign oil. The magnitude of a 40 percent or more increase is reflected in the fact that 1947 production was an increase over 1947 production by only 7 percent. The daily production of crude oil for the entire Western Hemisphere last year came to 6,666,000 barrels.

The current petroleum supply situation has also been unsatisfactory from the viewpoint of the services. During the past year considerable pressure has had to be placed upon industry by the military services in order to secure commitments to fill the purchase requirements. In August 1947 the Navy considered it necessary to issue instructions to reduce all operational activities to the essential minimum. At the same time the Air Force allocated extremely limited amounts of aviation gasoline to its commands. Tightness of the supply situation has been relieved to a certain extent and it appears that our military commitments will probably be met for the balance of fiscal 1948. However, in view of the increasing demand for petroleum, it is certain that continued pressure will have to be placed on industry if military requirements are going to be met.

It is appropriate to note here that the current military demands total 343,000 barrels a day. Of this amount, 244,000 barrels come from continental United States, 39,000 barrels from other sources in this hemisphere, and 60,000 barrels from the Persian Gulf. Calculated on the basis of crude production in the United States, the here-and-now military demands have amounted to only 4.4 percent of the total United States production, as contrasted to 32 percent at the wartime peak.

The National Military Establishment is intently interested in ways and means of ameliorating the tight petroleum supply situation in the United States. I note the advancements made in secondary recovery methods and the development of new effective recovery practices. It is believed that Government interest in secondary recovery and Government encouragement of such recovery are highly desirable. The prospects in the synthetic field and the possibilities in the utilization of foreign oil are eminently worthy of comment.

In the synthetic field the prospects for converting natural gas into liquid hydrocarbons appear promising and the military have hopes that the commercial developments in this undertaking will be successful. However, early commercial development of synthetic liquid fuel from coal and oil shale seem far away because of the high cost of the processes—high cost in terms not only of money, but also in terms of material, particularly steel. Nevertheless, the development of these processes is of great importance to national security as a means of supplementing our regular oil supply. The manufacture of synthetic liquid fuels from coal and shale has the considerable advantage of very extensive coal and shale resources in the United States. I am of the firm opinion that the United States Government should not only support pilot-plant operations in the synthetic liquid-fuel industry but also should support a few large-scale plants sufficient to provide the engineering know-how and to advance technical developments. The encouragement and promotion of the synthetic liquid-fuel developments is an important part of the petroleum policy of the National Military Establishment.

The utilization of foreign oil outside the Western Hemisphere brings me to the last topic of my testimony.

The Middle East oil resources at once become the focus of attention. Iran, Iraq, Kuwait, Saudi Arabia, Qatar, and the island of Bahrein are estimated to have over two-fifths of the world's proved crude reserves, or a total of about 28,500,000,000 barrels, and last year these sources accounted for 10 percent of the world's production. The significance of the latter figure is accentuated by the fact that only 199 oil wells account for all of the Middle East oil production. By way of contrast, the United States position in world crude-oil production is maintained by some 440,000 producing oil wells.

From a national security point of view I consider it most fortunate that American enterprises are leading the development of the Middle East oil fields.

It is anticipated that the petroleum of the Middle East will replace petroleum from the Western Hemisphere going to the European areas. The consequential benefit to our national security is patent. The demands on our own oil resources and those of the Western Hemisphere will be lessened, and the consequent savings will mean more petroleum security for ourselves. The European recovery program, for example, will require that large amounts of petroleum products shall flow to western Europe—and it is to our interest to see that this petroleum, to the maximum extent practicable, is supplied from the wells of the Middle East. At the present time, incidentally, our total imports of petroleum are about in balance with our total exports—at a figure of approximately 450,000 barrels a day.

Further, the trend of demand versus availability has, in my opinion, become such that if military operations or individual living standards in the United States are not to be limited because of an economy of oil scarcity, we must adopt an active policy of favoring sizable importations of oil. The National Military Establishment favors the importation of oil to the extent that it provides needed supplies and conserves Western Hemisphere resources but not to the extent that it would discourage or depress United States exploration and development of promising major petroleum resources.

As I indicated earlier, the military has obtained and proposes to continue to obtain petroleum products from sources outside the Western Hemisphere. Insofar as it is consistent with United States policy, the military will generally give priority in peacetime purchases to those areas of supply which appear to represent doubtful accessibility during periods of major conflict unless unreasonable costs are involved or encouragement is needed elsewhere.

Gentlemen, I hope that these remarks will be helpful to you in your wholesome investigation of a problem vitally affecting our national security. If I might be of further assistance, I wish you would let me know.

Thank you.

Michigan's Veteran Laws

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. POTTER. Mr. Speaker, most veterans are not fully aware of their legal rights to various benefits, privileges, preferences, and exemptions as extended to them, under certain circumstances, by the laws of the great State of Michigan. I am therefore pleased to present, for their information, an outline of such laws, as compiled by Robert L. Berry, department adjutant of the DAV, 2371 West Grand Boulevard, Detroit, Mich., who will be happy to furnish more specific information as to the application of any such State law.

This résumé of Michigan laws, affecting veterans and their dependents and organizations, is quoted in full as follows:

BONUS

Active honorable duty in military or naval service in World War II for a period of more than 60 days between September 16, 1940, and June 30, 1946, residents at time of entering service and for a period of at least 6 months prior thereto, $10 for each month of domestic service and $15 for each month of foreign service up to $500 maximum. Next of kin may be paid sum to which deceased serviceman would have been entitled if able to prove that they were dependent on veteran when he entered service. Applications and information may be obtained from the Adjutant General's Office, Bonus Section, Lansing 1, Mich. Applications must be notarized and mailed to above office by March 19, 1949.

Fifteen dollars for each month of service in World War I from April 6, 1917, to August 1, 1919. The time limitation on applications for benefits under this law expired December 31, 1932.

Payments of Civil War bounties have expired.

BURIAL ALLOWANCES AND ALLIED BENEFITS

County allowances are granted for the burial of certain veterans and wives and widows of veterans with privilege of removal of bodies to soldiers' burial grounds. Provisions have also been granted for the burial of the remains of the Michigan members of the north Russia forces of the American Expeditionary Forces in cemeteries in northern Russia or for their removal to the United States for burial by the Federal Government.

Counties are authorized to purchase burial plots for deceased Civil War veterans. Powers have been granted to the Grand Army of the Republic, Sons of Veterans, Military Order of the Loyal Legion, World War Veterans, and the United Spanish War Veterans, as corporations, to establish cemeteries. Power has also been granted to the State military board to purchase burial plots for certain Civil War veterans.

Municipalities may furnish, at public expense, metal markers for soldiers' graves to mark graves for memorial purposes. The county shall apply to the United States for a suitable headstone and shall have the headstone set in place.

CIVIL RELIEF AND ALLIED BENEFITS

Acknowledgment has been made of legal instruments and the making of oaths, affidavits, or affirmations by members of the armed forces.

In divorce actions, if one of the parties to the action is in the armed services such party's testimony may be taken outside the court, in such manner as the court may direct.

Proof of wills of persons who have died in the armed services is covered by an act effective until 1 year after the end of World War II.

Protection is granted to persons acting under power of attorney granted by members of the armed forces.

Provision has been made for withholding from sale during the war and for 1 year thereafter State tax lands in which persons in military service owned any estate or enforceable legal interest at the time title was vested in the State.

Disability of minority for qualified veterans under the GI bill of rights has been removed.

Powers of a trustee engaged in war service has been suspended.

CIVIL RIGHTS

Provisions have been made for absentee registration and voting.

The Parole Board of the Bureau of Pardons and Paroles of the Department of Corrections shall issue final orders of discharge to any parolee honorably discharged from the armed forces during the term of the parole originally granted.

CLAIMS; ASSISTANCE IN OBTAINING BENEFITS; SAFEKEEPING OF PAPERS

Persons authorized to administer oaths may not charge a veteran or his legal representative more than 15 cents for administering an oath or giving any official certificate in connection with a claim for pension, bounty, or back pay. Such persons may not charge a widow, guardian to a minor child, or other legal representative of a veteran more than 25 cents for administering an oath.

The fee of a judge of probate is limited to 15 cents for a certificate of guardianship, administration, or of the death of a pensioner or the widow, children, or other legal representatives of a pensioner, for the purpose of procuring payment of any installment of pension.

The State Commissioner of Health is required to furnish without charge one copy of any vital record to a veteran or a member of his family for use in connection with a claim for pension or compensation.

Transcripts under seal of any records of the offices of Secretary of State, Adjutant General, judges of probate, county clerks, and justices of the peace pertaining to pensions, insurance payments, or annuities are to be furnished without charge to veterans, their widows, or other dependents.

Discharge papers are recorded and indexed free of charge by county clerks.

Local councils of veterans' affairs may be established by any county, city, village, or township in cooperation with the State Office of Veterans' Affairs. Authority is given the boards of supervision, etc., to make appropriations.

EDUCATIONAL BENEFITS; QUALIFICATIONS FOR THE PROFESSIONS AND TRADES

Admission to the bar has been granted to applicants called into the armed forces of the United States or who volunteer therefor. Credit has been granted to World War veterans on application to take the bar examination.

Exemption has been granted to high-school and county-normal-school students who have been enlisted or inducted into military service during World War II from the requirement of taking a course in civics in order to graduate.

School districts maintaining an approved high school may operate veterans' institutes for education of World War II veterans. Schools may continue for 7 years after the close of World War II.

The State will render financial assistance to institutions of higher education maintained by a school district as a university, college, or junior college to assist in cost of education of veterans of World War II. The school receives $250 from the State Board of Education for each veteran in attendance. Five hundred thousand dollars was appropriated for the year ending June 30, 1947.

EDUCATIONAL OPPORTUNITIES FOR CHILDREN OF VETERANS

Aid has been extended to children of veterans, disabled or killed in action, including those killed in action or who died while serving in the armed forces of the United States between April 6, 1917, and July 2, 1921, or have died since or become totally disabled. Free tuition is granted in State institutions of secondary or college grade.

EMPLOYMENT PREFERENCES, PRIVILEGES, ETC.

Leaves of absence have been granted to municipal court judges in the armed services. Legislative request was made that Congress endorse a proposal that veterans of World Wars I and II be represented at the World Peace Conference.

Preference has been granted to veterans in county civil service. Preference is granted to veterans in employment in public departments and on public works of State and local units, with right to hearings on removal.

Preference has been granted to veterans in State civil service.

Preservation of benefit rights has been granted under the Unemployment Compensation Act.

Teachers must be reinstated within 90 days after termination of military service with preservation of status or seniority rights and benefits under established regulations of the school district.

The commandant and subordinate officers of the Michigan Soldiers' Home are required to be veterans.

War service credit has been allowed State employees for retirement purposes.

EXEMPTION FROM EXECUTION, GARNISHMENT, ETC.

State bonus claims are not assignable or subject to garnishment, attachment, or levy of execution.

GUARDIANSHIP

Provision has been made for the appointment of the commandant of the Michigan Soldiers' Home as guardian of a member of the Home in certain cases.

A Uniform Veterans' Guardianship Act has been enacted with modification which provides for the appointment of a guardian of an incompetent veteran or the minor child of the veteran, to receive certain benefits on behalf of such ward.

HOMES

Provision has been made for admission of veterans to the State Veterans Facility, formerly known as the Soldiers' Home. In 1931, a commission was created to transfer the Soldiers' Home to the Federal Government. Widows, wives, and mothers of soldiers, sailors, and marines may also be admitted to the home.

Aid has been extended to the American Legion children's billet at Otter Lake.

Provision has been made for care of widows, wives, and mothers of veterans of certain wars at the Soldiers' Home.

HOSPITAL BENEFITS

An inmate of the Soldiers' Home, if adjudged insane, may be committed to a State hospital for the insane. Commitment of an incompetent veteran may also be made to a Federal hospital.

Hospitalization has been provided for persons afflicted with tuberculosis. Use of certain wartime emergency funds for hospital and medical care and other purposes has been granted for the benefit of World War veterans.

MEDALS, CERTIFICATES, ETC.

Medals have been awarded for service in the Spanish American War or the Campaign in the Philippines.

MEMORIALS

Highway, United States Route 23, has been designated as United Spanish War Veterans' Memorial Highway.

PATRIOTIC HOLIDAYS

Towns and cities may appropriate money for proper observance of Memorial Day, Independence Day, and Armistice Day.

RELIEF AND REHABILITATION

Aid has been extended to Spanish-American War veterans. Banks and building and loan associations may make loans to qualified veterans under the GI bill of rights.

County relief may be extended to veterans, their wives, widows, children, and mothers. A postwar reserve fund of $50,000,000, has been created to liquidate the State's obligation to returning servicemen, their widows, or dependents.

State allowance has been made for care of dependents of enlisted and drafted men.

TAX EXEMPTIONS, EXEMPTION FROM LICENSE FEES, RENEWALS, ETC.

Members of the armed services when furnished with a driver's permit, and when operating an official motor vehicle in such vehicle, are exempt from State license requirements. This feature is not applicable to civilian personnel.

Operators' or chauffeurs' licenses of persons in the armed services are extended until 30 days after discharge from such service. This is not applicable to civilian personnel.

Veterans are exempt from license fees for peddlers' licenses.

Licensed embalmers and funeral directors in active military service may be relieved of the payment of renewal and revival fees.

No license of a person who was licensed to engage in a profession or occupation by the State shall expire while such licensee is in the armed forces.

Disabled veterans of the Philippine Insurrection, the China Relief Expedition, the Spanish-American, Indian, Civil, Mexican Wars, and World Wars I and II are entitled to $2,000 homestead exemption from taxes. Exemption is not available to owners of taxable property of greater value than $7,500. Memorial homes of World War veterans have been granted exemption.

Personal property of certain veterans' organizations is exempt.

Intangible property of posts of the Grand Army of the Republic and Sons of Union Veterans are exempt from taxation.

Pensions received from the United States Government are exempt from personal-property tax.

TRANSPORTATION PRIVILEGES

Common carriers may provide free transportation to inmates of soldiers' homes.

UNIFORMS

Rights have been extended to inmates of veterans' or soldiers' homes with respect to wearing the uniform of the United States Army or Navy.

VETERANS' ORGANIZATIONS

Appropriations (1942–43) to provide funds for conventions for certain veterans' organizations were made. Counties were authorized to appropriate $1,000 toward the expenses of veterans' conventions. Counties of 50,000 population or over may appropriate $5,000. Counties of 500,000 population or over may appropriate $25,000. Annual reports of the Grand Army of the Republic to the Governor shall include names and military record of deceased members. They shall be printed and distributed to posts.

United Spanish War Veterans' annual report to the Governor shall be printed and distributed to camps and auxiliaries

Incorporation has been granted to certain veterans' organizations and auxiliaries.

Unauthorized wearing or use of the registered name or insignia of certain veterans' organizations is a misdemeanor.

Any county, city, town, village, or school district may lease public buildings to veterans' organizations for 5 years at a nominal rent.

Armory privileges have been extended.

Certain veterans' organizations have been granted quarters at the State capitol.

State appropriation has been made for securing war devices and trophies from the United States Government and distributing same to veterans' organizations.

American Legion has been authorized to administer the Michigan patriotic fund to be used for welfare hospitalization, care, and assistance to disabled veterans.

Tax exemption has been granted to personal property of certain veterans' organizations. Intangible property of posts of the Grand Army of the Republic and Sons of Union Veterans is exempt from taxation.

Memorial homes of World War veterans are exempt from property tax.

Mr. Speaker, most of the above-mentioned laws have been enacted by the Michigan Legislature during the last 27 years, through the sponsorship and cooperation of the DAV and other veteran organizations.

The people of the State of Michigan have evidenced their confidence in the service work of these veteran organizations by making biennial appropriations to the several major veteran organizations.

Most of the 93 DAV chapters in the State, whose membership dues average about $5 annually, maintain volunteer or part-time service and employment officers.

In addition to such State-wide service, the DAV maintains nine full-time national service officers, under the direction of Sydney J. Allen, at 1201 Guardian Building, Detroit 26, Mich., to extend all types of assistance to veterans and their dependents, more particularly in the preparation, presentation, and prosecution of claims before the Veterans' Administration.

The DAV is primarily concerned in seeing that all war-disabled veterans and their dependents receive their just entitlement to rights and benefits provided under the many complicated laws, Federal and State.

To provide gainful employment for all such disabled veterans, the DAV has developed a Nation-wide man-job-matching method program.

During its more than 27 years of service activities, the Disabled American Veterans has sponsored and supported much liberalizing legislation, nationally and in each State.

Formed in 1920 and chartered by the Congress in 1932, the DAV is composed solely of men and women who were wounded or disabled as a result of their service to the United States in time of war.

Having specialized in the protection and formation of the justifiable needs and welfare of America's disabled defenders, the DAV feels that it has been thereby rendering a great service to these veterans and to our Country.

The service-giving activities of the DAV have made me proud to be one of the life members of this association.

Voice of America

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. KEATING. Mr. Speaker, no funds could possibly be more wisely spent in these critical times than in counteracting the false and misleading propaganda which is being disseminated abroad regarding this country. This was recognized in the House last June when we passed by an overwhelming vote the so-called Voice of America bill.

The other body has now, by unanimous action, enacted legislation, differing in details, but similar in purpose.

The conferees from both Houses, I understand, have ironed out their points of difference and agreed on a measure which, I feel sure, will go a long way toward combating in many quarters overseas the savage and vicious attacks which are daily being made on this country and our motives and objectives. Even so, the program envisaged in this bill will involve an expenditure less than one-quarter of that laid out by the Soviet Union in its "information program" to thwart our attempts at world reconstruction and recovery, to dominate the minds, souls, and destinies of increasing millions throughout the world and to impose upon them a godless, totalitarian despotism.

The hour is late but, let us pray, not too late. The ammunition afforded by this bill, wisely administered, may prove the turning point in the current war of words. I urge early action on, and approval of, the conference report.

Under leave to extend my remarks, I include an editorial on this timely subject from the New York Times:

VICTORY FOR THE "VOICE"

The Senate's unanimous approval last Friday of the State Department's cultural and informational program is as good an evidence as could be had of the changing climate of opinion in this country. Six months ago there was so much opposition to this measure and so much indifference to it that the Senate did not even bring it to a vote. In the House the similar measure introduced by Representative MUNDT of South Dakota passed, after a parliamentary rumpus, on June 24, by a vote of 272 to 97. Strangely enough, the program was allowed to continue without formal and separate legislative approval. Funds for it, reduced from the requested $31,381,220 to $12,400,000, were included in the regular State Department appropriations, sanctioned by vote of both Houses on July 3.

Now the withheld approval seems about to be granted. The Senate bill, introduced by Senator SMITH, of New Jersey, differs from the Mundt bill in some respects, notably in separating the radio broadcasting program ("The Voice of America") from the provisions for exchanging students, teachers, specialists, books, and periodicals. These changes do not seem damaging and it is thought the House will accept them. No specific expenditures are mentioned in either bill, but Senator SMITH suggests an immediate increase of $5,000,000 in this year's allowances and a total of from $35,000,000 to $40,000,000 for the next fiscal year. An economy-minded Congress, all things considered, might regard these increases as a true economy.

As long ago as last May, Secretary Marshall emphasized the necessity for making known to the world "what our motives are, what our actions have been, what we have done to assist people outside our borders." There is a greater necessity now, for, since May, the European recovery program has been announced, its principles generally accepted in this country and by democratic forces abroad, and a vicious attack launched upon it by the Cominform and other Russian mouthpieces. The storm of lies and misrepresentations about the United States has drifted across Europe and around the world like this winter's snows.

The old word "propaganda" has lost much of its stately meaning. We do not wish to reply in kind to the attacks upon us. But the truth about the United States will bear frank telling, and it is the truth, we believe, that now goes out in twenty-odd languages to thirty-odd countries, including European Russia and the Maritime Provinces of Siberia. If errors are made, they are certainly no part of a planned policy; nor should we forget that the "voice" is directly supplemented by the program for better acquaintanceship between our own students and scholars and those of other lands. We try to throw our beams of light across the earth and we raise our own curtains to let light in. The months have proved—and they have evidently convinced the skeptics in Congress—that in this bloodless war of words and ideas we must bring up our heaviest battalions.

The Louisiana Gubernatorial Election

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. PASSMAN. Mr. Speaker, I was amazed and shocked when I read the CONGRESSIONAL RECORD of yesterday noting that my colleague from Louisiana, Mr. DOMENGEAUX, had again abused his privilege as a Representative in Congress by inserting in the RECORD a statement charging the Honorable Earl K. Long, a candidate for Governor of Louisiana with income-tax fraud. The people of the great State of Louisiana are well aware of the fact that my colleague's eleventh-hour accusation is to try to stop the tide of Mr. Long's candidacy. I am of the opinion that my colleague, Mr. DOMENGEAUX, has resorted to these unusual tactics in a desperate effort to save the $20,000 wager that he has up that Mr. Jones will get more votes in the first primary than Mr. Long. Certainly, I am interested in the Louisiana gubernatorial campaign but I have not at any time inserted a single statement in the RECORD dealing with Louisiana politics, because I do not believe that the taxpayers' money should be wasted in such a manner. But on account of the many slanderous remarks inserted in the RECORD against the Honorable Earl K. Long, I must now vouch for his integrity. He is a fine, conscientious gentleman; able, honest, sincere, and a man with great ability.

Mr. Speaker, I believe that a resolution should be adopted by the House prohibiting any Member of the Louisiana

delegation from again using the CONGRESSIONAL RECORD to air Louisiana politics. I believe that it is obvious that my colleague, Mr. DOMENGEAUX, flew to Washington for a few hours to insert his remarks in the RECORD so as to have congressional immunity, because certainly he would not dare make such a statement without congressional immunity.

Air Policy Report

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. ARNOLD. Mr. Speaker, the subject of national defense is of the utmost importance to every loyal American. We should, however, be alert to any and all propaganda favoring universal military training as a necessary means to national security. An editorial in the Washington Post of January 16 by Marquis Childs, contains some interesting information with regard to economy in our armed forces, supposed to result from the consolidation of the services; and the need for more up-to-date efficiency. Under leave to extend my remarks I include this editorial which follows:

WASHINGTON CALLING
(By Marquis Childs)
AIR POLICY REPORT

In their searching and highly significant report the President's Air Policy Commission did not pass judgment on how the total defense budget is divided between Army, Navy, and Air Forces. But anyone who reads that report carefully can tell that the Commission felt a lot of money now being spent on defense is being wasted because it is going for "yesterday's war."

Neither the Army nor the Navy have faced up to present-day realities. Millions and millions of dollars are being spent in ways than can never serve the security of the United States. This is true in spite of the merger of the armed services 6 months ago which was meant to stop such wastes.

The facts are known, in part at least, to men in high position, some of them in uniform. Waste on yesterday's war—or even day before yesterday's war—is particularly obvious in the Navy. For example, shore installations are being maintained on the Pacific coast which can have no possible relation to any future war.

In the old days when America was relatively isolated by the two oceans this kind of waste did not matter too much. The Military Establishment was hardly more than a museum piece. At the outbreak of a war we would brush it aside and build a new modern war machine. Behind the barrier of the oceans there was always time.

But as the Air Commission's report—called Survival in the Air Age—makes dramatically clear, we shall never again have that much time. In the age of jet bombers and guided missiles there is no second chance. An atomic Pearl Harbor means final and utter defeat and disaster.

The commission's report is the first overall, impartial examination of the postwar Military Establishment and over-all strategy, if any. The commission was not authorized to pass on how the total defense budget should be spent. They came close to it, however, when they said:

"We view with great anxiety the pressures from many sides directed toward the maintenance of yesterday's establishment to fight tomorrow's war: of unwillingness to discard the old and take on the new; of a determination to advance the interest of a segment at the sacrifice of the body as a whole. All this is understandable. For it comes in large part from loyalty of each service to its traditions. But we can no longer afford the waste it involves. Hope rests only with the ability of the Secretary of Defense under the President to discharge effectively the authority vested in him with one objective in mind—the maximum in security for the minimum cost. It is imperative that this be done; for unless it is we will not have a Military Establishment capable of defending the country."

The Air Commission called on Secretary of Defense James Forrestal to show what had been done thus far to integrate the services and bring about essential economy. In tangible results Forrestal could show very little.

Members of the Commission were fully aware of the tremendous task that was dumped in Forrestal's lap. In the past the Navy has been the only force maintained in being between the wars. It was kept in being to guard the sea approaches to the United States.

Vested interests have grown up around the Navy that are like barnacles which fasten on a ship too long in port. It is an institution hoary with tradition and hedged around by guardians of that tradition.

Forrestal's job is now to keep the Navy as a force in being and as a security weapon safeguarding American interests all over the world while at the same time creating a second force in being in the air to guard the air approaches to the Nation. To carry out the second half of this assignment means inevitably that the Navy must be pruned (1) because many of its functions are now those of yesterday's war and (2) because the money simply will not be available unless there is a drastic pruning.

The vested interests are not, of course, all inside the Army and the Navy. For many years after they had outgrown any conceivable usefulness for defense the Army continued to maintain posts that in their day had been useful in fighting the Indians. When it was proposed to abolish these posts, nearby towns rose up in indignation and brought congressional pressure to bear to stop the move. That happened repeatedly, and naturally Army officers who didn't want to see any change could ally themselves with these interests.

Those days are gone forever. If Congress and the Nation persist in living in that kind of a past, then the awakening will eventually be a rude one.

Hoosier Watch Dog

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Wayne News-Sentinel:

HOOSIER WATCH DOG

One of the most zealous guardians of American freedom against totalitarianism is Representative FOREST A. HARNESS, of the Fifth Indiana District.

As chairman of the House Subcommittee on Publicity and Propaganda in the Executive Departments, he has a particularly strategic position in which to attack Federal bureaus and employees who have used public funds and facilities to foster schemes designed to entrench totalitarianism in America.

President Truman's demand for legislation providing compulsory health insurance, made in his recent message on the state of the Union, focuses attention on the exposé by the Indiana Congressman's committee of the campaign to pressure Congress into passing this legislation.

Mr. HARNESS found this campaign was planned on Government time, paid for by the taxpayers in violation of the Federal statute making it unlawful for Federal employees to use tax funds to promote legislation.

Although Congressman HARNESS' committee of Democrats as well as Republicans voted unanimously to expose these Federal employees and turn the evidence over to the FBI and the Department of Justice for prosecution, the President has yet to utter one word of rebuke to employees of his administration.

Indeed, he has again joined them in an urgent plea for the proposed legislation.

Of the proposed compulsory health insurance law, HARNESS declares "there is no legislative proposal that has stronger, more obvious appeal to devotees of the all-powerful, all-supervising state than national compulsory health insurance, often described as 'socialized medicine.' "

Compulsory health insurance, the Indiana legislator insists, is the cornerstone of every Socialist regime. It would swell the number of bureaucrats by many thousands and would cost the taxpayers billions of dollars a year.

Mr. HARNESS' investigation revealed that headquarters for the intensive drive is in the Federal Security Agency in Washington, to which would be added administration and enforcement of the health insurance law. The FSA already has 35,000 employees.

Last year HARNESS stopped a joint health service Government mission to draw up a socialized-medicine program for Japan, when he exposed it as a grossly unlawful expenditure of Federal funds.

The Nation can be grateful for the zeal of this Hoosier watch dog.

Letter of J. Edgar Small, Esq., of York, Pa.

EXTENSION OF REMARKS
OF
HON. CHESTER H. GROSS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. GROSS. Mr. Speaker, under leave to extend my remarks, I include the following letter:

YORK, PA., *January 14, 1948.*
Hon. CHESTER H. GROSS,
York, Pa.

DEAR MR. GROSS: There have been a thousand reasons presented to me during the past few months why I should be convicted of the fact that the Federal Government should appropriate billions of the taxpayers' money for the so-called purpose of preventing the spread of communism in Europe. But at the present time I am unable to think of one of them.

Mr. Harry Hopkins left the cat out of the bag in some lucid moment as to the real purpose of the "brain trusters" advising the New Dealers' Administration when he said, "The way to succeed politically is to tax and

tax and to spend and spend and to elect and to elect."

Shortly after Harry was sworn in as President of the United States he declared that he would follow in every respect the New Deal philosophy. It is now quite obvious that it is the intention of the administration to enlarge the New Deal to include almost the entire planet so that we won't stop at furnishing two bottles of milk to every family in Europe as Henry Wallace suggested years ago, but now it is proposed that this donation be enlarged to the global extent of rehabilitating the economy of all the nations of Europe.

I am beginning to be astounded with the possibility of a Republican Congress being influenced to go along with the Democratic New Dealers with this program. The influences which seem to be now effective in leading our present Congress astray are appalling when you consider the tremendous force and effect of this well-planned and executed propaganda of the Federal Government. I shudder when I actually perceive the extent of this influence when the Federal Government determines upon some definite line of action, such as the rehabilitation of Europe. They have the power inherent by reason of their high position to lead, mold, and direct the thoughts of the people making use of all the public relations employees employed in every bureau and department of Government who have free access to the press and to the radio. Yet this power is so tremendous that they have actually influenced the minds of a Republican Congress, that it is their duty to go along with this diabolical scheme to take the money out of the pay envelopes for 60,000,000 employees and hand it over to Europeans with the result and effect which is the real undisclosed purpose of providing them with the means to purchase commodities and foodstuffs from America which will have the effect of tremendously accelerating our own cost of living. This whole thing is a tremendous pipe dream and in any angle it is viewed it becomes more cockeyed.

No doubt old Stalin is chuckling in his boots as he becomes more and more convicted of the fact that we are about to commit national suicide. For God's sake do something about this before it is too late. Mr. Marshall stated that the Congress should either appropriate all the money decided by the New Dealers or none at all. This in my estimation, is splendid and opens the door to accept the latter plan.

If the New Dealers are restricted by Congress by setting up an independent agency to control the expenditure of this tremendous amount of money, then they don't want to have anything to do with it. It is perfectly obvious that their whole plan consists in elevating the entire economy of the United States by advising purchases of materials so that wages can be raised and the production and income of the Nation greater during the next 4 years so that they can be elected and that their entire term of office will be guaranteed to maintain this tremendous high level. Of course, the result of all this some day will lead to a tremendous financial bust predicted by Stalin.

These New Dealers do not intend to lift a finger towards staying ascending prices. Instead of cutting down the cost of Government they are constantly adding to its cost, all of which is unproductive money and accelerates the spiral. They are now engaged in adding to the tremendous stock piles of food and materials in Government warehouses. They have planned domestically to expend ten more billions of dollars per annum, in addition to the seventeen they desire to sink in Europe. Their whole conception of the conduct of affairs is so fantastic that you can hardly conceive of any reasonable Republican going along with any of their plans. The only thing for a Republican to do in Congress when he finds that it is a desire of the Democrats to do anything, is to hit it and hit it hard and you will be on safe ground.

Hoping that you have not been inoculated with this New Deal propaganda and will use the head that God has given you, I remain,

Sincerely yours,

J. EDGAR SMALL,
Attorney at Law.

P. S.—If no emergency exists at home, the New Dealers can find one some other place.

J. E. S.

Equal Rights Amendment

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks, I am including a speech I made to the Business and Professional Women's Club of Memphis upon the occasion of their first meeting in 1948. I spoke upon the equal rights amendment. A record was made of my remarks in Washington, forwarded to Memphis and broadcast to their meeting at the King Cotton Hotel. Later in the week, radio station WMC broadcast the speech as a regular facility. The speech follows:

My friends, I am grateful for this opportunity to speak to the Business and Professional Women's Club of Memphis in this unusual way. In the fall when Miss Brasher and Mrs. Richardson came to my Memphis office and invited me to speak briefly by remote control from Washington to your first meeting in 1948, on the subject of the equal-rights amendment, I confessed to them that I had little or no knowledge of the subject. Without reservation, however, I agreed to study the question and to prepare for this occasion which has now arrived.

I had long known the fine reputation enjoyed by your organization in Memphis and many of your members are personal friends of Mrs. Davis and of me. The high character of your business and professional services is generally known. It then followed naturally that I should want to be more adequately informed on a piece of projected legislation which holds your interest and endorsement.

My failure to know more about this particular amendment, I think, can be shared by the majority of the Members of both Houses of the Congress. During the war years much of the legislation presented to the National Legislature concerned our country's preparation for participation in great World War II, which so threatened the institutions, the happiness, the economy, the welfare, and the philosophy of our Government. We know now that Japan was preparing for this last war for 40 years. Russia, through its series of 5-year plans, had prepared for 25 years. Italy had been making ready for 20 years, and strange as it may seem, Germany, which precipitated this terrible experience throughout the world, had been intensifying its preparation for 12 years. Our own country which loved, and still loves, peace, had grown to be the happiest, the richest, and most powerful nation of all nations of the world. With an army of less than 260,000 officers and men, and thinking not in terms of war, found it necessary to prepare in a short period of 3 years not only for actual participation in battle, but through those efforts to turn back with our sons, the sacrifice of human blood, and the expenditure of our wealth, our inventive genius, and all of our great resources, these war lords. We now turn to a consideration of those principles which will insure a full, complete, and lasting peace. We are now in the midst of another war—this one a cold war, so called.

I think 1948 will be a year of great challenge, and as we seek to restore the economy of our own country, and as we may more completely contribute to a restoration of the economy of the world and world peace, we must think soundly and substantially on certain domestic questions. So then it was with amazement that my study of this bill during the Christmas holidays revealed the seeds of equal rights were sown almost 100 years ago.

As a matter of fact, two women of precocious political faith, Lucretia C. Mott and Elizabeth Cady Stanton, first recorded the efforts of women at the Seneca Falls conference on July 18 and 19 in 1848. Out of the convention tumbled these demands for women builders of the Republic: Equal rights in the franchise, in education, in the professions, in public office, in marriage, in personal freedom, in control of property, in guardianship of children, in making contracts, in the church, and in the leadership of moral and public movements. In entering upon the great work before them, these two women said: "We anticipate no small amount of misconception, misrepresentation, and ridicule; but we shall use every instrumentality within our power to effect our object." They spoke in accurate prediction and in the same sort of fearless language their fathers and grandfathers used in drafting the Declaration of Independence and the Constitution. The efforts of the conferees and their descendants toward realization of the avowed objectives are a part of the story of the Nation's unfolding.

Any conclusion bearing on woman's status under the laws of the United States of America must take into account the common law, on which the fabric of the Nation's jurisprudence is woven.

The common-law rules of property sprang from various causes, notably tradition, military or economic exigency, natural male dominance, and the social status of women. Shifts in these have effected an almost complete overturn in laws governing the property owned by a woman prior to her marriage and that coming into her individual ownership after her marriage by gift, inheritance, will, or accumulation from her premarital possessions.

In general, it has been the rule that where specific statutes abrogating them have not been enacted, common-law principles apply. In the century just passed, much ground has been covered in superseding by specific laws the old common-law injustices to women. The largest remaining area to be reformed to the present-day trend lies in the matter of ownership and control of property acquired by the efforts of husband and wife after marriage.

An instance of legislative effort to recognize women's status as an individual in society is the action of one State in amending its constitution so that women are no longer barred from election to the highest public offices; another is the enactment by one State of a law expressly safeguarding a married woman's right as an individual to her personal earnings; another is one State's assurance that the right of any person to declare intention to become a citizen of the State shall not be denied or abridged because of sex or marital status; or the reform by six States of their juror qualifications to remove the ancient bar of sex; or the action by two States to bar discrimination against teachers in contracts of employment because of marital status, or by another State to prohibit this form of discrimination against any public officer or employee.

Good examples of legislative action to relieve economic pressures appear in the tightening of State control over legal obligations for support of families or dependent relatives, the removal of legal disabilities arising from woman's marital status, and the adoption of a State-wide system of community for marital property to divide burdens of taxation.

If the aggregate of legislative action in these fields seems small in comparison with the total number of States within the Union, it must be remembered that these achievements are not initial but final steps in a clean-up movement among the States to remove lingering discriminatory laws which have escaped attention in the broad reforms of the past century.

No amendment to the Constitution should be passed without wholesome examination of the facts.

It is significant that those who argue about the equal rights amendment agree on principle but differ on method. Both proponents and opponents of the amendment resent the more than 1,100 old, discriminatory laws against women which linger in State constitutions. I refer to a few—such as those which:

Prohibit a wife from engaging in independent business and keeping her earnings without husband's consent.

Specify that property acquired after marriage, by cooperative effort of husband and wife, belongs to and is controlled by the husband in the absence of valid agreements otherwise made between the two.

Restrict women in the making of contracts.

Refuse women the right to serve on juries.

Give the father first right to custody, services, and earnings of minor children.

Permit the husband to secure divorce on the basis of his wife's unchaste character while the same advantage is not permitted to women in the same States.

Supporters of the amendment believe that correction of these laws will be more speedily effected through a simple, constitutional adjustment. Opponents, fearful of sharp, clean Federal action, prefer to wait for the slow, voluntary action of the States, action which, amendment proponents contend, may never come about and, if it does, may be of a highly impermanent nature. Without a Federal directive, States would be left free to pass those special laws for women, which many believe must give way to adequate laws for men and women alike.

In 1944 the Democratic Party platform contained this language: "We favor legislation assuring equal pay for equal work regardless of sex. We recommend to Congress the submission of a constitutional amendment on equal rights for women."

Likewise, the Republican Party platform contained this language: "We favor submission by Congress to the States of an amendment to the Constitution providing for equal rights for men and women. We favor job opportunities in the postwar world open to men and women alike without discrimination in rate of pay because of sex.

The matter has been before the Judiciary Committee in both the Senate and the House. Let me quote now from the Senate Judiciary Report of 1946:

"We should like to point out that the proposed amendment is in harmony with the principles to which our Nation has subscribed in ratifying the Charter of the United Nations. * * * Believing that the time has come for Congress to submit this resolution to the State legislatures for their consideration, the Committee on the Judiciary votes, January 21, 1946, to report this resolution to the Senate with the recommendation that the resolution do pass."

Now here is what the House Judiciary Committee reported:

"The committee definitely feels that the laws of many States and the United States, under the guise of protecting the safety and welfare of the female sex, have, in fact, discriminated against such sex in various economic fields of activity or have entirely excluded females from participation in economic fields in which they are as equally proficient as men and in which they can serve without injury to their health or the public interest. The arduous and efficient service rendered by women both in the armed services and in industry during the present war has clearly demonstrated that women are capable of fully participating in the economic activities of this country where not precluded from doing so by discriminatory laws and regulations."

Now, ladies, you have gained another advocate for the passage of your bill. I promise to do all that I can to interest other of my colleagues in this important legislation.

Speaking very practically, if each club represented in your fine federation will do as well, the bill will pass during the Eightieth Congress if properly presented after the so-called Marshall plan and other pressing world matters are out of the way.

Two months ago I should have been glad to have a limit placed upon my radio time. Now, I must confess that the time allowed is much too short for me to discuss adequately my genuine interest in this legislation.

I thank you.

Mikolajczyk Tells of the Fate of the Poles After Hitler Attacked Russia and of the Fate of 11,000 Polish Officers

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two additional installments of articles published in the Milwaukee Sentinel describing the reaction in England and the United States when Hitler attacked Russia. The fate of Poland was held in an iron vise of conflict and the London Polish Government was the real barometer of liberty. The liberty of a brave people cannot be ruthlessly sacrified without grave consequences for all parties concerned.

Following are Mikolajczyk's two additional installments:

MIKOLAJCZYK SAYS RUSSIA'S WAR ENTRY BEWITCHED CHURCHILL

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and President of the Polish Peasant Party)

(Installment VI)

When Hitler attacked Russia on June 22, 1941, climaxing a series of inter-Axis political clashes of which we had been informed by the Polish underground, Winston Churchill went immediately to the wireless to welcome the Soviets to the side of the fighting democracies.

The United States, still neutral, took a somewhat less enthusiastic view. Sumner Welles reported, "In the opinion of this Government, any rallying of the forces opposite Hitlerism, from whatever source they may spring, will hasten the downfall of the German leaders and will therefore be to the benefit of our own defense and security."

Our Polish Government-in-Exile had something to say, too, in behalf of the country most deeply concerned. Poland had been debased by both Germans and Russians. In addition to unprecedented cruelties to our civilians, the Fascists and the Communists had divided Poland in two with the Ribbentrop-Molotov line. It was still divided on June 22.

Our cabinet met in London and made up its mind. Our Prime Minister, General Sikorski, issued a statement. Poland, he said, did not rule out the possibility of an understanding with the Union of Soviet Socialist Republics.

WANTS RIGA TREATY RECOGNIZED

But unlike Britain and the United States, we had certain conditions to present. Russia, Sikorski said, must recognize again the Treaty of Riga, which established the border the Red Army had crossed in 1939. Russia must also set free the 1,500,000 Polish men and women the Reds had driven into Russia in 1939 for slave labor and worse. Polish prisoners of war in the U. S. S. R. must be freed and given every opportunity to renew the battle against the Germans.

The conditions we offered were most certainly generous. We had ruled out reparations and indemnities, though entitled to both. We had promised to forgive, if not forget that Molotov in 1939 had said, "Poland, as an independent state, is doomed forever"; that the Reds had stabbed us in the back; had cold-bloodedly appropriated half of our country—with which it held a nonaggression pact—burned our cities, killed our people, and driven many others into pitiless serfdom.

RUSSIA UNWILLING

But to our astonishment, when we sat down with Russian Ambassador Ivan Maisky in London to draw up our new pact with this huge new bedfellow in the camp of the Allies, we learned that Russia was not willing to accept all of our conditions.

Stunned and unbelieving, we asked Anthony Eden to help us obtain this bare minimum of demands, but found him immersed in almost the romantic enthusiasm of Churchill himself—over the very presence of the Russians in the war against Germany.

We objected but were asked to remain silent in the interests of "Allied unity"—a phrase used faithfully by the Western Powers, and abused by the Russians from the very beginning of their forced fight against Hitler.

We remained silent, and we compromised.

VALIDITY LOST

The pact which Sikorski signed with Maisky in London on July 30, 1941, provided, among other things, that:

1. The Soviet Government recognized that the Soviet-German treaties of 1939 as to territorial changes in Poland (the Ribbentrop-Molotov line) had lost their validity;

2. The Soviet Government granted an amnesty to all Polish citizens imprisoned in the U. S. S. R.

"A valuable contribution to the Allied cause," Eden said enthusiastically.

But, to us, it was a moral defeat. It was the beginning of the appeasement of Russia which continues to this day.

We had asked for Russia's recognition of the 1921 boundaries by name, not just a dissolution of the Ribbentrop-Molotov line. And we fought the inclusion of the word "amnesty" in the new pact, for it made it appear that Russia was doing a generous thing in releasing 1,500,000 Polish citizens they had criminally carried off to captivity.

QUIT IN PROTEST

We failed, and could not raise our voice. Three members of our Cabinet resigned in protest. The rest of us stayed, hoping that the handwriting that seemed so plain to us on the wall of history was somehow an illusion.

General Sikorski lived for the day when Polish armies re-formed in Russia, would

fight at the side of Red army men, and that in the heat of battle the two groups would be united as understanding brothers.

With that in mind he set about the task of providing a Polish-Soviet military agreement, which on August 14, 1941, was signed in Moscow. It was agreed that:

1. A Polish army would be organized immediately in Russia;

2. The army would be part of the sovereign forces of Poland;

3. Polish soldiers in Russia would receive the pay, rations, and maintenance accorded the Red Army;

4. Russia, aided by such lend-lease as Poland was to receive from the United States, would outfit and feed the Polish Army in Russia.

AMBASSADOR BUSY

Between the time of these two pacts, our Ambasador to Russia, Stanislaw Kot, who, though a sick man, had flown across Germany to get to his post, was busy with the task of releasing and caring for the multitudes of Poles imprisoned in Russia. Gen. Wladyslaw Anders, the great soldier who had been named commander in chief of the Polish Army in Russia by General Sikorski, scoured the country for his old troops and other Poles fit to fight.

In London our misgivings mounted as we began receiving reports from Kot and Anders that the Russians were releasing our people with grudging reluctance.

The tone of our first pact with the new ally continued to be a source of alarm, and when President Roosevelt and Prime Minister Churchill met to fashion their Altantic Charter we hoped for better days.

The precepts of that charter are, of course, familar to all. Suffice it to say that it calls for "no territorial changes that do not accord with the freely expressed wishes of the peoples concerned" and the "right of all peoples" to choose the type of government under which they will live, and promises that "sovereign rights and self-government will be restored to those who have been forcibly deprived of them."

Our efforts to get the British and United States Governments to clarify—for the Russian mind—the spirit and letter of the pact we signed, were generally without avail. Neither country was in a mood to speak bluntly to Russia, though Russia, now in full retreat before the German forces, might have been attentive. It was in sore need of Allied aid.

UNITED STATES "UNDERSTANDING"

But the best we could get out of Washington was Welles' statement that it was the "understanding" of the United States that the Polish-Soviet pact meant that our country's old borders would be reestablished after the war. Eden said in Commons, "There is * * * no guarantee of frontiers."

In Moscow a representative of the American Red Cross was rebuffed three times when he sought permission to send food, clothing, and medical supplies to the Poles in Russia. The Soviet authorities plainly regarded the Red Cross as a "foreign agent" secretly bent upon spying and meddling in the domestic affairs of the U. S. S. R.

RUSSIA INVIOLATE TO ALLIED LEADERS, MIKOLAJCZYK SAYS

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party)

(Installment VII)

The silence of the Polish Government-in-exile, during the autumn of 1941 when we were attempting to empty the Russian work-concentration camps of 1,500,000 captured Poles, had been imposed upon us chiefly by Britain.

There was a widespread feeling in Britain, as Hitler's forces overran what had been the Russian zone of Poland and swept on toward Moscow, that Russia would capitulate to Germany and renew that totalitarian monster born of the earlier German-Russian pact. Churchill wanted nothing to offend the feelings of Stalin.

Some of this feeling penetrated Washington, and over both Washington and London there settled a state of mind which decreed that Stalin was the noblest of leaders and that all things Russian were right.

The Polish Government-in-exile was getting a sharply different view of matters. Many of the Russian labor camp commanders were refusing to yield the tens of thousands of emaciated and work-broken Poles under their yoke. Other Poles, released by the so-called amnesty, were being rearrested and put back into slavery. They were dying like flies.

Our Polish soldiers, released as prisoners of war, found their way to General Anders' headquarters as best they could, while our hampered diplomatic and military staffs in Russia scoured the far reaches of the Union of Soviet Socialist Republics for camps that had contained them as prisoners of war.

We could never be absolutely certain about the number of Polish Army men the Red Army had captured and hauled into Russia. We had mainly to depend on an item in the Soviet Army paper Red Star, dated September 17, 1940.

The Red Star item had revealed that in addition to civilians, 181,000 members of the Polish Army were then being held in Russian prisoners-of-war camps—a list which included 12 generals, 58 colonels, 72 lieutenant colonels, and 9,227 officers of lower ranks.

Slowly, bravely, the remnants of these forces began to report to General Anders, but he noted with growing concern that there were only a few officers among them. He communicated this news to us and we asked Moscow—only to be told that all the men had been released.

We repeated our inquiries about our missing officers, without avail, and at the same time arranged—through a meeting between Norman Davis, of the American Red Cross, and Constantin Oumansky, in Washington—to have Red Cross aid delivered to our stricken people in Russia.

These were fretful times for our government, for we were unable to reveal our difficulties to the world's public opinion. Nothing must distress Stalin. Nothing.

MADE GOOD READING

Russia's formal acceptance of the principles laid down in the Atlantic Charter made comforting reading in the British Empire and in the United States. But in London the Polish Government had had a taste of the insincerity of Russian statements, and that taste was bitter.

Ambassador Maisky signified Russia's intention of abiding by the new world Bill of Rights established by Roosevelt and Churchill in the Atlantic. He denounced "all and any attempts of aggressive powers to impose their will upon other peoples," in a historic mockery of a meeting at St. James's Palace on September 24, 1941.

Maisky said the foreign policy of the Union of Soviet Socialist Republics would henceforth be guided by "the principle of self-determination of nations."

"The Soviet Union," he said, "defends the right of every nation to the independence and territory integrity of its country, and its right to establish such a social order and to choose such a form of government as it deems opportune * * * It proclaims its agreement with the fundamental principles of the declaration of Mr. Roosevelt and Mr. Churchill."

ROLE OF SILENCE

Hats were thrown in the air. A bit later, when Russia announced that it would permit Polish Catholic and Jewish chaplains to administer to the spiritual needs of the army we were attempting to form in Russia, Stalin was widely lauded for his religious tolerance. Our long efforts to achieve that goal were, of course, overlooked. Our role was silence.

Lend-lease shipments for Poland, to be routed to wherever Poles fought, began in September 1941 with a notation by President Roosevelt that "this action demonstrates our intention to give material support to the fighting determination of the Polish people to establish once again the independence of which they were so inhumanely deprived."

GETS STALIN AUDIENCE

On November 14, 1941, Ambassador Kot was able to gain an audience with Stalin at the Kremlin. Molotov and Vishinsky were present. Kot immediately brought up the matter of missing officers.

Stalin looked surprised. "Are there still Poles who have not been liberated?" he asked.

"Many," Kot said. "We are particularly concerned with the case of about 11,000 officers who were detained in the Starobielsk, Kozielsk, and Otashkov camps. They were transferred to an unknown destination in the spring of 1940 and none have reported to General Anders."

"Our amnesty knows no exceptions," Stalin said. He ground out his cigarette and picked up a phone. Then he made a personal inquiry of someone about the officers.

NO CHANGE IN EXPRESSION

Kot reported to us that Stalin listened to a voice on the other end of the line for some time, without a change in expression, and then hung up and refused to speak about the officers through the rest of the meeting.

The terrible truth was beginning to dawn on us in London. We had received reports from families of the men. Those reports jibed with an awful precision. Mail from the officers had ceased during April and May of 1940.

In the face of such difficulties, General Anders nevertheless raised an army of 70,000 Poles in Russia, the equivalent of eight divisions. That fall and winter they trained—many of them barefooted—under appalling conditions. Russia provided supplies for only 40,000 of them. Some of them were at times forced to go without food as long as a week.

As for our civilians in Russia, we were eventually able to place 7,000 Polish relief workers among these more than a million and a quarter Poles. These workers found our people reduced close to the animal stage from starvation, terror, and work. The Russians had spared no one; had heaped on the more intelligent Poles the most menial work. They had turned mechanical engineers into ditch laborers. They had detailed doctors, scientists, and chemists to fertilizing fields with manure.

London and Washington were reluctant to join in our own snuffed-out protests, and it was in such an atmosphere that General Sikorski flew to Moscow on December 1, 1941, for a personal appeal to the man who must have been secretly amused by his trusting or overly timid allies—Joseph Stalin.

War or the Marshall Plan, So Say Experts

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. Jerry Greene calls the turn on

double talk in the Times-Herald of January 19, 1948, in his column Capital Circus. Top-flight Cabinet officers should be telling the people the truth about our present international situation and not engage in testimony that is designed to scare our people into ill-advised legislation.

Under leave to extend my remarks, I include the editorial by Mr. Greene:

CAPITAL CIRCUS

(By Jerry Greene)

If these United States are as close to war with Russia as the administration stalwarts are telling the Congress day after day, then these dignitaries plugging for the Marshall plan are committing a fraud on the people which is little short of criminal.

For, if the danger of armed conflict is so imminent, if the Marshall plan alone stands between the cold war and a shooting war, then the top-flight Cabinet officers in this Government are being derelict in their duty.

They ought to be out demanding, immediately, the huge expenditures for defense they say will be necessary if communism isn't checked in western Europe.

After endless days when alternatives have been pitched at Congress by the dozens, a poor, feeble effort on the part of any taxpayer to understand the strange campaign for the Marshall plan can lead to but one door—the iron-studded portal of the booby hatch.

You have Defense Secretary James Forrestal telling the House Foreign Affairs Committee if the European recovery program doesn't go over, he will have to ask for 25 or 50 percent increases in appropriations for defense.

At the same time, Army Secretary Kenneth Royall is telling the Senate Foreign Relations Committee that the only alternative to the Marshall plan is another two and a quarter billions in cash for his Department and reenactment of the draft.

After the next Pearl Harbor?

Never since the day when the man in the tall silk hat leaned out of his wagon over the neck of the banjo player and sold the same bottle of medicine to grow hair on the head and remove it from other parts of the body has this Capital been confronted with such peculiar advice from high places.

What started out to be a European recovery program has, over night, turned into "shell out or get ready to fight."

When the hoop-la about the Marshall plan was started by the Secretary of State himself, there was the assumption that Europe's economy must be restored and we would benefit thereby. Also, there was the firm intention to help tired and hungry peoples to determine their own form of government which they might not be able to do otherwise, in view of insistent Communist pressure.

That, apparently, is out the window. Take Forrestal's reply to a GOP questioner before the House committee: "The alternative is that we would live in an armed armistice. We would have to create and maintain a military power so strong that none would dare attack us or start a new war. And this would mean that we would have to deny ourselves the production necessary for a return to normal conditions."

If we aren't living in an armed armistice today, why does Truman want $11,100,000,000 for the Army, Navy, and Air Force in fiscal 1949?

Now let's look at the Secretary's threat about having to maintain this strong military power so nobody will attack us if Congress doesn't pour out the dough for this Marshall plan. There are those around town who, from the Secretary's own words, assumed that the United States already was trying to become invincible.

Just exactly 24 hours before he talked to the House committee last week, Forrestal, without any reference to European-recovery spending, told a press conference:

"We must keep a force of such strength as to deter any nation that would plan otherwise to do what Hitler did."

The President's Air Policy Commission had that same idea and the hell with whether Europe recovers or not. The Commission demanded more billions right now for aircraft production and said the United States ought to be spending $18,000,000,000 a year for national defense by the end of 1952—when Russia is expected to have the A-bomb and planes to carry it.

This frenzy about the Marshall plan or selective service, save Europe or fight, looks even more phony and strictly along the propaganda line when Marshall and Forrestal and Royall fail to turn up a timetable for their gloomy predictions and when they neglect to mention the world's hottest spot—the Middle East.

The danger of a clash which might bring on a real war is as great in Palestine, Iran, and vicinity as anywhere else. What would the Marshall plan do to stop that?

Additionally, some of the Congressmen are asking, since it is obvious that Europe is going to get some help from the United States, when will the Army-Navy-Air Force people know whether or not we need the draft again or those added billions?

Our best intelligence agents report that Russia doesn't want a war for another 4 or 5 years at best—certainly not until she has an atom bomb or two hidden under the Steppes. This is common knowledge around Washington and this assumed fact is causing an increasing number of people to wonder what's back of all that scare testimony turned loose on Capitol Hill in recent days.

The General Electric Price Policy and the Public Interest

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. MARCANTONIO. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement issued by United Electrical, Radio, Machine Workers of America, CIO:

To what extent was the recent announcement of the General Electric Co. of a price decrease of from 3 to 10 percent (average 5 percent) on radio and television sets and large and small electrical appliances in the public interest? This determination can only be made by an examination of the over-all price policy of the General Electric Co.

GENERAL ELECTRIC PRICE POLICY ON HEAVY ELECTRICAL EQUIPMENT

The company publicized widely its December 31 announcement of price decreases on 40 percent of its products. But a statement by the company on December 12 that it was dropping its policy of firm pricing and allowing increases up to 20 percent on locomotives, generators, turbines, and other heavy electrical goods, comprising 60 percent of its production, was quietly buried in the financial pages of most newspapers. General Electric's lead was followed shortly thereafter by the Westinghouse Corp., which announced an identical policy providing for increases up to 20 percent on its heavy equipment. General Electric's 12-percent price rise in tubes in December 1947 was not reported in the press. Thus the company is breaking the price line and setting the stage for pyramiding increases on products which are bound to influence seriously the price structure of American industry and therefore the cost of living of the American people.

PREVIOUS PRICE INCREASES OF GENERAL ELECTRIC

Once before in 1947 General Electric broke the price line. On April 28, 1947, the company, the last major corporation in the industry to settle with the UE for a 15-percent-wage-package increase, was the first to announce simultaneously with the wage settlement a 6 to 17 percent price rise on all of its products. (New York Times, April 29, 1947.) Not until some months later did its competitors follow suit and increase prices.

The General Electric Co. not only helped break the price line in the electrical industry in April 1947, but also destroyed the movement for voluntary price reductions popularly known as the Newburyport Plan. It was reported at the time that Dr. Edwin G. Nourse, chairman of the President's Council of Economic Advisors, was deeply disturbed by this action of the company. (New York Post, April 28, 1947). The Union also criticized the company's price increases as unnecessary—a contention borne out by the company's latest price move.

For the entire year 1947 General Electric admits an increase of 20 percent in its average weighted prices. (New York Herald Tribune, December 22, 1947.) This does not include the proposed 20 percent increases on heavy electrical equipment.

INCREASING COMPETITION FOR RADIO, TELEVISION, AND APPLIANCE MARKET

The price decreases of the General Electric Co., such as they are, were prompted by adjustments as to an increasingly competitive market for radio and television sets and large and small appliances. For some time the trade journals have been carrying stories of increasing competition for a rapidly developing buyers' market. The General Electric price action would appear to be but a near post-Christmas adjustment to this competitive market.

On November 5, 1947, the Journal of Commerce reported that electrical buyers believe "that holiday buying this year may be our last big sales fillip before merchandising gets back on a really competitive footing.

The Wall Street Journal of November 26, 1947, reports: "The youthful television industry is poised for its major competitive war." On December 23 the same journal under the heading Radio Battle Royal, states that leading radio makers "plan to hit the market early next year with new and less costly models, in the opening salvo of what promises to be the fiercest competitive fight the industry has seen in years."

The New York Times of November 11, 1947, reports "Consumer resistance to high-priced gadgets" on electric ranges and points out that "many customers have decided to pass up deluxe models and wait for less expensive standard merchandise."

Business Week of November 8, 1947, notes that "a normal supply situation can be expected in 1948" for electric motors.

The Journal of Commerce for October 29, 1947, states that "Manufacturers of household refrigerators expect to be back in a full-fledged competitive market before the end of 1948."

The market condition is summed up by Business Week, October 4, 1947, as follows: "Producers of vacuum cleaners, washers, water heaters, and the like are telling dealers that the time has come to get out and sell. Floor stocks are becoming adequate, and in a few cases current production is sitting too long on manufacturers' loading platforms."

DISTRIBUTORS' REACTION TO GENERAL ELECTRIC'S PRICING

It has been widely recognized in the electrical industry that General Electric prices have been out of line with those of its competitors. On the occasion of its April 1947 price increase dealers noted that General Electric prices were out of line, and one dealer called the company the "least realistic" and most inept of major appliance producers when mass merchandising was involved. (New York Times, April 29, 1947.) Again, in January 1948, upon the announcement of price reductions by General Electric, the company's prices were criticized, one large distributor stating "it is well known that GE prices before the reductions were not competitive on many appliances. The reductions, among other things, served to bring GE into line." (New York Times, Jan. 1, 1948.)

PRODUCTIVITY INCREASING

For the industry as a whole, Factory Management and Maintenance, September 1947, reports on the basis of a survey among electrical manufacturers that productivity has increased 13½ percent between January 1946 and June 1947. The magazine also reports that electrical manufacturers foresee further increases in productivity from June 1947 to June 1948 of 9.6 percent. In the New York Herald Tribune of December 22, 1947, Charles E. Wilson indicated that increasing productivity in the General Electric Co. is reaching the point where price decreases are becoming possible.

THE PROFIT STATUS OF THE GENERAL ELECTRIC CO.

The profit picture of the General Electric Co. also throws some interesting light on the net results of the company's price actions over the past year. The year 1947 has been the most profitable one General Electric has enjoyed in its 55-year history. The Company's 1947 profit rate comes to the record-breaking figure of $75,280,000, 52.5 percent above its wartime yearly average (1942–45) of $49,348,000 and 82.6 percent above its 1939 level of $41,236,000.

In its effort to minimize the extent of its super-1947 profits, General Electric has undertaken a publicity campaign relating its profits to total sales instead of to its net worth (total stock owned by stockholders plus accumulated surplus). Even with war-inflated net worths General Electric in 1947 was earning 20.8 percent on its net worth—far above its wartime level of 13.9 percent and its prewar 1939 level of 13.5 percent.

Distilled Spirits or Food—Need for Legislation Urgent

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. KEFAUVER. Mr. Speaker, Secretary of Agriculture Anderson is now doing the very necessary job of limiting the use of grain by distillers in this time of world-wide food shortages.

Secretary Anderson's power to allocate grain to distillers was conferred by Public Law 395, enacted by the Congress in the last days of the special session just before Christmas. The power granted by Public Law 395 expires on the 31st of this month—only 12 days away.

Unless the Congress takes speedy action to continue Secretary Anderson's power to allocate grain to distillers, a tremendous amount of grain needed by human beings will be made into whisky in the months to come. The price of corn will jump. Farmers will find cash corn so expensive that they will turn to wheat for animal feed. This will not only raise the price of wheat and bread, but will make it practically impossible to meet the wheat-export goals which are such an essential part of our bipartisan foreign policy.

Mr. Speaker, on December 19, 1947, I introduced H. R. 4799 to continue the President's authority to allocate grain to distillers under the Second War Powers Act. Many of my colleagues on both sides of the floor have introduced similar bills, authorizing the President to allocate grain to distillers, or forbidding the use of grain for distilling entirely. A bill very similar to mine has been introduced under bipartisan sponsorship in the Senate. Hearings on this bill will be held before a subcommittee of the Senate Banking and Currency Committee beginning next Tuesday.

Mr. Speaker, the bills which my colleagues on both sides of the floor and I have introduced in this House have been referred to the Committee on the Judiciary and to the Committee on Banking and Currency. So far as I am aware, no hearings on these bills have as yet been scheduled. With the fullest appreciation of the many pressing duties which now confront both of these committees, I respectfully urge the chairmen of both committees to schedule hearings on these bills at the earliest possible moment so that this House will have the benefit of a careful study of all the facts in this complex situation. In this way, it would be possible to avoid the need for taking action at the 11th hour, without any hearings, as we had to do in the critical situation which confronted us just before Christmas.

Mr. Speaker, the Nation's distilleries have ample supplies of whisky and neutral spirits. Their production and profits over the past few years have been enormous. There is plenty of whisky available for current sale. It will not hurt this industry to give up or cut down on the use of precious grain for beverage spirits for the next several months. Only in this way can we keep down the price of corn and wheat and prevent the start of another inflationary spiral. Only in this way can we export enough food to keep the freedom-loving peoples of the world going during this most critical year in world history.

If the Nation's distillers had any vision, they would welcome restrictions on their use of grain in the next few months. The greedy, self-centered, and short-sighted actions of many distillers are doing more to bring about the return of prohibition than 15 years of earnest labor by temperance workers. Several distilling companies have even challenged the constitutional power of this Congress to restrict their use of grain in order to protect the public welfare.

Mr. Speaker, to help us put the brakes on inflation at home, to help free peoples abroad, and, yes, to help the distillers themselves, I urge that this House, and particularly the Judiciary and Banking and Currency Committees take early action on the grain allocation bills which are now before us.

Proposing a Six-Point Program as an American Approach To Exercising the World Leadership Required for Permanent Peace

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. MUNDT. Mr. Speaker, we Americans should face up to the realistic fact that dollars alone cannot buy peace or outlaw war. As we discuss the substantial figures of the Marshall plan, or the European recovery program, as it is now being more popularly referred to, we should keep in mind that unless we raise our vision above the levels of a cash register or expand our leadership beyond that of the functions of an international paymaster or supply agent, we will get neither world security nor national solvency as a permanent dividend for our expensive and expansive efforts.

Now is the time, therefore, Mr. Speaker, for this Congress and this country to give consideration to the practical concurrent steps which we must take as essential concomitants if our economic and even military aid to Europe is to result in peace for the world, security for ourselves, and increased opportunity for others. We need not, and we must not, limit our activities to doing one thing only, and we must proceed with a comprehensive and constructive program for winning the peace if we expect our astronomical financial sacrifices to bring us the precious dividends of peace.

It is not my purpose to engage in critical generalizations, Mr. Speaker, nor to take the time of the House in a fault-finding, nagging discourse pointing out what I believe to be the obvious earlier errors of our State Department from the days of Cairo or before down to the very present. Neither do I care at this time to detail the errors of commission and omission which in my opinion continue to plague and perplex the Congress and the country as we strive to fashion a nonpartisan foreign policy which will warrant and receive bipartisan support.

I shall content myself, today, with saying simply that the failure of the White House and the State Department to follow through on its so-called Marshall plan or European recovery program suggestions by simultaneously or even subsequently proposing other specific steps for rounding out and shaping up a comprehensive and constructive multiple-front program for waging a peace are a great source of regret and concern to me. Positive action, now, can in my opinion win and hold this peace but it must be

action all along the line and not reliance simply upon a program of sending our dollars and supplies across the seas while we fail to press forward on other fronts which have equal or even greater significance if we are to avert war and maintain world security. The cash register psychology of this administration and the dollars-can-do-it-alone proposals which it presents without supporting them with the necessary concurrent actions so that our dollars and supplies can really help win the peace are a sorry manifestation of a myopic approach to world peace which the Congress and the country must correct if the administration continues to fail to supply leadership.

Mr. Speaker, I have never been one to criticize or castigate unless I have some suggestion for rectifying the conditions about which I feel compelled to complain. Therefore, I am now proposing a six-point program which, in my opinion, can provide a sound basis for an American approach to its responsibility of exercising the world leadership required for permanent peace. I offer these, sir, with all humility. I do not propose them as the final answers nor the perfect panacea. But, sir, I am prepared to defend them and to explain them and I have confidence that if we arm the economic aid program with the five fingers of concurrent action which I propose in addition to that program that we can make of the so-called Marshall plan a hand of friendly and firm assistance which can succeed rather than permitting it to become the hand of futile charity passing our hand-outs to some and disappointments to others without supporting our generosity with actions which can make it effective.

THE PROPOSED SIX-POINT PEACE PROGRAM

Mr. Speaker, I now call attention briefly to the six points which I propose as a comprehensive and constructive basis upon which to function if we are really to wage a peace rather than simply to engage in wishful hoping that handfuls of dollars and shiploads of supplies will bring order out of chaos and tranquillity out of torment.

Point 1. I favor the extension of American economic aid abroad to friendly countries. This must be kept within the limits of our ability to provide and finance, and should be made available on such a basis as to protect our own self-interests and national security and so as to provide the best possible dividends in strategic returns for the United States.

Point 2. In addition to point 1, which is generally referred to as the European recovery program, we should move concurrently with action in the United Nations to revamp the policies and procedures of that organization so that Communist Russia and her satellites can no longer block efforts at preserving the peace through collective security, the establishment of an effective international police force, and the effective control and elimination of atomic armaments for aggressive war. The United States should now, without further devitalizing delay, exercise the necessary leadership to secure action by the United Nations in eliminating the procedural techniques which have enabled the Russian Communists to veto constructive proposals, and exercise absenteeism or deliberately dilatory tactics to disrupt collective security and block progress toward permanent peace. Once this is done, our economic aid abroad will strengthen nations willing and eager to work and cooperate for peace—until this is done, our aid abroad may be a noble undertaking, but the needs of the world are too great and too permanent to permit even the great United States to correct or cure them by unilateral action alone.

Point 3. We must develop and utilize an adequate and effective program of American information abroad to tell the truth about the United States, our plans, our purposes, and our ideals. Today, at long last, the House adopted in final passage my bill, H. R. 3342, setting up such an information service and what is now required is adequate financing and appropriate administration to put this information service into action as a great factor in our campaign to wage and win an effective and a lasting peace.

Point 4. The United States must face up to its expensive error in approving the so-called Morgenthau plan for Germany, and we should abandon all vestiges of that program without further delay. Instead, we must develop a program for utilizing the economic and manpower resources of Germany and Austria to strengthen the economic tone of non-Communist Europe while carefully safeguarding against any form of remilitarization which might permit these occupied and defeated enemy countries again to precipitate aggressive warfare. We should bring Germany and Austria back into the western world and encourage them in the development of successful democratic governments.

Point 5. We must develop and apply a set of relationships with Soviet Russia and her kept Communist satellite countries which will be based on policies which are strictly realistic and reciprocal. This means, Mr. Speaker, we must stop sending freight cars, farm machinery, petroleum products, tractors, trucks, and such other war potentials to Russia until such time as the Soviets demonstrate a willingness to cooperate for peace. It means, too, we must put our other relationships with Russia on a "tit for tat" basis, whereby we do not continue granting visitors' visas to Communists seeking entry to the United States as we are now doing until and unless the Communist countries extend similar privileges and opportunities to American citizens desiring to visit within their boundaries. One-way concessions to the Communists must cease; they must cease now, sir, and they must cease on all matters, whether they be diplomatic, military, or economic considerations. There must be no further appeasement of the Russian Communists if we are to help strengthen the world to resist their aggression. Our present policy of aiding those who resist communism while appeasing the Communists themselves is too much like bailing water out of the boat with one hand while bailing it back in from the Red Sea with the other.

Point 6. We must maintain a strong, modern, and alert defense establishment in the United States capable of supporting our program for peace and second to none in the world. The United States has become the ripest, plumpest, prettiest apple on the tree and it is the envy and the target of the Communist world which aims its efforts at plucking it for its own rapacious appetite. The surest way to lose the peace and to fumble or blunder our way into another war is to manifest weakness to the world or to permit ourselves to become what appears to be an easy victim for a tough aggressor. An ounce of prevention in preparedness today may well produce far more than a pound of cure against the ruinous epidemic of devastating war.

Mr. Speaker, in my opinion if we move forward on these six points today with prompt and positive action we can win the peace and we can protect the world and ourselves against the menace of aggressive communism. Only the first and last of these points will cost us heavily in money or material. And if we pursue the last five of these programs actively we can materially and subsantially reduce the costs of the first point—the so-called Marshall plan. Let us keep in mind that dollars alone cannot win the peace.

Let us do what we must and what we can under point one of this six-point program but by supporting and supplementing action by concurrent activities on the other five points we can greatly reduce the total costs of economic aid abroad and with the billions saved thereby we can built permanently for peace and strengthen our economic foundations at home so as to provide prosperity for all our people and peace for all the world. This is a challenge which this country must accept and I hope enlightened members of both major American political parties will unite in developing and promoting a comprehensive, multiple-point program for peace which does not rely alone upon sending our money and materials abroad but which while holding that policy to the essential minimum will supplement it with constructive action which can maintain permanent peace. We can have enduring peace this time if we deserve it. Let us unite our efforts in exercising the type of leadership which will make it possible.

Rationing and Price Controls

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter I have received from Mr. Glen Wenke, a farmer living in my district, which explains just what will happen if rationing and price controls are put into effect. What he says is based on just what happened during our previous experience with controls.

In addition to what Mr. Wenke says let me point out that our exports still amount to a billion dollars more a month than our imports, which fact greatly aggravates the very condition that causes shortages and high prices—a greater demand for goods than goods to supply it. The only condition that will bring down prices is for the supply of goods to equal or exceed the demand. Mr. Wenke's letter follows:

SPENCER, NEBR., *January 12, 1948.*

DEAR MR. CONGRESSMAN: I see by the papers they intend to ration meat. Well, if they do there will be less meat, for the farmer has had all he wants of rationing. During the war, when our hogs got 1 pound overweight we could not get the ceiling price and had to take a loss on them. Now, if they ration meat again my sows that are bred will go to market, and lots of others will do the same. In a year there will be less meat. Only about one out of a thousand cattle and hogs are now bringing top prices. The others are not bringing enough to more than pay for their feed. We farmers might as well sell our sows and sell the grain and let them holler for meat. We know what OPA was. Then we had black markets. You could buy anything you wanted if you had the money to pay black-market prices.

Yours truly,

GLEN WENKE.

St. Lawrence River Seaway

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 14, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Evening Tribune, Thursday, January 15, 1948, concerning the St. Lawrence River seaway and power project:

BAD FOR NEW ENGLAND

Ever since the St. Lawrence River seaway and power project was proposed initially a number of years ago, New England for the most part has been opposed to its realization as something that would be harmful to the best interests of this part of the country and now that the long deferred matter is scheduled to come up again in the United States Senate next week the case against the idea from this viewpoint seems stronger than ever.

Originally, the proposal was simply to make the river navigable in its upper reaches to provide direct connection by water from American and Canadian ports on the Great Lakes with Europe, and that constituted New England's main objection. That opposition was based on the contention that grave injury would be done to the port of Boston, to which Middle Western States send a considerable part of their goods to be shipped overseas by boat. The power phase of the project was added later and received the support of the late President Franklin D. Roosevelt and other prominent proponents of public power. Definite action was postponed during World War II, but now the plan is being pressed again.

Last year United States Army engineers testified at a hearing in Washington, D. C., that the complete seaway and power development cost would not be more than $500,000,000, but opponents insist that it would run eventually into billions of dollars. Although Canada also is interested, another basis of the objection is the belief that ultimately the United States would pay the bulk of the expense.

As evidence of prevailing sentiment on the subject, more than 400 representatives of New England business, industry, and labor met in Boston this week and voiced vigorous protest against the plan. United States Senator LEVERETT SALTONSTALL, of Massachusetts, opposed the navigaticnal features, although expressing himself in favor of getting more and cheaper electrical energy. A spokesman for the Brotherhood of Locomotive Firemen and Engineers declared that the seaway would cost 20,000 railroad workers their jobs.

Other speakers stressed various points of opposition, with a sensational high point being reached in the declaration of Vice President Matthew Woll of the American Federation of Labor that associated with the general plan for the project is the intended settlement of 20,000,000 British people in a new industrial area on the Canadian side of the St. Lawrence River that would inflict irreparable damage on American wage earners, industrial enterprises, cities, and ports. That sounds fantastic and exaggerated, but if only a small part of it is likely to come true, New England would make a serious mistake if it did not enter the most formidable remonstrance possible to the current attempt to secure favorable action on the seaway and power project by Congress.

European Recovery Plan

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CROW
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. CROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WEST GROVE, PA., *January 13, 1948.*

MY DEAR CONGRESSMAN: This session of Congress will decide not the welfare of us Americans but our very existence.

You have before you a recommendation of General Marshall basing European recovery upon economic measures, namely, the expenditure of billions of American dollars. If carried out, this great sacrifice by the American people, raising our own cost of living to unbelievable heights, will be just as successful as the British of old, trying to buy off the Danish ravagers.

If Russia occupied Canada and we had no army, air force, or navy, would any of us be interested in building up our own business? That today is the position of every European country outside the iron curtain.

Why is our country threatened as never before?

Simply because first Roosevelt, Hopkins, and Marshall, and then Truman and Marshall, failed completely, in spite of repeated warnings, to analyze correctly the Russian menace. Yet you gentlemen, selected by our people because of your patriotism, foresight, and integrity, consider seriously again following the disastrous policy of President Truman and General Marshall.

In the autum of 1945 Russia, by breaking again and again her agreements for Europe and Asia, was exposed in her true colors. Then we had the mightiest military power in world's history on land, sea, and in the air, and a monopoly of the atomic bomb. That was the time for the showdown with Russia. And now today, due to the policy of Truman and Marshall, we are about to face this showdown with one tenth of our military power and with God and the Kremlin alone knowing if we still monopolize the atomic bomb.

From the bottom of my heart I say, if Truman is nominated and defeated our Democratic Party is sunk. If Truman is nominated and elected our country is sunk!

Very sincerely,

GEORGE H. EARLE,
Formerly Governor of Pennsylvania,
Democratic National Committeeman,
American Minister to Austria and Bulgaria.

The Voice of America Has Work To Do

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. MUNDT. Mr. Speaker, the House today has given its approval to the final passage of H. R. 3342 which has for its purpose the establishment of a permanent American information service abroad and the utilization of all available information media, student-teacher exchanges, and numerous other devices for the creation of the mutual understandings essential to a lasting peace.

In connection with today's great forward step in setting up this new and comprehensive permanent service feature in our State Department, Members may be interested in the following article appearing in yesterday's Sunday section of many American newspapers:

WE'RE LOSING THE PROPAGANDA WAR—BECAUSE WE DON'T EXPLAIN THEM FULLY, UNITED STATES PLANS AND POLICIES ARE MISUNDERSTOOD AND MALIGNED—AN EFFECTIVE INFORMATION PROGRAM MUST SPEAK ABROAD IN LANGUAGES THAT WILL BE UNDERSTOOD, IDEAS THAT WILL BE COMPREHENDED

(By Ken W. Purdy)

The United States of America is probably today the most maligned major nation in the world, the least understood, and well on its way to being the most detested. There isn't a city in the world, from Bangkok to Berlin, from Spitzbergen to the nether reaches of Patagonia, in which the wildest, most improbable and fraudulent tales about United States plans and purposes are not repeated a thousand times an hour. The food we send to children abroad is designed to stunt their growth, our medicines make illness worse, we are imperialists, money-grubbers, Fascists, selfish materialists, uncultured oafs, stupid, a lucky people whose luck is running out, heartless gangsters, naive do-gooders, a mongrelized rabble, lynch lovers, war fomenters, and so on through the entire catalog of invective and abuse in six-score tongues and dialects.

We are able to do next to nothing to counteract this torrent of planned falsehood.

Of course, we have the means with which to do the job, and the technicians in ample number. The difficulty does not lie there. But up to the present time, the Congress of the United States has not authorized the job to be done. Which is to say that the United States people have not authorized it to be done.

There are two basic reasons for the inaction of Congress on the question of an effective United States propaganda service, and all other arguments are subsidiary to these: (1) Isolationism. Many Americans, and

many Members of Congress, believe that the United States can stand alone, untouched and unharmed, even if the rest of the world collapses. Unfortunately, this has not been true at least since 1918. But to those who believe it to be true, there is no reason to spend money explaining ourselves to the rest of the world. (2) The fear that an official Government propaganda department, if given enough money to be effective, would use its facilities to further the political ambitions of the party in power. The record of the wartime Office of War Information, Overseas Branch, should be sufficient proof that this admitted danger can be overcome.

One way or another, during the next 10 years, we Americans will learn that isolationism is as dead as the mustache cup, and no more to be mourned. We can learn it through a world-wide depression, leaping across the globe like a prairie fire; we can learn it through a third world war—or we can learn it through simple self-education.

It is now commonplace to say that the third world war, if it comes, will begin with another Pearl Harbor. This is certain truth. In the staff schools and war colleges of the world, it has been well noted that the two greatest attempts at world domination in modern history—the two German attempts—failed primarily because they took on America last, instead of first. This is a mistake that will never be made again.

Too many of us think in terms of 1900, when the deadliest weapon in the world was a cannon capable of fair accuracy at ranges under 10 miles; when the French Army, the greatest in the world, stood between us and all western nations of doubtful friendship; when the British Navy, the greatest in the world, patrolled the Atlantic Ocean, serving our identical interests. In those days the Chinese had barely begun to break out of the cocoon of their ancient ways, and the Japanese had yet to win—prophetically, by a sneak naval attack—what we considered their funny little war against the Russians. They have both grown up since.

WORLD CONDITIONS DO NOT WAIT ON US

Today the Russians, currently the only nation with the taste for warlike threats and the muscle to back them up, could drive in trucks to the English Channel and step into Britain at will. In the East, the peoples of Asia are beginning to ponder the fact that together they outnumber, and by a handsome majority, all the white men in the world. Times have changed. It is not 1900 any more. "The time?" a most knowledgeable foreign correspondent said recently, "The time is Germany, 1932."

The answer is always the same. There are no barriers between us and other nations. We live next door to France, and Australia is just down the street.

The shrinkage of the world is a fact, like your age. It can't be changed.

It is not alone the danger of war that demonstates the childishness of isolationist thinking. There is a little matter of economics to be considered, too. A good apple cannot exist in a barrel of rotten ones, and a prosperous America will not survive a bankrupt Europe. Imagine your own State, by a miracle left in prosperity with the other 47 in bitter depression. For how long do you think? A couple of weeks, perhaps. The anology is exact.

Since then, we must live with the rest of the world, it behooves us to know our neighbors, and to see that they know us. To that end, what are we doing?

WE LET PROPAGANDA EFFORTS LAPSE

After VJ-day, we Americans, in what we now recognize as an unwise and adolescent wish to forget the whole thing immediately, demobilized our Army, wrapped most of the Navy in cellophane against moths and rust, and fed a good many thousands of airplanes into metal-baling machines. Naturally we also very speedily reduced the propaganda department of the Government, the Office of War Information, to skeleton proportions. The lesson in the fact that the British, although accepting desperate economies elsewhere, chose this time to double their appropriations for foreign propaganda, somehow escaped us.

The vestigial organization, its name changed to the Office of Information and Cultural Affairs (OIC), asked for $37,000,000 with which to carry out its operations in 67 countries during the fiscal year 1947. After a series of violent attacks in Congress, the agency received $12,400,000—or less than what American women spend on cosmetics in a week. The pleas of Secretary of State Marshall and of General Eisenhower availed nothing. The reduction was made anyway.

The OIC's director, William Benton, an advertising expert of demonstrated ability, then resigned. For months he was not replaced, partially because acceptance of the job carries with it the practical certainty that the individual concerned will be subjected to violent personal and professional attacks, and may well suffer permanent damage to his reputation and his private earning capacity.

Headless, then, and handicapped by insufficient funds, the OIC attempted to carry on its job. It has done as well as could be expected. It has done as well as, say, a small boy operating a toy pump in a sinking boat. He will drown, of course, being a boy doing a man's work, but while he pumps, he pumps well, and much credit should be his for the effort.

Part of the over-all job it has tried to do, though a small part, is the library, necessary to any modern propaganda activity: A center of information set up in a foreign country to which students, newspaper people, writers, and other moulders of opinion may come for background material, statistics, periodicals, and so on. The United States has a grand total of 56 people engaged in this work from one end of the world to the other. That is about the number of individuals to be found attached to a Russian legation in a small South American republic.

America produces more movies than any other country in the world. We invented the thing. Through the film medium, a great deal could certainly be done to inform the rest of the world of our nature, our purposes, our wish to be helpful and friendly. The United States Government carries six people on its pay roll for this purpose. And so it goes.

Congressman KARL D. MUNDT, of South Dakota, who went to Europe to see for himself, was shocked to find that in Prague, Czechoslovakia, one of the world's most crucial areas at the moment, United States propaganda is dispensed by two Americans and three Czech assistants. There are no facilities whatever outside of Prague. The Russian propaganda budget for Czechoslovakia is estimated at about $6,000,000 a year, or half what we spend on the whole world.

The United States radio program, the Voice of America, is a thin and piping treble, although there are pending proposals to strengthen it. We broadcast a total of 17 hours a day to Europe. This is not to be read as a steady 17 hours going to all of Europe; it is a total of 17 hours, made up of such components as half an hour a day to Austria, the center of the fight for the minds of the central European peoples, and 90 minutes a day to Greece, westernmost bastion of the United States, testing ground for the Truman doctrine.

As Congressman MUNDT remarked, in pointing out that an expenditure of less than 1 percent of our current yearly outlay in Europe would give us an altogether adequate information service, "We're battling with pea shooters and popguns against heavy artillery."

The weighty opinions of the authorities have long since been registered. Said former Secretary of State James Byrnes: "There was a time when we could afford—or thought we could afford—to be unconcerned about what other people thought of us. * * * That time is past."

Or, as Senator ARTHUR VANDENBERG remarked a few weeks ago, "I am heartily in favor of all practical means to combat the self-serving propaganda from Moscow and her satellites. * * * The most disreputable campaign of libel and slander which has ever belabored the ears of the world."

In lieu of a functioning professional propaganda organization, various stop-gap methods have been proposed. So far, aside from such suggestions as an improved coordination between White House and State Department public relations, and the recruiting for Foreign Service of more men with journalistic backgrounds, the proposals have been of little value.

Typical was the plan offered by Senator ALEXANDER WILEY, of Wisconsin, who urged that United States newspapers and magazines be sent abroad in quantity, by air transport. Said WILEY, "* * * I believe that America's great press wire services, her leading magazines, and similar institutions can do a magnificent job for us without involving us in the possibilities of a Government propaganda mill with a partisan approach."

NEWSPAPER EXPORT WON'T WORK

WILEY's proposal will probably be graciously received by the State Department, the temper of Congressmen scorned being known, but it will be received in despair by the experts. The percentage of the English-reading population in any given European area is, of course, small. Of those who can read English, the greatest number is to be found among the wealthy and the intellectuals, most of whose minds are either long made up or else unlikely to be swayed by a perusal of the news. Export of periodicals in any amount likely to be agreed to by the United States press would not reach those masses of the people who must be reached.

This idea was, of course, one of the first to occur to OWI personnel during the war. Why make our own magazines, it was said, when the country is full of them, all ready to go? But very few were ever sent, and of those that were, most were ineffective and some were actively resented. To a Parisian who learned English in school, Time magazine, for all its usefulness to us, simply does not make sense. The New Yorker completely mystifies him, as does all our humorous material. He likes picture magazines, but Life, certainly the best picture magazine in the world, has not been able to make a notable success of its international edition, mostly because (1) it is in English, and (2) it is made up of material edited for Americans. The Frenchman has picture magazines of his own, which take into account his foibles, his habits, his tastes, and so, of course, he prefers them. Reader's Digest has been the sole real success, because it is edited to be read in the various countries to which it is sent, and is translated into the languages used there.

Newspapers sent abroad would have to be most carefully selected, lest they defeat the purpose. Papers of the New York Times category would be useful if perhaps 500,000 were available, which they would not be unless the Government paid for their production and furnished the necessary newsprint. So heavy an expenditure would be more useful in other directions.

The heavy percentage of local news which makes United States papers so interesting to their own readers would naturally be incomprehensible for the most part anywhere,

England included. Other papers would serve only to confirm for foreigners what anti-United States propaganda says of us. For example this story, from a major United States daily: "Surgeon claims cure for reds. A world-renowned brain specialist came up yesterday with a sure way to rid the world of Communists. Make a hole in their heads, he said—but by surgery, not a bullet." The story went on to say that Communists and "liberals" who underwent lobotomies were changed into individuals of conservative political beliefs. Lobotomy is a form of brain surgery indicated in some types of mental disease, which it often cures—at a price. The price frequently is loss of initiative, some lowering of intelligence, and the acquisition of a placid, noncurious mentality. One does not have to be a propagandist to know what the Russian machine would do with this story. "United States surgeons turn liberals into moronic serfs" would be the least of it. And they would cite our own newspapers as proof of the falsehood.

No, this is not the answer.

When there is plumbing to be done, one should send for the plumber. For an aching tooth, a dentist and only a dentist is indicated. Propaganda is best done by propagandists.

The core of the machinery is ready in the much-battered OIC, now called the Office of Information and Educational Exchange. It requires only money, say about 25 cents per United States citizen per year, and a reasonable go-ahead.

The fear that such an agency will turn itself into an instrumentality for the reelection of President Truman, or the election of the 1948 Republican candidate, is largely illusory, since its function is fixed by law, and it is forbidden to operate in this country. Few Greeks will go to the polling places in Athens next year to vote in our elections. The Belgians do not hold the United States franchise. In 4 years with the OWI, which was constantly under totally unjustified attack for attempting to influence United States politics, the writer never saw a written directive or heard an oral instruction to do any such thing—even had it been possible, which it was not. The fact that Franklin Roosevelt meant America to most of the world, as Winston Churchill meant England, and as Josef Stalin means Russia to us today, was of course duly exploited, as it had to be. But nothing more.

The United States does not need a propaganda machine in the European pattern. The truth is the best propaganda. One of the reasons for the current set-back of the Russians in Europe has been the extreme cynicism of their propaganda; people wearied of being told one thing today, another tomorrow, ended by believing nothing.

It may be argued that propaganda is a preliminary to war, and that to propagandize against the Russians, as they propagandize against us, is to invite war.

GOAL OF OUR PROGRAM: TO SPREAD TRUTH

If propaganda is preliminary to war, so is diplomacy, yet we did not dismantle the State Department. Nor should we propagandize against the Soviets. We should instead propagandize for the truth, as nearly as we can determine the truth. The accuracy of United States propaganda depends of course in a measure upon the validity of United States policy. It is hard to argue truthfully that we come as liberators if we support reactionary elements with which most of the natives in a given country are out of sympathy. Further, we should not attempt to bludgeon others into our own beliefs. Historically, sugar catches more flies than vinegar, and the man who attempts to break up a fight by urging that the combatants adopt his views usually gets a rousing punch in the nose for his pains.

It may be—it should be—that the world, although at the moment divided in two, will yet learn to live peaceably as one. But meanwhile it is as well to believe that when the Russians say that capitalism and communism cannot exist side by side, they mean what they say. There is every indication that they mean it.

The success or failure of the Marshall plan is the most crucial issue before the world today. It does not appear that anything else can save the peace. If for no other purpose, an apparatus to explain its true purpose is vitally needed.

In this, perhaps the most crucial era of modern history, there is no sound reason for our keeping silence, or speaking in a whisper. If the Rumanian radio says, as it did recently, that United States corn shipped to feed Rumanian children was adulterated, and made them ill, a reasoned reply should be made. The corn may in fact have been contaminated or spoiled in shipment. Such things have happened. But that an entire nation should be allowed to believe that Joe J. Jones, American, tried to poison the children of Rumania, is ridiculous, and to allow it to happen is folly.

After all, Mr. Jones, it's you they're talking about.

The White House Balcony

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. BRADLEY. Mr. Speaker, the following article from the Daily News, of Los Angeles, Calif., discussing the proposed addition of a balcony to the south facade of the White House is entered in the CONGRESSIONAL RECORD at the request of residents of the Eighteenth Congressional District as an indication of their disapproval of the contemplated White House structural changes:

(By Harold L. Ickes)

With all of the hush-hush secrecy of the Pendergast gang getting ready to steal an election in St. Louis, President Truman, an honored and dues-paying member, has suddenly announced that a contract has been let for mutilating the south facade of the White House by building thereon a scabrous balcony.

President Truman has not asked the people what they think about his proposed liberty with their White House. He simply tells them what he proposes to do.

The White House balcony episode, at this writing, would appear to have resolved itself into a question of good sense and good taste, on the part of Truman. There is a further question, whether the Commission of Fine Arts is a watchdog, with, or without, teeth. One might have assumed that Truman would have learned a lesson during the first year of his fortuitous occupancy of the White House when public opinion compelled him to abandon his purpose to build a distorted west wing.

Apparently that experience netted him only the disjointed notion that, when it comes to laying vandal hands on public property, secrecy is the best policy. In any event, the public was given no hint that a disfiguring balcony was to be added to the beautiful south portico until the contract for it, in serene disregard for the disapproval of the Commission of Fine Arts, had been let. This represents neither good taste nor good sense.

As for Truman's taste, perhaps the least said the better. The chief reason given for his yearning for a balcony is that it would provide privacy for himself and his family in the hot summer months, when neither he nor his family would be in Washington, generally speaking. Has Truman overlooked the fact that the matter of his continuing as the tenant of the White House will be decided at the polls this year? Has it occurred to him that the people may reject him as a tenant; and that his successor and his family may not like an iron balcony inside the majestic pillars of the south portico? Or is the letting of the contract purely a boastful gesture of confidence?

These are, really, the lesser aspects of the taste displayed. The larger one is Truman's apparent lack of perception that the White House is as truly and as definitely a national shrine as is the Lincoln Memorial.

Lincoln, and other national heroes before and after him, lived and toiled there. Americans, proud of their traditions, make pilgrimages from far places that they may gaze, if only for a few minutes, at their White House, in which the spirit of great leadership still lives. To them it is the historic mansion in which the great Lincoln, Theodore Roosevelt, Woodrow Wilson, and Franklin D. Roosevelt lived and wrought for their country. They do not conceive of it as the dwelling place of a Chester A. Arthur—or of a Harry S. Truman.

It does seem as though Truman could have put a curb on his adolescent yearning for a balcony until there could have been a real expression of public sentiment regarding it. There was an expression, by proxy; and Truman may fairly, I think, be regarded as adding insult to injury by willfully going ahead in defiance of it.

The Commission of Fine Arts was created, in 1921, to provide a continuing and expert body of men to protect historic landmarks against damage through erratic personal idiosyncrasies of individuals. Truman, it appears, consulted this body—and proceeded to disregard its advice.

At first, a member of the commission gave out an informal statement to the effect that the members were opposed to the balcony. However, the commission decided to string along with the President.

Later, the chairman, Gilmore D. Clark of New York, issued a formal statement in which it was revealed that there had been two meetings to consider the balcony, and the vote was unanimously against it, on the ground that "such a feature would permanently change the appearance of the south facade of the White House."

If, as the commission says, its authority over Presidential whims is no more than advice on request, then, clearly, it should be given teeth; or it should resign, as a body, in protest.

Self-respect requires no less. Undoubtedly it could have exercised more pressure than it did. But it ducked. On the strength of this unhappy precedent, the protection of public shrines is likely to degenerate into an apparently answerless question of "Who is stringing whom?" And American voters do not like to be "strung."

The White House does not belong to you, Mr. President. You do not even occupy it under a permanent lease. It belongs to the people of the United States who have graciously allowed you to live in it as they will allow others after you. You have no more right to mar it than you would have to change the physical appearance of the Washington Monument or the Lincoln Memorial.

Secretary Harriman's Views

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include a clipping and an editorial appearing in the Chattanooga Times of January 15, 1948, concerning the excellent speech made by Secretary W. Averell Harriman at the seventy-first annual dinner of the Chattanooga Chamber of Commerce.

The clipping follows:

Harriman, who will testify before the Senate Banking Committee this afternoon at 2:30 eastern standard time on the Truman program to curb the rising cost of living, said: "Congress has authorized a program of voluntary agreements with industry which I am charged with administering. I shall give this program my fullest support. But from my experience in business and government, I do not believe our present needs can be met without addition of the limited powers the President has asked for. Of paramount importance to us and other countries is the maintenance of a stable America."

LAUDS MARSHALL PLAN

The Secretary of Commerce termed the European recovery program "an indispensable step in building a stable peace. We know that political stability can only be attained by improving economic conditions. There are forces in Europe who wish to take advantage of economic chaos and hunger to establish totalitarian dictatorships."

He said a "program of the contemplated magnitude will be costly and will mean sacrifices by the American people, but the benefits to be gained, I believe, will far outweigh immediate sacrifices. * * * Our returns will be in furthering peace and world stability."

ASKS MIDDLE EAST HELP

"I believe that we can help in the less developed areas of the world, such as the Middle East, where I spent many months during the war, to expand agricultural products through American imaginative projects."

Harriman's address was delivered to a capacity audience of 450 members of the Chamber and their wives and friends in the Read House ballroom.

"I firmly believe that a recovery program for Europe of the size and nature proposed by President Truman will serve the cause of peace and in fact is an indispensable step in building a stable peace," Secretary Harriman said.

"We are proposing to assist the people of western Europe to regain their economic stability. We have given generously already to alleviate the conditions of economic disruption and hunger that existed immediately after the war. Through hard work they have rehabilitated factories, and industrial production has been expanded to almost prewar levels in most of the countries. But we find it is not yet enough to balance the needs."

"WORKSHOP OF WORLD

"These countries on the whole are, next to us, the great workshop of the world, and they must import food and raw materials to convert to finished manufactured products. They must export to live, and so far they have not been able to cover their requirements with their exports. More aid from the outside is needed or else there will be extreme difficulties.

"We know that political stability can only be attained by improving economic conditions. There are forces in Europe who want to take advantage of economic chaos and hunger to establish totalitarian dictatorships.

"The countries of western Europe, including western Germany, include some 270,000,000 of the most talented, industrious and freedom-loving people of the world. They are largely the people from whom our traditions and way of life stem. If western civilization in Europe collapses we shall face world conditions quite different from anything we have before known.

"We have learned that wherever governments are under the control of the people and wherever the people are free to make the ultimate decisions, the cause of peace is furthered. Historically, we can find no such assurance in dictatorships."

SELF-HELP PROGRAM

"At Secretary Marshall's suggestion the 16 nations have developed a cooperative program of helping themselves and helping each other. The success of the program will depend primarily upon their own efforts, but they have asked us for the aid that is necessary to make the program effective.

"Although the amounts from us are large, they are a small percentage of the total job to be done. I, for one, have no doubt that if we support this program with determination it will be successful in reestablishing western Europe on firm foundation and enable it to go forward in its traditions of democracy, freedom, and expanding human values. Not to have such faith is to deny the validity of the free institutions that we so firmly adhere to.

"This program is one of the most far-reaching undertakings for peace and human progress ever contemplated by this or any other country. It is noble in concept but is based on considerations of our own self-interest and in fact on our own self-preservation.

"We must understand and evaluate the alternative—if we should fail to take this step."

QUOTES HIS COMMITTEE

"The President last summer appointed a committee of 19 distinguished private citizens drawn from different backgrounds and experience to give its judgment on a foreign aid program. I served as chairman of that committee. A section of their report deals with the interest of the United States in European recovery. They emphasize our humanitarian and economic interests and then conclude with their views on the consequences of a collapse in Europe. I will quote from the concluding sentences:

" 'The domestic consequences are such as no American could easily tolerate: The swift and complete conversion to a military footing which national security would require; the abrupt but necessary change in our relations with the rest of the Western Hemisphere; the immediate and sweeping limitation of our economic and political life, perhaps extending even to our very form of government.

" 'In such prodigious terms is the interest of the United States in European recovery defined. The committee is convinced that a sound program for western European recovery should be formulated and adopted by the United States with the same boldness and determination and the same confidence in the worthiness of the democratic cause which characterized our action in World War II.' "

COSTLY PROGRAM

"A program of the contemplated magnitude will be costly and will mean sacrifice by the American people, but the benefits to be gained, I believe, far outweigh the immediate sacrifices. We cannot expect direct repayment for a substantial part of the aid given. Our returns will be in furthering peace and world security. In addition, western Europe has been a great factor in international trade, and with recovery I believe we will get an indirect return over the years from expanding world trade.

"We have a great interest in expanding world prosperity, and much can be done if American experience is followed. All estimates indicate that there will be a continuing shortage of food for some years to come. The Congress has recently authorized the Department of Agriculture to engage in broad projects 'to stimulate and increase production of food and agricultural commodities in non-European countries.' This far-sighted legislation is bound to have important results.

"Here, close at hand, we have one of the great American developments—the TVA. In other areas we have great irrigation and reclamation projects that have opened up large areas for cultivation.

"As President Truman has said, the TVA does not belong to the people of the Tennessee Valley alone, but to all Americans. The TVA is a help not only to this region, but to the whole country, to expand and develop production and standards of life. At this time when people the world over look to America for guidance, the TVA has added significance."

CAN AID MIDDLE EAST

"I believe that we can help in the less-developed areas of the world, such as the Middle East, where I spent many months during the war, to expand agricultural production through American imaginative projects. Surplus foods from this area can help provide for the increased populations of the world and develop new trading areas that will bring improved life to many other countries. Peace can only be based on stable economic conditions.

"We are today facing difficult conditions due to inflation. You all know the difficulties which high prices are causing for many families. We want to share those things which are in short supply in a democratic fashion. The form of rationing which results from price increases gives a disproportionate share to those with higher incomes at the expense of those with lower incomes.

"The President has proposed to the Congress a program to deal with inflation and rising prices where they affect the cost of living and industrial production. All of these measures are needed to deal adequately with the situation at home. We must bend every effort to increase production, but in the meantime we must direct some of our effort to the most essential national needs. We must find ways to deal with our domestic problems.

"And so we face real problems at home and abroad. With the greater cooperation that exists today among all groups, I have confidence that the decisions of the American people will be wise and far-sighted."

Harriman declared that it is pretty hard for the American people to face the fact that there is a new aggressive force "out to destroy eventually" the things that this country believes in. There are men, he continued, who will use every means to accomplish this. He said that these men are the leaders of the Soviet Union.

Harriman declared that everything possible has been done to break down Russian suspicions and "it is unfortunate, but true, that they have made their decision to go their own way." He charged the Russians have broken all their agreements made during the war. American policies abroad have but one single motive and that is to lead to world peace, he said.

RESTRICTIONS NEEDED

"I don't like sacrifices. I don't like high taxes," Harriman asserted, adding that what this country has set out to do cannot be done "out of our surplus and will require some restrictions."

He warned that inflation, in his opinion, will continue "up to a bust unless we do something about it. We must give the Government the same type of authority that we give authorities to cope with a traffic jam."

He asserted that he for one is not going to ask labor to hold the wage line unless Congress gives the power to hold the price line. Harriman said that "business does not go with clean hands" unless it is for giving the Government the authority to hold the line." He said that the controls needed, and he mentioned steel among other items, does not mean that President Truman will set up a great new agency. He saw success for the program if sacrifices are made now and if the controls asked to cope with the situation are granted in time.

Representative KEFAUVER introduced Harriman as "one of the truly great Americans of our time." He added that "I feel when the final words are said after we come through this situation, which we will, high on the list of those responsible will be the names of Secretary Harriman and Secretary George C. Marshall."

The Chattanooga Times editorial is as follows:

THE HARRIMAN SPEECH

William Averell Harriman, Secretary of Commerce, former Ambassador to Russia and England, head of the President's Advisory Committee on the European aid program, made an interesting guest speaker at the seventy-first annual dinner meeting of the Chattanooga Chamber of Commerce.

He said frankly that if Europe goes Communist, Scandinavia, Africa, and the Mediterranean area will follow and America will be placed in a precarious position. If the European recovery plan is adopted, he said there was no reason why democracy could not be saved.

Looking more youthful than his 56 years, Mr. Harriman spoke sometimes haltingly and this lack of glibness was refreshing. ESTES KEFAUVER, in introducing him, told of his prowess in sportsmanship—an expert on skiis, member of the Yale crew, an international polo player—those are a few of his sports. He is famous as a breeder of Labrador retrievers.

The meeting did great credit to the Chattanooga Chamber of Commerce. Not only did it show that the Chattanooga C. of C. does not insist on hearing only the customary conservative philosophy, but there was a delightful absence of stuffed-shirt atmosphere.

Roy McDonald, retiring president, held up a booklet and said that his annual address was in it and that they could read it when they got home or give it to somebody else.

Earl Carter, incoming president, cracked wisely and delightfully.

ESTES KEFAUVER made a fine introductory address. The capacity audience arose and gave Mr. Harriman an ovation at the start and applauded him for several minutes at the finish. And the speaker was a charming type, not a ponderous politician.

Still a great power in the railroad world, Mr. Harriman's devouring interest is in working out the problems facing America at home and abroad. Many in the audience might not have agreed with what he said, but he pulled no punches.

"I shall not advocate holding the wage line unless Congress gives the power to hold the price line.

"I shall not advocate labor making the sacrifices unless business joins with clean hands.

"I do not think it undemocratic to ration meat when it is in short supply."

He appealed for the Truman program.

Many in the audience wondered what old E. H. Harriman, "the last great individualist" and "the last figure of an epoch" would have thought of the speech. We know he would have been proud of the son who was speaking.

Edward H. Harriman gobbled up railroads and ship lines. He practiced free enterprise unrestrained. Although the Interstate Commerce Commission and Teddy Roosevelt and the famous Equitable Life Assurance Society investigation found nothing to condemn in E. H. Harriman except a ruthless practice of free enterprise, he became the subject of extraordinary public abuse. Teddy Roosevelt's trust busting was beginning and Harriman was made the chief subject of public disapproval.

And here, Tuesday night at the Read House, was his distinguished son preaching that all Americans should share equally in sacrifices for the common good.

If old E. H. Harriman was the last figure of one epoch, his son seems one of the first figures in a new epoch—one to save free America and to prevent it from being engulfed in the totalitarian world which threatens to come up like thunder across the big pond.

Truman's Grains of Sand

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. MacKINNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Star for Thursday, January 15, 1948:

TRUMAN'S GRAINS OF SAND

The fact that the United States is riding a wave of inflation toward peril wouldn't be news, except that the President said it yesterday in his second annual economic report to Congress. Everyone knows inflation is bad and is growing worse. Everyone would like prices on things he buys to be lower.

All Harry Truman has said is, "Me, too." Thus, he hopes to cast the Democrats as the only crusaders against the high cost of living

With the same purpose in mind he asked Congress in his state of the Union message "to make available to the Government the weapons that are so desperately needed to fight against inflation." The weapons were described only by plaintive reference to his inflation-control message of November 17.

If they are all Harry Truman would use to stop inflation, inflation will not be stopped. They can be written off as mere grains of sand instead of heavy sandbags to hold down high-flung prices.

Of the fundamental causes of inflation—the largest peacetime budget in history, a foreign-aid program that greatly reduces our basic industrial, feed, and food supplies, and forces their prices upward, expanded cheap Government-insured credit aided and abetted by a Government-manufactured low interest rate originally designed to fight deflation rather than inflation, a money supply four times prewar, and the highest incomes in history, all of which have caused the demand for goods to outrun supply—of these causes Harry Truman has said almost nothing. He has proposed no sandbags to weight down their effect.

Instead, he has asked that Congress spend $39,700,000,000, an inflationary balloon $2,000,000,000 larger than that of a year ago. Thus, he seeks to have the Federal Government perpetuate the Roosevelt Santa Claus legend and himself in office.

People like the effects of inflation on income but not on living costs. And so, while talk of halting inflation is common enough, anything actually done to gain that end would prove unpopular with some group. It has become a national pastime to blame everyone else for inflation—a pastime in which the Truman administration has participated freely.

We suppose that is part of the price of an era in which too many people have come to expect Government to socialize their losses and individualize their gains—if the gains fall below certain brackets.

If any serious stopping of inflation is to be done in 1948, an election year in which politicians often become cross-eyed from riveting one eye on the national destiny and the other on the ballot box, the past 2 weeks are evidence that it must be done by Congress.

It can start by going to work on the budget. First, by detailed economies that carve the fat off necessary services. Second, by flatly refusing to take up new enterprises which, though desirable, can best be deferred to more normal times.

Aid Plan, Backed by Might, Urged for Our Protection

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. LARCADE. Mr. Speaker, since I have been in the Congress I have taken a position in regard to our foreign policy, universal military training, and all other matters which were, in my opinion, to the best interests of our country. I have, unhesitatingly, from time to time, inserted in the CONGRESSIONAL RECORD my views on all of these important subjects over a period of the past 5 years, and it is a source of great satisfaction to find, at least, one of the most prominent Washington columnists who agrees with my ideas as reflected, especially in his article in the Washington Sunday Star, January 18, 1948, and I ask unanimous consent that I may include in this insertion the copy of the article by Mr. Constantine Brown, Washington columnist, referred to, as follows:

AID PLAN BACKED BY MIGHT URGED FOR OUR PROTECTION—ANALYST SAYS UNITED STATES IS REPEATING THE MISTAKES IT MADE AFTER WORLD WAR I BY FAILING TO CURB SOVIET AGGRESSIVENESS

(By Constantine Brown)

Americans have profited little from the lessons of two world wars. This lack of willingness to learn from experience is at the root of the predicament in which we find ourselves today.

This country has fought two wars in the last 30 years. Both brought victories on the battlefield, but we lost them because our diplomats and politicians failed to take advantage of our triumphs.

In 1917 the United States went to war to end all war and to make the world safe for

democracy. In 1940 our Government decided that we must intervene once more to destroy the tyranny of dictators and establish a long period of peace.

CHARTER AND 14 POINTS FAILED

We fought two ideological wars. Unlike both our allies and our enemies, we sought no new territory and no other gains. The only profit we hoped to obtain was an era of peace for ourselves and the rest of the world.

In both cases before we engaged in military operations our wartime Presidents—Woodrow Wilson and Franklin Roosevelt—frankly exposed our program to the world. These were contained in Mr. Wilson's 14 points and in Mr. Roosevelt's Atlantic Charter. Both were admirable documents which met with the whole-hearted approval of the vast majority of citizens of this country, but were paid only lip service by our war associates.

Some of the provisions of Mr. Wilson's 14 points were put into practice. None of Mr. Roosevelt's ever became anything more than a pious wish. The doctrines of Mr. Wilson were by-passed politely over a period of several years. Mr. Roosevelt's were thrown into the trash can only a few months after they were announced to the world.

In both wars the allies would not have survived the enemy's onslaught if it had not been for the complete assistance of the United States. Before we became actively engaged in war we advanced large sums of money to the French and British. Because of the bitterness engendered by the debts of World War I Mr. Roosevelt decided long before we entered World War II to give grants to the victims of totalitarian aggression in the form of lend-lease.

UNITED STATES NOT FIRM ENOUGH

Neither wartime President took advantage of the fact that without the United States the victims of aggression would have been defeated. They did not press the beneficiaries of American support to implement—unreservedly and honestly—the doctrines we espoused.

The 14 points were gradually torpedoed after 1919. The Atlantic Charter was brutally murdered by the Union of Soviet Socialist Republics—the chief recipient of American wartime aid. Both could have been saved if our Chief Executives and their confidential advisers had remained adamant in support of the principles for which this country was sacrificing its sons and substance.

World War II was the inevitable consequence of World War I and we fared far worse after VJ-day than after November 11, 1918. After 1918 we had at least an illusion of peace for 21 years. After World War II we did not enjoy that illusion for even that many weeks.

Through their Government the American people now are following—but on a larger scale—the same policies which we believed would bring peace after World War I. We decided then to help Europe out of her troubles and devised the Dawes and Young plans, which eventually were followed by Herbert Hoover's moratorium.

We were told then—as we are more forcefully told today—that money can buy peace. We poured a few billions—chicken feed compared to our present expenditures—into Germany to recreate her economic potential.

LEAGUE DIED OF INACTION

Since VJ-day we have sent some $20,000,000,000 to Europe and Asia to restore the national economies of the war-torn countries. The important difference between now and then is that whereas after World War I we sent abroad principally dollars, we are now called on to divest ourselves of our already depleted raw materials.

The League of Nations—like the United Nations—was an American creation. Although the United States Senate never ratified the League Covenant, and we did not take our place at Geneva, we did encourage its work, and in some instances—like the Sino-Japanese conflict over Manchuria in 1932—we did take a modest seat at that international gathering.

The League died of inaction. Europeans openly blamed the United States for the League's failure, because we created it and then refused to have anything to do with it. The truth is that the major powers—there were five after World War I—decided to make that peace organization into an instrument for their plan to maintain conquests and promote their own selfish objectives.

The League survived, however, until the UN was created and occasionally did give the appearance of trying to live up to the purposes for which it was created.

The principal trouble with the League, its supporters stated, was that it had no teeth. It had no power to prevent aggression by military intervention. This, we were told, was due to the fact that no such measures could be taken so long as the United States was outside.

We decided to repair this deficiency for the sake of world peace. We entered enthusiastically into the United Nations and provided ample teeth for it by providing for the creation of military, naval, and air forces to intervene in case of aggression.

But when this new instrument for world peace was established the world had shrunk. Only two great powers remained: the United States and the U. S. S. R. Our statesmen refused to recognize this obvious fact and, forgetting the lessons of history, agreed to give the five major powers—among which China, France, and Britain were included out of courtesy—the right to veto.

If the framers of the UN statute had remembered history they would have taken a cue from the fact that Poland, when she was an important power in the eighteenth century, collapsed and was partitioned, for one reason, because her Parliament was made up of noblemen, each of whom possessed a veto over all legislation. There were selfish and unpatriotic persons who took advantage of this prerogative to serve the interests of the country's enemies.

WARMED-OVER METHODS

In the 58-nation parliament in the twentieth century the veto of one of the five permanent members of the Security Council can prevent the UN from taking necessary steps to enforce peace and organize a military force for peace enforcement. The Soviet Government's representatives not only have used but have abused that right in order to serve the selfish interests of Moscow.

There is, however, little difference between the fundamental principles of the conclave of nations as presented to the world in 1917 and as they exist today. The former took 24 years to die; the latter, in their present form, are already on their last legs and continue to live after 2 years only because of artificial respiration administered in the high-sounding speeches by representatives of the west.

Thus after World War II we adopted as our national policy the warmed-over ideas and methods used after World War I, without taking into consideration that the interests and aims of non-American nations are wastily different from those of the people of this country.

Now we are told that we must make a last and supreme effort to bring peace, at least in the Western World, by adopting the Marshall plan, just as we were told after 1918 that we must contribute our wealth to restore peace in the world. The principal difference is that the amounts involved now are enormously larger.

Since we have no other national policy in the field of foreign affairs, there is nothing that we can do but try it again, regardless of the fact that the cost of the European recovery program will be felt strongly by the rank and file of the American people. Conditions all over the world are far worse now than after World War I.

TODAY'S CONFLICT DIFFERENT

An ideological "cold war" is being waged now by a combination of nations representing some 400,000,000 persons—Russia, the nations behind the "iron curtain" and the Chinese Communists. After World War I ideological warfare was scarcely noticeable.

Today the conflict between east and west is different. The whole question is whether western civilization—whose principal representatives are the peoples of this country and this hemisphere—can survive the onslaughts of the semi-Asiatics from the east.

The existence of western Europe—the cradle of civilization of both the Americas—is threatened physically by strong military forces, backed by the best fifth column the world has ever seen. To continue our assistance in an effort to save what is left of it—and possibly save ourselves—we must include in the ERP the necessary military assistance which the western governments are asking in hushed voices and which our political leaders do not dare discuss in public.

POLITICS OVERSHADOWED

This is an election year, but the world situation—much as we might like to deny it—transcends by far domestic political issues. Those who say that mere economic and financial assistance to the 16 nations of Europe which have not accepted Soviet domination, can save the situation are rendering a disservice to the mass of people in the United States.

We are repeating now on a much larger scale the methods we employed after World War I. They failed and led us into another world war. The end of the last struggle sees us in a far worse position than ever before. Not only our economic but our social structure is threatened.

To refuse to admit that economic and financial assistance will have to be backed for our own self-preservation by thorough military preparedness would be rendering the worst disservice of our history to the people of America.

The men in the Kremlin can throw out of gear any attempt at economic recovery in Europe simply by moving military masses. And it is highly probable that they will do so unless they are shown that the western nations are prepared to meet their challenge and oppose force with force.

The Communists and Minority Rule

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. DAVIS of Georgia. Mr. Speaker, the citizens and press of Georgia are alive to the menace of communism, and are losing no opportunity to expose the insidious devices which Communists resort to in spreading their cruel dictatorship.

On January 11 and 12, the Georgia Department of The American Legion, through its Americanism committee, held a 2-day seminar in Atlanta, which was attended by delegates from every section of the State. They were fur-

nished information, pamphlets, and publications dealing with communism to carry back to their respective communities for distribution.

On January 12, the second day of the seminar, the Atlanta Constitution published an editorial under the heading "The Communists and minority rule," which lists some of the steps taken by Gen. Lucius D. Clay, native Georgian, and military governor of the American zones in Europe, in his campaign to keep the Army of Occupation and the German people informed about Communists and communism.

Under leave previously granted, I insert this editorial herewith:

THE COMMUNISTS AND MINORITY RULE

A few weeks ago Gen. Lucius D. Clay, the Georgian who has done such a magnificent job as military governor of the American zones in Europe, and also as commander of the small occupying Army, announced a policy of publicly refuting each Communist lie.

This policy infuriated the Communist leaders to an almost rabid attack on General Clay. He now has followed it with a series of pamphlets and posters designed to educate and inform the American Occupation Army. It also will be available to the German population. Prepared by the Army's education and information branch, the posters include one, "How to spot a Communist." It says:

"The party line—if he echoes it, he's probably a Communist (probably underlined).

"The Communist press—if he endorses it, he's probably a Communist (probably underlined).

"The Communist policy—if he supports it, he's probably a Communist (probably underlined).

"And if he does all three—he is a Communist (is underlined)."

While this is interesting, by far the most impressive are those pamphlets which give the progressive steps used by the Communists minority to oust representative government and to kill or imprison the opposition. To support its arguments that only a small party membership was all that was needed in those countries to gain control, with the help of the Red Army, they are listed as follows:

"In Bulgaria, 450,000 Communists, only 7 percent of the population, run the Government."

"In Rumania, 500,000 Communists—some 3 percent of the population—maintain themselves in power through force and fear."

"In Poland, 600,000 Communists—2 percent of the population—are in control."

"In Yugoslavia, a handful of Tito-led Communists also have come to control the Government and Yugoslavia's 61,000,000 people."

"In Greece, 400,000 Communists—6 percent of the population—have caused enough turmoil for the Government to ask the United Nations to force the Communist Party in Greece to abandon seditious methods."

We now know it was Communist influences which spurred on the "bring the boys home" campaign which practically wrecked the American occupation army before, even, Japan was conquered. They inspired and led demonstrations which were close to mutiny. Many editors of Army papers were cleverly persuaded to be the front men, and were carefully fed praise and backslaps.

Truthfully does one of the popsters conclude:

"American Communists do not think first of their own country. If it came to a showdown, they would certainly pledge allegiance to the Soviet Union."

A Voice From the Country

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Louis Bromfield:

A VOICE FROM THE COUNTRY—TRUMAN ABOUT-FACES ON VITAL PROBLEMS

(By Louis Bromfield)

The President's message to Congress was, on the whole, cheap, political, and characterized by absurd economical thinking. His tax proposal was infantile. These things are serious in a great nation, but not perhaps so serious as the confusion and the forces which lie behind them. It is doubtful that we ever have had a President with such a record of snap judgments, confusion, and mind changing, nor one more apparently subject to pressures from advisers, both those chosen by himself and those imposed upon him by circumstances.

To be sure, this is an election year, and a graduate of the Pendergast machine and of local politics is not likely to underestimate the element of politics nor be adverse to moving with changing winds.

None of these things, however, wholly explains Mr. Truman's sudden—almost hysterical—about-faces on questions of vital importance to the Nation and to the world.

From the beginning the President has bewildered newspapermen who were tough and experienced and used to political shiftiness; but it is doubtful whether, beginning with the first blunders of the Wallace-Madison Square Garden incident, they ever have encountered so many colossal examples of mind-changing, confusion, and compromise.

The list is long and sometimes grotesque, as in the case of the Harriman incident when the President was proposing one policy to newspapermen when his Secretary of Commerce was at the same moment proposing exactly the opposite course to Congress.

The attack on grain speculators, at the very moment that two of his most intimate friends, Mr. Pauley and his personal physician, were engaged in speculation on a large scale, is another. The denunciation of Government controls as police government, and the advocacy of those very controls a few days later, is a third. There is not space here even to begin the recording of all of them.

LOST CONGRESS' RESPECT

The record does not lead to respect either for Mr. Truman's integrity of conviction or for his powers of judgment. One is led to suspect that not only is Mr. Truman too small for his shoes but that he has no confidence even in his own judgments. Consequently, his opinions and proposals are regarded with less and less respect by Members of Congress and by the people themselves.

Behind him, of course, lies the wreck of the Democratic Party organization, which is split nationally in one way and in all 48 States in 48 other varying fashions. For this fact, Mr. Truman is not himself directly responsible. It is the heritage of the New Deal administration which sought to be all things to all people, and of the unwillingness of Mr. Roosevelt to allow any other Democratic leader to develop or attain power.

The general confusion began with the retirement of Jim Farley, the giant. Since then the party organization has suffered a hop-skip-jump organizational leadership with backwoods politicians and political pygmies in posts of great power. The fantastic plans of Henry Wallace have not improved the situation, or the presence of Republican majorities in both Houses of Congress.

In some respects the absence of virtually all leadership in the party of the Chief Executive of the Nation scarcely could come at a worse time in the history of the Nation and of the world.

It is fortunate indeed, in view of the world situation, that General Marshall heads the State Department, and that Congress itself, always the most immediate representative of the common sense of the people (and never more so than now), has the leadership and ability of men like Taft and Vandenberg on the national and international fronts.

It never should be forgotten that neither Mr. Truman nor Mr. Wallace, symbolizing in a sense the disruption of the Democratic organization, arrived at their present positions of prominence either by outstanding achievements or by the will of the people. Both were invented by Mr. Roosevelt as instruments of political convenience and imposed upon the people.

Taking all things into consideration, it would seem that the time has come to retire Mr. Truman and give the Democratic Party a breathing spell in which to reestablish and reorganize itself as the traditionally liberal party. At the moment it appears to have no policy or principle or leadership save those of backwoods political opportunism.

Time for Common Sense

EXTENSION OF REMARKS
OF
HON. HAROLD F. YOUNGBLOOD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. YOUNGBLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article contained in this morning's Washington Post concerning the Government's intention to restrict the use of certain grains for the purpose of making liquor while the very same grains that we are shipping abroad in the form of foreign relief are being used for the manufacture of liquor and resold back here to the United States:

TIME FOR COMMON SENSE—AN OPEN LETTER TO THE CONGRESS OF THE UNITED STATES

In the next few days the Congress will be asked to consider legislation to extend the shut-down of American distillers. Since this involves an industry which pays annually more than two and a half billion dollars in taxes, and employs directly and indirectly more than 2,000,000 American workers, we think it might be useful for you and for the public to have some of the facts about the recent voluntary 60-day shut-down.

Schenley entered into the voluntary agreement and has lived up to its obligations 100 percent.

Some American distillers did not shut down.

The Canadian distillers did not shut down.

The British distillers did not shut down.

No other country in the world closed its distilleries.

For the announced purpose of providing food for hungry people in Europe, the shut-down has been an absolute, costly, and utter failure.

The purpose of our Government was to save wheat. We believe that not only was there no saving of wheat, but that wheat was actually lost.

The distilling industry uses practically no wheat. The actual figure is less than one-thousandth of 1 percent of the total wheat crop.

This industry uses principally corn, some rye, and some barley malt. Most of this grain, if not so used, would ordinarily be fed to animals.

Normally, we use about 2 percent of the total corn crop.

It was estimated by the President's Food Committee that the 60-day shut-down would save approximately 10,000,000 bushels of grain, but actually little or nothing was saved because in the process of distilling we return to the farmer feeds for poultry, hogs, dairy cattle, and beef cattle which, in the opinion of experts, have an equal or greater feeding value than the grain we used.

We take out only the starch. We save all the protein and oil and add yeast. The resulting products are rich in protein, vitamins, amino acids, and other feed values.

We are convinced that the final result is this—if a farmer has 10 bushels of grain and sells us 2 bushels for distilling, and then feeds the 8 bushels which he kept and the residue which we return to him, he will get as much added weight in feeding his animals as he would have achieved if he had fed them the original 10 bushels. We think he actually gets more.

Suffice it to say that the benefits of a balanced diet have been proved over and over again for both animals and human beings.

Our own Department of Agriculture, in numerous bulletins, has published many formulas for the use of distillers' feeds to balance animal diets.

We admit, frankly, that the exact percentage of feeding value which we return to the economy is debatable.

You may think that instead of being more, it is even as much as 50 percent less. Let's assume that you sincerely believe that the Luckman plan saved 5,000,000 bushels of corn, or less than one-tenth of 1 percent of the total grain available.

But it wasn't corn the Government wanted to ship abroad. It was wheat.

We knew that our feeds would add weight to cattle, but the Government apparently was not interested in getting more meat. Now the Secretary of Agriculture tells the country that we are faced with a terrible meat shortage. It does get a little confusing, doesn't it, gentlemen?

In addition, we think they lost more wheat than they thought they saved.

When the farmer doesn't get our feed do you honestly believe he is going to let his poultry and hogs and cattle starve?

And maybe this particular farmer hasn't any corn. Maybe he has wheat. So he feeds the wheat to the chickens and hogs and cattle—and it was wheat that we wanted in the first place to ship to Europe.

The government of every country in the world, except our own, has adopted the principle that distilling takes nothing away from the food economy. This is proved by the fact that none of these governments have shut down their distilleries. Surely they are not purposely taking food out of the mouths of starving people.

England is running at capacity; Canada is running at capacity; 11 countries which have submitted their needs under the Marshall plan, have asked for grain for distilling and brewing.

Even assuming that the shut-down saved a few million dollars' worth of corn, let's see what it cost:

It completely dislocated an industry which pays to the Federal and State Governments more than $2,500,000,000 a year in taxes.

It threw thousands of American workers out of work. We know because we alone kept more than 1,000 on full pay.

It increased the price of the neutral grain spirits now in storage in the United States more than 150 percent.

It opened the door wide for foreign distillers and foreign workers to take over the business of American distillers and the jobs of American workers.

We admit that these are strong statements, but we will prove every one of them right up to the hilt.

There is one other fact that ought to be clarified. The public was told that the stocks of whisky in the United States were adequate—that we have over 550,000,000 gallons of whisky. What we have, actually, is about 65,000,000 gallons of whisky in this country which is 4 years old, or older. This is about 1 year's supply. The rest is green whisky not yet fit to drink. (Government figures show what is put away—not what is there after evaporation and outage.)

This is less aged whisky per capita than in any distilling country on the whole face of the globe.

Now you may well ask us why we agreed voluntarily to shut down when we knew all of these facts and had communicated them to the Luckman committee.

We assented because we were conscious of an obligation to the American people, who decided in 1933 that they would prefer to have a sound distilling industry with employment and taxes and Government regulation instead of bootleggers, gunmen, and rot-gut. They put that in our Constitution.

So, when the call came to help hungry people, we wanted to contribute our share, heaped up and running over. We knew no grain would be saved, but when we were told that a great sacrifice on our part would be a tremendous psychological contribution for the purpose of securing assent from others to make comparable sacrifices, we agreed.

No other American industry was asked to make any comparable sacrifice.

No other country asked its distillers to make any sacrifice.

We think it is time for a little common sense.

We think this whole question of the shut-down of distillers and the allocation of grain for restriction of production should be investigated by the Congress of the United States. Not in an hour, not in a day, but in a full-dress hearing with opportunity for all to be heard. Not just distillers, but the communities that are being ruined, the workers who are being thrown out of work and the farmers who have an interest in the feeding of their stock and the disposition of their products.

We believe that the public interest would be best served by full disclosure of all the facts in the full light of day.

Discovery of Gold at Coloma, Calif., on January 24, 1848, by James Wilson Marshall Started First Great Migration to California

---

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. JOHNSON of California. Mr. Speaker, on January 24, 1848, James Marshall and Capt. John A. Sutter, the founder of Sacramento, Calif., were partners in the ownership and operation of a sawmill. On that day Marshall found some yellow metal in the stream where the sawmill was located. He was uncertain as to what it really was, but it later turned out to be gold. This started a great migration to California. It was the beginning of one of the most romantic and exciting eras in our history.

California seems to be a magnet that stimulates migrations. During the depression of the thirties we had the great migration to California of the "Okies" and "Arkies." These names are merely nicknames of the great volume of people who came from the Dust Bowl seeking better opportunities in California.

Then during the recent war we had a tremendous migration to California of almost 3,000,000 people from almost all the States of the Union. They came as servicemen, as war workers, as agricultural workers, and so forth. Many of them have remained and thousands more are pouring in every month and in the course of a few years become as truly Californians as the real "native son."

Mr. James D. White has written an interesting story about the first, or shall we say the gold migration, which was printed in the Washington Post on Sunday, January 18, 1948.

Under leave to extend my remarks, I include the article, which I am sure will be found most interesting:

JIM MARSHALL FOUND GOLD JUST A CENTURY AGO, AND OPENED UP A CONTINENT

(By James D. White)

COLOMA, CALIF., January 17.—A century ago next Saturday a young man stooped down in this sleepy village and picked up the first gold found in California.

He was a shy young wheelwright named James Wilson Marshall. His life never was the same again. Nor, for that matter, was California's.

His discovery led to history's greatest rush to dig gold. It was gold that rocketed a raw new American territory into statehood. It helped finance the Union in the Civil War. It hastened by a generation the building of a transcontinental railroad. It lured men of many races and ways of life into the violence of a lawless frontier and the ruthless, creative experience known as empire building.

THREE-YEAR CELEBRATION

So this January 24, 100 years later, Coloma will be jammed with thousands of Californians celebrating Jim Marshall's discovery. Famous actors will reconstruct the event over national radio networks. The mining industry will exhibit old and modern mining machinery. Visitors can pan gold in the same stream where Marshall found it.

The program will launch 3 years of celebrating by Californians as the centennial dates of their historic beginnings roll around: Discovery of gold will dominate '48; the gold rush and State constitution in '49; admission to the Union in '50.

The State Centennial Commission, which has received $250,000 from the Legislature for this year's events, is asking for a million for all 3 years. Communities all over the State will commemorate local echoes of the great news at Coloma 100 years ago and the chain reaction that followed.

It began slowly, Jim Marshall thought the yellow metal he had picked up was heavy enough to be gold. But the men helping him alter the sawmill where he found it in the millrace were doubtful.

He rode down through the Sierra foothills to Sacramento, 50 miles distant, to show it to Capt. John A. Sutter, his partner in the sawmill. They dunked it in vinegar and nitric acid. It was gold.

Sutter was worried. He held large land grants from the Mexicans and wanted to develop the rich valley, but to do this he needed men, and to keep men he had to have lumber to build houses for them. That was why he and Marshall had built the mill. Now he was afraid his men would leave him stranded.

They did.

Two weeks later California became American territory through the treaty which ended the war with Mexico. This threw Sutter's and Marshall's claims and titles in doubt; neither subsequently benefited from the discovery of gold. Both were nearly ruined and both died disappointed men.

PURELY WESTERN CONTAGION

When the news reached San Francisco, nobody believed it at first. Then gold arrived and was tested by jewelers. Word spread and the rush began.

Shovels sold for as high as $50 and a man's labor became worth pretty much what he figured he could make panning gold. Town by town the fever spread. Communities emptied as people flocked to the Sierra foothills and horses and cows grazed in unharvested fields.

Shops were boarded up. San Francisco's two newspapers closed as editors followed printers to the gold country.

It still was just a California phenomenon. The East did not get what it regarded as reliable confirmation until the following September, when the new American Governor of the Territory reported it to the President.

Again, nobody was too excited. But when gold arrived in New York and was assayed, the news swept around the world. El Dorado, sought for centuries, had been found.

It was too late for travel that year across the high Sierra, but ships could sail around the Horn or to Panama where a short crossing could put a man on the first boat up the west coast. Immigrants began pouring into San Francisco, and by '49 the rush was really on.

Buying outfits in San Francisco, Sacramento, or Stockton, the newcomers hurried into the hills. Many struck it rich along the 250-mile mother-lode area that stretches from Mariposa in the south to the Feather River country in the north. Others failed, went into business, and got rich in stores, shipping lines, manufacturing. Everything was in demand in a world where a man might and often did make thousands of dollars in a single day.

Gold seekers kept coming, and in '49 alone some 25,000 arrived by sea and 42,000 came over the mountains from the East.

Not all were Americans. Mexicans, Peruvians, and Chileans came from Latin America, Kanakas from the Sandwich Islands. A great influx of southern Chinese began, to continue many years through the period of railway building.

SHIPS LEFT TO ROT

Old French prints of the time depict soldiers at San Francisco's Presidio, handcuffed to their sentry posts. They are shown wearing Napoleonic uniforms, so the picture is apocryphal, but not too far from what did go on. In San Francisco Bay in '50, some 500 sailing ships stood idle. Captains had followed crews to the gold fields, and some of the ships never were reclaimed.

California labored in chaos. With Mexican authority gone, the new Territory was not yet a State, and there was a considerable legal vaccum. A State constitution was drafted by October 13, 1849, at Monterey, but Congress did not decide California should come into the Union as a free State (without slavery) until September 9, 1850.

In the meantime some remarkable things had happened in California as local committees took things in their own hands to keep the peace.

The miners were human, and after working hard on diets such as beans and ship's biscuits, fortified by whisky, they often found diversion in violence. They were being mulcted by swindlers and claim-jumpers, and highwaymen preyed on the vast gold shipments. The population was 98 percent male, a tough crowd of venturesome characters who had come a long way to get rich.

Things were getting out of hand, so when the pioneers needed a law and couldn't find one, they made one up and if necessary enforced it with the means at hand—and the means were as tough as the times.

After the six-shooter came the hemp necktie. In Hangtown (now Placerville) they strung one man up for stealing a sack of flour. They gave a convicted murderer 2 years, and dismissed another who killed an Indian. At Hornitos a mob lynched a Chinese by tearing his arm off through an unbarred jail window, using a horse and lariat.

REAL CHINESE LAUNDRY

The miners did prodigious things with their wealth. All the way around the Horn they sent for pianos for music, iron shutters for their stores, and brick and lumber for their churches and schools.

They built long canals and flumes for hydraulic mining and started the California habit of piping water great distances.

Too busy to quarry stone, they shipped in enough from China for at least one store, which still stands and is all that is left of the once-thriving town of Butte City. San Franciscans at one time were so busy that they found it easier to ship their laundry to Canton by clipper than get it done locally.

Among such giddy economics the State of California was born. The great lode held out many years, and in the richer pockets mining still goes on, balanced delicately now on the market price of gold and the cost of production.

California still yields more gold than any other State, but Californians celebrating at Coloma next Saturday realize that gold was just the beginning of riches.

Their annual agricultural production alone amounts to about $2,000,000,000—as much as all the gold mined here since 1849.

Theirs is the second largest State, third in population and edging toward second place with nearly 10,000,000 people.

These people, notes the State chamber of commerce, now have the highest average per capita income (ranking 32 percent above the national average) and operate more radio sets and motor cars than the people of any other State. Some wonder just what it means that they spent more in 1946 for motor transportation than they did for eating.

Anyway, they lead the Nation in taking fish from the ocean, in growing fruits and vegetables and putting them in cans, in pressing wine, in refining borates, and in recording simulated life on celluloid.

Its population of many strains has not merged without friction, but as the generations pass the differences fade, diluted by a steady stream of newcomers.

One thing goes on. These people are Californians and westerners, the spiritual grandchildren of the pioneers who found gold here at Coloma 100 years ago.

Greek Contest Grows More Bitter

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I quote the following editorial in the January 14 issue of the Christian Century:

Latest developments in Greece are more confusing than ever, but they at least show that the tension there is growing rather than diminishing. Some sort of show-down, or explosion, seems not far away. On the Russian side (why not be candid and discuss the Greek situation in terms of its real elements?) a 'free Greek' government has finally been proclaimed by the Communist guerrilla leader, Gen. Markos Vafiades. This constitutes a bid for recognition as the government of Greece from the neighboring Russian satellite nations. Such recognition would open the way for every imaginable kind of gun-running and intervention according to the familiar 'foreign legion' pattern. It might also lead to the often forecast Balkan federation of Communist-dominated nations. This Russian move has been countered from the American side by diplomatic and military action. Undersecretary of State Lovett has warned the Russian satellites that if they recognize the 'free Greek' government 'this step would have serious implications.' Mr. Lovett leaves to the imagination of Marshal Tito and his friends what those 'implications' would be. At the same time the American military mission, which is now 'advising' at every divisional headquarters of the Greek army, has pepped up that force sufficiently to repel an attempt by Markos' guerrillas to capture the little mountain town of Konitsa and make it the capital of the 'free Greek' government. This sudden activity is probably to be read as an effort by the Greek army's higher command to prove that the $300,000,000 sent it from the United States last year—including 47 shiploads of military equipment—has not been utterly wasted, and that the army of 140,000 men is not entirely helpless before 20,000 guerrillas.

In the same issue of the Christian Century is another forceful editorial entitled, "What's the Next Move in Greece?" As part of my remarks I am including it also:

WHAT'S THE NEXT MOVE IN GREECE?

Despite the repulse suffered by Russia's pawns at Koritsa, it is evident that something will have to be done soon to rescue American policy in Greece. The $300,000,000 so reluctantly appropriated by Congress last spring is almost gone; the Konitsa setback has not materially diminished the ability of the guerrillas to terrorize and control most of the country; President Truman knows how close the doctrine which bears his name is to collapse in the first country where he has tried to apply it. More money, much more money, will have to be poured into Greece. Perhaps more troops will also have to be sent there. That may be the meaning of the recent dispatch of marine battalions to the eastern Mediterranean. But will Congress, already sniffing at everything it suspects may be an "Operation rathole," appropriate? Rumors abound that the Athens government will turn to the UN and ask it to put pressure on American Congressmen. That is, on the theory that a plea for more millions will have more persuasive power if it comes from the UN than if the State Department sponsors it. Whether such tactics will be employed by the Truman administration, or will work if they are, remains to be seen. But while all this is going on, the question remains unanswered whether Russian forces are to take part in the partition and policing of Palestine. If they do, and the Red Army is thus placed almost within sight of the Suez Canal and athwart the oil pipe lines from Arabia, the Truman policy of pouring out millions to contain Russia on the Greek border will look like one of the silliest examples of confused thinking and action in the history of modern power politics.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. KILBURN. Mr. Speaker, I am glad to extend in the RECORD a letter from my dear friends, Hon. William A. Pittenger, of Minnesota, who, as the Members know, has been a life-long advocate of the St. Lawrence seaway and power project. I am sure that the colleagues who served with him in the House, and also the new Members, will be glad to read this letter. For years he has been our champion and I am in hope that he will return to us to lead this fight as he has in the past.

DULUTH, MINN., *January 19, 1948.*
Hon. CLARENCE E. KILBURN,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I have been privileged to serve with you in the House of Representatives over a period of some years. Since coming to Washington in December to help in my advocacy of the St. Lawrence seaway and power project, I have had occasion to consult you at different times on this controversial measure. I am writing this letter because I want you to know how deeply I appreciate your cooperation and leadership in connection with the pending legislation. I take this means of reporting to you and to your colleagues the fact that I am in favor of the St. Lawrence seaway and power project and that I am in Washington to render all possible help in support of this pending legislation.

Very frankly, I do not find much activity in Congress in behalf of the pending legislation. It is my hope that more men will become actively interested and give you their support. I do find that the propaganda factories are particularly active at this time giving misinformation to our people in reference to the St. Lawrence seaway and power project. The powerful lobbies are at work, but there appears to be no lobby working in the interests of the American people. I have been privileged to see bits of propaganda that come from the most powerful lobby in America. I do not dignify this lobby by giving it a name, but it has an office here in Washington, D. C., and is now viciously at work to misinform the American people regarding the seaway project and by misstatements and other methods to shape public opinion against a development that will contribute to the resources, wealth, and happiness of the American people.

Just the other day in one of the local newspapers a columnist reiterated the objections of the opponents of the seaway. He argued that the seaway would cost a lot of money, that it would be icebound and not open to navigation for about 7 months of the year, and that it would take business away from the American railroads. Of course, if the seaway would not be any good, the argument that it would take business away from the railroads is pure nonsense. These inconsistencies do not bother the opponents of the seaway who believe that to the extent that this project benefits the American people they will be harmed accordingly. So, they may be expected to foul their own nest by trying to influence Congress against this project. In view of the misleading statements that have been made, mostly a tissue of falsehood and incorrect series of half-truths, friends of the seaway project should have in mind certain facts.

First, the proposed legislation would deepen some 60 miles of connecting channels in the Great Lakes region from an existing depth of 14 feet to a depth of 27 feet. This would give the Great Lakes region a fourth ocean seacoast and would move the Atlantic Ocean something like 2,600 miles to Duluth, Minn. We already have a 14-foot channel, and all it needs is some additional work in certain spots to permit oceangoing ships to enter and traverse a 27-foot channel.

Five Presidents of the United States and numerous Army engineer boards have endorsed the project. They have pointed out the immense benefits to the American people, and they have estimated that the benefits far exceed the costs of construction.

The project has a twofold purpose. I have just called attention to the fact that the navigation features would be of benefit to the Midwest, and this means to some forty to fifty million people. In addition, it would make available to the people of New York and New England cheap electric power at Massena, N. Y., which is now going to waste.

I do not here discuss the agreement between Canada and the United States which was entered into in 1941, but I do know, as a Member of Congress at that time, that the American people are protected in every way by the proposed agreement.

I am constrained to say that the worthwhile value of this project can be measured by the strength of the vicious propaganda that is being put out to defeat action in Congress.

In conclusion, it seems strange to me that Congress is asked to authorize $17,000,000,000 for Europe, and at the same time people that I choose to designate as enemies of progress are doing everything they can to defeat this measure.

Very sincerely yours,
WILLIAM A. PITTENGER.

Address of Secretary of State Marshall

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Secretary of State Marshall before the Pittsburgh Chamber of Commerce, Thursday, January 15, 1948:

During the past week I have appeared before congressional committees of the Senate and the House to discuss the European recovery program recently recommended by the President.

Other officials of the executive branch are now testifying before the same committees as to the details of the program. It has been widely publicized and discussed. Its purpose and principal features are now well known.

Therefore, I am reluctant to add another statement to the mass of material on the subject. But this issue is of such great national importance that I feel justified in referring tonight to some aspects that may be of especial interest to the leaders in business.

Businessmen quite naturally are concerned about the possible effects on their own position—about how this program will affect the supply of raw materials, prices, sales, profits, and the condition of doing business.

Measures affecting the national economic interest in the long run will influence the private affairs of all of us. In considering the effect of this particular measure upon our individual or collective lives and fortunes, it seems logical first to appraise the present position of the United States in world affairs.

RECALLS FRUITLESS PARLEYS

In order to put current events in proper perspective, it is necessary to go back at least to the Council of Foreign Ministers at Moscow last spring. We met there, as you know, to consider peace treaties for Germany and Austria. That effort to reach agreement failed utterly because the Soviet Union insisted upon conditions which the three western powers could not in good conscience accept.

The reasons for the Soviet attitude have now become clearer and were well defined at the recent London Conference, where resort to similar obstructive tactics and propaganda appeals led again to failure.

Our experience at Moscow was productive in one sense at least. It necessitated a complete reappraisement of the situation in Europe which was steadily deteriorating, and brought us to the important conclusion that we faced the choice of quitting Europe altogether or of completing the task of European recovery. We had no intention of quitting.

Once the basic decision was taken the United States put into effect certain measures susceptible of immediate application. These concerned Germany, where we have major responsibilities as an occupying power.

TOOK NECESSARY STEP

It was apparent that there was no immediate prospect of a German peace treaty nor any likelihood that the Soviet Union would cooperate in establishing a balanced economy for all of Germany as provided in the Potsdam agreement.

Therefore, we had to take what steps we could to enable the Germans to pull their own weight in Europe and at an early date to terminate reliance upon Britain and the United States for the essentials of existence now lacking in western Germany.

The British and American zones were then being integrated economically in the interest of efficiency and economy. This process was accelerated. In addition, the two Governments decided upon an appreciable increase in the level of industry. This is a rather technical matter which is not readily understood.

It should be remembered that the Potsdam agreement called for the economic integration of all four zones of Germany. To enable Germany to be self-supporting, a stipulated portion of the German industrial capacity, factories, machinery, etc., was to be retained in Germany.

Industrial capacity in excess of this requirement was to be destroyed or distributed among the Allied Nations as reparations.

PEOPLE BECOME DEPENDENT

But the refusal of the Soviets to cooperate in establishing a unified economy for Germany invalidated the level of industry and reparation calculations made at Potsdam.

It soon became apparent that the plants and equipment originally selected for retention in the western zones could not—with that area sealed off from the Soviet zone—produce enough to support the increased population of the bizonal area. This left the people in the bizonal area heavily dependent on Britain and the United States, especially for foodstuffs.

The only feasible solution was to increase the industrial capacity to be retained in western Germany at the expense of reparations. This was done.

Incidentally, these measures which we have undertaken together with the British for the revival of economic life in our two zones have all been on the basis of a continuing invitation to the other occupying powers to join us in these necessary and constructive steps.

Such measures as these, which we could undertake single-handedly or in cooperation with other governments, yielded some results. But they did not get to the heart of the problem—which was, the general economic recovery of western Europe, which, after a promising start, had plainly begun to falter.

UNITED STATES HAD ONLY ONE CHOICE

It became unmistakably clear that if Europe was to recover, rather than suffer a perhaps fatal relapse, vigorous action would be required.

The United States was the only nation in the position of economic power and leadership to take the initiative in the matter. The alternatives to such action were so repugnant that for our own self-interest, if for no other reason, we could make only one choice.

These then were the considerations that led to the suggestion of last June 5. It was stated that a continuation of the procedure of intermittent relief measures was no longer possible. It was also stated that recovery must depend primarily on their own exertions.

The suggestion was made that if they would take the initiative and unite in developing a sound and workable cooperative program to restore their economic system to a self-supporting status, we should do whatever we were able to do, consistent with our own capacities and needs.

The response was instantaneous. In the countries where freedom of opinion and action still prevailed the idea quickly caught hold and served as a strong stimulus to morale, as well as a spur to action in a material way. It focused attention on the necessity of treating economic recovery as a continental and cooperative matter rather than a problem confined to the narrow purview of each nation.

REDS SPURN BID

The response of the Soviet Union and the states under its domination was revealing. Their reaction was immediate, sharp, and defensive.

Our proposal to Europe contained no geographical or ideological qualifications of any kind. Any government sincerely desirous of entering into a combined effort to promote the rehabilitation of Europe was free to participate.

It was made clear, however, that we would not aid—in fact, we would vigorously oppose—any nation or group which sought to delay or impede recovery.

This was the suggestion: The nations of Europe were left to their own choice—insofar as they were free to to do. Sixteen countries, led by Britain and France, rallied together at Paris to work out a joint program to which each pledged itself to contribute what it could.

The Soviet Union, though invited to serve as a cosponsor of the conference, spurned this invitation and refused to participate. Moreover, the Soviet Government evidently directed the eastern European countries subject to its influence or control to refrain from attending, even after some of these had indicated a desire to participate and one had actually accepted.

SOVIETS OPPOSE PROGRAM

Subsequently, a high Soviet official, a member of the ruling Politburo, made a public statement that it would be the policy of his government to oppose and attempt to defeat the European recovery program by every possible means. That statement has been confirmed by the actions of the Communist parties in several European countries, notably France and Italy.

The 16 western nations set up the Committee of European Economic Cooperation and proceeded to draft a program for achieving recovery to a self-sustaining basis in a 4-year period.

Far from interfering with the sovereign rights of the countries involved, as hostile propagandists have alleged, the United States refrained throughout the summer from any suggestion or advice to the European representatives at Paris, despite the fact that repeated and urgent appeals for such counsel were made.

We were determined that the initiative in this phase of the procedure should be confined entirely to the European countries involved. Only at the conclusion, and then at the insistence of the participants, did we express our views on some aspects of the preliminary draft of the Paris program as they might relate to the prospect of American support or aid.

After the Paris program was submitted to our Government, it was given an intensive and critical examination. No peacetime project in Government history has received more careful attention and study from a large number of highly qualified individuals both in and out of Government.

LAUDS PLAN PROPOSED

Numerous modifications were made in the Paris program, as the result of studies made by various groups from the executive branch and by the Krug, Nourse, and Harriman committees.

As a result, the measure recommended to the Congress represents the combined judgment of a large number of the Nation's best talent. It is the plan, we believe, best adapted to serve the interests both of the United States and the European countries we wish to help.

There may be flaws of omission or phrasing and no doubt the proposal will be improved in some particulars in the light of congressional hearings and debate, but the principal features have been shaped with utmost care, to meet many vital considerations affecting the national interest.

Radical alteration of the basic structure would, I fear, jeopardize the prospect that the measure will successfully accomplish the purpose for which it is designed.

There is a general determination to secure the most efficient administration of this program that is humanly possible, taking into full account the unavoidable factors of Government legal requirements and diplomatic relationships.

MAY MAKE HISTORY

The proposal is now under close scrutiny in Congress and the resulting publicity should keep the Nation well informed as to the issues. This is especially desirable because we are dealing with a matter which may largely determine the course of history—certainly the character of western civilization—in our time and for many years to come.

The American people frequently hear assertions that events have thrust our Nation into a position of world leadership which imposes on us unprecedented responsibilities. There is truth in these assertions.

The practical question is: Shall we acknowledge and accept the obligations and exactions of leadership and, if so, in what manner shall we exert that leadership?

I dare say no group is more determined to assert its leadership in vigorous and decisive fashion than the business element. Your traditions and instincts, your business experience, tell you that to be a leader you must act like one.

But, of course, the great problem of the leader is the responsibility for what follows as the result of his decisions and actions.

AMERICANS TO PAY BILL

If we agree that the United States has become a world leader and in view of the critical state of the world perforce must assert its leadership, then we must examine all aspects of the problem.

Our contribution to the European recovery program will cost the businessmen of America money—it will cost all Americans money. But on this occasion I refer to the situation of the businessman of America, the great and small industrialists—what are his reluctances in the matter of the foreign aid program?

Expenditures of the magnitude required to set in motion a constructive rehabilitation program in Europe—that is, a cure and not a palliative—will be an evident factor in the matter of Federal taxes.

The appropriations necessary to carry out this program effectively, particularly in the initial 15-month period, must be considered in connection with tax rates.

There are subtle distinctions among the inconveniences and sacrifices that may be expected to result.

Waiting for delivery of a new model car while continuing to drive an old one is an inconvenience. Paying higher taxes than we would wish entails definite sacrifice, as does doing without some scarce goods or articles until there are enough to go around.

PART OF JOB FINISHED

These are some of the realities to be faced in our daily private lives. These are some of the exactions of leadership. But each of the comprehensive analyses of the problem yet made, and there have been a number, resulted in the same general conclusion that the United States can successfully carry out the proposed program.

The fact is that the largest part of the job of assisting Europe, as measured by the rate of exports from this country, is behind us.

The volume of commodities planned for shipment from the United States during the first 15 months of the program is less than the volume of our exports during the past 15 months. Moreover, the program contemplates a steadily decreasing volume of exports in succeeding years.

The goods and services to be financed with American dollars actually will constitute but a small proportion of Europe's total requirements—perhaps on the order of 5 percent. Our aids will be marginal, but that margin is absolutely necessary to enable the European economy to gain sufficient momentum to make real progress toward a pay-as-you-go basis.

It is, in effect, the proverbial nail for lack of which the battle of European recovery may be lost.

The fatal deterioration and collapse of Europe economically and therefore politically would result in consequences of a most serious nature for this country.

The situation we then would face would necessarily impose on us such burdens in the way of taxes, discomforts, sacrifices, and impairments of the rights and privileges we now enjoy as to make those that now confront us seem trivial by comparison.

In the field of foreign trade, for example, this Government is pressing for international agreements to remove or minimize arbitrary restraints on business between nations and to eliminate harmful discriminations.

Many of the restrictive practices we oppose appear in the system known as state trading, where the foreign commerce of a country is conducted by the government as the sole or dominant buyer and seller.

We recognize that many of the present state-imposed restraints are defense mechanisms, resorted to as a result of abnormal conditions caused by the war, and susceptible of correction when stability is assured.

BUSINESS HAS SPECIAL STAKE

The long-term significance of state control of foreign trade, however, is a matter for serious concern. Thus, business has a special stake in European recovery by virtue of what this recovery may mean for the practices and atmosphere of world trade.

There is no doubt that if the countries of Europe should be forced to meet their present problems without further assistance from

this country, the result could only be a radical increase in the restrictions and controls in force throughout that area affecting international trade and investment.

And more important, perhaps, than the actual restrictions themselves would be the deterioration in the atmosphere in which international business would have to be conducted.

If the businessmen of this country are again to enjoy the former facilities for residing, traveling, and doing business among the European peoples, then it is essential that the Europeans retain their confidence in this country and in the soundness of liberal institutions in general.

CALLS SITUATION SERIOUS

It is idle to think that Europe left to its own efforts in these serious problems of recovery would remain open to American business in the same way that we have known it in the past.

I have been talking about Europe, but the situation is even more serious than that. Europe was at the heart of a great world trading and financial organization. Her failure to recover would have disastrous effects in many other areas.

The economies of Latin America and Canada, for example, are organized on the basis of having markets in Europe. If Europe fails to recover, and she certainly cannot do so without our aid, the repercussion will be felt throughout the entire world.

The cumulative loss of foreign markets and sources of supply would unquestionably have a depressing influence on our domestic economy and would drive us to increased measures of Government control.

MUST MAKE DECISION

By contrast with these possibilities, the cost and temporary adjustments required by the European recovery program appear reasonable, as I think they are. I have attempted only to present an estimate of the stakes the businessmen of America have at issue in this matter.

We are all stockholders in the same company—the United States of America. The paramount question before us, I think, can be stated in business terms.

We are required to make a decision as to which is the wiser course: Whether to make a capital investment in European recovery involving a sum that though large is well within our means, with a good prospect of realizing long-term gains; or whether to spend our abundant capital for the satisfaction of our immediate wants, in the hope that the day of reckoning can be indefinitely deferred.

I am not a businessman, but I have some knowledge out of my experience of what has been required in the past to preserve certain of our national assets in security, peace, and freedom.

I consider the prudent course in this situation is prompt and effective action to assure solvency and stability in Europe.

I think that is our role as a leader in a distressed world.

I think we must judge ourselves in our present security and abundance in comparison with distressed people, sick and suffering, but already inspired by a great hope that the new world will help redeem the old.

Hidden Red Ink in TVA's Books

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Reader's Digest for December 1947:

THE HIDDEN RED INK IN TVA'S BOOKS

(By John T. Flynn)

In 1916 war raged in Europe. To insure a supply of nitrates, Congress voted funds for two nitrate plants at Muscle Shoals and a dam to produce hydroelectric power to run the plants. The dam, finished in 1925, became a Government headache. Finally, in 1933, Senator George Norris put through a bill creating the Tennessee Valley Authority to operate the plants for fertilizer and the dam for navigation, flood control, and power.

But TVA is no longer just a plant and a dam. There are 28 dams on 650 miles of rivers running through 7 States. TVA owns 10 steam plants; has built villages, parks, stores; makes fertilizer; carries on forestry, agricultural, and recreational operations. Moreover, it is now proposed to establish as many as nine more TVA's all over the country for the Missouri, Columbia, Arkansas, and other valleys.

I strongly advocated TVA. But in the interest of TVA and the country I think TVA's financial picture should be set straight.

Its managers have made extravagant claims. Dr. Arthur E. Morgan, its first chairman, told Congress in 1934: "After a preliminary period * * * this program will be amortized in 25 years." David Lilienthal, its next chairman, said, in 1944:

"Even if the total investment in power, navigation, and flood control—the entire $700,000,000—were charged against power, revenues would pay the entire cost in less than 60 years."

It cost $762,000,000 to built TVA. The Government borrowed and put up the money and pays interest on it. In addition the plant must be operated. The operation costs over 14 years up to June 1946, including the interest paid by the Government, were $339,000,000. The revenues were $209,000,000. Thus there was actually a deficit of $130,000,000.

But TVA has a different figure. It arrives at it by leaving out of its accounts the $129,000,000 paid by the Government as interest on the loan.

TVA carries on many activities. Power production is only one of them. The figures given above are for the entire program, including power. Now let us look at the power enterprise alone. TVA insists it is selling power cheaper than the private companies and doing so at a profit. Let us see.

The total investment in TVA power—using TVA's own accounting assumptions—is $462,000,000. All of this was borrowed by the Government. A TVA propaganda book claims that the total net profit from power since the beginning in 1933 to June 30, 1944, was $38,000,000. But, alas this left out the fact that $53,000,000 was paid by the Government as interest on the money borrowed to build the power plants. Hence a power deficit of $15,000,000.

TVA, of course, will never accept these figures. If one questions its accounts it replies: "Go to our reports. It is all there, verified by a firm of independent accountants." But it is not all there. Nowhere can you find any record of the interest charges paid by the Government. The firm of accountants it cites took particular pains to point this out, saying: "The net results stated for this program do not include any charge for interest." And the General Accounting Office of the United States in an official report expressly calls attention to this same failure and wants it corrected.

The Government has financed hundreds of housing projects. There is a loss of over $4,000,000 a year on these. But the projects faithfully record their interest costs. If, following TVA, they ignored this item, they could boast of a profit of $14,000,000 a year.

On the Government-financed Bonneville Dam project the Treasury charges 2½ percent interest. Why not on TVA's power debt? As a matter of fact, TVA's debt for its power investment alone is split into two classes. There is a small one of $58,000,000 and a large one of $404,000,000. The Government holds both. TVA does pay 1 percent on the small one, but nothing on the big one. Why is the interest on the small debt—however inadequate—a proper cost item while the interest on the big one is suppressed in its accounts?

If TVA were a private corporation the law would require it to state its debt and interest payments with exactitude. TVA ignores this. Each year it reports its revenues and its expenses (without interest). It calls the difference "net income." This is inexcusable in any case. It is doubly so in TVA, which started out as a scientific yardstick to measure public-utility rates. But a yardstick must contain all 36 inches. The interest costs actually amount to more than a third of TVA's annual power costs. What sort of yardstick is it which leaves out a whole foot?

No one need take my word for this. The United States General Accounting Office says:

"Unless all costs for TVA's power operations are included in its income statement * * * it cannot be conclusively shown that the power operations are self-supporting."

It then insists that the interest on the Government loans must be included and that the proper rate is 2½ percent.

The TVA, of course, greatly improved its showing during the war. The whole valley was turned into a war arsenal. TVA revenues doubled, as did those of many corporations. However, TVA reports its war record for power with the same 2-foot yardstick. It reports net income for the 6 years from 1941 to 1946 as $72,000,000. But what it omits is a bill for $57,000,000 of Government interest on the power debt.

However, these years do show a net power income even when interest is included. At least they seem to do so. But the General Accounting Office is unwilling to say so. It points in its TVA report to various costs left out, one alone amounting to as much as $500,000 a year, and concludes that "power rates appear to produce gross revenues in excess of costs of power production," but "there can be no consistent showing of whether TVA is self-supporting and liquidating unless every element of cost is recorded on its books and shown in its final statement."

The TVA Act says its power project must be self-liquidating. The GAO says it will never be until its electric rates produce enough to liquidate its debt. The Appropriations Committee of the House says it should liquidate its debt in 40 years. This alone would mean an annual minimum payment to the Government of $11,000,000. Who should pay the cost of the power plant which produces power if not the people who enjoy the use of that power as is done by the customers of every private utility in the land?

The General Accounting Office has said the books do not tell the whole story: It is not all there. All of which recalls the complaint of Dr. Arthur Morgan, first TVA chairman, who declared that there ought to be an impartial investigation of the obscure financial record of the power program.

We may now ask: Is TVA selling power at less than it costs? What should power costs include? Obviously the following: (1) All operation costs. The GAO says all are not included. (2) State taxes. It pays some, but less than a private company of the same size. (3) Federal taxes. It pays none. Other utilities pay large sums. TVA boasts that other utilities pay only a part of their profits in taxes, while TVA pays all its profits. But it has no profits. (4) Interest on the Government power debt to build TVA. (5) Liquidation of the debt incurred to build TVA.

Actually, the estimates of the cost of TVA power given above are probably much too low. They are based on certain assumptions made by TVA directors. Upon these assumptions I have put the debt for power at $462,000,000. I believe, however, that a more rational allocation of power costs would put that debt at not less than six hundred million.

Many of the great dams in the Tennessee River and tributaries are called multipurpose dams. It is claimed they were built not only to produce hydroelectric power but to control navigation and floods. The directors of TVA have declared how much of the structure is for power and how much for navigation and flood control. But no one has ever officially checked this allocation. The private accounting firm which audited TVA's books specifically disclaimed any responsibility for the allocation used. And the General Accounting Office has made the same disclaimer.

Competent engineers have disputed TVA's claim and have insisted that the dams are almost wholly for power production and that the element of flood protection or navigation control in them is small. They are supported in this by the leading authority on flood control in Congress, WILL M. WHITTINGTON, a Democrat, former chairman of the House Committee on Flood Control, a supporter of TVA and a Representative of Mississippi, which enjoys a large measure of benefits from TVA. In a speech in the House he declared that "TVA is primarily for the development of power."

There can never be any authoritative accounting of the cost of TVA power until the total amount of the investment in power has been settled. It is this that the General Accounting Office referred to when it recently reported that "the power debt should be finally determined."

I have examined patiently most of the evidence on both sides of this subject and have gone to the TVA country to check on the respective claims. I believe there is no escaping the conclusion that the allocation of power investment and costs made by TVA is arbitrary and that if it is ever audited by a competent board of impartial engineers and accountants it will be found that the power investment and debt is not four hundred and sixty-two million but six hundred million at the lowest.

The reason for TVA's claim of lower power investment is plain. The more costs TVA can unload on navigation and flood control, the less the costs of power will seem. By the accounting trick here described TVA has cut more than one hundred and fifty million from the debt due for power. They can also reduce the seeming cost of operating the dams, because now they charge off most of the cost of operating the common purposes of the dams to navigation and flood control.

Do I want TVA destroyed? Certainly not. But we must submit TVA to the yardstick which it now tries to forget. Just as we had to have commissions to stop private utilities from soaking the customers, we should have some authority to prevent publicly owned power projects from soaking the taxpayers.

What should be done seems to me inescapable. (1) The outstanding Government debt on the power enterprise should be determined definitely and the TVA should pay the interest on it. (2) The TVA should pay off this debt in 40 years. (3) These items and all other costs should be included in the rates charged for power. (4) The TVA directors should not be the sole judges of the amount of the investment in power. (5) All the nonpower activities of TVA— agriculture, fertilizer production, forestry, and other projects—should be transferred to appropriate departments of the Government. They should be divorced from the TVA power project to which they have no rational relationship. (6) The costs of these activities should be paid out of authorized congressional appropriations like any other costs of government.

There is an aspect of TVA which disturbs me more than its fiscal vagaries. It has operated as a Federal corporation under a charter which has enabled it to do an incredible number of things and to escape Government scrutiny. The Federal charter is a comparatively new device to enable the Federal Government to expand its powers immensely. Mr. Lilienthal, in his book, TVA—Democracy on the March, calls attention to the vast growth of Federal power. It has become so great that, he says, it cannot be wisely administered from Washington. But the power must not go back to the governors, mayors, legislatures, and councils elected by the people. It must go to great regional areas administered by directors appointed by the President, to a corporation cunningly devised to accumulate power and to elude congressional authority. We will see the country split into a few great regional provinces run by corporate provincial governors. This is what Mr. Lilienthal calls "democracy on the march." I think it is democracy in retreat, a return to the European system of centrally controlled provincial governors. With TVA as a beginning the advocates of regionalism are planning under the guise of flood, navigation, and forestery control and other excuses to blanket America with this new type of government which represents a complete revolution in our political system.

The TVA should be specifically instructed by Congress that it is not a provincial Government agency of a regional province but a Government-owned power enterprise. If the people of the United States want to adopt the regional form of government they should do so—but only after full discussion and a formal decision. I do not think it should be presented to them suddenly as an accomplished fact.

Tennessee Valley Authority

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. RANKIN. Mr. Speaker, our distinguished friend the gentleman from Pennsylvania [Mr. RICH] is seeing too much "red."

It is all right for him to complain when he realizes that the Federal Reserve System is spiraling us into a stratosphere of inflation; but when he attacks the TVA and inserts in the RECORD that fallacious article written by Mr. John T. Flynn, attacking that great Authority, I call his attention to the fact that I answered that statement several weeks ago.

Mr. Flynn is just as far wrong as he could possibly be. The Tennessee Valley Authority is not only the greatest development of its kind ever undertaken by man, but it is absolutely sound, and it is rendering one of the greatest services the American people have ever had.

Mr. RICH. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Pennsylvania.

Mr. RICH. It might be rendering a great service, but the Federal Government has put a great deal of money into it, and it is never going to be able to pay it back.

You will wreck the United States if you continue your policy of getting the Government into all kinds of business.

Mr. RANKIN. Every dollar invested in the TVA will be paid back with interest; and at the same time it is adding, and will continue to add, billions of dollars to the wealth of the Nation.

On December 4, 1947, I answered Mr. Flynn's attack on the TVA in a short speech on this floor, which I am reinserting in the RECORD at this point. It reads as follows:

Mr. RANKIN. Mr. Speaker, the December issue of the Reader's Digest carries an article by my old friend John T. Flynn called The Hidden Red Ink in TVA's Books. In his article Flynn unblushingly declared that I advocated the TVA. And he asks rhetorically, "Do I want TVA destroyed?" And then answers "Certainly not."

Yet that is what he advocates. For the proposals he makes concerning the TVA are just the ones which have been advocated openly by the Power Trust and its satellites who make no attempt to disguise their hatred for this highly successful regional agency. Mr Flynn's points and his arguments can be found in any propaganda handbook of the Power Trust lobby.

Right at the beginning of the article he has a financial analysis which follows down the line on the kind of analysis made by the Edison Electric Institute, the Power Trust propaganda organization. He seeks to show that the TVA has a deficit by the simple ruse of charging navigation and flood-control costs, with an assumed interest charge, against power revenues. Of course, he shows what he calls a deficit. Yet certainly Mr. Flynn knows that in other parts of the country, on the Ohio and the Mississippi and other rivers which the Government has developed for navigation and flood control, the costs are not borne by the electric consumers.

The navigation dams on the Ohio and the levees on the Mississippi are not paid for by the electricity consumers along their banks. They are paid for by the Federal Government in the interests of the general welfare.

There can be no justification for assuming that things should be different in the Tennessee Valley—that there, unlike any other place in the country, power consumers should not only pay the power costs but those of flood control and navigation as well.

Mr. Flynn tries to make several points with respect to TVA power. And for an economist he has a strange notion of what interest is. He says it is an element of cost. But as any regulatory commission could tell him, interest is not a cost but a part of the return on profit. Rates of return are set by regulatory commissions without reference to interest. Out of this return, the utility pays whatever interest it has to pay—depending on the amount of bonded debt in its capitalization and on the interest rate it must pay.

But Mr. Flynn goes further than that. The TVA is required by law to pay back to the Treasury money invested in its power system within 40 years. That is something that private utilities do not do; they usually refund their debts, that is, they replace old bonds by issuing new ones. Mr. Flynn seems to think the TVA ought not only to pay back to the Treasury the money invested in the power system, but to pay interest on the money on top of that.

There is nothing the enemies of TVA would like better than to see the TVA hampered and hamstrung by just such a double burden. It would place the TVA under a handicap under which no power system, public or private, could survive. The TVA cannot, like a private utility, go out and borrow money. It has only two sources of funds—appropriations by the Congress and revenues from its power sales. The double burden proposed by

the TVA's alleged friend, Mr. Flynn, would tie up this second source of funds, revenues, so that it is doubtful if it could fulfill its obligations to provide electric service to the 750,000 consumers who are dependent upon it.

Mr. Flynn claims that competent engineers have said the dams are almost wholly for power. Of course, some engineers have said that. Every time the utilities have gone to court against the TVA they have rounded up as many such competent engineers as they could lay their hands on and put them on the stand. They did it in the so-called Ashwander case. That is the case that followed Newton D. Baker's $50,000 private opinion, paid for by the Power Trust, that the TVA was unconstitutional. The United States Supreme Court did not uphold that private opinion.

They tried it again in the 18-company case, and, after listening at length to the competent engineers, this is what the three-judge Federal district court said:

"Certain expert witnesses, in answer to hypothetical questions, stated that the dams might be operated for the primary purpose of power. Thousands of pages of testimony and numerous exhibits were introduced to show that Congress might have adopted a better plan than the TVA unified system. Experts equally qualified testified to the contrary.

"The court is of the opinion that the relative value of these various plans is immaterial, since it has been established that the TVA project is reasonably adapted to use for combined flood control, navigation, power, and national defense, and that in actual operation the creation of energy is subordinated to the needs of navigation and flood control."

So much for Mr. Flynn's competent engineers.

Mr. Flynn declares that all the nonpower activities of the TVA—agriculture, fertilizer production, forestry, and other projects—should be transferred to appropriate departments of the Government. In that statement Mr. Flynn shows either that he has never read the TVA Act and does not know what the TVA unified development of resources is, or that he has read the act, knows it very well, and thus knows just how to go most effectively about destroying it.

Mr. Flynn looks on the TVA as simply another power system, in business solely for the money there is in it. It is true that power is important in the unified development of the resources of the Tennessee Valley—it is the paying partner, the only activity which brings in revenues in the commercial sense. But power is only a part of the whole regional development program which has done such great work in controlling floods, promoting navigation and commerce, and restoring the soils and forests of one of the great regions of the country. The TVA is much more than a power project. Either Mr. Flynn does not know that—or he does know it and wants to destroy it.

Mr. Flynn's anxiety to destroy the TVA leads him to some strange conclusions. Former TVA Chairman Lilienthal, he says, "calls attention to the vast growth of Federal power. It has become so great that, he says, it cannot be wisely administered from Washington. But the power must not go back to the Governors, mayors, legislatures, and councils elected by the people."

Mr. Flynn here has missed the point. The powers Mr. Lilienthal referred to are Federal powers—the powers to develop interstate streams and so on—which never could be held or exercised by States and local governments. The TVA, under the direction of Congress, does not exercise new powers, but simply administers in a new, integrated, and much more effective way the powers which the Federal Government has always possessed. Nor does the TVA, as Flynn suggests, have these powers in itself; the powers are exercised by the Congress, which sets the policies; the TVA carries out those policies.

When Flynn suggests that the TVA has taken over State and local powers and functions, he raises a bogey without any substance. If, as he claims, he has spent months investigating TVA and has gone to the TVA country, then he ought to know better. Just the contrary is true. Two years ago, one of the leading newspapers of the country—the St. Louis Post-Dispatch—asked each of the governors of the seven Tennessee Valley States whether the TVA had encroached upon the rights of the States. The consensus was a vigorous "No." Moreover, the governors said, the TVA had in most cases increased the effectiveness of State and local agencies with which it cooperated in the regional program; they were stronger than ever before.

Mr. Speaker, as everyone knows, I was coauthor with Senator Norris, of Nebraska, of the bill creating the Tennessee Valley Authority. I have fought its battles from the beginning. No one could be more jealous of its reputation or more solicitous of its success than I am. I repeat what I have said on this floor time and time again, that it has wrought the greatest development of ancient or modern times.

From the building of the Pyramids down, there has been no single development that compared with that of the Tennessee Valley Authority. It is now generating between twelve and fifteen billion kilowatt-hours of electricity a year that was formerly going to waste. That power is being distributed to the people within the distribution radius at reasonable rates.

Its yardstick, showing what electricity should cost the ultimate consumers, is saving the users of electricity outside of the TVA area hundreds of millions of dollars annually. It is one of the few great developments the Government has ever undertaken that is paying its way. Every dollar of the cost of construction and operation that can be legitimately charged to power, as I said, will be paid back to the Government within 40 years; and in the course of time the revenues derived from this power will return to the Government every dollar invested for all purposes.

It is controlling floods on the Tennessee River and helping to control the floods on the lower Mississippi River, thereby saving untold millions of dollars of such damages as are being experienced along the Missouri and Ohio Rivers almost every year.

It has provided a navigation channel from Paducah to Knoxville, something like 600 miles, enabling the people of that area to use this great stream for transportation purposes.

At the same time it has carried out its program of reforestation, soil conservation, and experiments in the development of fertilizers that have been of untold value to the farmers of the Nation.

But the private power interests that are owned by the vast holding companies, which exact tribute from every power consumer they serve, are turning heaven and earth to destroy the TVA and to take from the people of that area the benefits this great project provides; just as they are trying to take from the people along the Columbia River and the Colorado River and other similar streams their enormous wealths of hydroelectric power.

Out of the Tennessee Valley Authority grew our program of rural electrification. It has already resulted in the lighting of more than 2,000,000 farm homes. The Rural Electrification Administration now has in its files applications for $300,000,000 to build lines to serve the farmers of the Nation, and they are coming in at a rate of from twenty to twenty-five million dollars a month, or more.

Instead of attacking the TVA, it would behoove the Members of this Congress to join me in my efforts to secure additional appropriations for rural electrification. We are going to need at least $500,000,000 for that purpose from now to the end of the next fiscal year. We need a deficiency appropriation for that purpose now, and, in my opinion, we are going to have one, either during this short session, or in the early part of the session beginning in January.

While this Congress is appropriating billions of dollars for people in foreign lands, let us develop our own national resources, especially our water power, and see that it is distributed at the cheapest possible rates, and at the same time let us provide for the electrification of every farm home in America at rates the farmers can afford to pay.

Let us not permit selfish interests to interfere with this great program by hampering the operations of the Tennessee Valley Authority.

Gutter Politics

EXTENSION OF REMARKS
OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Detroit Free Press of January 9, 1948:

GOOD MORNING

(By Malcolm W. Bingay)

GUTTER POLITICS

Of course, as I always say, I am not quite bright in the head. Therefore, I do not understand a lot of things that other people take for granted. I have reference especially in this epistle to that message of President Truman's supposed to be on the state of the Union.

The things that baffles me is not the message. That is as easily obvious as a half-wit kid trying to do card tricks at a midway carnival. Everybody can see the extra aces tucked in his pockets.

It requires nothing beyond a fourth-grade intelligence to get the pitch. But what do most of our better newspapers do? They come out with editorials lauding this chap Truman for his "high ideals." Says the Wall Street Journal, "f'rinstance":

"Opens with an admirable statement of the basic political ideals which all Americans cherish * * * as he says, we are a people with a faith * * * profound devotion * * * welfare * * * rights * * * human beings."

You betcha!

The staid old New York Times even outdoes the Wall Street chum: "We share his faith * * * foundations of our democracy * * * happiness of our people," and so on.

When they get all through with that, they pause, take a breath, and start off again:

But, comma.

Then they make plain that the tax plan is nothing but a soldier's bonus for every citizen—a pay-off of the voters. "The voters' bonus bill of 1948."

They must know that no man could stoop so low in demagogery and still have any sincere thoughts on the state of the Union.

If, in the darkest hours of its most desperate need, a nation has a president who cannot raise his views above the lowest order of Pendergast precinct politics, then there is little hope left for that country. Especially when the papers and the critics take seriously the platitudinous sugar coating of his horrible plans to pile inflation upon in-

flation "to tax and tax, to spend and spend, and elect and elect."

Not in the maddest moments of the worst of the New Deal hysteria did any demagog in that gang ever suggest such staggering proposals.

Harry S. Truman doesn't know much, but he does know that his whole tax proram is so utterly impractical that nobody can be for it.

He offers everybody everything without stint. Lower taxes, higher wages, new doles, billions upon billions for all of us and the rest of the world—a mathematical phantasmagoria out of a nightmare.

The wilder it looks the smarter the little man thinks he is. Knowing that no Congress would dare pass any such program without having it used against them by psychiatrists in making out commitment papers, he feels that he is quite safe.

As the campaign begins to boil he will say, "You see, I promised you the earth and all that's in it, and heaven, too, but those dirty Republicans wouldn't let me get it for you."

There isn't a politician in Washington who does not understand this. They know the program is the bunk and Truman knows that they know it is the bunk.

Well, then, what about the people?

Oh, hush, they do not understand practical politics. The Republicans will make counterclaims, knowing all the time that what Truman is doing is playing a game in the gutter, to shake off Henry Wallace.

He has got to out-Wallace Wallace and the GOP gang gets a great kick out of his desperate efforts.

Never before in the history of the human race has there been such a delicately desperate world situation. Never before in the history of this Republic have our people been faced with such awful responsibilities and judgments. When there is no vision, the Bible says, the people perish. And we see our highest ideals prostituted by lip loyalty in order to put over the lowest and dirtiest of political tricks.

Franklin D. Roosevelt would have shuddered at the crudity of it all.

But the papers and the commentators speak of expressions of ideals and sincerity.

That's what makes me sore.

I'm thinking of the Presidency and all that it stands for in the eyes of the people. That state of the Union report does not rise above the sordid report on the state of the precincts in the Pendergast machine, of which Harry S. Truman is so proudly a member.

Even a northern city boss or a southern Bilbo must have been somewhat nauseated in hearing it.

The Folly of Peacetime Conscription

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made by me over the National Broadcasting Co. network, January 16, 1948:

There is an urgency upon us—we must face it—to clear away the hysteria, the confusion, the muddle thinking, the myopia, physical and moral, that surround the issue of compulsory universal military training. Before we rush into a measure that will affect every concept in our structure of life, let us completely realize its meaning.

It is difficult to think rationally on the subject of universal military training when, all unaware, our attitudes are being subtly shaped by the flood of propaganda emanating from governmental and military sources. We are now being told to think about it; we are being told (with all the weight of authority behind it) how to think about it. It is a poisonous injection and our only immunity against it is an aware and enlightened public opinion.

The panic is upon us. We hear such nonsense as the prevention of war by the construction of a war machine. While we with feverish activity harness our manpower, our natural resources, our science, and our skills to the purposes of war, will other nations sit idly by? With the enactment of universal military training, the armament race is on, every nation in the world bending its energies and economies to meet the competition.

The result? A trigger-happy world, ready to unleash the mad dogs of destruction before the word "go." International nerves are strained and raw. It is not difficult to foresee the explosive signal that will be given should the United States depart from its basic tradition of no peacetime conscription. How else can it be interpreted? For the first time in our history, we embark on a program of peacetime conscription. Do we thus reassure a sick and troubled world that our intentions are honorable?

Today, we are spending more than $10,000,000,000 annually on our armed forces, more than $70 a piece for each person in the United States. We have the largest Navy and the best equipped Army in the world, and in addition thereto, have the atomic bomb. Look at this picture and then ask yourselves what hope can there be for international sanity and amity if on top of all this we add peacetime conscription. Let us not for one moment underestimate the potency of a psychological climate.

To me there is complete inconsistency between the Marshall plan dedicated to the purpose of restoring the health of Europe's economy and a measure such as peacetime conscription. If the United States seeks absolute security, so must every other sovereignty in the world. In the present day concept of war, it is total war, not only with atom bombs but with transoceanic missiles, radio-active dust, supersonic, and biologic weapons. All this adds up to the realization that an absolute security calls for military control of every phase of our life. It means the mobilization of industry, the military direction of the kind of output; it means control over the farmer and the laborer; it means the dispersal of cities and the building of underground communities; it means directing science and education toward military objectives primarily. Unless all this is done, how ridiculous is the notion that peacetime conscription is our greatest security. I do not contend that we weaken our defenses already existent, but I do maintain that peacetime conscription in no way adds to our security. If we are asking for the absolute, then we might just as well stop living. Absolute security is incompatible with living. Of course, if a man never goes outdoors, he will never risk slipping on the street, or if he never heats his dinner, he can never run the risk of a gas explosion.

As we do, so shall others, each seeking total security. How consistent is that with the need for greater production of civilian goods in war-torn Europe. And, again, how consistent is this with our plan to build healthy democracies in Europe? Can democracy flourish under military control?

Please keep in mind what I have outlined of security measures is not an offspring of my imagination. Such measures were recommended by the President's Commission on Universal Military Training. I quote from the report itself:

"We do not wish, however, to exaggerate the benefits that would be derived from the establishment of a universal training program. Only when combined with the other elements that enter into a balanced security system would it provide the measure of strength necessary to deter an aggressor from taking up arms against us or from violating the rights of less powerful nations."

No one has called for legisitaion providing for underground factories or industrial mobilization. Yet by the admission of all authority, universal military training would be ineffectual in and of itself. What actual purpose would it serve? I have little patience with those who talk of universal military training as necessary to the health and education of our youth. The function of the military is to train for war. I refuse to subscribe to the absurd contention that the military is better fitted than the home, the school, and the church to take care of our youth in terms of health, education, and spiritual welfare, particularly in the formative years. Let us find the defects in our educational system and apply the remedy there. Let us remedy the defects of our medical services. Let the economy of our democratic system of free enterprise be so strengthened as to eradicate poverty, illiteracy, and ill health. Do we have to call upon the military to do these things for us? I most certainly prefer those who ask for universal military training straightforwardly to those mealy-mouthed apologists for the introduction of complete military regimentation of our lives. Call it what it is—peacetime conscription. Never mind the pink ribbons.

It must be faced squarely today that the military has already entered our lives in unhealthy proportions. A general of the Army is Secretary of State. The President's personal chief of staff is an admiral. Occupied areas are under military men who shape policy every day. The shaping of policy in peacetime is not a normal military function. In the Foreign Service we have General Smith as Ambassador to Moscow, Admiral Kirk is Ambassador to Belgium. In South Africa and Panama retired generals head the legation and the embassy. Some 13 American military missions exist in South America today, again shaping policy. General MacArthur is absolute ruler of Japan. Two military men, Eisenhower and MacArthur, are possible contenders for the Presidency. The military has contacts with many leading universities dealing with basic scientific research. I state these facts certainly not to malign any of the men I named, but rather to indicate how wide the net of military control is being swung.

I cannot, too, understand the talk of peacetime military training as a lesson in democracy. It is a dedication of the individual life to the purposes of the state, a concept which is totalitarian. It places in constant stream the malleable minds of our youth under the tutelage and discipline of professional officers who necessarily bear the military cast of mind. There is nothing democratic about inculcating in our youth the need for immediate and unquestioning obedience. In war we have no choice; we do in peace. Peacetime military training is inconsistent with any intellectual freedom. It means complete submission. It precludes any criticism on the part of the conscriptee and makes for a standardized conduct that destroys the initiative a successful democracy must have. The President's Commission on Universal Military Training states in approval: "It would teach the trainees to think like soldiers in military organizations and to develop habit responses to situations that will save lives in the event of war." How will, may I ask, an unquestioning obedience

fit into a free democratic life which demands an alert, critical appraisal at all times?

Remember, too, under a system of universal military training, the military could select the best leadership among the youth of promise and siphon them away from civilian activities, thus robbing our democracy of the leadership it sorely needs.

In a study made by educators it was estimated there would be a loss of about $2,000,000,000 in goods and services as a result of the withdrawing of 1,000,000 youth from productive work. It would, in addition, add from three to five billion dollars to the defense budget, as estimated by Hanson Baldwin, military expert of the New York Times, who has more than once in his column exposed the fallacies of a peacetime conscription program. But the cost in dollars is not nearly so important as the cost in the increase of venereal disease, the corruption of the democratic base of our Government, and the militarization of our country, resulting in a totalitarianism. Thus we stand in the acutest danger of ending up by becoming that which we sought to oppose.

Assuming that we dare for a moment to embrace the barbarism that war is inevitable, it does not prove the effectiveness of military peacetime training. In the rapidly changing techniques of war, boys trained 10 or even 5 years ago would have to be retrained. Selective service would have to function as if there had been no peacetime conscription program. Our industries, instead of expanding production for peacetime goods, would be kept busy supplying weapons soon to be outmoded and then resupplying others. Again we come to the same conclusion, universal military training serves no purpose, is completely ineffectual unless the country becomes one armed camp. Why this emphasis upon the weakest element, manpower, in modern military techniques? Universal military training neither prevents nor shortens war. This past war was not prevented nor made any shorter by reason of universal military training in Germany, Russia, Italy, France, or Japan. In all these countries save France there flourishes nazism, communism, or fascism. Remember, too, a wall of human flesh is no defense against the atom bomb.

The evidence of national hysteria is all around us. The hysteria is reflected in such governmental activities as loyalty review boards where the accused is not even granted the elementary rights accorded a prisoner at the dock who committed a minor criminal offense. The Government employee when accused of so serious a crime as disloyalty cannot even be told of the nature of the evidence against him nor is he permitted to confront the witnesses against him. The national hysteria is reflected in the methods of the Committee on Un-American Activities, where is revealed such a disregard for civil liberties that many fear to speak freely. The national hysteria is reflected in the absurd censorship imposed at the source by our Army and Navy officials. There can be no doubt that acceptance of the principle of peacetime conscription is still another manifestation of our hysteria. We cannot afford the luxury of taking these symptoms of hysteria lightly. Hysteria is highly contagious. It leads from majority rule, with protection of minorities, to mob rule, untempered, malicious, and corrosive.

What we seek is a restoration of sanity and values in the world today. That is where our moral leadership should take us instead of the path of preparing for destruction. This is a plea for reason and temperance.

Examine the proposal of peacetime conscription. Examine it carefully and logically. Ask yourself what it means to you, to your children, to your country and to the world.

United States Being Duped?

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. ELLIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Parkersburg (W. Va.) News. The statement adds to the ever-increasing evidence that the people are getting wise to the foreign spending of this administration and have come to the conclusion that the American people are being duped, and that our foreign policy has been a complete failure as far as contributing to peace and the rehabilitation of Europe is concerned.

The editorial follows:

UNITED STATES BEING DUPED?

Just how far and how much are our Government officials being duped in their efforts to aid foreign nations is a question uppermost in the minds of many Americans today. And, at the same time, one wonders at the capabilities of some of the Government officials charged with the administering of the American aid designed to feed the hungry and stave off communism in some of the war-torn countries.

News reports from Greece tell of United States officials being displeased with the Greek attitudes. The United States has poured considerable into Greece where the cold war took on a little heat as government forces used bullets instead of words in battling with Communist sponsored guerrillas.

Dwight Griswold, chief of the American mission to Greece has deplored the noncooperation of the Greeks in assisting the Americans to assist themselves in their struggle against the guerrilla bands and in rebuilding the nation.

One story out of Greece has it that the Greeks purposely did little themselves to halt the guerrilla activities and hoped that the Communist battlers would make even further trouble in their land. It was felt that this would lead to a complete let-down of the gates on American aid and that the United States would pour millions of dollars more into the country. Thus the Greeks could sit back in comfort and without work while the Americans fed them and rebuilt their country.

Congressman McDonough Urges Repeal of Tax on Women's Handbags, Luggage, Toilet Preparations, and Cosmetics; Also the Repeal of War Excise Taxes on Admission to Theaters and Places of Amusement

REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. McDONOUGH. Mr. Speaker, the time has come for repeal of the war-time excise taxes on certain articles that were classified as luxuries during the war, but which by everyday use and custom have been clearly established as necessities to most people in the United States. I refer specifically to the 20-percent war-excise-tax rate which has been levied since 1943 on luggage and leather goods and since 1944 on toilet preparations and cosmetics.

It is also time to reduce the war-excise-tax rate on admissions to theaters and places of amusement such as sporting events and concerts to the prewar rate of 1 cent on each 10 cents.

The present tax on luggage and leather goods was enacted on the assumption that all leather goods were articles of luxury. That there was no justification for such an assumption was proven when the War and Navy Departments listed women's handbags, one of the items subject to this tax, as required articles of apparel for the WAC's, the WAVES, and the women's branch of the Marine Corps. Women's handbags, purses, and billfolds generally serve the same purpose as a man's pockets, and are just as essential.

While expensive handbags, toilet cases, or luggage might be classified as luxuries, these articles when moderately priced and used for commercial and other essential traveling certainly must be recognized as necessary articles. But the tax applies to all leather goods without regard for price or use.

The wartime excise-tax rate on toilet articles and cosmetics is levied on the same over-all basis, and includes all items regardless of whether the use of articles is a necessity, as in the case of certain baby oil and powder, or a luxury as in the case of imported perfumes.

At the time this tax was enacted, arguments in favor of the levy admitted that cosmetics were universally used by women, many in the low-income group, but held that if a person of low income chose to spend part of their income for such articles, the high tax should still apply.

Today many toilet preparations and cosmetics are essential to every woman who needs to get and hold a job. Now that the war is terminated this tax should be repealed.

The high tax on admissions also places an excessive burden upon the low-income groups, and in addition taxes sporting events and many cultural events such as concerts, operas, fairs, and legitimate theater offerings.

It also levies a tax on entertainment of children, even when special programs are shown that are particularly suitable for a child audience.

The present tax of 1 cent on each 5 cents for admissions is exorbitant, and it should be reduced to the prewar tax rate of 1 cent on each 10 cents.

Most arguments against reduction of any taxation at this time center on the fact that national income must remain high to meet enormous national expenditures and pay something on the national debt.

However, opponents to tax reduction generally will not be found among lead-

ing advocates of greater economy in government.

If we appraise Government expenditures carefully, and only appropriate funds for those purposes which are actually necessary to provide full and effective security and protection for the United States and to provide all essential services to our citizens, both veterans and civilians, and not to support nonessential bureaus or duplication of services in the Government; I am confident we can and must give tax relief to our citizens now. We can accomplish this in part by repeal and reduction of these excise taxes without impairing our national economy.

I, therefore, urge the Members of Congress to support legislation to repeal the excise-tax rate on leather goods, luggage, toilet articles, and cosmetics, and to reduce the excise tax on admissions now.

Federal Taxes

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me on January 19, 1948:

Fellow citizens, I am grateful for this opportunity to briefly present my views on pressing legislative problems to the people through the facilities of WWJ and the Detroit News.

Federal taxes is the first problem chosen for discussion. There are strongly conflicting arguments on this subject presented to me for consideration by people of varied views and opposed interests. My philosophy on taxation and the course I have always tried to follow was predicated upon the principle of ability to pay. My philosophy of Government spending is to provide those essential services which the people cannot directly and effectively provide for themselves.

I have always opposed all forms of sales and excise taxes as being unfair, discriminatory, punitive, and regressive. My theory is to tax the profit, not the product. Let an industry or an individual make or sell his production, then tax his profit, if any, at the lowest possible graduated rate. Small profit, small tax; big profit, bigger tax; no profit, no tax. Never tax production as such; it stifles initiative and reduces the number of jobs, which in turn further reduces production in an endless and vicious cycle. Right now the trend of discussion centers upon tax reduction and whether it is feasible or desirable.

As I view the situation, tax reduction and the immediate personal gain may be attractive even if it is not the soundest course bearing upon the present and the future. I advocate the application of current surpluses to the reduction of our wartime debt. I point out that for every billion dollars of suspended reduction of the war debt, you, the taxpayer, will be called upon to pay an approximate additional two and one-half billion dollars over the years to come. Besides, you are risking the value of your savings bonds and reducing the purchasing power of your dollar through dangerous inflation.

My proposals for tax reduction are based upon increased personal tax exemption for dependents, the repeal of wartime excise taxes and provision for splitting incomes between husband and wife for tax purposes in order to equalize the tax burdens between taxpayers living in community-property States and States not so favorably situated. The fourth proposal embodied in a bill bearing my name, would reduce surtaxes one percentage point in each bracket.

If my ideas were to prevail, and ultimately they might in part, as is indicated by the belatedly corrected course of Chairman KNUTSON of the Committee on Ways and Means in accepting the proposals for increased exemption and for income splitting between husband and wife which, had they been previously included, might have saved the Knutson tax bills from a distinctive double veto which was twice sustained by a Republican-controlled Congress. I will not at this time undertake to perform a post mortem on the dead Knutson bills. I will let them rest where they were buried. The present tax-reduction proposal by Mr. KNUTSON I will dissect in due time. Now I will say only that aside from the provisions having to do with liberalized exemptions and splitting of incomes, KNUTSON'S latest bill is even worse in its favoritism toward the big income taxpayer than the bills which were killed by veto. The wealthy will obtain thousands more while the little fellow will get but a few more dollars in relief. The small taxpayers that are to be dropped entirely are forced upon the author by the liberalization of exemptions, something he has heretofore always opposed, but now is forced to accept in order to increase the chance for enactment of a more pernicious plan of favoritism in the high brackets.

The President's proposal for a $40 cost-of-living credit recognizes the brutal pressure of inflation upon the lowest income groups. It is an honest across-the-board tax cut for everybody—without fake or fancy arithmetic. Moreover, the average American family of four, earning less than $4,300 a year, would receive greater relief under the President's proposal than under the Republican tax bill. The President's plan could well be substituted for the liberalized exemptions contained in my own bill and that bearing the Knutson label.

The President's idea to maintain Federal revenues at current levels by imposing a tax on the excess profits of corporations has been carefully thought out. It would not injure small corporations, nor even big corporations, as such. The approach is to determine what constitutes excessive profits, and apply a 75-percent rate against this tax base. The tax would apply to no more than 25,000 corporations out of the total of approximately 400,000 business corporations in the country. Corporations with excess profits of $50,000 or less would pay no excess-profits tax.

The President's proposal will discourage corporations from charging the excessive prices out of which these excessive profits are made. With corporate profits after taxes now at an annual rate of over $17,000,000,000 nearly double the $10,000,000,000 profits earned in banner war year 1943—the excess-profits tax is a safe, sound, and equitable method of offsetting the loss of revenue from the $40 cost-of-living credit. By maintaining Federal revenues at current levels, the President will be able to retire the Federal obligations now held by the banks which are used as the basis for inflationary expansion of credit.

Reasonable reserves for all corporations are essential to their safety and continuance. Excess profits are not, as contended by Mr. KNUTSON, used in venture capital. The contrary is true. Smart money—inside money—is used for expansion to further enhance profits for the insiders in going concerns. Venture capital involving risks for wildcatting for new untried industries for making and selling new ideas and products comes from the average uninformed investor and from what is termed "the sucker." So that if we argue for venture capital, we had better plan tax relief for the average taxpayer, the worker, the veteran, the white-collar worker, not for the wealthy or the millionaire. They, as a general rule, plan their investments safely.

In discussing taxation I feel compelled to call to your special attention a proposal now before committees of Congress which is masquerading as a tax simplification. It is nothing of the sort. It strikes at the very heart of our unemployment-compensation system and the operation of our public-employment offices. It threatens the adequacy and promptness of benefit payments to working men and women when they lose their jobs through no fault of their own. Because it does so, it is equally a threat to the corner grocer, to the butcher, to the druggist, to our churches, our doctors, even the bankers. In fact, to every man and woman in the community.

This proposal to which I refer is to allow to the States a 100-percent tax offset instead of the present 90-percent offset under the Federal Unemployment Tax Act. This proposal would cut the Federal Government out of its present cooperative role with the States in both the unemployment compensation and public employment service programs. It would repudiate the national interest in these two programs.

As the Social Security Act and the Unemployment Tax Act now operate, the Federal Government collects a three-tenths of 1 percent tax on pay rolls of employers covered by unemployment compensation. The Federal Government in turn pays the cost of administration of unemployment-compensation programs and the State-operated public-employment offices of our Federal-State employment service system.

Congress now has before it a call for action on a short, simple, innocent appearing little bill, which—offered as a simplication of our tax system—would actually turn over to each State this tax now collected by the Federal Government, and would leave the administration of both the unemployment-compensation and employment-service programs solely to each State.

Why is this proposed change important to every one of us? Because it would remove the Federal Government from all responsibility for the administration of these two programs, for the maintenance in all States of minimum standards of benefit payments. It would cancel out the Federal Government's role in assuring the purpose of the Social Security Act, which is pay benefits promptly when due, to insured workers.

I cannot imagine a more brazen proposal, unless it would be to saw the Washington Monument into 51 sections and ship the pieces to the States.

States would at once be thrown into competition in reducing benefit payments and tax rates, in lengthening the waiting period, in multiplying reasons for disqualifying workers from benefits. The entire system of unemployment compensation would quickly be destroyed.

I have described this proposal as a capsule atomic bomb. I mean just that. The initial explosion would be followed by cancerous activity eating away the tissue and fiber of the entire unemployment-compensation and public-employment-office programs.

Michigan, as you know, has been a leader in the field of unemployment compensation

and public employment service. We know that our progress has been possible in part because the Federal Government took the initiative in establishing, and has used its influence in maintaining, minimum standards in all the States. The role of the Federal Government has been to keep the more backward States from unfairly breaking down standards of benefit payments and employment services available to both workers and employers.

This proposal is an insidious attempt, under the guise of a tax revision, to wreck two programs—programs which are vital to the well-being of citizens of Michigan and citizens of the Nation as a whole.

I want to report that, because of my deep interest in unemployment compensation and the public employment service, I have met with the proponents of this alleged tax proposal, and have endeavored to point out the evil of their intent.

Michigan has a particular stake in defeating this vicious proposal. We have a heavy concentration of durable industrial production, particularly automobiles and related items. As a result, within our borders, there is limited opportunity to shift from job to job when employment turns down. We want the system maintained whereby Michigan workers may be aided in seeking jobs, not only within the borders of our own State but wherever there may be unfilled job openings. Such a system is best for those who have jobs to fill, as well as for those seeking jobs

We know that labor-market conditions in Michigan are influenced by developments outside our State. The labor market must be kept Nation-wide, as wide as the market for automobiles.

We do not want our industries to be compelled to leave our State to go to other States that attempt to offer temporary tax advantages by chiseling down benefit payments to unemployed workers, and by restricting employment offices to merely local registration centers for unemployed workers waiting for jobs to turn up in their communities.

More important, we do not want our well-established industries to have to compete with industries in other States who may be willing to turn the clock back to the conditions that prevailed in the thirties.

The vicious proposal to rub out Federal-State cooperation in our unemployment compensation and public employment services, as I have stated, is promoted under the innocent label of amending the Federal Unemployment Tax Act to provide a 100-percent tax offset to the States. It must be defeated.

My views with regard to the Marshall plan are in strict accord with the recommendations of the President, the expressions and objectives of Secretary of State Marshall, and they square with the views of our own distinguished senior Senator, ARTHUR VANDENBERG, of Michigan. The expenditures entailed by the Marshall plan are intended to secure peace and harmony among nations and world salvation from communism. The defeat of the plan at this time would spell disaster and would lead to war.

To me the problem is as simple as that. Peace and tranquility with the Marshall plan; war and turmoil without it.

On domestic issues other than taxation, I am actively supporting the President's program against inflation, for adequate housing, for aid to needy veterans, Federal aid to education, and for a national program of health insurance. As you know, I am coauthor of the so-called Wagner-Murray-Dingell bill, and of a bill to expand social-security coverage and benefits. I regret that time does not now permit a full discussion of these issues.

Nehru Denies Shipment of Arms to Arab League

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I include the text of a cable I sent to Jawaharlal Nehru and the text of his reply:

JANUARY 14, 1948.

Hon. JAWAHARLAL NEHRU,
Government of India, New Delhi, India:

It is reported in the Roz El Usef, a newspaper published in Cairo, Egypt, that the Arab League secretariat has acquired a large quantity of arms and ammunition sent by the Indian and Afghanistan Governments and that the secretariat is arranging for the safe transfer of this consignment to Palestine. If true, this action on the part of your government is a violation of the decision of the General Assembly of the United Nations on Palestine. Trygvie Lie, Secretary of the United Nations, has urged all nations to uphold the decision. I am sure that Trygvie Lie and many friends of India in the United States will be shocked if you do not repudiate this reported violation of international comity. India has much to gain from a strong United Nations. Actions of this character wound the prestige of the United Nations to which India has, and is now in the act of so doing, applied for redress of wrongs.

EMANUEL CELLER,
Member of Congress, U. S. A.

JANUARY 16, 1948.

EMANUEL CELLER,
Member of Congress,
Washington, D. C.:

Report in Roz El Usef that Indian Government has supplied large quantity of arms and ammunition to Arab League is wholly devoid of foundation, and I am surprised that anybody should give credence to it. India is fully conscious of her obligations to the United Nations and can rightfully claim that she has discharged them faithfully.

JAWAHARLAL NEHRU.

The Last Speech

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. COOLEY. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the last public utterance of the Honorable Josephus Daniels, a speech delivered on December 18, 1947, here in the city of Washington, D. C.:

REMINISCENCES—EXTRACTS FROM ADDRESS BY JOSEPHUS DANIELS, THE WOMEN'S NATIONAL DEMOCRATIC CLUB, WASHINGTON, D. C., DECEMBER 18, 1947

When I was honored by your invitation to speak at the Women's Democratic Club in our National Capital it seemed an opportunity for an "ex" to discuss the domestic and foreign policies which challenge more wisdom than men and women in and out of office have seemed to possess. Having no official responsibility, I naturally felt, as do all outsiders, fully capable of providing a blueprint to build a warless world. I, therefore, went to work to draft a modern plan of 14 points, more or less, that would end soaring prices at home and bring peace to a frustrated world.

However, before I had gotten far in formulating plans for legislative and executive action needed in this postwar era of doubt and drift, word came to me that it was not desired that I instruct executives and legislators on how to solve world problems but confine myself to reminiscences. Whether the new subject was assigned for fear my 14 points would run counter to the views—or lack of views—of some in the seats of the mighty I do not know. It was probably prompted by a desire that controversial questions should not be intruded because they might mar the harmony of the pre-Christmas gathering. Always obedient to petticoat rule, I turned from proposing constructive public policies to the more pleasant field of looking backward and recalling some incidents, as witnessed from an inside seat, in the 50 years since (as a deserving Democrat) I came to Washington in 1893 to hold a small office for a brief period. It was in the second Cleveland administration and my recollections may not be without interest to those charged with guiding affairs in this era when the problems of all the world seem to wait upon Uncle Sam for their solution.

I have been privileged to have seen every President of the United States since the days of Andrew Johnson, and to have known all of them since I was received at the White House by President Garfield in 1881. In a life beyond fourscore years I have been honored with a commission from every Democrat who has occupied the White House since I was born. It was, perhaps, because of knowledge of this experience that you invited an "ex" to reminisce instead of advise. I hope you were not influenced by the same feeling that caused the president of the North Carolina Society for the Preservation of Antiquities, presenting me facetiously, to say: "Exhibit A of North Carolina antiquities."

Having lived in Washington for 10 full years and holding commissions from four Presidents, and spending much time here between officeholding and conventioning and in diplomatic service, I feel that Washington is a second home. In a sense it belongs to all Americans. It has a pull upon all who have a yen for politics and a flair for public service with an indefinable attraction for all who have once breathed its atmosphere. I love it—the cave dwellers whose hospitality I have enjoyed; its beauty more stately than any of the world's famous capitals; its public officials and bureaucrats; and most of all, like most Americans, I love to see the wheels of government go round. So I come back tonight, cheered by troops of cherished associations and fond memories.

I am particularly happy, on the first occasion of speaking in Washington in recent years to make my come-back to the Democratic women of this club. Preachers emphasize the doctrine "Ye must be born again," but many understand it as little as did Nicodemus of old. However, in matters intellectual we all know the truth of the new birth when we emerge from the shell of ignorance into the perception of a new truth or a new doctrine. I remember as a boy hearing an emotional Christian give his religious experience. He related with something of the glow that never was on sea or land how on a certain night at a certain hour in a certain place God spoke peace to his soul.

In somewhat the same manner I was born into the new light of faith in woman's suffrage. Until my conversion I had never seen an advocate of that strange doctrine or heard anyone profess it. Of course, I had heard of those noted women, Elizabeth Cady Stanton, Lucy Stone, Anna Howard Shaw, Carrie Chapman Catt, and other pioneer advocates of votes for women. They were ridiculed as strange creatures who wanted to wear the pants. They wished to unsex themselves, as critics said, by wishing to frequent polling places, often unfit for the fair sex. I had read about Mrs. Catt who was pictured as a woman whose creed would destroy the home by taking women out of their God-given sphere. From such atmosphere and environment, where election day meant no more to women than old time military muster day, a great light shone round about me, even as that which illuminated the pathway of Saul when he was suddenly converted on his way to Damascus. My conversion to woman's suffrage came with as sudden a change. I recall the place and the hour when going to a woman suffrage meeting in Washington to scoff I remained to pray. It was a summer night in the late nineties. I had come to Washington to attend a meeting of the Democratic National Committee. That business ended, I was taking dinner with a fellow member and his wife at the old Ebbitt Hotel not far from the White House.

"How would you like to go to hear Carrie Chapman Catt tonight?" the lady asked. "Let's go to hear the pussy cat."

"I do not like her name or her cause," I replied.

She said "Neither do I, but I'd like to hear her speak. We should not close our minds."

Thus challenged upon my creed of "trying anything once" I accepted. We arrived at the crowded small hall late and had to stand while the lady with unanswerable logic called unbelievers in the cause of repentance and acceptance of her creed. No, I did not go to the mourner's bench and rise professing a new faith, but I did find myself carried along by the force of the heights of her great argument so irresistibly that I had a new birth of political faith. From that hour I was never disobedient to the heavenly vision and never doubted that my country would recognize the equal right of women to voice in government.

My conversion, not loudly professed in an atmosphere that had not been exposed to the convincing reasoning of Carrie Chapman Catt and the moving eloquence of Anna Howard Shaw, brought forth no early fruit. However, I pondered it in my heart, never doubting its coming until 20 years later at Woodrow Wilson's inauguration I saw marching down Pennsylvania Avenue, led by an American political Joan of Arc, a phalanx of women carrying banners with what was then a strange device "Votes for Women." The demonstration organized to urge votes for women as an integral part of the New Freedom. Woodrow Wilson, reared in the old-time southern conception of the place of women, was adamant to their entreaties, persuasions, and demands. With him in his first term other issues of reform had precedence. However, though denied a seat at the New Freedom table, these militant women never doubted that before a change of administration they would melt down both indifference and opposition. In the inner circle of the Cabinet, William G. McAdoo, Franklin Lane, and Josephus Daniels, were adding their persuasion to the winning voice of Helen Gardner, the first woman Wilson named to an important post. The women were not discouraged when the only dent they could make in Wilson's armor was that in 1916 he favored a plank in the national platform of his party advising the States to grant the right of women to vote.

When persuasion did not move Wilson to go all the way, these resolute women took a suggestion from a letter written long ago by Abigail Adams to her President husband in which she said: "If particular care and attention are not paid to the ladies we are determined to foment a rebellion and will not hold ourselves bound to obey any laws in which we have no voice or representation." Animated by that spirit, on a wintry day, a number of militant suffragists picketed the White House and declined with resentful indignation Wilson's invitation to come into the Executive Mansion and "get warm."

Though outwardly nearly freezing they were hot with rage inside against his seemingly immovable position, and were so militant that some of them were arrested for disturbing the peace and sentenced to confinement in prison. It looked like they had reached the end of their crusade with the arrest of their leaders and the iron bars enclosing them. But these ladies, each like Valiant in Bunyan's immortal Pilgrim's Progress said: "I am Valiant, a pilgrim, and am going to the Celestial City though a host organize against me"—only their destination was the ballot box and not the goal of Valiant.

It was not until the patriotic and sacrificial contribution of women in World War I, including the first women to wear military uniform (the yoemen (F) and marines in the U. S. Navy), that Woodrow Wilson embraced woman suffrage and appeared before the Senate (September 30, 1917) and urged submission of the nineteenth amendment for ratification by the States. He based his eloquent appeal in the name of true democracy. But enough Senators were in opposition to make success then impossible. Again President Wilson cabled from Paris (February 10, 1919) to a number of Senators urging them to submit the amendment. William Jennings Bryan hurried to Washington to intercede for it. All in vain—the provision was defeated by one vote. It was clear, however, that the reform was gaining and could not long be delayed. On the 19th day of June 1919 the suffrage amendment was submitted to the States.

The fight was long and often in doubt until the Volunteer State of Tennessee obtained the honor of casting the deciding vote that conferred full citizenship on women—an honor which my wife (who was appointed by President Wilson as the official delegate from the United States to the World Woman's Suffrage Conference at Geneva in 1920) had coveted for North Carolina. We rejoiced with millions of others, when, in the Wilson administration, the nineteenth amendment was proclaimed on the 26th day of August 1920.

Though liberal men of both parties had cooperated to secure the ratification of the woman suffrage amendment, little recognition of woman as equal partner in government came until Franklin Roosevelt's inauguration. Then the first woman, Frances Perkins, took a seat in the inner circles of the administration as a member of the Cabinet. Florence Allen was named as the first American Portia on the United States circuit court, and Ruth Bryan Rhode and Daisy Harriman were elevated to high station in the ranks of diplomacy. A number of able women like MARY NORTON and EDITH ROGERS pioneered in able and useful service in Congress, and it became almost a rule that a woman should hold a place on every important agency of government under Roosevelt and Truman, not only in civilian tasks but likewise as enlisted personnel and officers in the Army and Navy in World War II where they more than made good.

More still: In my State, in World War I, the wife of the Governor of North Carolina was so abundant in labors at home and with the troops in Europe that it was truly said "The State has two Governors for the price of one." The United States could have made a like boast in 1933–45 for in distinguished public service, then and since, Eleanor Roosevelt proved herself a full partner to her illustrious husband. Uncle Sam had two Chief Executives for the price of one.

What does this reminiscence of the sufferage fight sum up to for the women of the national democratic clubs and other women citizens? The command for the women of today is: Go into politics. Go in red headed. Quit shivering on the brink and plunge into the stream and demand an equal part in navigating the ship of state by women officials who have demonstrated their fitness.

There were more women voters in 1944 than men and a majority of them cast their ballots for Roosevelt and Truman. They will equal or outnumber the male voters in 1948, and they, as harbingers of progress and peace, ought to demand the election of more qualified women to posts of power. It is rare to find a static woman. Just as when housekeeping they move the bed and change the location of furniture, so in public life women are not wedded to the status quo. They are not content with things as they are. The attitude of women of vision and responsibility is in the slogan "Change but forward." Militant and progressive liberalism must be the democratic marching order in 1948, and the result will depend on women voters.

The first President under whom I held office was Grover Cleveland. In the 1892 campaign, I, with many other Democrats, had joined in the song that put him in the White House:

Four more years of Grover
Then we'll be in clover.
Out they go, in we go,
Four more years of Grover
Then we'll be in clover

Deserving Democrats (why use the overworked adjective since all Democrats are deserving?) flocked to Washington, I among the number, in the near panic year of 1893 to hail the realization of Grover's return to the White House, with patriotic desire to lend a hand.

It was in my apprentice days in the second Cleveland administration that I first knew and had a run-in with Theodore Roosevelt, then Civil Service Commissioner. The abuse of the doctrine "to the victor belong the spoils" had caused Grover Cleveland and Theodore Roosevelt to wish to remedy the abuses by substituting civil-service examinations so that clerical and some other appointments to office would be free from politics. The reform as to clerical and like appointments, though not without its evils, was an improvement. This was true even though at the first it was weakened by giving life tenure to those who owed their appointment to political influence. I believe then (and, with some reservations, I believe now) except in war days and times of emergency that all key positions in an administration should be filled by members of the party entrusted with the administration of government by the vote of the people.

The pendulum has swung far—too far—from government by party men to government by men who do not think enough of the obligations of citizenship to even vote, much less take an active part in shaping public policies. In the old days the doctrine "to the victor belong the spoils" was carried to an extreme. But, bad as it sometimes was, it had the virtue of insuring government all down the line by a responsible party which could be driven from power for abuses. Today the pendulum has swung too far toward a government manned by men who if they have any political principles manage to conceal them. Too many men in office are like chameleons, ready to make lightning

changes in their attitude to stay in office in defiance of the mandate of the voters for a change.

The citizen who does not vote (I do not refer to the good people in Washington City, who are unjustly disfranchised along with idiots and convicts) and take interest in public affairs through political activity advertises that he is a civilian AWOL. No slacker at the ballot box ought to be regarded as eligible to hold office. There is need for a new birth of the sort of freedom that gives precedence in official station to men in accord with the party in power who have convictions that send them to the ballot box, to the primaries, and to the conventions.

Today, when the term "communism" is heard oftener than any other word in the English language, I distinctly remember when I first heard that word used in public discussion. It was when Cleveland was preaching the gospel of tariff reform. He charged that the Republican policy was founded on a "communism of pelf."

There was another tariff story in the Cleveland days that had wide currency. I recall it ran like this:

"One night Mrs. Cleveland aroused Grover from his slumber by saying, 'There are burglars in the house.'

"The House had passed a good tariff bill, which the Senate was emasculating and shaping it into one Mr. Cleveland characterized as 'party perfidy and party dishonor.' Half awake, he said to Mrs. Cleveland:

"'There are no burglars in the House, my dear, but you'll find plenty of them in the Senate.'"

It is interesting to recall that when Cleveland was opposing the fiasco of a revolution in Hawaii that dethroned Queen Liliuokalani, a young student at Groton by the name of Franklin Roosevelt was taking the same position in a school debate. In answering his opponents young Roosevelt asked, "Why did not the United States Government submit the treaty to a general vote of the inhabitants?" He answered his question by saying, "Because it was known that they would vote against it to a man."

This proves the consistent policy of most Democrats against imperialism and colonization. At the time when McKinley was, as he said, "benevolently assimilating the Filipinos," this same young Roosevelt in college was denouncing the policy of imperialism in the Philippines. Uncle Sam ruled that people until Franklin Roosevelt pledged independence to the Philippines as soon as victory was won in World War II. That pledge was carried out by President Truman. When Roosevelt appended his name to the Atlantic Charter, promising self-government all over the world, as he was a man carrying out the vision that guided him as a schoolboy at Groton and a student at Harvard. The boy was father to the man.

In 1889, while Mrs. Cleveland had no thought but of a second term, Mr. Cleveland was telling the press that the happiest day in his life would be when he could lay down the heavy burdens imposed upon him by the office of Chief Executive. He thought he was sincere. But the truth is that it took little persuasion to induce him to seek election for a second time in 1892, and he never quite forgave the majority of his party for not renominating him in 1896.

I recall a story told me by a faithful Negro messenger from New Bern, N. C., who served long and acceptably in the White House. It ran like this:

"In March 1889, when the Clevelands were packing up after the defeat in the previous November, Mrs. Cleveland said to her Negro friend, who was to stay in the White House service:

"'Keep everything here in good shape and before 1893 put everything back as it has been these past 4 years. We are coming back then. I wish to find the White House and its furnishings just as they are now.'

"He promised, and when the Clevelands returned, he reported for duty, saying he had kept his promise, and she would feel perfectly at home."

If Mrs. Wilson were not present, I could tell how disturbed the Democratic politicians were when they learned about the romance that made Edith Bolling Galt mistress of the White House. However, at the risk of rushing in "where angels fear to tread," I will tell it, anyhow. Upon my return from a speaking trip in the West in 1915, I found an imperative message from Postmaster General Burleson to call him at once on a matter of the highest importance. He was the political high priest of the Cabinet. News, having gotten out, that President Wilson had won the love of Washington's most charming lady and that marriage was imminent, the Democratic politicians had hurried to Washington to tell Burleson that if Wilson married before the 1916 election it would cause his defeat. They were scared stiff at the thought. So was Burleson, who communicated his fear to me. What could be done to save the party? We did not know then that Edith Bolling Galt entertained a like trepidation and at Cornish earlier in 1915 had set herself against a wedding before the election.

"What can be done to save the party?" That was the question I asked Burleson.

He replied: "Wilson must be induced not to marry until after the election in November 1916."

"How can that be done?" I asked.

"While you were away we discussed it," answered Burleson, "and we all agreed that you were the member of the Cabinet to approach him and tell him the weal of the country depended upon his reelection; that marriage prior to that date would defeat him; and that he should not contemplate such a step until he had been reelected."

"Why was I selected for this dangerous diplomatic mission?" I inquired.

"Wilson thinks as much of me as of you, but as the first Mrs. Wilson and your wife were the closest friends in the administration circle, we think he will be more apt to listen attentively and be influenced by your advice," Burleson said.

I was an ambitious young man and the tender of this position as Envoy Extraordinary and Minister Plenipotentiary had its appeal. I felt sure that an appeal for postponement of the marriage would find no echo in Wilson's heart. I suspected he would wish another Secretary of the Navy, who would think of navigtion on the salt water rather than aspire to direct sailing on the matrimonial sea. I declined the mission and kept my job, and Wilson was shortly happily married.

Wilson followed his heart and his election after his marriage was another proof that "all the world loves a lover." The country, when it came to assess the worth and wisdom of the new mistress of the White House, rejoiced that the President had not permitted political devotion to interfere with marital happiness. Instead of the bride driving away votes, she attracted them. And, in the years that followed, though she meticulously refrained from public participation in affairs of state, the country learned to admire and respect the noble lady whose wisdom and counsel were above the value of rubies in the anxious days of war; who rose to statesmanship in Paris when some upon whom Wilson leaned failed. She was a ministering angel in the long years that followed the breakdown as Wilson lost his health and shortened his life by consecrated devotion to the League of Nations. He correctly believed that American entrance into the League would insure lasting peace. History has proved he was right, for if the United States Senate had been guided by the same wisdom in 1919–20 as it displayed in 1945–46, no Second World War would have cursed the world.

Time does not permit of other stories about occupants of the White House in the years I was privileged to "have an inside seat" in days of peace and war. I'd like if there was time to recall how Wilson broke precedents and delivered his message in person to Congress; drove the horde of lobbyists, thick as locusts in Egypt, out of Washington; and recall the long fight Wilson made for the League of Nations even when broken at the wheel. I would like to dwell on how Franklin Roosevelt converted depression into prosperity, declaring "the only thing to fear is fear" and followed the declaration by New Deal healing legislation; and how both these Democratic Presidents successfully waged war to end totalitarianism and outlined workable peace programs. But time forbids.

Summing up, let me give you an impression based on association, long experience and study of the careers of national leaders. It is my mature conviction that no man since Andrew Jackson ever willingly left the White House, and I doubt that this could be said of Old Hickory if Rachel had been living. Theodore Roosevelt was not the only "willin' Barkis" who died hoping to be given a new lease on residence in the Executive Mansion. There's an appeal about the great office of President which does something to a man and few privileged to hang up their hats there have been happy after its doors were closed to them. No matter how much, like Cleveland, they declared that they looked forward with joy to laying down their onerous duties, or like Coolidge hoping his "I do not choose to run" would result in being drafted, each and everyone of our Chief Executives has been so enamored with the power and glory of the greatest office in the gift of mankind that not one has contemplated a change of residence except with regret. The blow was softened for Taft by a seat on the Supreme Court Bench. Wilson would have felt the urge to be a candidate in 1920 on the League of Nations issue if he had not been stricken. I am not sure Franklin Rooselevt would not have responded to a fourth encore, and there is not room to doubt Herbert Hoover liked it better as a residence than salubrious California's beloved Stanford University, and Harry Truman finds the White House more attractive than Independence, Mo.

It is not only men who have lived in the White House who have yearning to live in that residence, but there is an impression that on Capitol Hill—and in some State houses—the Presidential bee has stung others into a desire to move into the White House. Once bitten by that bee, there is a tradition that no man ever recovers from it.

But—I am in danger of treading on forbidden grounds. If my subject had not been assigned me I might tonight have outlined the course of government that all Allied nations should have pursued after V-day and should pursue now to reach the promised goal. Or—and that gives me pause—I might have advised a course that would have been fatal to the attainment of the peace which alone can save the world from chaos.

If the United Nations must continue to debate and practice manana while there is lack of a program guaranteed to bring the peace, for which all women prayed in the cruel days of war, the responsibility will not lie at my door. I was ready and chart and compass to point the route to the safe harbor and was only deterred from its presentation by being shunted off by the Women's Democratic Club to the uncontroversial theme of Reiminiscence.

Even tonight, however, in the swirl of conflicting tides and eddies, I am a confirmed optimist. I dare to believe that doubt and confusion will give place to the universal peace for which our best beloveds fought and died and the goal for which women prayed

and sacrificed. In this Christmas season let us invoke the blessing, long deferred, promised with the advent of the Prince of Peace, and have the faith that we shall live to see an upswing toward the peace which will cover the earth as the waters cover the sea.

Blueprint for Disruption

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. HUGH D. SCOTT, JR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Henry Hazlitt from Newsweek magazine for January 19, 1948:

BLUEPRINT FOR DISRUPTION
(By Henry Hazlitt)

President Truman's annual message to Congress was primarily a campaign document. It seems to have been written chiefly in fear of losing extreme leftist votes to Henry Wallace. The basic philosophy it embodies is unmistakable. It is the philosophy of the welfare state, the doctrine of salvation through bureaucracy. Free enterprise, free markets, and free prices are no longer to be trusted to stimulate and guide production and consumption. Everything is to be in charge of omniscient and omnipotent bureaucrats.

Everyone is promised economic security, regardless of what he contributes to production. We are to have bigger job insurance, bigger old-age benefits, bigger survivors' benefits, bigger education. The Government is to subsidize our medical care and our housing. It is also to reclaim land, replant forests, build more TVA's. On top of this, it is to spend in 15 months on European aid alone as much as it used to spend in the same period before the war for all its purposes combined.

Mr. Truman, by some miracle, is at the same time for economy. "Government expenditures have been, and must continue to be, held to the lowest safe levels." But the proposals he makes would immeasurably increase even present expenditures, and the Federal Government is already spending in 1 year as much as it took it 5 years to spend just before the war. Of course, all this money is to be taken in taxes only from the rich.

What Mr. Truman forgets is that the entire wealth and welfare of the country depends upon production. The total amount of the national product is far more important to the average family than any possible redistribution of it, yet Mr. Truman's schemes and taxes would undermine, discourage, and disrupt production. It would destroy incentives. The producers would not be permitted to enjoy the fruits of their production, and others would be handed the fruits whether they produced anything or not.

Mr. Truman's speech is a tissue of self-contradictions. He is for free enterprise and free competition, but demands price fixing. He wants to "continue price supports for major farm commodities." But he declares that the price of food is too high and that it must be reduced by Government edict. While prices are to be held down, costs of production are to be forced up. The minimum wage is to be increased from 40 to 75 cents an hour. This would be a wage boost of 87½ percent. All workers above the minimum would, of course, insist on the maintenance of their existing differentials. Production costs and prices would be forced up enormously, and this might cause heavy unemployment even in spite of monetary inflation. If we can raise wages just by passing a law, and do it without such harmful consequences, why not $1 an hour or $2 an hour? Why stop anywhere?

We must enlarge our industrial capacity, continues Mr. Truman: "At least $50,000,000,000 should be invested by industry to improve and expand our productive facilities over the next few years." But such funds could only be provided out of past profits and would only be invested if there were an inviting prospect of future profits. Yet, Mr. Truman is shocked by existing profits, even though, as a percentage of the national income (especially when proper allowance is made for depreciation and inventory replacement) corporate profits today are not at all abnormally high. Mr. Truman wishes to increase taxes precisely where the increase would do most damage to production—on the corporations that are the very means of the workers' livelihood. He would do this in order to free some 10,000,000 voters in an election year from all income taxes, and to create the short-lived illusion that present enormous Government expenditures can be paid for only by a minority, by the rich, by somebody else.

Candidate Truman's program is demagogy run riot. It is a blueprint for disruption. He asks this country to imitate slavishly all the disastrous economic policies that have brought Europe to its present critical state, and he wants us to call this process American leadership.

A Modest Request

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Daily Evening Item, Lynn, Mass., recently:

A MODEST REQUEST

The most frugal Congressman will find it hard to quarrel with one item in the President's 1949 budget. That is the modest request for $24,000,000 for ship construction, and $15,300,000 for contract authorization.

Those figures look even more modest beside the billions asked for other branches of national defense. We say "other" because it is generally accepted that a shipbuilding industry and a modern, adequate merchant marine are important to our safety.

The President said that scarcity of steel, surplus warbuilt tonnage, and "uncertainties regarding the future economic requirements for shipping" prompted his decision. He does not think that the Maritime Commission should start any construction now without contracts for sale to private operators.

In this, Mr. Truman goes further than the State Department in its analysis of European-aid requirements. Even on the Marshall plan's home grounds it is felt that our maritime position, especially in the passenger field, is unimpressive. The Department recommends that European shipbuilding be deferred after ships now under construction or contract are finished.

The Keller committee, Truman's advisory group, proposed a "modest start" on eight United States passenger ships in fiscal '48, and a big construction program for the next 3 years at a cost of about $150,000,000 a year. But no start has been made on the 1948 program and it is too late to make one before the fiscal year ends. So Mr. Truman's recommendation, in effect, puts the 1948 program into 1949.

The Maritime Commission now has almost $90,000,000 for ship construction. And there are passenger lines with approved plans for new ships, and money in the bank.

The operators say they could get ships built in foreign yards for half or less what they would cost here. But that wouldn't help American shipbuilding, and besides they wouldn't be able to get an operational subsidy. So they want a 50-percent construction subsidy.

The Commission is permitted to grant a 50-percent subsidy if it can be shown that the difference between American and foreign construction costs is really that much. They think the difference is nearer 40 percent. There the matter rests.

All the dire and oft-repeated predictions seem to be coming true. The last construction job on the horizon for private yards will be finished by August. Shipyard employment is down to 30,000 and is expected to go to 10,000.

The United States still has only one first-class passenger ship to compete with foreign luxury liners. There are only 30 passenger vessels remaining of the 113 operating under the American flag in December 1941. In spite of war-built surplus, there is a shortage of tankers and fast cargo ships.

European aid, like shipbuilding, is a factor in national security. But the postponed fiscal '48 building program would only take an estimated 60,000 tons of steel out of a national production of about 85,000,000. There is little chance that Congress in its present mood will up the budget for ship construction. But perhaps it will at least see fit to iron out some of the difficulties in the laws covering subsidy payments.

Veterans' Education Aid

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. MADDEN. Mr. Speaker, under the present inflationary high cost of living the economic condition of GI's attending colleges and universities over the country is indeed critical. The majority of the Members of Congress, I believe, are anxious to pass suitable legislation which will aid the veteran in overcoming the unreasonable increase in the cost of living since the original veterans' subsistence legislation was passed.

I am herewith incorporating a news item from the Daily Northwestern, of Evanston, Ill. I have received a great number of letters from GI's attending universities at various points in the Middle West, all registering identical protests.

The news item follows:

TUITION JUMP TO SPELL "CURTAINS" FOR MANY GI'S

While Veterans' Coordinator Chester E. Willard yesterday determined that it is too early to announce the effect the recent tuition hike will have on the veteran, comments from campus GI's indicate that it will spell curtains for many of them.

With tuition boosted to $505 beginning in the fall quarter, veterans will run into the red. Every Northwestern student enrolled under the GI bill of rights will finish the 1948–49 school year actually owing the Government money.

VA ALLOWS ONLY $500

Here's how it works: Currently, the Veterans' Administration allows its students $500 a year for tuition and books. That means the veteran may take any course of his choosing and buy all the books that are necessary so long as he doesn't exceed the $500 limit.

Inflation has forced hundreds of ex-GI's into part-time jobs. Many veterans already hold 40-hour-a-week positions in Evanston and in Chicago. Wives of married students are working as office clerks in campus buildings. Under the old tuition of $400, single men as well as married couples have found college life tough sledding.

Most veterans stayed under the ceiling and gave little thought to winding up as debtors. Books averaged $90 a year. That left $10 surplus. But what happens now? Veterans will pay for their books and supplies and still get billed for $5 in June. Meanwhile, board and room bills remain unpaid.

SUBSISTENCE FALLS SHORT

His $65 monthly subsistence allowance falls short of paying for room, board, washing, cleaning, and incidentals. Two may be able to live as cheaply as one, married veterans agree, but not on $90 a month.

If Congress doesn't pass the subsistence bill now pending, Northwestern's enrollment will suffer a drastic decline. Customary Conga lines in front of registrar's offices will be missing. GI Joe will have gone to work.

Truman's Tax Juggling Act

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of January 8, 1948:

TRUMAN'S TAX JUGGLING ACT

A major portion of President Truman's message to Congress on the state of the Union was a prospectus of that brave new world of the future when the Government will insure everybody against everything from the cradle to the grave, when no one will need the courage and foresight to plan for his own economic needs because an all-wise Government will meet every contingency that arises.

Another part of the message contained a recommendation that Congress appropriate $6,800,000,000 to finance the first 15 months of operations under the European recovery program. This was not unexpected, and the subject is scheduled for thorough debate in the coming weeks.

A third section of the message consisted of a reiteration of the President's views on a number of subjects, such as his advocacy of universal military training, of bestowing upon the Federal Government the power to ration and to impose price and wage controls, and of the admission of a number of displaced persons to the United States, and of his opposition to the Taft-Hartley Labor Act.

The only element of surprise in the message was provided by the President's tax proposals, which consisted of a remarkable hodgepodge of faulty economics and a scheme to juggle taxes in return for votes. But perhaps this should not have been a surprise, since 1948 is an election year.

The President's recommendation that a tax credit of $40 be allowed each individual taxpayer and dependent would provide substantial tax relief only to persons in the lowest income-tax brackets. It would provide only infinitesimal relief to those in the higher brackets, while exempting an estimated 10,000,000 persons now on the Federal income-tax lists from paying any Federal income tax whatever.

This proposal is an aggravated example of the New Deal's "soak the rich" philosophy and is nothing more than a brazen bid for votes.

But the President's statement that Government revenues must not be reduced until inflation has been brought under control, and that taxes on corporations accordingly should be increased by $3,200,000,000, is utterly fantastic and wholly inconsistent with other portions of the President's message.

The President seems to think that it is highly inflationary if individuals and corporations spend the money they earn, but apparently he believes the Government can spend the same money without producing any inflationary effect. The fact is that when there is a large amount of money in circulation, the effect is the same, as far as inflation is concerned, whether the Government collects and spends it or whether it is spent by those who earned it in the first instance.

In the early part of his address, the President said that industry should invest $50,000,000,000 over the next few years in new facilities in order to maintain the present level of productivity and go on to greater accomplishments. Where would industry get the money for this enormous investment, or what incentive would there be for the owners of capital to invest it, if profits were to be taxed away, or if the Government, through excessive taxes, were to prevent industry from accumulating surpluses?

The President attempted to justify an increase in corporate taxes on the ground that corporate profits totaled $17,000,000,000 in 1947 as compared with $12,500,000,000 in 1946. In making this comparison, he conveniently overlooked the fact that the profit dollar is just as much inflated as the food dollar. He also ignored the fact that the cost of replacing worn-out machinery and of building new facilities must be paid with inflated dollars. This part of the President's message might well have been taken word for word from a report by the CIO's economists.

The President is greatly concerned about the high cost of living. But nowhere in his message was there any recognition of the effect on the cost of living of high taxes and our foreign aid program.

Taxes are as much a part of the cost of doing business as wages and the prices of materials. Eventually all these costs are passed on to the consumer. Unnecessarily high taxes are bound to result in unnecessarily high prices. But either the President is not aware of this relationship, or he chose to ignore it.

Likewise, he ignored the relationship between foreign aid and domestic prices, although no single factor has contributed as much to high food prices as the Government purchases of grain for export.

One can only conclude from the President's message that the Nation will be in a deplorable state if it must depend much longer for its guidance on an administration as confused and as willing to play politics with its economic welfare as the Truman administration has shown itself to be.

Improving Army System of Justice

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. TEAGUE. Mr. Speaker, I am very glad to be able to give my support to these amendments to the Articles of War which we are now considering as our experience during the recent war demonstrated that changes to the Army system of justice were necessary. Over 11,000,000 Americans not accustomed to military law were brought under this jurisdiction during World War II and approximately 80,000 were convicted by general courts martial. Of course, a far larger number were convicted by special courts martial.

In many of these convictions it has since been established that the result was not justice for the accused in that he did not have the same rights he would have been granted by civilian courts, and in many instances his punishment of long period of confinement and dishonorable discharge was too severe for the offense committed.

At the present time we have a Regular Army Establishment five times the size of our previous peacetime Army. Also it is likely that universal military training will be enacted into law, which will require all young men to participate in some form of military training. Therefore these amendments to our military system of justice are urgently needed.

I believe it will be a great step in the right direction if the following amendments are accepted: First, enlisted personnel to be included as members of a general or special courts martial; second, the trial judge advocate and the defense counsel for the accused to be lawyers; third, that officers as well as enlisted men be tried by special courts for minor offenses and that lesser penalties than those now provided be imposed in many cases; fourth, for pretrial investigations to be conducted before every general courts martial and that counsel be provided the accused during the investigation if requested; fifth, that a more adequate review of sentences by courts martial be established.

The Late Honorable Guinn Williams, of Texas

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1948

Mr. GOSSETT. Mr. Speaker, before I returned to Washington, my colleague, the Honorable O. C. FISHER, of the Twenty-first Congressional District of Texas,

announced to this body the death in his home town of San Angelo on Friday, January 9, of the Honorable Guinn Williams. For 10 years, Guinn Williams represented that district of Texas which I now have the honor to serve. He was reared on farms within this district, and for many years was the most distinguished citizen of one of the best-known little cities in Texas, Decatur, the county seat of Wise County.

I want at this time to pay tribute to his memory. He was truly a great American. He came of sturdy pioneer stock. He was one of those rugged, courageous, aggressive, God-fearing individuals who helped to make of Texas and the Southwest a great empire with noble traditions. If our Nation possessed more men of his towering stature, many of us would have less fear for the future strength and security of this Republic. In a busy life filled with multitudinous activities, in the many capacities both private and public in which he served his day and generation, he did all things well. He possessed strength of mind, clarity of vision, and honesty of heart which won him universal confidence and esteem and which endeared him to his many thousands of friends. He embraced and lived by a code of fair play and fair dealing, a spirit of live and let live. Even in his last years, amidst the strife and confusion of our times, he never lost a sense of true values and of direction.

His distinguished services in this body, from which he voluntarily retired, have been and will be elsewhere recorded in the RECORD.

During a constructive and busy life, he did not neglect to rear a splendid and distinguished family to whom he taught, and in whom he inspired his traits of good character and outstanding citizenship. His life will continue to be an inspiration to them and to us.

He left our country much better because he lived, and much poorer because he had to go. No more could be said of any man.

The Need for Action on the GI Educational and On-the-Job Training Allowances Is Now

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. MANSFIELD. Mr. Speaker, I am taking this means to call to the attention of the House the number of letters which I have received from the students at the Montana State College, Montana State University, Carroll College, Montana School of Mines, and Montana State Normal College, all in my district, as well as from Northern Montana College at Havre, Eastern Montana College at Billings, Rocky Mountain College at Billings, and also from interested individuals throughout the State concerning H. R. 4212.

It will be recalled that last year during the first session of the Eightieth Congress, S. 1394 passed the Senate and was referred to the Veterans' Affairs Committee. This committee unanimously reported out H. R. 4212, which has since been held up in the Rules Committee and for which no rule has been given. H. R. 4212 supersedes the previous measures including H. R. 870 which was introduced by Mrs. ROGERS and which had been given consideration. H. R. 4212 is the bill which the committee finally decided to approve.

Both of these measures, S. 1394 and H. R. 4212, will raise the allotment for single veterans in educational institutions from $65 to $75 per month and for the married veterans from $90 a month to $105 and $120 a month, depending on the number of dependents. In an effort to shake this bill out of the Rules Committee, a number of us in the House, myself included, signed a discharge petition, but in order to bring that bill to the floor of the House we must have 218 signatures. At this time we are still very short of that number, and I call upon the Rules Committee and the House, in view of the desperate situation in which many of the GI's and their families find themselves, to either sign the discharge petition so we get the necessary number of signers or get the Rules Committee to give us a rule so we can consider and vote on this very important bill.

I am wholeheartedly in support of this measure, and I will do everything I possibly can to see that it is passed at the earliest opportunity.

I want to also call to the attention of the House a bill introduced by me on January 3, 1947, H. R. 265, which will remove the monthly maximum placed on the incomes of veterans receiving both compensation and salary allowance for on-the-job training. It is my understanding that a bill similar to this, introduced by the gentleman from New York, Congressman PAT KEARNEY, has been reported out of the Veterans' Affairs Committee, and that for this measure also the Rules Committee has refused to give a rule.

I should like to urge upon the membership of the House that both the Meade bill, H. R. 4212, which will allow an increase in education subsistence allowances, and my bill, H. R. 265, or the Kearney bill, H. R. 246, which will increase the maximum for veterans in earnings while on the job training and also the subsistence allowances for those veterans going to school be reported out to the House and passed at the earliest opportunity.

Income Taxes

EXTENSION OF REMARKS
OF
HON. FRED E. BUSBEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. BUSBEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter which I received this morning from one of my constituents. I do not wish to include his name because I have not requested his permission to make his letter public. The writer of the letter is a close personal friend of mine and one whose judgment I seek and respect. I assure you, Mr. Speaker, that he reflects the thoughts of the vast majority of the people in my district. It follows:

JANUARY 12, 1948.

Mr. FRED E. BUSBEY,
Member of Congress, Congress of the United States, House of Representatives, Washington, D. C.

DEAR FRED: I spent Saturday afternoon and Sunday figuring my income tax, also that of my mother's, and this morning I am in a bad mood. Upon coming into the office this morning, I found that my disposition is no different than that of the others around here and we have concluded that we are victims of politicians—Democrats and Republicans included. We do not even count Communists, although there is a smoke screen raised on that issue.

The way we size it up is that the Republicans made a miserable failure of putting across their tax plan which they so freely promised all of us who voted for them. They failed, just for one reason—they succumbed to political pressure of their own party, as well as the Democrats, and voted for the appropriation the boys wanted. In turn, the Democrats kicked them in the face and let the override of high-tax Harry's veto fail.

If the present tax bill is to pass, and to prevent everyone moving to a community-property State, leaving perfectly good positions your friends JOHN TABER and LEO ALLEN will have to let the other boys know that the "tap" is shut off until the tax bill is passed.

We cannot continue to go on year after year digging down into our meager investments to pay our income-tax bills.

This letter is not written with any idea of being funny, it is in a very serious vein, and I think you and the other Republican leaders must realize that when sentiment of this kind begins, it will be felt in places where it will be rather effective.

I heard a very interesting lecture the other evening on why Europe's recovery program broke down—due principally to lack of administrative know-how. If men who have administrative ability in this country commence to think of retiring to get out of all the worries connected with high taxes, and working at half time for the Government, it will indeed be a sad state of affairs.

Very truly yours.

Displaced People

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. MADDEN. Mr. Speaker, the second session of the Eightieth Congress is confronted with a great number of major problems, both from an international and a domestic standpoint. During the last session, committee hearings were held on the question of American contributing its share, along with other nations, toward taking care of the unfortunate

displaced persons now standing by in European camps. During the recent war, over 8,000,000 people were uprooted from their homes and either fled or were forced to find haven in other European countries or localities. Over 7,000,000 of those people today have already been repatriated. The displaced persons remaining today number approximately 900,000. The problem facing democratic nations is to admit these displaced persons to countries where they can establish themselves and become useful citizens. Other countries have already assumed their just burden and have admitted to their borders and reestablished a great number of these homeless people.

Members of Congress visiting Europe during the last summer, learned about this problem first hand. They found that these displaced persons are self-reliant and self-respecting people, determined to make their own living and reestablish their lives if given an opportunity to do so. Many of them were pioneers in the battle against nazism and Hitler tyranny and are now ready to combat and oppose the forces of communistic oppression. They are eager to become useful citizens in any free country. It is impossible for the European economy to support them and of course the United States Army cannot continue to support them indefinitely. They cannot be repatriated as it would be impossible to compel all of them to return to persecution and ultimate liquidation. We should immediately open our doors for the admission of a reasonable number of these people outside the immigration quota system, subject of course to our regular immigration requirements.

Almost all of them are in the American, British, and French zones of Germany and about 530,000 are in the American zone alone. Throughout our country, and especially in the Middle West, millions of acres of productive land could be utilized by most of these new citizens. In the last few years we have had a serious decline in our farm population. More than 2,000,000 persons left our rural areas during the war who did not come back at the cessation of hostilities. American farmers have a big job ahead, producing food for America and the hungry people in the world. The American farmer is short-handed. By channelling a great percentage of these displaced persons to the rural areas, it would relieve the scarcity of farm help and aid in providing food for millions, not only in our country but throughout the world. A great majority of these displaced persons are from the Baltic and Slavic countries. Thousands of their fellow countrymen came to America in the last century and today their descendents are the backbone and sinew of this great republic. They became good farmers, good citizens, and patriotic Americans. There is no reason to believe that their unhappy and homeless countrymen might not do as well. Congress should take immediate action on this pressing problem.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

SHENANDOAH, IOWA, *January 13, 1948.*
Hon. BEN F. JENSEN,
Member of Congress,
Washington, D. C.

DEAR SIR: We hear considerable about the proposed military-training matter. People are considerably divided as to the matter.

So far the military situation seems to be the principal part of the argument; but to thousands of people there is an entirely different slant to the matter. During the recent world war, our Government had thousands of boys in camps which was necessary, but in so many cases the Government did not protect the boys from the inroads of liquor and red-light women, as the Government should have done; and thousands and thousands of our good home boys turned out to be booze sots and diseased. That happened over and over again during those trying days; and many citizens are afraid to favor military training for fear the same thing will be repeated—good young fellows taken from their homes and subjected to the power of sinful booze and the things that go with it. Thus much of the military argument in favor of conscription is being lost, whether good or bad, by a definite consideration of liquor back of it all. The Government must lick the liquor situation before the people will really like saying yes to the proposed military training.

Yours truly,

JAMES PEARSON.

Graft and Peonage Spur Red Gains Against Chiang

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. HUGH D. SCOTT, JR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ivan H. Peterman from the Philadelphia Inquirer:

GRAFT AND PEONAGE SPUR RED GAINS AGAINST CHIANG

(By Ivan H. Peterman)

WASHINGTON, January 18.—The Chinese situation, ever a ponderous skeleton in the international closet, is making such ominous noises these days, that it threatens to tumble out in full view. This despite top secrecy on General Wedemeyer's report.

Manchuria is now 98 percent Red. All the rich, potentially powerful areas are in the hands of Chinese Communists. Chang Chun and Szeping Kai, important industrial cities beyond Mukden, were more or less abandoned last week. The Nationalist government decided to shorten lines, defend the capital, Mukden.

Thus down the oriental drain goes the vast province—among the great hopes of the impoverished Far East—on which so much of China's rehabilitation depended. And the Reds drive on * * * toward the Great Wall, toward the Yellow and Yangtze Rivers, toward Nanking, Shanghai, Chungking and victory. All this in spite of the advice, the superior arms, and encouragement of the Western Powers.

Why? What's the matter in China? What happened to the Republic pieced together by Sun Yat-sen.

I put these questions not to some ancient oriental philosopher, not to a Buddhist mystic or down some wishing well, but to a recently returned American in whose judgment I have complete faith. He gave a story shocking in hopeless outlook, unbelievable by today's enlightened standards. It explains a lot about China.

The Chinese today are paying the bill for centuries of subjugation, ignorance, laissez faire. For passive acceptance of a rotten lot, for cruelty from the top and simple-minded resignation by the masses. Only 15 percent of the population can read or write. Does one have to say more?

Americans first arriving there are unable to understand. They see people having not even a faint idea of democracy; they see graft accepted as part of the general scheme. Everyone grafts. Money is ridiculously worthless. Prices are idiotic.

"The best we could hope for China would be a benevolent despotism of some sort. Democratic principles can't be entertained in our lifetime. The Chinese aren't ready." My friend shrugged.

But why do they go Communist if it offers so little?

"Anything the Reds offer is a lot more than the average Chinese may have. In China, the landlord—the rich, all-possessing head of a community—has everything. The people, working his lands, his mills, his inn, his factory or shop (for he owns the village and countryside surrounding) those people are virtual slaves. They work for him, buy from him, pay taxes through him until they've nothing left.

"When the Communists come, the landlord takes off. If he does not flee, he's apt to be stood against a wall. He's liquidated. Then the Red leader calls the peasants together. 'We give you the land for yourselves,' he says. 'Here each to your own parcel. What you raise and produce is your own, except for a small but necessary tax.'

"Then, to the able-bodied, he hands a rifle, tommy gun, or other weapon. With ammunition. 'Use this if the government forces return,' the leader tells them. 'Use it if the landlord reappears. Resist, then retire to the hills if you must, but be loyal to us. We will come and help if necessary. Until then, return to your farms, your jobs, and wait until the victory is won.' "

My friend tapped reflectively upon the table.

"A rather hard procedure to beat, isn't it? Tough to combat. Difficult to sell to unchained millions still sweating under such landlords, isn't it?"

Are China's Communists closely held by Soviet Russia?

I wouldn't say so, except through their leaders. The latter are carefully trained, some in Moscow. The Chinese peasant, the fellow who is handed the gun, doesn't know anything about communism and has no interest beyond his own rice patch. Yet he is firmly held because of his hate and fear of the landlord, the old order.

Chiang's government is getting worse. Since General Marshall left that country, discouraged and disgusted at its failure to adjust differences and pull together, China has

been on the toboggan. Chiang is a creature of his own military lieutenants, warlords, etc., who accept him as a titular head of the mismanaged, grafting, economically, and politically corrupt federation.

If Chiang goes? Few of his subordinates could even suggest a successor. Many believe if that occurs, if the warlords are gradually ousted or forced to flee, China may retrogress to the scattered province condition prior to Dr. Sun's revolution. Nevertheless, the Nationalist leaders won't reform, the landlords refuse to improve conditions, and China, gasping again and again for American help, struggles like a drowning man—weighted with the lead of injustice, but refusing to let go.

This is the proposition American taxpayers will be asked to underwrite. We can't afford to let Russia control China. But can we afford to maintain Ming Dynasty traditions while upholding the rights of landlords to starve millions? Such is the Chinese problem.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. WALTER G. ANDREWS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. ANDREWS of New York. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD an article appearing in the New York Herald Tribune entitled "No Time for the Seaway" on Sunday, January 18, 1948:

NO TIME FOR THE SEAWAY

Among the many items which Mr. Truman displayed so temptingly in his budget message was that venerable and highly controversial project, the St. Lawrence seaway. This vision of cheap power and a direct route for deep-water vessels from the Great Lakes to the Atlantic Ocean has haunted many Congresses and many political campaigns. It has aroused regional support and regional opposition, as well as much argument over the basic merits of the proposal. With a hotly contested national election in the offing, Congress again seems in a mood to give serious consideration to the seaway.

New York City—indeed, the whole region which makes up the port area—cannot afford to ignore the economic implications of the seaway project. The Port of New York Authority is a public body vitally concerned with the manifold activities which result from New York's splendid harbor and geographical position. It is also an agency which has earned and won a splendid reputation for its sound judgment and broad knowledge of the problems of the port. The Authority has asserted that half of the traffic which the seaway would acquire would be at the expense of the port of New York and that this diversion of business would affect the livelihood of some 200,000 persons in the port district—entailing a severe blow to the whole metropolitan area.

This threat cannot be dismissed lightly. But the national interest is paramount, and if the gain to the country as a whole will outweigh New York's loss, the former must prevail. No single community, even one so large as that comprised in the New York port district, can legitimately set its own well-being against a proved case for any proposal which would meet a national necessity. The case for the seaway, however, is not proved. It has been attacked, authoritatively; on a number of grounds—that it would not, on the scale now contemplated, provide the highway to the sea which its advocates foresee; that its locks would be vulnerable to air assault; that the potential traffic would not justify the investment, annual charges, and loss to established ports. These objections are weighty enough to justify continued objections by New Yorkers to the plan.

And there is an even more urgent reason why, at this particular time, the seaway project should at least be held in abeyance. The costs of government, the mounting pressures of inflation, the unsettled international scene, all are powerful arguments against any major capital expenditure that can be avoided or averted. If an undertaking of the magnitude of the seaway were to enter the competition for scarce goods and labor, the costs of the project would certainly increase. The national budget would be burdened by a substantial additional sum, and the whole effect would be inflationary. Even if Congress were only to authorize the project without appropriating for it immediately, the effect upon other future commitments, such as the European recovery program, might well be unfortunate. There is, therefore, every reason why the seaway should be held in abeyance now, and no reason why it should occupy the time of a busy Congress.

Resolution of Litchfield County (Conn.) Farm Bureau

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to call to the attention of all the Members of this honorable body the following resolution which was adopted by the Litchfield County Farm Bureau at their annual meeting on January 9, 1948.

A close reading of this resolution will point out that not all individual groups of our citizens are bent upon receiving benefits for themselves to the detriment of other groups. I believe that the program embodied in this resolution is one which might well be enacted by the Congress of the United States. I direct your attention to it so that you may be aware of the fine concepts of Americanism demonstrated by this wonderful body of Connecticut citizens. The resolution follows:

We believe that all civilization depends fundamentally upon the food, shelter, and clothing, in that order, which are available to their people, but that all of these depend in turn upon a healthy soil. To that end we urge soil conservation as an integral part of a coordinated farm program adequate to the needs of our people and the world for food, shelter, and clothing.

The Litchfield County Farm Bureau believes that the parity-price concept might be useful in appraising the agricultural situation, but that the present parity system is inadequate, since it does not consider all the costs of production nor conditions of supply and demand, and is inapplicable to present conditions, since it is based on a situation that existed prior to World War I.

We demand a change of the parity-price formula so as to make it flexible, permit of regional differentials, include all of the costs of production and take into account conditions of supply in relation to demand.

While agreeing that agricultural planning is necessary, the Litchfield County Farm Bureau believes that plans should be developed from the ground up and that they should be locally administered. To this end we recommend that all the functions and contacts of the Department of Agriculture with the farmers of the country be coordinated and handled locally by one agency in the interests of both economy and efficiency.

The Litchfield County Farm Bureau deplores the use of subsidies to farmers in the interests of other groups. Where low-income groups exist we believe these should be subsidized, if necessary, through such instruments as the stamp plan, rather than subsidizing the general public at vast national expense.

The Litchfield County Farm Bureau deplores the inflationary trend which is both increasing the farmer's cost of living and lowering the margin of profit in his farming operations. It believes that the Federal Government already has the power to control this inflation.

We recognize that prices are now maladjusted; but believe that any attempt to control them through price control is an attack upon a symptom and not the cause of these maladjustments, and that the effect might well be to drive many northeastern farmers out of business by withholding from them grains essential to the production of milk and eggs.

We urge the Congress to make available to the department of education of the State of Connecticut sufficient funds to insure the continuation of an adequate school-lunch program.

The Share of the Sixth Missouri Congressional District in Foreign-Aid Cost

EXTENSION OF REMARKS
OF
HON. MARION T. BENNETT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. BENNETT of Missouri. Mr. Speaker, it is difficult for the mind to conceive the size of the gifts this country has provided in the past and is being called upon to provide in the future to various foreign countries. Perhaps it will help my constituents to get a better understanding of their individual or per capita share of this program if it is broken down into county and town and compared with local county revenues. The Library of Congress has prepared such an analysis.

Assistance this country's taxpayers have given other countries from July 1, 1940, through June 30, 1947, totals $73,092,058,013. This includes war expenditures.

The assistance we have provided foreigners since the end of the war, from July 1, 1945, through June 30, 1947, amounts to $24,099,211,087. This sum

does not include approximately half a billion dollars just voted by Congress at the request of the President as stopgap aid pending a decision on the Truman-Marshall plan.

The Truman administration is now asking Congress for seventeen additional billions for foreign aid, with six billion eight hundred million of it to spend in the next few months.

The amount already provided since the end of the war equals $183 for every man, woman, and child in America, on the basis of the last official census. It has cost each average American family more than $25 per month for each of the last 2 years. That is the main reason for high taxes and high prices.

The official figures prepared by the Library show three things:

First. The cost of foreign aid since VJ-day to the residents of each county and principal town in the Sixth Missouri Congressional District.

Second. The per capita cost to residents of each county and town of the proposed Truman-Marshall plan for $17,000,000,000 more.

Third. The county revenue received from all sources from March 1, 1945, to February 28, 1946, the last dates available for such comparison.

Sixth Missouri Congressional District

County and cities	Foreign aid July 1, 1945, to June 30, 1947—peacetime assistance	Foreign aid proposed by Truman-Marshall plan now pending	Total foreign aid provided and proposed	Annual tax receipts

Mikolajczyk Tells How United States and Britain Appeased Stalin While Stalin Was Crushing the Poles

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two additional installments of articles published in the Milwaukee Sentinel that continue to describe the abandonment by the leaders of the United States and Great Britain of the principles of the Atlantic Charter, when it came to dealing with Stalin in his crushing of Poland. If some of us cannot understand now why we are confronted with the communistic ogre, it will be remembered that our leaders grievously sinned against human freedom in the abandonment of Poland to the rapacity of the Communist dictator. Following are two additional installments of Mikolajczyk's story:

RUSS WITHHELD UNITED STATES FOOD FROM POLES

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party)

(Installment VIII)

Prime Minister Sikorski, my predecessor as head of the Polish Government-in-Exile, flew from London to Moscow in December 1941 for several reasons.

He believed that by seeing Stalin, and sitting down with him man to man, he might be able to explain the unfriendliness of Russia's retention in labor camps of many of the 1,500,000 Poles the Reds had forcibly taken into the U. S. S. R. during the time when Hitler and Stalin were collaborating in the rape of Poland.

He believed, too, that Stalin, as a military man, would be able to shed some light on the 11,000 Polish Army officers who had not reported to General Anders for service in the Polish Army being formed in the Soviet to continue the fight against the Germans.

He hoped he would be able to remove the obstacles surrounding the supplying of the Polish Army in Russia. At this time, supplies for the Poles were so short that three soldiers were existing on one soldier's rations, which at their best were far below those of any other Allied army. He hoped, also, to expedite the delivery of promised United States and British, as well as Russian, military aid for the Polish troops in Russia.

At the same time he hoped to be able to obtain proper care for Polish citizens who had been released from their work-concentration camps and who were in desperate need of the relief we could now offer them through American aid and our operatives in the U. S. S. R.

He did not know that such relief was about to be stopped, for a reason which was shocking then and remains just that today: the food and even the tin containers in which it was packed were too good to suit the Russians.

That is the truth. Russian citizens, examining what was being shipped to our people

from the United States, began to wonder aloud how a country where the despotism of capitalism was rife could produce such bounty. So their Communist overseers stopped the shipments, as needed as they were.

General Sikorski flew from Kuibyshev to Moscow protected by Russian fighter planes. The Germans were so close to Moscow that their cannonading could be heard in the streets of the frozen, blacked-out capital. The general brought up the matter of the missing Polish officers as soon as he was seated in Stalin's study.

"They were liberated," Stalin said, "they just have not yet reached your quarters."

Sikorski insisted that this was not possible; that if they were alive they would be ready and eager to rejoin the fight against Germany.

Stalin muttered something about their probably having escaped.

Unable to gain any more information from the Red leader, Sikorski turned to General Anders, who sat at his side, and lauded him to Stalin.

He reminded Stalin that Anders had been wounded eight times in the fight against the combined Nazi and Red forces in 1939 and then had been arrested by the Russians when he sought to come to London to continue the fight.

Stalin looked solemnly at Anders.

"How long were you in prison?" He asked the commander in chief of the army we were trying to form to help Russia fight Hitler.

"Twenty months," Anders answered evenly.

"Were you treated well?" Stalin asked.

"No," Anders answered directly. "I was treated very badly in the camp in Lwow. In Moscow it was a little better, if the word 'better' can be used."

Stalin looked back at him and shrugged. "Such were the conditions," he finally said.

TALK OF FRONTIER

Before the long night was over, Stalin agreed, however, to outfit our forces in Russia and sternly bawled out General Panfilov, his deputy chief of staff of the Red Army, for ignoring his orders to supply the Polish troops—most of whom were housed in stoveless tents in subzero weather, so eager were they to carry on.

The following night, December 4, 1941, with the Germans only a few miles from Moscow, Stalin entertained Sikorski lavishly at the Kremlin. At the height of the party, however, he turned suddenly to Sikorski.

"Now we will talk about the frontier between Poland and Russia," he said.

SLIGHT ALTERATIONS

Being essentially a military man, and knowing Russia was retreating in the face of the Nazi tanks, Sikorski was taken by surprise at this twist of Stalin's mind. He replied that he had no authority to discuss such matters; that Poland assumed that the old prewar boundaries would prevail once the war was won.

"I'd like to see some alterations in those frontiers," Stalin insisted over his vodka. "They'll be very slight alterations."

Sikorski resisted this and Stalin dropped the subject.

Following this evening a joint Polish-Russian mutual assistance pact was announced. It pledged the two governments not only to fight the war until the German invaders were destroyed but to promote a durable alliance of democratic countries for lasting peace. Specifically, the pact's three points were:

1. Poland and Russia, together with Great Britain and other allies, would wage war until the final victory over Germany.

2. Both governments would render each other full military assistance and in peacetime their relations would be based on good neighborly collaboration, friendship, and mutual honest observance of their undertakings.

3. After victory, it would be the task of the Allied states to insure a durable and just peace.

This pact of friendship, signed by both Sikorski and Stalin, as published by Tass, official Soviet news agency, declared that after "a victorious war and appropriate punishment of the Hitlerite criminals" there must be restored in Europe "respect for international law backed by the collective armed might of all the Allied states."

Sikorski left Moscow a troubled and bewildered man. On his mind was the fate of the 1,500,000 Poles in Russia, their misery, their hunger, their helplessness in the face of a desperate need.

Still too clear was the picture of thousands upon thousands of Poles dying in the Russian camps from hunger and disease. He knew only too well that if the pact he had just concluded did not work, the 1,500,000 Poles in Russia would be doomed forever.

REDS GET UNDER WAY

On the surface everything was all right. He clung tenaciously to the hope that, somehow, the thousands of missing officers would appear, that the Reds would indeed supply our men and not renew demands for border alterations which, in the light of the conditions of the war, were presumptuous and, in the light of solemn pacts, criminal.

But the Red machinery was well under way. A Soviet news broadcast soon flatly stated:

"The question of frontiers between the Union of Soviet Socialist Republics and Poland has not been settled and is subject to settlement in the future."

Later, in London, Sikorski was informed by the British that Stalin had reported that the main post of the Polish forces in Russia was being shipped to Tehran and North Africa "on request." Stalin, who had promised only a few days before to supply them, now accused them of cowardice.

LUBLIN BEGINNING

But no new word ever came of the whereabouts of the missing 11,000 Polish officers.

There were other disturbing factors for the Polish Government in London. While Sikorski and Stalin were signing a joint declaration of their war aims against Hitler, Stalin was establishing the "Organization of Polish Patriots" at nearby Saratov, under the leadership of a Polish Communist woman writer, Wanda Wasilewska, who later became a member of the supreme council.

Wanda, who hailed from the prewar Polish town of Lwow, which was occupied by the Russians during the time of the Ribbentrop-Molotov agreement in 1939, is married to a Mr. Korniejczuk, a Ukranian, who now serves as a deputy in the Soviet foreign ministry.

It was the beginning of the Lublin Government. It was the beginning of the police state which "liberated" Poland was to become.

UNITED STATES, BRITAIN GAVE STALIN FREE HAND IN CRUSHING POLES

(Installment IX)

The composite "ear" of London and Washington began to grow deaf to the pleas of the Polish Government-in-exile at the beginning of 1942.

The British were determined to do nothing to disturb their Anglo-Russian relations; even to the extent of overlooking the interests of Poland, their ally over whose problems they had gone to war in 1939.

So we began to look to America to bring the necessary pressure on the Red chieftain. But the Russians, though hard pressed in a war of survival, could and did act the part of a conquering power in diplomatic circles. What is worse, they were permitted to get away with it—and their political aggression continues to this day.

In 1942 Molotov felt secure in telling Secretary of State Cordell Hull in Washington, when Hull questioned him about Soviet pressures on Poland, that it was none of his business.

United States Ambassador to Moscow, Admiral Standley, began having difficulty seeing Molotov or Stalin when the subject dealt with anything except additional lend-lease supplies.

Appeasement of Russia grew by the hour, both in London and Washington. The American people felt, it seemed to the anxious Poles in London, that there was something almost shameful about their inability to open the second front which Stalin and his cohorts were crying for.

Careful Communist propaganda, which stressed the activities of the Red Army and neglected all Russian depredations, made its weight felt in the free press of the Allies.

The picture of Russia became easily distorted. Ambassador Ciechanowski reported from Washington that pro-Soviet elements had moved into important places in the United States war agencies and that any American who attempted to bring up such distasteful matters as, for instance, the cold-blooded murders of the two Polish Jewish Socialists—Victor Alter and Henryk Ehrlich—was pilloried as a Fascist.

We finally had to protest to the United States Department about the tone of the OWI broadcasts to Poland.

Such broadcasts, which we carefully monitored in London, might well have emanated from Moscow itself. The Polish undeground, fighting a sadistic Nazi foe which in time was to murder more than 5,000,000 of our people wanted only to hear what was going on in the United States—toward which it turned haggard but hopeful eyes.

It was not interested in pro-Soviet propaganda from the United States since it duplicated that which was being sent from Moscow itself.

We turned from Churchill to Roosevelt, then back to Churchill again and thence to Roosevelt, without avail. They were sympathetic but continued to impose silence upon us—reluctant to inject anything into their relations with Stalin which might displease him.

Each counted upon making a personal plea to him in respect to Poland at a meeting which Stalin continued to postpone.

UNBEARABLE MUTENESS

In the echelons beneath Churchill and Roosevelt, our position worsened. We were constantly told not to make any move which might anger Stalin or give him an opportunity to break relations with our group in London.

That imposed on us an often unbearable muteness in the face of ridiculous charges being increasingly flung at us by Communist writers and fellow-traveling journalists in the world press, including the free segment of it.

We could not even speak aloud when our Ambassador to Moscow was abruptly handed a note on January 16, 1943, telling him that the 1,500,000 Poles who had been forcibly taken into the Union of Soviet Socialist Republics in 1939 had been made Russian citizens.

PROTESTS IGNORED

Our own diplomatic protests to Moscow were ignored. When we took the matter to Washington, Mr. Wells suggested General Sikorski should again call on Stalin, but we

pointed out such a move would be futile unless he could go with the written assurance the United States would back him up.

We had thereafter to reckon with the Roosevelt administration's definite appeasement of Russia. It became a heavy cloud over our London efforts, but we tried to understand it: Russia was beginning to throw back the German forces.

The United States and Britain had been unable to open the second front, partially because of heavy contributions to Russia's war effort, and their forces were undergoing scant progress in North Africa.

FEARED CAPITULATION

As for the British Government, it apparently had begun to fear Germany might now abruptly capitulate or negotiate a peace with the Red Army before British forces could step back on the continent, and that Britain's position in Europe might thus be irreparably damaged.

After Roosevelt's return from Casablanca, we were told he considered the status of Russian-Polish relations so "delicate and difficult" he did not choose to intervene at just that time—though we pointed out to him that more than a million and a half pawns of aggression, whose husbands and sons were now fighting the Germans, were being held as hostages by a colleague in the anti-Hitlerite fight.

"KEEP SHIRT ON"

He said he could do nothing except marvel at the workings of the Soviet mentality, and would not at that time restate the principles of the Atlantic Charter to which Russia had subscribed.

Our people in Russia, back on starvation rations and increased slavery, were forced at gun point to sign Russian citizenship papers. Those who balked were jailed, beaten, and in some cases shot.

We tried to tell Churchill and Roosevelt that our continued silence was regarded by Stalin as an invitation to renew his political aggression against all democracies.

The best answer we got was "Keep your shirt on."

There followed a period of buck passing, with Poland in the middle.

Everything would be changed just as soon as Roosevelt and Churchill could sit down with Stalin—at Stalin's leisure.

Everything.

Amendment of Federal Employees Classification Act

EXTENSION OF REMARKS

OF

HON. ELLSWORTH B. FOOTE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. FOOTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I wish to include a bill which I have introduced in the House today which will benefit thousands of Federal workers throughout the country by clarifying the Federal Employees Classification Act of 1923 so that within-grade salary advancements date from the first day following completion of each 12 months of service. Heretofore bookkeeping delays had resulted in loss of pay from 5 to even 30 days each year amounting to a considerable sum during an employee's tenure in office.

The bill reads as follows:

Be it enacted, etc., That so much of subsection (b) of section 7 of the Classification Act of 1923, as amended, as precedes the colon is amended to read as follows:

"(b) All employees compensated on a per annum basis, and occupying permanent positions within the scope of the compensation schedules fixed by this act, who have not attained the maximum rate of compensation for the grade in which their positions are respectively allocated, shall be advanced in compensation successively to the next higher rate within the grade at the beginning of the first day following the completion of (1) each 12 months of service if such employees are in grades in which the compensation increments are less than $200, or (2) each 18 months of service if such employees are in grades in which the compensation increments are $200 or more, subject to the following conditions."

List of Property Taken Over by Alien Property Custodian Which Has Recently Been Returned

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. BECKWORTH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following tabulation:

Property returned to American citizens and friendly nationals that had been vested under findings that it was owned by nationals of Germany

Order No.[1]	Returned to—	Description of property	Value
N. 1	Askania Regulator Co	6 patents	
N. 2	Radio Corp. of America	44 patents

The Taft-Hartley Law Really Hurts Labor

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article reprinted from the December 1947 issue of the Railroad Trainman:

THE TAFT-HARTLEY LAW REALLY HURTS LABOR

(Gerhard P. Van Arkel, attorney, Washington, D. C., who served as General Counsel for the National Labor Relations Board and who resigned when the Taft-Hartley law was enacted, and who is regarded as the best authority in the Nation in matters involving the National Labor Relations Act and the emasculated law known as the Taft-Hartley Act, analyzes an article by Mr. J. Mack Swigert, law partner of Senator TAFT, which appeared in the Saturday Evening Post of October 25, 1947.)

The October 25, 1947, issue of The Saturday Evening Post contains an article by J. Mack Swigert, partner of Senator ROBERT A. TAFT, called The Taft-Hartley Law: Does It Really Hurt Labor? This well-known corporation lawyer has little difficulty in concluding that the act is really very good for labor. It's a little like a doctor saying, "But I feel no pain," when a patient complains of a bad headache. Corporation lawyers generally find that the Taft-Hartley Act does wonderful things for labor, and loftily pooh-pooh the bitter protests against the act from the officers and members of all trade unions—AFL, Railway Brotherhoods, CIO and independents.

Mr. Swigert's first point is that labor's gains under the Wagner Act and the Norris-LaGuardia Act are fully protected. But the truth of the matter is: 1. The right to strike has been circumscribed in every manner that legal ingenuity could devise. 2. By providing that the National Labor Relations Board may not order the reinstatement of persons discharged "for cause," and then defining "cause" to cover a wide range of union activities, the act substantially removes the protection of the Wagner Act against discrimination because of union activities. 3. By hampering procedures, separating the functions of the National Labor Relations Board, widening the power of the courts to review board proceedings, making the technical rules of evidence apply in board hearings, and a host of minor changes the enforcement of any rights which existed under the Wagner Act becomes extremely difficult. 4. The protection against "company unions"—organized and controlled by the employer—has been materially weakened.

5. The Norris-LaGuardia Act forbade the courts to grant injunctions against strikes unless violence were involved and certain other conditions were met; the Taft-Hartley Act restores "Government by injunction" by compelling the Government to seek injunctions against certain types of strikes. The great majority of Supreme Court decisions of the past 10 years which conferred a measure of protection on labor's right to organize have been overruled. This—from the point of view of a corporation lawyer—is the manner in which the rights of labor have been fully protected.

Mr. Swigert's second point—seen from his neutral corner—is that the Taft-Hartley Act has granted "14 privileges * * * to the workingman without his knowledge, like a legacy to an unknowing heir." The workingman cannot be expected to cheer the unsolicited legacy of a worthless and debt-ridden estate.

His important thesis is that the Taft-Hartley Act has emancipated the workingman "from domination by unions and union bosses." Curious, how much that "domination" is resented by corporation lawyers and other paid spokesmen for big business, and how little by the workingmen who are supposedly so oppressed. In elections held by the NLRB, by secret ballot, workers have for many years voted by majorities of almost three-fourths—a majority substantially larger than Senator TAFT received when he last ran in Ohio—in favor of such "domination." Mr. Swigert has dealt with enough unions on behalf of corporations to know that the stronger the union the more it can do for its members. But he can't, for propaganda reasons, say that; so the strength of the union becomes the "strength of a few labor bosses" to present the illusion that the rank and file play no part in making the union strong. It must be readily conceded that the Taft-Hartley Act gives the worker a right he did not have before: To belong to a weak rather than a strong union.

How about these 14 new "freedoms"?

1. THE RIGHT TO WORK

Let's call it denial of the right to engage in free collective bargaining with an employer about the closed shop, since that's what Mr. Swigert is really talking about. The closed shop, which has worked well in many industries, is out. So is the union security agreement—by which employees must join the union 30 days or more after being hired—unless the union goes through the elaborate rigmarole imposed by the act. And, contrary to Mr. Swigert's assertion that this prevents discrimination against colored citizens, it is noteworthy that such discrimination is expressly sanctioned (see CONGRESSIONAL RECORD, vol. 93, p. 6372) by the provisions of the act. The purpose of these sections is to weaken the power of unions in collective bargaining by encouraging workers to stay out of unions. So that there could be no doubt about it, Senator TAFT expressly wrote into section 7 of the act the right to "refrain from" engaging in union activities. Workers had that right before, but the real complaint of the sponsors of the act is that not enough of them undertook to exercise it.

To prove his point Mr. Swigert sheds a few hot crocodile tears for someone he apparently does not know, since he incorrectly states his name. Mr. E. E. Pfoh violated a law of the Brotherhood of Railroad Trainmen, which forbade direct solicitation of members other than pursuant to authorized action of the brotherhood. He was tried pursuant to the constitution of the brotherhood where he had two full hearings, and, after full consideration of the facts, was expelled from the union. Pfoh took an appeal to the courts and had a full jury trial in the Common Pleas Court of Cuyahoga County, Ohio. An appeal was taken and on June 25, 1945, the Court of Appeals of the State of Ohio, directed that judgment be entered for the brotherhood, a decision which the Supreme Court of Ohio refused to review. Mr. Swigert has the right of any citizen to disagree with a decision of the courts but to put forward this case as an example of arbitrary action by a union in expelling a member is certainly ill-advised. How many of the employees of the corporations which Mr. Swigert represents have an equal right of hearing, and appeal to the courts if they are wrongly discharged from their jobs? What appeal have the purchasers of the products of those same corporations if prices are arbitrarily raised? What can the stockholders do if those same corporations arbitrarily refuse to distribute dividends owing them? If Mr. Swigert is worried about the power to take arbitrary action, he would do well to examine more closely the practices of his clients instead of worrying about a nonexistent evil in the trade-union movement. Union members are protected, not only by the laws of their unions, but by the law of the land, as the Pfoh case shows, against arbitrary expulsions.

2. PROTECTION FROM UNION THREATS AND VIOLENCE

Propaganda has been carefully spread for years that would tie unions to threats and violence. The same propaganda carefully conceals the use of threats and violence on the corporation side. The reports of the La Follette committee document with care the purchases of tear gas, tommy guns, machine guns, and the like by our large corporations for use in labor troubles. Take a little look at labor history, and immediately you see that the real violence has been on the management side; from the Homestead riots through the Ludlow Massacre down to the Chicago Memorial Day killings. Every union leader—and every corporation lawyer—knows that violence during a strike discredits the union and the strike, and there have, for that reason, been many cases of the hiring of agents provocateurs by corporations to cause violence during a strike in order to break it.

And if there are threats and violence, local police are invariably present with a patrol wagon to take offenders before the magistrates. Under the Taft-Hartley Act, threats and violence are (so they say) to be remedied by the issuance, many years after the fact, of a "cease and desist" order directing the offender not to do it again. What is needed is genuinely impartial enforcement of existing laws against threats and violence which are adequate to protect the public against any abuses which may arise; the Taft-Hartley Act is in this respect merely a continuance of the propaganda effort to make it appear that unions and violence are synonymous.

3. OUSTER OF UNSATISFACTORY UNION

The purpose of the Wagner Act was to "encourage collective bargaining"—and you cannot have collective bargaining without unions. The unexpressed purpose of the Taft-Hartley Act is to break up unions and defeat collective bargaining. Before, if employees, were no longer satisfied with the union representing them, they would join another or merely cease to be active in the one representing them. But now every legitimate union may be harassed at least once a year by petitions, instigated by employers, seeking to "decertify" the union; another handsome union-busting device for anti-union corporations.

4. RELIEF FROM HIGH INITIATION FEES

Many unions provide their members with large benefits; unemployment benefits, old age retirement funds, burial benefits, and the like—just as do many lodges and fraternal societies. New members, who become immediately eligible to these benefits, are usually required to pay an initiation fee to make up their fair share of what all the members have paid in. What is usual practice in every lodge or fraternity, is "unconscionable extortion" (in the eyes of corporation lawyers) when done by unions. Now the Government is given power, in effect, to run the financial affairs of labor organizations by determining what are reasonable initiation fees. What would you think if the Government were given the same power over the funds of your church or lodge? What would Mr. Swigert think about a law permitting a Government agency to reduce unreasonable profits?

5. BAN ON COMPULSORY CHECK-OFF

In every industrial plant the wages and hours must be uniform. The benefits obtained by the union go to all workers, union members or not. But usually the union members who pay the dues, do the work, and support the union resent the "free riders" who, like drones, accept the benefits of the union without its burdens. By banning the compulsory check-off, the Taft-Hartley Act gives another powerful inducement to those cheapskates who will not carry their fair share of the union load by agreeing that their dues shall be checked off.

6. OPPORTUNITY TO PRESENT OWN GRIEVANCES

In every group there are persons who will put their own advantage ahead of that of others; there are "teacher's pets" in industrial plants as there are in schools. And if the individual worker can settle his own grievance without the union, as the Taft-Hartley Act provides, the "teacher's pets" (most frequently the non-union members) are going to be better treated than the other employees. Fairness?—or a union-busting device?

7. AN END TO JURISDICTIONAL STRIKES AND SECONDARY BOYCOTTS

For many years corporation lawyers have been actively at work attempting to prevent the giving of legal advice by trust companies, newspapers, mortgage associations, and the like. This effort to preserve the jurisdiction of lawyers is called "maintaining the ethics of the profession" and is highly laudable. But when carpenters attempt to protect their right to do carpentering, in order that they may maintain their livelihoods, it becomes, in Mr. Swigert's vocabulary, "a struggle between labor leaders for dues-paying members" and highly sinister.

As for the secondary boycott, let us consider for a moment the case of *Bedford Cut Stone Co.* v. *Journeymen Stonecutters' Association* (274 U. S. 41). There a majority of the Supreme Court, in an opinion which Messrs. Holmes and Brandeis said "reminds one of involuntary servitude," held that it was proper to enjoin a union of stone masons from refusing to set stone quarried by men "working in opposition to the union." The opinion shocked the public, and the agitation which followed a decision that workers might not combine to protect their wages was largely responsible for the Norris-LaGuardia Act. Now—under identical circumstances—the Taft-Hartley Act says: (1) That the Government must ask for an injunction against action; (2) that anyone injured may sue the union for damages suffered; (3) that all the men participating may be discharged by their employers with impunity; and (4) that the union participating is guilty of an unfair labor practice. Fairness?—or an effort to make it impossible for workers to maintain their wage standards?

8. OPPORTUNITY TO BARGAIN IN A CRAFT UNIT

"Divide and rule" is sound industrial as well as political practice. As Chief Justice Taft said in *American Steel Foundries* v. *Tri-City Council* (257 U. S. 209): "They (trade unions) were organized out of the necessities of the situation. A single employee was helpless in dealing with an employer. * * * Union was essential to give laborers opportunity to deal on an equality with their employer. * * * To render this combination at all effective, employees must make their combination extend beyond one shop." It is unfortunate that such intelligence concerning labor problems is not an inheritable characteristic. But, because the individual is helpless in dealing with his corporate employer, industry for years divided and ruled by preventing labor organization. And since, under the stimulus of the Wagner Act, labor has for the most part succeeded in organizing, corporation lawyers now seek to have them organize in the smallest possible group. Often this has advantages, particularly among highly skilled workers. But when employers offer such a gift horse, labor has legitimate grounds for looking at its teeth.

9. EQUALITY FOR INDEPENDENT UNIONS

Why are corporation lawyers so solicitous about the welfare of "independent" unions? The employee representation plans which followed enactment of section 7 (a) of the NRA in 1933 were financed by, dominated by, and supported by, large corporate employers. Their only purpose was to frustrate genuine independence of workers and to provide a sham collective bargaining sufficient to fool the public. Ever since they were outlawed under the Wagner Act, corporations have been thinking back to the good old days of the "independent" union which never bothered management on such unpleasant topics as higher wages or shorter hours. So the Taft-Hartley Act attempts to put these bogus unions on the same plane as affiliates of the genuine trade union movements.

10. LIBERATION FROM COMMUNIST CONTROL

During the year or two before the passage of the Taft-Hartley Act, the American trade union movement did an effective job of ridding itself of most of the few Communists leaders in its midst. In union after union, workers in democratic meetings daily vote into office non-Communist officials. But—if a Communist does get into office—the penalty under the Taft-Hartley Act is paid not by the Communist officials, but by other officers and the union members, all of whom, Commu-

nists and non-Communists alike, are denied access to the procedures of the Government. It is a new philosophy in America which states that my access to the courts shall be curtailed because I belong to an organization which has an official with political beliefs over which I have little or no control—and a dangerous one. It is far too easy to go a step further and demand that all union officials take pledges that they are not Democrats or Republicans, before union members may seek relief from governmental tribunals.

11. A LOOK AT THE BOOKS

The Taft-Hartley Act requires unions to file all sorts of data with the Secretary of Labor, which, says Mr. Swigert, "is not nearly so detailed a report as corporations are required to give the Securities and Exchange Commission." Throughout his article Mr. Swigert appears to believe that unions should be run like corporations; an interesting suggestion since this would mean that unions should be run for private profit, with limited liability, by a small, tightly-run, management group. In any event, minority stockholders' suits in the courts have shown that (except where securities issues are floated) the stockholders have an extremely difficult time learning how their corporations are run. It's dollars to doughnuts that Mr. Swigert opposed, and now opposes, the registration requirements of the Securities Exchange Act and would even more strongly fight a law giving stockholders a look at the books.

12. EXEMPTION FROM PERSONAL LIABILITY

The technique of pointing out how much worse it might have been is now standard practice in defending the Taft-Hartley Act. Mr. Swigert makes quite a point of the fact that the individual is not suable under this Act, though his union is and though his union's funds belong to him and other individual members. The vice here is that a citizen, in order to sue a Federal court before the Taft-Hartley Act, had to show that the amount in controversy was more than $3,000 and that there was diversity of citizenship; that is, that the parties to the action were citizens of different states. But now, under the Taft-Hartley Act, only in the case of union agreements, are these requirements removed: a pointed reminder of the bias and one-sidedness of the act.

13. ESCAPE FROM FORCED POLITICAL CONTRIBUTIONS

On June 5, 1947, the following interchange took place on the floor of the Senate between Senators PEPPER and TAFT. Senator PEPPER: "So a workingman's organization (under the Taft-Hartley Act) would be deprived of the power even of advising its membership of the antilabor record of a man who might be a candidate for public office?" Senator TAFT: "Correct." A church, a lodge, a fraternity—in short, any voluntary organization in this country—may take a position on a political candidate and emphatically may make the political and voting record of candidates available to its membership. But not a labor union. And this has nothing to do with forced political contributions; it is still criminal for a union to make any expenditure on behalf of a candidate even though the union members unanimously vote to make it. Fairness?—or a threat to the political freedom of all of us?

14. SECURITY AGAINST ABUSE OF HEALTH AND WELFARE FUNDS

In the hearings before the Congress, and during the debates, not a single instance was cited of abuses of health and welfare funds. This was not oversight, for the Eightieth Congress dredged up every trade union abuse, no matter how trivial, and expanded the few it found to distort and warp and public's understanding of the American labor movement. Under the Taft-Hartley Act it is now, for example, illegal to set up funds for vacations with pay. Corporation lawyers may enjoy them but a union, by voluntary agreement with its employers, may not provide them for workers through funds set up for that purpose.

There are quite a few things about the Taft-Hartley Act which Mr. Swigert fails to mention. The manner in which the act narrows the responsibility of corporations for the activities of their "agents" and broadens it for unions. The numerous exemptions from the coverage of the Wagner Act, so that large groups of workers are outside the scope even of the extremely limited protection provided by the act. The irrational separation of functions and the setting up of the General Counsel of the Board as a labor czar. The nonsensical free speech provision of the act by which what an employer says may not be used in evidence—contrary to the rule applied in all courts. The renewal of government by injunction in the case of strikes affecting a substantial portion of an industry. The adroit manner in which it has deprived the States of power to deal with management-labor relations by making Federal law alone govern, except that State laws more restrictive of union security agreements than Federal law are allowed to stand. The provisions which allow harassment of the citizen by making the issuance of subpenas mandatory.

As Chairman HARTLEY, of the House Labor Committee, is fond of pointing out, employers and unions throughout the country are busily engaged in finding subterfuges to evade this law. Bootleg union security agreements, the abolition of no-strike clauses in contracts, the predating of agreements, and the like, are tributes to the unrealistic provisions of this second prohibition law. American management and labor have too much sense to give up their accepted methods of collective bargaining in the interests of corporation lawyers, whether they are in or out of Congress. The campaign now being conducted by the National Association of Manufacturers, the Chamber of Commerce, and the like, to go slow and take it easy are the best of all possible demonstrations that even the authors of the act fear the resentment of the American people if the people really learn the full potentialities of this act. Fortunately, Senator TAFT and Mr. Swigert, as small-town corporation lawyers, do not represent that neutral opinion to which the American people turn for guidance.

Glass-House Tenant

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. MILLER of Nebraska. Mr. Speaker, the winter 1947 edition of a magazine published by the University of Nebraska Press at Lincoln, Nebr., contains a very interesting article on Congress by our colleague the Honorable KARL STEFAN, of Nebraska. Under unanimous consent, I include this article in my remarks:

GLASS-HOUSE TENANT

(By KARL STEFAN, Member of Congress)

During the crowded days of the first session of the Eightieth Congress a related series of events took place which will not be easily erased from my memory.

A friend and associate of mine, a long-time Member of the House of Representatives, had been appointed by the President to a position of national importance in an administrative agency. It was necessary that his appointment be confirmed by the Senate. However, before the Senate committee charged with the responsibility of examining the character and qualifications of the appointee could call its own witnesses, a commentator-columnist launched a major publicity blitz against the appointee's good name. The traducer went to the limit of combing the former Member's home district for men to testify in support of his argument that the appointee was lacking in patriotism. He came up with some hand-picked witnesses. The Senate committee permitted their testimony. Then, because of that very testimony, the committee voted overwhelmingly to confirm the President's appointment. The entire Senate accepted the verdict of its committee. These results were a blow to the commentator-columnist, a vindication of my friend.

But what could my friend do? There were still those who did not believe him, still those who did believe the untruths about him.

My friend could publish denials in prominent newspapers for days on end. Yet, when these published denials had to cease because they were no longer news, the columnist could begin again. He would always have the last word. He would always have the final plea before the public sitting as a jury.

My friend could ask for radio time over the same network as that which employed the commentator. Again, the commentator would reply to the reply. The advantage of the last word would still be his.

The customary formula for the smear-blitz is usually "attack-defend-attack-attack-attack." For the Congressman, such defense is an expensive luxury. He absolutely does not have the time. Only in extremely rare instances does he have the money.

The case of my friend, the Presidential appointee, calls to mind what happened on one of those sultry, humid days shortly before the Seventy-ninth Congress became history.

Some 20 Members of the House were breakfasting together for what, to many, would be the last time for several months—and the last time altogether for some.

On my right was a Member from a southern State. He had served brilliantly on important committees. Although he and I had had differences of opinion, I respected his convictions and admired his cool, logical, unemotional analysis of problems affecting us all. Conversation veered to the dean of his State delegation who had recently died in office.

I noticed that my neighbor's hand shook so violently that he was forced to lower his coffee cup. At first his lips moved soundlessly. We were all silent when he did speak.

"He didn't die," the man on my right said. "He was murdered. His murderer is still at large. Yes. And he's doing mighty well for himself."

No names were spoken. No names were needed. All present knew against whom this accusation was aimed. My neighbor's associate had been an elderly man. His heart condition was well known, not only to his colleagues, but to the press and the public. His personal financial interests were the same as those of hundreds, even thousands, of businessmen in his section. However, at the very time of the most serious phase of his illness, he had been made the subject of a one-man campaign of character smearing in the press and over the radio. In the midst of this campaign, without having had his opportunity to answer the charges made against him, he died. In our minds, his detractor was a real-life Gilbert and Sullivan character—at once, judge, jury, public prosecutor and lord high executioner.

This set me thinking about conditions I have known to exist during my more than 12 years in Congress. Every Congressman is a tenant in a glass house, in the sense that he lives completely exposed to irresponsible examination and judgment by his ill wishers. It doesn't do us any good to throw stones, no matter how little we deserve the stones cast at us. A calm, objective study of this most controversial subject is, I think, sorely needed.

When Joe Doakes decides to run for Congress he deliberately puts his privacy in moth balls. He has consciously made his own decision. With his eyes open, and of his own free will, he has walked the plank.

There is a prevailing notion about Members of Congress being so thick-hided as to be impervious to criticism. That is only a myth—and not a very good one, at that. In reality, your national legislators invariably react to what is written of or said about them. Their reactions are not the same in each instance. Circumstances, personalities, and the manner in which our faults are presented make for variety. Still, there are bound to be certain similarities in our responses to the frontal attacks of the broad echelons of criticism.

Our most immediate reaction is to that category of criticism coming from our home districts. Our constituents elected us to represent them in Washington. They are entitled to the best service, the highest type of representation, which we can furnish them. They have the right to comment to us and about us by letter, by phone, or in person.

It is not surprising that we actually welcome a good going-over from home. It helps us to become more efficient public servants.

Judge Anderson calls on me at my office to see if I can't speed the passage of flood-control legislation which he favors. He has no disagreement with me about what I am doing. He does think it is possible for me to get swifter action. Perhaps he is right. Perhaps I am. We each have a 50–50 chance. It could well be that the pressure of "must" legislation, committee meetings, and special assignments has kept me from giving Judge Anderson's project the attention to which it is justly entitled. It also could be that I had done all within my power to bring flood control out on the House floor, but that other bills had had priority.

My phone rings. It is a long-distance call from Bob Wentz, secretary of Blank City's Chamber of Commerce. He wants to know why I voted for a bridge across Smith River at Bluffville instead of voting for one at Blank City. The weight of evidence presented to me has clearly shown that Bluffville is the logical place for the bridge, although, had it been put across at Blank City, it might have extended that community's trade territory. Bob has no new evidence; so I stick by my guns. Maybe he isn't convinced, but he sees the way I figure things out.

This letter is from a former Wave who lives in my home town. She is bitter because I haven't as yet taken a stand on an important naval issue. The truth is that I do realize how vital this subject is. However, I haven't made up my mind definitely. On such a decision there can be no turning back. I must assemble all possible facts before casting my vote one way or the other. Still the Wave does not share my uncertainty; so I write a letter in reply, telling her exactly what I intend to do about the affair in which she is concerned and why.

These people—and people like them—whether or not they agree with me, have the highest priority in telling me what they think of me. They elected me; and they will reelect or reject me. They are the true representatives of the only constitutional pressure group in the United States—the American citizen.

Group criticism from my home district, when supported by fair polling of the rank and file of the group, is also welcomed.

When, after a secret ballot of the entire group, a delegation from a farm organization calls upon me to object to something I have or haven't done, what they have to say has real meaning. Should that delegation call on me without having consulted the rank-and-file membership, I would respect their views as individuals, but I would not consider them as duly qualified spokesmen for the group as a whole. And this goes for chamber of commerce delegations, labor delegations, and veterans' delegations as well. I was selected to represent my district by the secret ballot and by majority rule. It is no more than fair to expect criticism from groups to be presented, governed by the same rules.

One of the chief ventures into futility, as far as I am concerned, is the mimeographed letter or the penny post card which drags me over the coals. These messages, identical in wording, even to typographical errors, and distinguished only by differing signatures, are promptly discounted.

Next in order in the futility field is the mass march-on-Congress procedure. Members who are actually in favor of a measure have been known to change their votes when confronted by this vicious form of intimidation. We former teachers, lawyers, preachers, radio announcers, merchants, ex-servicemen, and farmers do not take easily to mob threats. We are the same kind of Americans that you are. Being condemned by the lawless merely raises us in the esteem of the law-abiding.

Each Congressman gets plenty of the trial-by-battle treatment. Read your CONGRESSIONAL RECORD. Or, better yet, go up into the House galleries the next time you are in Washington while your Congress is in session. There you can be an eyewitness to the verbal crossfire to which your Congressman is subjected. Republicans strike at Democrats. Democrats blast Republicans. Republicans blast Republicans. Democrats strike at Democrats. This method is healthful. In this way individual and party opinions are winnowed. In this way the chaff is separated from the wheat.

Nor would any examination of America's glass-house tenants be complete without considering the role of our system of elections. Most of us have opposition in the primaries and in the general elections every 2 years. That opposition is seldom remiss in tearing apart our legislative service records. If the evidence so presented is sufficient, we are returned—to private life.

There is just one test which Congressmen apply to all types of criticism. That test is: Is it informed criticism? It is difficult to take seriously the slurs of delegations who have repeatedly called on us to do what we can to further legislation when that legislation has already been passed. It is impossible not to resent letters taking us to task for not getting bills out of committee when those same bills have already been debated, voted upon, and signed by the President.

Grown-ups don't like being told off for something they haven't done when they have done it any more than children like it—even if the ones who do the "telling off" have the best right in the world to do it.

Even with the recital of this formidable roster of critics of Congress the whole story has not been told. There still remains the impact of press and radio.

Objective "hard news," whether it is reported over the radio or in the press, is an aid to Congress. When what happens is told as it happens—not slanted, warped, twisted or angled—it is an expression of the freedom of speech guaranteed by our Constitution. When truth is so manipulated as to become falsehood it approximates the evil, fraudulent methods of reporting under dictatorships. From my observation of straight news reporting on Capitol Hill, I am happy to state that 90 percent of the correspondents on this beat shun such totalitarian methods themselves and scorn the few who do go in for counterfeiting hard news. Radio reporters of hard news maintain the same high percentage of honesty in their newscast.

Newscasters and reporters call the news as they see it. That is their job.

It is the job of columnists and commentators to shed light on the story behind the news.

Newspapers often accompany a column with the announcement that "John Doe's ideas are his own, and may or may not reflect the editorial policy of this newspaper." In like manner radio stations increasingly identify their purveyors of criticism by: "Joe Blow's opinions are his own, and are not necessarily those of this station or of Puffie's Fish Food, his sponsor." With the disclaimer given, the columnist and/or commentator is free to criticize Congressmen without danger of action against the hiring corporation, and with the name of the hiring corporation behind him.

Should a member protest the injustice and untruth of these protected attacks, the commentator has merely to scream: "The freedom of the press is in peril." He may then wrap his spotless mantle about him and retire to his ivory tower. Even if a retraction is pressed for and obtained, it is seldom published in Bluffville newspapers, and never repeated for the radio public, with the habit of listening same time, same station, to hear.

My estimate of the effectiveness and honesty of this columnist-commentator clan is 70–30—70 percent sincere in their attitude toward Congressmen; 30 percent either kowtowing to alien ideologies, too far removed from the Washington scene to evaluate it accurately, or plain and fancy sensation-hunters. Congressmen will never stop fighting against overt attempts to undermine our form of government by blackening the name of our Congress. There can be no quarter for that style of vilification. Neither is it astonishing that on-the-spot Congressmen do not take lightly to the unrestrained language of night-club nestors, keyhole-peepers, and professional character assassins. Nor do we hold back our contempt for those who would strike at us through our wives and children.

There are depths, as well as heights, of criticism.

No means of appealing to the public has enjoyed a more phenomenal growth than that of the cartoon. Even as the tabloid has condensed the conventional-sized newspaper, so has the cartoon condensed the editorial page. And over a hundred million newspaper readers get daily criticism of Congress in the form of cartoons. The Congressional symbol is, of course, a paunchy man with a string-bow tie and a flapping Stetson. Or, as an alternate to that symbol, a doddering ancient with a patriarchal beard may be used. Whatever the symbol, it is employed equally in criticism and praise and, in many instances, cartoon and lead editorial are synchronized.

Editorials themselves are important in the scheme of criticism directed at Congress. While editors are not without flaw, neither are they likely to be completely uninformed. They may be misinformed, that is true. Yet, in directing thought through editorials, most writers—although following the policy of their paper—feel it their duty to the public to present both sides of a question, even if one side is given a more favorable presentation. Editorial comment in legitimate newspapers is an incentive to Congress to improve itself. Editorial comment in propaganda sheets, where such comment is not confined

to the editorial pages but is present in every news item, is merely ignored.

To my knowledge no Member of either House has maintained a column of national circulation since the late Senator Royal Copeland of New York issued his daily advice on medical subjects. Many of us send weekly or monthly columns to newspapers in our districts, pointing up the high lights of legislative events. It is to the lasting credit of national radio networks that they have requested the appearance of Members on public-service programs, often to answer poorly-informed attacks on their integrity. In addition to speaking over the major radio chains, Members make numerous recordings of speeches to be sent home for use over local radio stations.

Your national legislators have nothing to fear as long as the American press and radio retain their present standards of fairness and efficiency. Your Congress will meet and welcome criticism as long as that criticism is informed.

Haym Salomon—A Son of Liberty

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks, I wish to introduce in the RECORD an article from the New York Journal-American of January 9, 1948, written by my good friend, Harry H. Schlacht, editorial writer for many years for the Hearst newspapers and formerly director of the War Production Board in New York City. This article was written on the occasion of the one hundred and sixty-third anniversary of the death of the great Jewish patriot of the Revolutionary era, Haym Salomon, who helped in large measure to finance the American Revolution.

The article follows:

HAYM SALOMON—A SON OF LIBERTY
(By Harry H. Schlacht)

Let us thank God for our heroes of yesteryear, who have by their vision, their courage, their faith, and their lives made our Nation great and bequeathed to us our glorious heritage.

We commemorate the one hundred and sixty-third anniversary of the death of Haym Salomon. We salute the great Jewish patriot of the Revolutionary era whose qualities of mind and heart endeared him to our founding fathers. We honor the memory, the inspiration, and the example of this son of American liberty.

There was a time "that tried men's souls," and also their purses.

The life story of Haym Salomon is both fascinating and tragic. He came to our shores seeking religious freedom; to help build a Nation which gives to bigotry no sanction; to persecution no assistance.

He gave all he had, he gave all he could borrow that this Nation might be conceived in liberty.

He advanced $640,000 in freedom's holy cause. He died penniless.

Haym Salomon helped to feed, clothe, and equip the Continental Army. His contribution to the cause of our independence should be deeply engraved in our hearts and indelibly inscribed in our historic annals.

He loved America so much. He served America so well.

He toiled, sacrificed, lived, and died in the very shadow of anonymity. Pride and vainglory were alien to his nature. He would have shrunk from worldly acclaim. He loved America with deeds and dedication.

He was a simple man—the badge of a great soul.

He was a man of great character, of noble self-sacrifice, of wholehearted patriotism, and of martyrlike devotion to high ideals.

He was an institution to himself. He became part of our glorious inheritance.

Indeed, Haym Salomon glorifies the race from which he sprang. The Jews have played a noble role in the government of our country. They were identified with our colonial growth. They have fought in all the wars of the Republic. They have won the highest commendation from every President of our Nation.

Let all Americans remember and acclaim this great benefactor and patriot.

You may travel where you will on a thousand battlefields; you may travel where the delicate poppies carpet the earth with their rich, red blossoms, or where the glistening white stones rise above the flower-strewn mounds—there you will see, side by side, one beneath the cross of Christianity and one beneath the Star of David—Christian and Jew—pillowed in eternal glory.

The fought together. They bled together. They worshipped together. They died together for God and country.

No, Haym Salomon shall not be the forgotten man in American history. He belongs to us. He is ours by more than patriotic self-devotion with which he came to the aid of our Nation in the crisis of our fate. He is ours by that unshakable gratitude for his services which is the precious portion of our inheritance. He is ours by that tie of love stronger than death which will link his name for the endless ages with the names of Washington, Jefferson, Madison, Morris, and the other immortals of our history.

The World Situation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WCOP, Boston, Mass., on December 30, 1947:

The world situation, what we should do, what may happen, is the uppermost thought in our minds today.

As this year draws to a close, it is my purpose to convey to you the situation, as I see it, and while the situation is disturbing to convey to you a message of confidence and of optimism for the New Year, if our country follows the proper course.

In establishing and following this course—the right one—each American can play his or her part.

This can be done by analyzing conditions practically and rationally, and not emotionally, and in the molding of a public opinion that will demand that Members of the Congress view world conditions and the part we shall play therein from the angle of the national interest of America, and not for political advantages, or for partisan purposes.

The national interest of our country transcends political considerations, and yet, there are Members who will try and make politics out of our national interest.

My talk tonight is confined to the world situation.

A sound public opinion will be of inestimable value in doing the right thing for America by the next session of Congress.

This is where you and all other Americans can play an important part.

At the outset, let me state that the basic issue is atheistic or international communism or Christianity.

We might just as well face this fact. To think otherwise would only deceive ourselves, and loose or hopeful thinking will only produce harm.

By "Christianity," as I use it tonight, I mean all who believe in God—Catholic, Protestant, and Jew.

It is about time that all organized religions appreciate the significance of the challenge of atheistic communism, and unite in one front to meet it. The challenge of atheistic communism is a danger to all—not one—and a danger to all of the countries that still are free from Soviet control or domination.

As a matter of fact, atheistic communism is the enemy of all religions. It directs its attacks at the Western World first because its leaders realize that it must destroy, or drive underground those religions that recognize the omnipotence of God in order to win. The other existing religions would be easy prey if the western civilization falls.

Another observation, the people of no nation, even Russia or the Soviet Union itself, have freely accepted communism as a form of government.

It has always been forced upon a people, and it can only maintain itself through ruthless persecution and fear.

It is a challenge and a force we should not underestimate.

On the other hand, with the forces of organized religions of the Western World united, and America adopting the right policies we should not overestimate it.

We should not underestimate our own power and strength. We must remember the Soviet Union, and its satellite nations have their marked weaknesses.

Viewing our national interest from a sound and practical viewpoint, it is imperative—necessary that the Marshall plan proposed by our courageous President, Harry S. Truman, pass the Congress. At least, the main substance of this plan should be enacted.

The basic purpose of this plan is to commit our country to an affirmative policy to meet the challenge of atheistic communism by relieving suffering humanity and helping free nations to rehabilitate themselves morally and economically.

It is essential in our national interest that we do this. I place the wisdom of such affirmative actions on our part on the basis of our own national interest.

The tactics of the Communists are well known. They will use any means to attain their goal. They will use force, deceit, and any means outside the law which will result in uncertainty, confusion, chaos, and fear—all steps prior to actually taking over a government.

They have done this in the Soviet Union itself—in Latvia, Lithuania, Estonia, Poland, Yugoslavia, Bulgaria, Rumania, Manchuria, and wherever they may have puppet governments.

We know of the conditions in Czechoslovakia, Hungary, Austria, as well as what the Communists are attempting to do in Greece, Turkey, Italy, France, and China.

It is the primary intention of the Soviet Union to gain control through puppet governments of all of Europe, and if they are successful, and they will only be successful if America fails in its rendevous with destiny,

this means the Communists will gain control of not only Europe but Asia and Africa as well.

Every American viewing our national interest, and its future, cannot afford to sit idly by, see our country do nothing, and permit this to happen.

If you were to read the papers tomorrow or a month from now, and read that Italy or France had been actually taken over by the Communists—how would you feel?

I believe you would be weighed down with a feeling of despondency. You would know that the best interests of our country had been adversely affected and to a very serious extent.

The Marshall plan is designed to prevent such a thing from happening.

If America fails, or takes only half-way measures, we will be adversely affected. To prevent this, America must use its great power in cooperation with other nations who want only their freedom and independence.

We must bear in mind that the people of Poland and the other satellite countries now dominated by the Communists will drive them out just as soon as they can.

There is no doubt but that there are conditions behind the iron curtain that are very disturbing to the Soviet regime. The cloak of censorship has prevented news of such conditions leaking out to the public at large.

The freedom-loving people behind the iron curtain who are waiting for the first opportunity to drive the oppressors from their lands look to America with hope. Those countries outside the iron curtain depend on America to save them from being enveloped by their enemies within and without.

If America fails to act, the only course left for these peoples is to make the best terms possible with Moscow, and any terms are but the beginning of the end.

Those oppressed look to Washington with hope—to Moscow with fear.

In addition to our response to the call of humanity, we have a direct and personal interest involved. It certainly would not be for our best interests if Europe were to come under the control and domination of communism. We can stick our heads in the sands if we so desire but it might not be long before they will be chopped off. We cannot meet the challenge of communism by avoiding it, or believing it is nonexistent.

Communism achieves its evil aims of taking over governments when human suffering and distress exists. Like so many buzzards, Communists hover overhead during a period of trial and tribulation.

By taking affirmative action along the lines of the Marshall plan—and I am sure the European countries affected will cooperate in this fight against the spread of communism—we will gain many advantages. The success of this program will be consistent with our best interests; our national defense will be strengthened; it will be the means of saving the next generation of our youth from the horrors of another World War; it would be the means of halting communism and its spread over Europe, Asia, and Africa; it would be the means of setting a pattern for the establishment of peace in view of the failure and refusal of the Soviet Union to cooperate with understanding for peace in the world.

We are aware of the fact that Russia does not have unlimited power. Russia knows of our industrial strength, and knows too, of its own weaknesses.

It is because of this that Russia is, through its secret agents who are traitors to their own countries, resorting to creating disorder and chaos so that the Communists will gain control country after country.

After the Communists gain control of a country their policy of liquidation follows with concentration camps and death the fate of those who fail to agree with the Communists.

An aroused public of fair-minded persons everywhere, backed by America, is the only answer to this challenge.

We have seen the failure of the recent London Conference of the Big Four. We know the failure was due to the deliberate refusal of the Russian Foreign Minister Molotov to cooperate with the United States. It was obvious he was there to create confusion and uncertainty. He certainly made no constructive contribution for permanent peace.

The Communist effort to gain control of Greece has failed because of the effectiveness of American assistance. Months ago it was believed that Italy and France might come under the control of the Communists, and while the danger has not completely passed, the forces of decency are in a much stronger position. It is a fact, too, that the rest of western Europe is making recovery because of the assistance and leadership of the United States.

When President Truman sent his first message to the Congress, the now famous Truman doctrine, the issue was joined. President Truman's efforts have given hope to the non-Communist countries.

The passage of the Marshall plan is necessary to bring complete success, and with success, a lasting peace.

In his recent and historic Christmas message, Pope Pius XII called upon all honest men to unite for the rehabilitation of the world. While his holiness Poe Pius XII mentioned no particular country by name we feel sure he had in mind the Soviet Union and its leaders as the harbingers of destruction, as well as their efforts to extend their ideology.

The Pope spoke of peace through a union of honest men. The Boston Post in its editorial of Christmas morning emphasized the importance of his message when it said:

"So 2,000 years after the Sermon on the Mount, Christ's present-day outstanding representative on earth repeats that only through a league of honest men can the nations of the world enjoy peace and prosperity." By honest men, Pope Pius must have had in mind honest nations.

As an honest nation and certainly the most powerful nation in the world today, America must, and with your help will, assume its rightful place of leadership.

A league of honest men and honest nations will achieve victory for the forces of decency.

With affirmative action on the part of United States we can look forward to the New Year with confidence.

Our Swollen State Department

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an interesting article from the current issue of Pathfinder magazine:

OUR SWOLLEN STATE DEPARTMENT

Twenty years ago the listing of the Department of State required just over 1 page of the Congressional Directory. Now it takes 13 pages of the same reference book, merely to give the names of the divisions and bureaus and offices in this single governmental department.

If you are concerned about what is happening to your Government you will find it useful to visit the nearest public library and examine copies of the Congressional Directory. A new volume is issued for every session of Congress and the volume for the second session of the Eightieth Congress, which convened on January 6, will be available shortly.

Each volume is a mine of well-arranged information. But what makes the Congressional Directory particularly valuable is its continuity. You can compare the current issue with one of 20 years ago, as I have been doing. That shows you the changes that are taking place. It also shows why it is difficult to bring taxes down.

The way in which the Department of State is spreading out is simply fantastic. Twenty years ago it had a dozen divisions, each moderately staffed and headed, for administrative purposes, by four Assistant Secretaries and an Under Secretary.

Now it is almost impossible even to count the number of assistant secretaries, executive assistants to assistant secretaries, special assistants to assistant secretaries, and so on. Under them are a score of separate and often overlapping offices, each composed of numerous divisions. It is a fair guess that Secretary Marshall himself cannot name all of the divisions over which he presides.

As an illustration of runaway bureaucracy one may take the new Office of Intelligence Research, with a director, a deputy director, an executive officer, and five subordinate divisions. Each of these divisions has its chief and sometimes an assistant chief as well, so that the modest title of one petty officer is "Chief of the Division of International and Functional Intelligence of the Office of Intelligence Research of the Department of State." You probably never heard of the man who has this title.

But alongside the Office of Intelligence Research has grown up a separate Office of Intelligence Collection and Dissemination, with a separate director, a deputy director, and four subordinate divisions. There is, for instance, an Acquisition and Distribution Division of the Office of Intelligence Collection and Dissemination. It has a chief and an assistant chief.

Of course all these agencies continuously get in each other's way. So to keep them straight still another division has been established, entitled "Division of Foreign Activity Correlation." It isn't getting things very well correlated, however. Perhaps that is because of the Office of Special Political Affairs. This has a director, a deputy director, a special deputy director, a special assistant to the director and—for good measure—an executive officer above all that.

This maze of bureaucracy explains why there is so much congressional opposition to letting the Department of State administer the European recovery program.

During the war and postwar years the State Department has grown to such size and complexity that its right hand no longer even knows what its left hand is doing. And there has really been a left hand in this department, as the loyalty investigations have shown.

Whatever money is appropriated for European relief from now on must be spent efficiently. That is why there is growing support for the Herter bill, which would make the administration of ERP responsible to Congress, rather than to the Department of State.

Time for Greatness in Congress

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Miami (Fla.) Daily News of January 13, 1948:

TIME FOR GREATNESS IN THE CONGRESS

The sound American custom of looking at the price tag before buying reaches finest flower in the country's scrutiny of the President's annual budget message. Unfortunately, the representative democracy—for all its advantages—is an imperfect machine for translating the mass decision. Nor do the political considerations of a Presidential election year provide the best lubricants for the Congress. Indeed the result quadrennially is a chaotic pandemonium of stripped gears, cracked pistons, and—inevitably—overheating.

Couple this fact with that of President Truman's unprecedented peacetime budget of $39,669,000,000. There you have it.

But, it must be presumed, the President had the willing ear of his thoughtful countrymen when he told them the realities of our existing international and domestic requirements during 1948–49. The outstanding fact of the budget message is that 79 percent of the expenditures he proposed "directly reflect the costs of war, the effects of war, and our efforts to prevent a future war."

(The efforts to prevent a future war? They include $11,000,000,000 for national defense and $7,000,000,000 for foreign and other international affairs. They account for 46 percent of the record-breaking total.)

Now what of the ordinary expenses of Government, which are already the target of the Republican sharpshooters? They account for only 21 percent of the total.

Withal, the President holds forth the hope of again balancing the budget, and again reducing the national debt. And, he still maintains, income taxes can be cut $40 for each individual and each dependent.

There is little in the record of the Republican Congress' first session to warrant optimism about judicious economy in the forthcoming appropriations. Take the reaction of Chairman BRIDGES (Republican of New Hampshire) of the Senate Appropriations Committee that the President has presented "an extravagant program beyond the means of the Nation to meet this year." By all economic barometers, the Nation's unprecedented peacetime budget comes at a time of unprecedented prosperity.

If there is fat in the budget, the lopping-off will be best performed by the surgeons of Congress, such as the Republicans' own Representative DIRKSEN, rather than by the butchers. If there are more BRIDGES than DIRKSENS on the appropriation committees, and the record of the eightieth more than suggests there are, the result may be that famed in the pronouncement, "The operation was a success. But the patient died."

Now, indeed, is a time for greatness in the Congress. The President's message on the state of the Union ticked off the main spending projects for next year. The budget message affixed the price tags. The world recovery so adhesively linked to world peace, the national defense so vital to our security, these and many other endeavors can best be assayed not at the cost of doing, but at the cost of not doing. History will record this fateful session not for its effect on our November election as the politicians would, but, in the perspective of the years, for its effect on our world.

Address Before Women's Patriotic Conference

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mrs. ST. GEORGE. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include excerpts from a speech made by me before the Women's Patriotic Conference in Washington, D. C., on January 16, 1948:

As a Congresswoman and, even worse, as a woman politician, I am constantly asked what the woman's point of view is on every question before Congress and the Nation, and I can only say that there is no woman's point of view. Women are citizens and they are individualists, and they agree together even less than men, and that is what makes them so interesting and so valuable politically.

You women here today represent many great patriotic organizations; you are just as interested in the affairs of these organizations as any man, and you are just as interested in national defense as any other patriotic American.

It is a very great tribute to women that the chairman of the Veterans' Committee in the House of Representatives is a woman, Hon. EDITH NOURSE ROGERS, and I think it is highly appropriate she has been named to this high office. She is well named "the Veterans' Angel." She is exactly that, untiring in her efforts for their best interests. All women quite naturally have a very strong urge to work with and for the veterans. The mere fact that we cannot bear arms makes it all the more our duty and our right to see that all veterans shall be given their just due and that, above all, they shall never be forgotten.

After every war we bow our heads and pray again that those who died in the conflict may not have died in vain and that their sacrifice will be the last one necessary to insure peace.

But human nature being what it is, we have a very real responsibility to see that our heroes have not made the supreme sacrifice in vain. We, the living, must be on the alert to keep this country strong. We must, all of us, be alive and diligent in working for national defense.

I believe that we are now in a difficult position. For the first time in our history we have not sufficient resources to do all the things that we are being called upon to do.

We must therefore take stock, we must determine what things come first. I submit to you that as women and Americans we must put peace as our first objective, and that to attain peace we must have an adequate, nay, a powerful program for national defense.

The possibilities of another war are too frightful to contemplate. All the scientists have warned us that it means probably the end of civilization. National defense today means more than armies and navies, it means air force, atomic weapons, and the knowledge of germ warfare—probably the most horrible weapon of all. It also means the planning of complete mobilization of the entire population because the next war will be a war against the entire civilian population of the world.

The greatest thing that has been done in years was done during the first session of the Eightieth Congress, and that was the creation of an over-all Office of Defense and the appointment of a Secretary of National Defense. This is by all odds the most important position in the whole Cabinet, and second only to that of the President.

It is now possible to coordinate all our resources for national defense—civil, military, and scientific—and it would be well to let our friends and enemies abroad know what a tremendous step we have taken to strengthen our country and to put her in the position of being invincible, so that she may maintain the peace of the world.

You have great influence, you represent many groups of patriotic men and women all over the country. There can be nothing more valuable than for you to explain to those in your immediate circle that our country, though rich and powerful, does not have unlimited resources, that we cannot support the whole world and maintain our own strength.

We must not be foolishly sentimental and fall into a trap. Remember Lenin said: "The way to destroy the United States is to make her bleed herself white." We are in a fair way to do that very thing.

No one can destroy us from without but our own thoughtless stupidity can destroy us. If we destroy ourselves all hope for the survival of freedom and liberty will perish from the earth.

If we remain strong and keep our defenses high we can maintain the peace of the world, and in peace, the war-torn peoples may be able to build up once more their own civilization and their own economies.

Let us resolve to put first things first. And let the first thing be a free America. She cannot be free unless she is strong, she cannot be strong without adequate national defense. It is my hope that you will leave this meeting and these deliberations more determined than ever to keep America the hope of the world.

Most Desired Peace

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and editorial:

WASHINGTON, D. C., *January 20, 1948.*
Hon. JOHN W. McCORMACK,
House of Representatives,
Capitol, Washington, D. C.

DEAR CONGRESSMAN: I am sending to you herewith an editorial from the current issue of the Christian Advocate, official organ of the Methodist Church, a weekly having a Nation-wide circulation of over a quarter of a million copies. It is entitled "We Join in This Appeal," and the opening paragraph thereof reads as follows:

"Voicing concern over the uncertain future and the bitter hatred engendered by widespread poverty and social unrest, Pope Pius XII in a historical encyclical entitled 'Optatissima Pax' (translated 'Most

Desired Peace') at Christmastime condemned class hatred and those who exploit the depressed poor of the world. He warned that it is 'necessary for each—and especially he who has greater goods—to put the common welfare before private advantages and profits'."

In my humble opinion, such editorial is worthy of space in the CONGRESSIONAL RECORD, in furtherance of your own well-known views on the general subject.

With personal regards and assurances of high esteem, I am,

Sincerely,

JAMES PATRICK MCGOVERN.

[From the Christian Advocate of January 22, 1948]

WE JOIN IN THIS APPEAL

Voicing concern over the uncertain future and the bitter hatred engendered by widespread poverty and social unrest, Pope Pius XII in a historical encyclical entitled "Optatissima Pax" (translated "Most Desired Peace") at Christmas time condemned class hatred and those who exploit the depressed poor of the world. He warned that it is "necessary for each—and especially he who has greater goods—to put the common welfare before private advantages and profits."

Defining the conditions necessary for the establishment of a peaceful social order, he declared: "It is absolutely necessary to pacify spirits, bring them back to mutual understanding, to reciprocal cooperation, so as to be able to carry out those doctrines and those directions that are consistent with Christian teachings and the conditions of the present hour." Then in an appeal directed especially to children, the head of the Roman Catholic church pled for prayers in behalf of world-wide peace.

In the basic principles of this encyclical every Protestant worthy of the name most surely joins, and the Christian Advocate, as the official organ of a powerful denomination, appeals to its readers and to the Methodist Church to assemble their prayers in behalf of this objective so devoutly desired by all true Christians.

Simultaneously with the Pope's encyclical there comes an appeal from J. Edgar Hoover, the director of the FBI, that parents all across America shall engage in the practice of daily prayers with their families. "If there is hope for the future of America, if there is to be peace and happiness in our homes," he says, "then we, as a Nation, must return to God and to the practice of daily family prayer. Our generation, it seems, has allowed old faithful religious practices to slip into oblivion. As a result, family life has been weakened and the Nation has suffered."

We cannot ignore such an appeal, except at the peril of the Republic.

Statement of Philadelphia Housing Authority

EXTENSION OF REMARKS

OF

HON. HARDIE SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. HARDIE SCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the Philadelphia Housing Authority to Joint Congressional Committee on Housing, January 8, 1948, Philadelphia, Pa.:

The Philadelphia Housing Authority is most happy that your committee is here today to investigate housing conditions in Philadelphia. When our chairman, Mr. William Reinhardt, learned that the Joint Committee on Housing planned to visit Philadelphia he wrote to Chairman GAMBLE suggesting that the members of your committee visit several of the Philadelphia Housing Authority's projects in order to learn first-hand the advantages which tenants in our low-income projects are enjoying in comparison with the disadvantages under which their neighbors in adjoining slums are forced to live.

We regret that the pressure of time has prevented you from accepting Mr. Reinhardt's invitation but we believe that if the members of your committee and every Member of Congress could visit one of the low-income public-housing developments in any of the 40 States where housing authorities are established, Congress would take immediate action to extend the benefits of the United States Housing Act of 1937 to more of our lowest income citizens.

Since your committee cannot visit our housing developments and see the results with your own eyes, we will endeavor to review what the Philadelphia Housing Authority has done, and what it proposes to do just as soon as Congress provides additional Federal assistance to local communities for slum clearance.

In 1937 the Pennsylvania Legislature in enacting into law the housing authority law of Pennsylvania declared that there "existed within the various counties of the Commonwealth, numerous slums and unsafe, unsanitary, inadequate, or overcrowded dwellings, which conditions are accompanied and aggravated by an acute shortage of decent, safe, and sanitary dwellings within the financial reach of persons of low income, such conditions arising from overcrowding, dilapidation, faulty construction, obsolete buildings, lack of proper light, air, and sanitary facilities."

The legislature further determined that: "Private industry alone has been and now is unable to overcome the obstacles which have prevented and are now preventing it from clearing slum areas and relieving the shortage of decent, safe, and sanitary dwellings for persons of low income, and the construction, pursuant to this act, of housing projects for persons of low income would therefore not be competitive with private enterprise."

In 1945 the Pennsylvania Legislature confirmed and expanded this policy of slum clearance and aid to families in the lowest income groups by enacting a redevelopment law and the city of Philadelphia has since established a redevelopment authority.

The Philadelphia Housing Authority and the other local housing authorities throughout Pennsylvania are therefore official agencies of this Commonwealth whose established policy is to provide housing for families in the lowest income groups whom private enterprise cannot profitably serve. The people of Pennsylvania and the people of Philadelphia through their respective representatives at the State and local levels have clearly endorsed the principles of public housing and we feel that the Members of Congress should give great weight to their wishes and to the wishes of 120,000,000 Americans in the 40 States which have passed housing legislation similar to the housing authorities law of Pennsylvania.

Pursuant to the housing authorities law of 1937, the Philadelphia Housing Authority constructed three low-rent housing projects totaling 2,859 dwellings at an average capital cost, including land, of $5,400 per dwelling. For each one of these dwellings a substandard dwelling was eliminated in the city of Philadelphia.

At the time of initial occupancy of these dwellings, prior to the war, a maximum income limit for the largest families at admissions was established at $1,399 and the average rent, including all utilities, was $18.94 per month. With changing economic conditions income limits at admission have been increased and now range from $1,875 to $2,275 per year with rentals from $13 to $39 per month, including all utilities. Prior to the war, income limits for continued occupancy ranged from $1,550 to $1,900, but during 1947 as income limits for admission were increased, the limits for continued occupancy were increased and now range from $2,350 to $2,900 for the largest families for whom a rent of $43 per month is charged.

Of the 2,859 families living in these homes 419, or 14.6 percent, are receiving relief or some other form of governmental aid.

During the war, because of the housing shortage and because many of the tenants were essential war workers, the high-income tenants were not required to move when their incomes exceeded the maximums established by the authority.

In June 1947, however, the authority served notice on 850 tenants whose incomes were in excess of the maximum income limits for continued occupancy, notifying them of their ineligibility and at the same time "vacate notices," effective December 31, 1947, were sent to 56 tenants with the highest incomes among these ineligibles. These tenants would have been required to vacate by December 31, 1947, but for the passage of the McCarthy bill (S. 1361) deferring the eviction of over-income tenants until March 1, 1948.

During the period of occupancy of the three low-rent projects, the Philadelphia Housing Authority has paid to the city of Philadelphia $334,163.25 as payments in lieu of taxes to help defray the cost of municipal services rendered to the three housing projects. During the same period the authority has used only 63 percent of the annual contribution available to it under its assistance contract with the Federal Government.

The Philadelphia Housing Authority also has under its jurisdiction four federally owned permanent Lanham housing projects comprising 2,400 dwellings and 4 temporary Lanham projects totaling 2,191 homes. In addition, the authority leases from the Federal Government, and operates as a low-rent housing project, Hill Creek, containing 258 homes. The authority has almost completed as agent for the city of Philadelphia, the construction of 1,781 temporary homes for veterans. More than 10,000 veterans have applied for the 1,781 homes. In all, the authority will have under its jurisdiction, upon completion of its veterans' program, 9,620 homes.

Of the 9,192 homes which have been completed thus far, more than 4,100 or 43 percent, are occupied by veterans of World War II. With veterans receiving preference for all vacancies and with the eviction of many high income tenants during 1948, it is estimated that veteran occupancy will increase to 55 percent of the total by the end of the year. If Congress permits the transfer to the Philadelphia Housing Authority of the 2,400 homes in the permanent war-housing projects, veterans of low income will be given preference in the occupancy of these units, and veterans' occupancy would reach 75 percent of the authority's accommodations.

In 1945 the Philadelphia Housing Authority held public hearings in order to determine the public's attitude toward the ex-

tension of a public housing program in Philadelphia. These hearings were attended by more than 500 persons representing educational, religious, civic and social groups, Federal, State and city officials, real estate and builders' associations, labor organizations, private groups and individuals interested in the practical solution of the vital housing problems confronting the city and the authority. As a result of the testimony developed at the public hearings, the authority, on July 23, 1945, submitted its recommended program to the city of Philadelphia and the city planning commission. This report recommended the construction of 19,500 homes for families of low income, over a 6-year period. Copies of this report and a supplementary report submitted 1 year later, as well as a stenographic transcript of the testimony taken at the public hearings is attached hereto for the information of the committee.

The Philadelphia Housing Authority and the city of Philadelphia have jointly requested the Federal Government to transfer title to the four permanent war housing projects, Passyunk Homes, Abbottsford Homes, Bartram Village, and Oxford Village I, comprising 2,400 homes, to the Philadelphia Housing Authority for use as low-rent housing projects This request by the city and the authority is presently being studied by the Public Housing Administration and a report containing recommendations by the Administrator of the Housing and Home Finance Agency will, in all probability, be submitted to Congress in the very near future. Preference, of course, will be given in the occupancy of these homes to low-income veterans who are so badly in need of rental housing in Philadelphia today. Since these projects as constructed are not readily divisible for sale as individual units and since the Federal Government did not conform in many respects to the Philadelphia Building Code in the construction of these projects, which fact would seriously affect their sale to private individuals, it seems apparent that their operation by a public agency for rental to veterans of low income is in the best public interest.

Turning to the housing conditions as they exist in Philadelphia today, we find that there are almost 200,000 veterans living in Philadelphia and it is conservatively estimated that 50 percent of them are living doubled-up with relatives, in temporary shelters such as rented rooms, trailers, or tourist cabins, or in dwellings needing major repairs or lacking one or more standard plumbing facilities. For the nonveteran today's housing picture in Philadelphia is just as bad. The 1940 census revealed that of the 557,537 homes in Philadelphia 107,917 or 19.3 percent of the total housing supply was substandard. Taking into consideration normal obsolescence and deterioration and the increase in families since 1940, housing conditions are undoubtedly much worse at this time.

What is being done to relieve this admittedly serious housing condition?

For the low-income veteran, and the nonveteran living in substandard and overcrowded housing, the answer is—nothing.

Here are the facts: The Census Bureau reports that the average weekly income of Philadelphia veterans wishing to buy homes is $48 and the average weekly income of those veterans who wish to rent homes is $39. Based on the normally accepted ratio of carrying charges and rentals to income, the average veteran cannot afford to pay more than $5,500 for a home or $40 per month rent. The Census Bureau further reported that one-fourth of these veterans stated that they could pay $4,200 or less for a home and one-fourth reported that they could pay $33 or less for rent.

The conclusion is inescapable that at least 50 percent of Philadelphia veterans are priced out of the housing market today, and without some action by Congress to relieve the situation they will be without hope of purchasing or renting housing within their means for at least several years. If there is any doubt as to the accuracy of this statement, a reference to the news columns of the Philadelphia Evening Bulletin of Saturday, January 3, 1948, should suffice. The headline announcing new housing in Philadelphia reads: "Big spurt in rental housing, chiefly garden-type apartments, predicted for Philadelphia area in 1948." The captions underneath the two accompanying photographs contain the following references to rentals, respectively:

"Rents are $75 and $85 per month, plus $6 for garage.

"The apartments contain four and a half rooms and bath and rent for $90 a month without utilities."

Under the provisions of the Taft-Ellender-Wagner bill Federal assistance will be given to local communities to construct 125,000 low-rent dwellings a year for 4 years, or a total of 500,000 during that period for the entire country. Senator TAFT, the principal sponsor of the bill, estimated that this minimum provision for families of low incomes, including veterans, will provide only 10 percent of the estimated need of low-income families living under substandard housing conditions.

However, the special interests—the National Association of Real Estate Boards, the United States Savings and Loan League, and the National Association of Home Builders, who cannot see any profit in public housing for their members, have effectively prevented the House Banking and Currency Committee from reporting the House version of the Taft-Ellender-Wagner bill to the House floor for a vote. These pressure groups well know that the Representatives in Congress of the 40 States with their 120,000,000 constituents which have adopted public housing legislation would overwhelmingly approve the Taft-Ellender-Wagner bill if it was brought to a vote. Knowing this, the opponents of public housing pickled the Wagner-Ellender-Taft bill (S. 1592) in the House Banking and Currency Committee of the Seventy-ninth Congress after its passage in the Senate, and these special-interest groups are endeavoring to do the same thing with the revised Taft-Ellender-Wagner bill in the Eightieth Congress. We trust that the Joint Committee on Housing will use its efforts to assure fair play and democratic process by urging their colleagues in both Houses to bring the Taft-Ellender-Wagner bill to a vote.

Some of the opponents of public housing charge that it is un-American and communistic for the Government—local, State, or Federal—tc extend direct aid to low-income families living in slums. Senator TAFT has ably refuted this argument by pointing out that this country long ago adopted a policy of educating its children at public expense, of providing free medical care for those unable to afford it, and direct relief payments to those unfortunate citizens unable to feed and clothe themselves. The Senator points out, therefore, that there is no change in the basic policy when Government provides a minimum program of public housing for assistance to the lowest income groups. Those who shout about un-Americanism and communism should remember that communism feeds on want and distress. The seeds of that want and that distress are being sown daily by the continued failure of Congress to provide housing for those with the greatest need and the least chance of satisfying that need. The chaos in France and Italy today should be sufficient proof of this fact.

The House Special Committee on Postwar Economic Policy and Planning of the Seventy-ninth Congress, after making an exhaustive study of public housing, made the following report:

"The committee recognized that there is an area of housing at the lowest rent levels which private industry cannot afford to serve and which local government is not fully capable of serving. The problem of public housing is therefore one of national as well as of local concern. Any program of Federal cooperation with local governments for postwar construction must accord a permanent place to the making up of the large deficiency in housing for low-income families."

Similarly, the Subcommittee on Housing and Urban Redevelopment, which held hearings from June 1, 1944, to February 7, 1945, at which hearings appeared many national organizations interested in the problems of housing as well as Government officials connected with housing, made the following statement on public housing in its report to the Senate Special Committee on Postwar Economic Policy and Planning:

"The entrance of the Federal Government into public housing has produced a much greater controversy. It is contended by many that the whole job of housing can be done by private enterprise and that this form of Government activity results in competition which acts as a deterrent to the expansion of private operations.

"The subcommittee agrees fully that the Government should not go into housing as a business or compete with private enterprise in this field any more than in any other field, but it does not agree with the contention that the problem can be solved at the present time by private enterprise alone. Unaided private initiative has not provided a sufficient supply of decent houses in the past. Although the subcommittee believes that a revivified industry will constantly reduce the need for direct aid, it sees no likelihood of change that would permit private initiative to meet all the requirements of the immediate future.

"The justification for public housing must rest on the proposition that the Federal Government has an interest in seeing that minimum standards of housing, food, and health services are available for all members of the community. The American people have been impressed with the fact that, in a country capable of our tremendous wartime production, there is no reason why hardship and extreme poverty cannot be prevented."

In closing, the Philadelphia Housing Authority will welcome any formula which your committee or the Congress may evolve for solving the housing problem of our low-income groups. If private enterprise can do the job—so much the better. All we ask is that the Congress take immediate action to put into effect a Federal program to aid families of low income who cannot afford to pay for decent housing.

Respectfully submitted,

THE PHILADELPHIA HOUSING AUTHORITY,
WILLIAM REINHARDT, *Chairman.*

The Marshall Plan and Peace

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. GARMATZ. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following radio address delivered by me over Station WBAL on January 18, 1948:

Senator MILLARD E. TYDINGS has graciously permitted me to occupy the time usually allotted to him for his excellent weekly program, for which I am very grateful. I also desire to thank radio station WBAL for making this 15-minute period available to me so that I might express my views on subjects of general interest, not only to the residents of the Third Congressional District whom I have the honor to represent, but of vital importance to the citizens of the entire United States. It is not my intention to quote a lot of figures concerning the Marshall plan, or any other plan, but there are some cold facts staring us in the face, and we cannot escape our responsibility in seeking the path to permanent world-wide peace.

Regardless of what may be said, peace will not come until people have food, housing, security, and the basis for hope of the future. Under the stimulation of the announcement of the Marshall plan, representatives of 16 European nations met in 1947 and submitted a general program of economic and fiscal rehabilitation which called for American financial aid for over a 4-year period. Congress is now deliberating as to the actual way the Marshall plan will be applied. While this Nation is debating just how far our participation in world affairs shall go, riots, civil war, bloody elections, and strife are rampant in many parts of the globe. These people are seeking a way out of chaos and uncertainty. We Americans think and know that democracy is the only sure remedy for the ills of the world. If we are wrong, then we, too, will be caught in the maelstrom of world unrest.

We Americans have high ideals and pride in our American way of life—and we have cause to be. That is because we enjoy real freedom, especially the four freedoms as stated by our late lamented great President, Franklin Delano Roosevelt.

But we must remember that our high ideals and pride can vanish if our people suffer want through inflationary prices. The United States is the richest and most powerful nation on the face of the earth. Initiative and production enabled us recently to win a war on two fronts. That same initiative can rescue us from the fear of inflation if we will but realize that we must help other nations while we are helping ourselves. We might as well face the fact that we are the only nation left that can aid world reconstruction, and if we are to survive as a free nation, we must enable all nations—large or small—to remain free.

Even more important than economic reconstruction is our obligation to keep alive the hope of the world by demonstrating that democracy is a workable, humane form of government, in which the people are the rulers of their destinies. At the same time, we must insure adequate living wages for our workers and a reduction in the price of essential commodities. It is a fallacy to suppose that, great as this Nation is, we can keep on raising wages and raising prices, because there is small consolation to the working man or woman in a small salary raise if the price of every-day necessities takes a jump at the same time. Congress is working on a solution to these problems, and we hope the answer will be found during the present session of the Eightieth Congress. We always have been able to solve our domestic problems no matter how difficult they may appear at the time—that is one of our inherent characteristics as free Americans.

Another problem affecting our Nation is the demand for a reduction in taxes. If we look at taxation in the light of a payment to the Government to insure liberty, then we can better stand the burden—but in no event can we hope to escape a fair and equitable taxation. As Congressman from the Third District of Maryland, I am sympathetic with the pleas of my constituents that their tax burden be lightened. President Truman has just presented a proposal to Congress to ease the tax load of the men and women least able to stand heavy taxation. Here again I am sure the solution to the problem will be found, and that some form of tax reduction will be announced in the very near future. But the solution, whatever it is, must be fair and just to all segments of society. That, too, is part of the American way of life.

In theory, excessive price rises could be avoided by taxing the people so heavily that the Government could take back, in the form of taxes, all the extra money it paid out for necessary expenditures to keep down prices, that is to say, by the Government subsidizing producers to keep down inflation, but of course, that is only a nice theory. We must deal with practical, hard facts. In World War II, the percent of the total expenditures obtained from taxation in the fiscal years of 1942 through 1946 was approximately 46 percent, leaving 54 percent derived from borrowing. This result was achieved despite the fact that costs of the war to the United States were about 10 times as great as the cost of World War I. It reflected an even more vigorous use of the income tax and excise taxes.

Here we have a direct cause of inflation, because, even with a modernized tax system and its drastic application, we still had to borrow over one-half of the total war costs. I merely mention this fact to show the high cost of war, the method of financing armed conflict and its resultant effect on our home economy. We must find a solution for world peace and a remedy for our economic ills as quickly as possible. We cannot afford to have another war. Our country is doing everything possible to avert such a disaster. If, in spite of our best efforts, war should come upon us, we must be prepared not only to defend ourselves but to carry the fight to the aggressor.

I am a firm advocate of a strong America, not for purposes of aggression, but solely for defense! We have recognized the fact that if the United States is to retain its position of leadership in world affairs, and if it is going to be able to implement its foreign policy so that the peace may be kept, we must be ever alert to possible attack from without and within.

And now, may I say a few words in behalf of our veterans, the men who preserved our liberty and all we hold dear. The two great wars of the twentieth century were brought about by a challenge to the heritage of human freedom, on which the American heritage of democracy is founded. Each time our Republic has met that challenge and the force of her industrial power and the might of her armed citizens have been largely instrumental in overcoming it. Without our veterans, much of the world would have lost that concept of free democratic government of which the United States of America is the prime example.

How, then, can we best honor our veterans? In my opinion, we can best honor our veterans by helping to create a world in which freedom and peace are inseparable. We can make sure our veterans receive the benefits to which they are entitled, namely, educational opportunities, the right to engage in gainful pursuits, and a home for himself and his family. I pledge my support to these objectives. I am also in favor of adequate compensation for those veterans pursuing educational courses in our schools and colleges, they are entitled to adequate subsistence while at school!

To sum up my remarks, I sincerely hope the Marshall plan can accomplish its purposes because the world will then have been saved from another terrible conflict.

As I stated before, I am 100 percent back of our working men and women who have aided in making this Nation great. I favor an adequate living wage, because as has been so truly said, "The laborer is worthy of his hire."

Along with other Members of the Eightieth Congress, I am giving serious thought to the rapidly mounting spiral of inflation. It must be curbed and quickly. President Truman has asked for certain specific powers which would give him weapons to fight the cost of living. I shall support any legislation which, in my opinion, will best remedy these conditions, and shall continue to look to President Truman for leadership in this threat to our economic life.

A strong nation is a peaceful nation, if that nation is imbued with the principles of true democracy which has for its slogan, "Live and let live." To that end I favor preparedness. I will vote for those measures pertaining to housing which are beneficial to both, veterans and nonveterans, and I pledge continued support for all legislation that will advance the welfare of all our veterans.

To my friends and constituents of the Third Congressional District, I pledge continued efforts in your behalf. I welcome your views on the important matters affecting our Nation and my chief aim is and will continue to be, "The greatest good for the greatest number."

Again, my thanks to Senator TYDINGS and radio station WBAL for this opportunity to express my views on the vital problems confronting our Nation at this time. My only interests will be the interests of our citizens. I thank you.

Mine Safety

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. PRICE of Illinois. Mr. Speaker, under leave to revise and extend my remarks, I should like to place in the RECORD an editorial appearing in the St. Louis Post-Dispatch in regard to mine safety. I cannot urge too strongly the necessity for the enforcement of mine safety regulations if disasters such as the Centralia mine tragedy of last year are to be averted. The editorial follows:

SIX THOUSAND MINE SAFETY VIOLATIONS

Why should Congress pass a Federal mine inspection law with teeth?

The answer is written in large letters for all who read the Interior Department's report on violations of the Federal safety code:

More than 6,000 violations were found in the 1,000 mines which were inspected last year.

Only 14 of the 25 coal-producing States cooperated with the Federal mine safety code.

The Governor of Illinois, whose negligence and compromising of the State mine inspection service was followed by 111 deaths at Centralia, wrote in protest: "It seems to me that at the present time the forcing of a Federal mine safety code upon the State is a violation of State's rights."

As Representative PRICE of the East St. Louis district says, there is no need whatever for further hearings on this issue. The Landis bill to provide Federal safety enforcement should be reported out of committee and passed.

What is Congress waiting for, another Centralia? Governor Green took that risk and men who had pleaded with him were brought lifeless out of Centralia Coal Co. mine No. 5. Does Congress want the same risk on its part paid for in the same way?

Jack Beall on Communism

EXTENSION OF REMARKS
OF
HON. WILLIAM C. COLE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1948

Mr. COLE of Missouri. Mr. Speaker, for the past several weeks I have listened with interest to Jack Beall's weekly radio broadcast on communism which is heard every Saturday at 6:45 p. m. eastern standard time over the American Broadcasting Co. network.

Mr. Beall has devoted long hours of research to this subject and through his broadcasts is doing much to bring home to our American citizens the policies of and the methods used by the Communist Party of the United States in its efforts to overthrow our republican form of government. I take this opportunity to commend Mr. Beall for the splendid work he is doing.

I was so impressed with his broadcast of January 10 that I requested his permission to insert it in the CONGRESSIONAL RECORD in order that my colleagues may have the benefit of the factual information it contains regarding this menace of our republican form of government. It is as follows:

Good evening. One hundred years ago this month, two Germans drew up in writing a program to change the world. Karl Marx and Friedrich Engels, in London, prepared their Communist Manifesto. It was a program to turn class against class, and to bring about bloody revolution.

The Communist Manifesto, which was written out in German, in a cheap London flat, just 100 years ago this month, became the bible of the revolution in Russia. Marx became the major prophet of both democratic socialism and of communism. The two parties agree on Marx's materialist approach to history, his dialectic, his economics, but they have now divided on how socialism is to triumph in the world. The Socialists appear to be more consistent Marxists by holding that capitalism is bound to collapse of its own weight. They contend there is no need to precipitate it by violent means. They are the evolutionary party which has grown up about the teachings of Marx, particularly in Das Kapital. On the other hand, the Communists are the revolutionary party which has grown up around these same teachings, but which put more emphasis on the Communist Manifesto, as a program.

Almost everybody has heard the closing words of the Communist Manifesto. Here they are again:

"The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions. Let the ruling classes tremble at a Communistic revolution. The proletarians have nothing to lose but their chains. They have a world to win. Workingmen of all countries unite!"

Of course, there has been a slight change in that attitude of disdaining to conceal their views and aims. More recently—particularly after the Harry Bridges trial—every effort has been made by the Communists to gloss over the angle of bloody revolution. For a while, they even made noises like patriots. Earl Browder, at one time, offered to pal up with J. P. Morgan. But that was a short-lived period—a tactic. It has not changed the basic views and aims. Let me quote you a few other words from Communist Manifesto.

Said Marx: The phases are, first, a more-or-less veiled civil war, within existing society—"up to the point where that war breaks into open revolution and where the violent overthrow of the bourgeoisie lays the foundation for the sway of the proletariat."

The high-sounding term, "bourgeoisie," can be translated as employer and the proletariat are the people who work for wages.

In the Communist manifesto we find this other gem: "You (meaning the bourgeoisie) reproach us with intending to do away with your property. Precisely so, that is just what we intend."

Fairly crisp and to the point, I'd say.

And Marx repudiates in the Manifesto, the Christian code of ethics, by saying that law, morality and religion are, to the proletarian, "so many bourgeois prejudices, behind which lurk, in ambush just so many bourgeois interests."

This puts the Marxian mark of approval on Lenin's famous dictum that his followers should "use any ruse, cunning, unlawful method, evasion and concealment of truth" to achieve the desired ends.

Here are some other quotations, by later Marxists of the Soviet persuasion, on the use of force and violence in the overthrow of governments. They may be important to you to know if some Communist or fellow-traveler denies that communism contemplates overthrow of the state by force and violence. I take this from the Theses and Statutes of the Third International. "The Communist International makes its aim to put up an armed struggle for the overthrow of the international bourgeoisie and to create an international Soviet Republic, as a transition stage to the complete abolition of the State."

Lenin says in his The State and Revolution: "The replacement of the bourgeois by the proletarian state is impossible without violent revolution."

Again, Lenin says this, with particular reference to England and the United States: "The preliminary conditions for every real people's revolution is the smashing, the destruction, of the ready-made state machine."

Stalin—the present high priest of communism—said in his Foundations of Leninism: "The law of violent proletarian revolution, the law of the smashing of the bourgeois state machine, as a preliminary condition for such a revolution, is an inevitable law of the revolutionary movement in the imperialist countries of the world."

In 1929, Stalin wrote a letter to the Communist Party of the United States in which he said: "I consider the Communist Party of the United States is one of the few Communist Parties to which history has given decisive tasks from the point of view of the world revolutionary movement. It is necessary that the American Communist Party should be capable of meeting the moment of crisis fully equipped to take the direction of future class wars in the United States. You must forge real revolutionary cadres and leaders of the proletariat who will be capable of leading the millions of American workers toward the revolutionary class war."

That is the man who is represented by some of his smoother-talking followers as holding that world revolution is not necessary—but that socialism in one country—Russia—is acceptable.

William Z. Foster, the present head of the Communist Party, United States of America, said, back in 1928, when he was a candidate for President of the United States: "We working class," he said, "must shatter the capitalistic state."

We must build a new state, a new government, a workers' and farmers' government, the Soviet Government of the United States. * * * In all our agitation around these demands we must emphasize the absolute necessity for the proletarian revolution. Our strategy is to utilize these immediate demands to educate and organize the masses, in preparation for the final revolutionary struggle, which will abolish capitalism, altogether. * * * Our party is a revolutionary party."

Benjamin Gitlow, a high Communist functionary in this country until his break with the party, said at the Harry Bridges trial, in 1942: "The present Communist Party interpretation of the Communist Manifesto is to lay down the policy that it is necessary to overthrow capitalism. It is necessary to do it forcibly, through a violent revolution."

In May, of 1942, Attorney General Francis Biddle, in reviewing the deportation proceedings against Harry Bridges, found that the Communist Party in this country believes in, advises, advocates, and teaches the overthrow, by force and violence, of the Government of the United States.

A relatively short time after that, the Communist Party dissolved itself. This was the era when Browder was preaching a second front and all-out production—because Russia had been attacked by Hitler. It was something of an embarrassment to be threatening us, as allies, with overthrow by force and violence. Besides that, there was a law on the books that might be interpreted as forcing all representatives of a foreign power, in this country, to register. Certainly, that was the last thing the Communists here wanted to do. So, they changed their name to Communist Political Association. They left out references to the historic mission of the party, which was in the original constitution.

I might say, here, that this historic mission is the forcible overthrow of the government of whatever country they are in.

If you talk to a Communist and ask him about this matter of force and violence he will probably come back at you with some of the party double-talk about the party not wanting violence. It will be forced upon the party he will say, because no capitalistic government will ever yield power without a struggle. If the struggle comes, it will be the fault of the capitalist society for not submitting quietly, in other words. It is something like a highway man excusing himself for shooting his victim—the victim had no right to resist—it was all the fault of the victim.

After the war, in July 1945, the party came back, under its old name, and restored to its constitution the reference to the historic mission.

A great deal of the appeal of both the Socialist Party and the Communist Party has been based on the claim that Marxism is "scientific"—that it follows scientific principles. Its founder, Marx, they claim, was an infallible prophet of the inevitable decay of the capitalist system and its supplanting by socialism, because he used scientific principles, founded on Hegelian philosophy.

Now, I think almost anybody would agree, who thought about it, that the so-called social sciences can hardly be called sciences at all. Who would dare call economics a science, in the meaning of an exact science, or an infallible system?

And yet this pretension to being scientific and infallible has got Marxism a long way. Maybe people are impressed with it—the way they are impressed with the big, mouth-filling words. If you call a wage payer a member of the bourgeoisie, or a wage receiver a proletarian, it is so much more scientific-sounding, isn't it?

Marx had the hardihood to speak of iron laws—one of them amounts to the simple assertion: Collapse of capitalism is inevitable. He bolstered this by the assertion that no system is able to digest unlimited forces of production and that every system must collapse when the "forces of production have outgrown it."

Marx thought that the industrial revolution, brought on by the application of

steam power, would prove this last assertion of his—he confidently expected the collapse of capitalism because it couldn't digest the production of the steam engine. In 1848, the year of the manifesto, there was a great deal of unrest all over Europe. Communists did gain power, for a few days, in France, but the big explosion didn't come. Capitalism and free enterprise have gone on to digest the steam engine, electric power, the internal-combustion engine, and the wonders of modern physics and chemistry. It is now reaching out to digest the products at atomic power and yet the system refuses to collapse.

I'm very unscientific and very ignorant, of course, to have thoughts like this, but I can't help feeling that, when the Communists took the tack they did—that they had to help this inevitable collapse of the capitalist system by doing some positive acts, themselves, it showed a fundamental lack of faith in the inevitability of the collapse. Certainly, the Social Democrats, who claim to be just as good and sound Marxists as the Communists—don't exhibit this lack of faith. They are content to let the system fall of its own weight, then pick up the pieces by being voted into power. I am not a Socialist, but I have a great deal of respect for them, as good democrats with a small "d." One cannot say that they are potential traitors to their country, in behalf of another country.

Another of the iron laws of Marx was that the poor proletarian had to get constantly poorer. There was no possibility of his getting better wages than just the bare minimum upon which to subsist and to reproduce his kind. Under capitalism, nothing stretched before him except increasing want and misery and nothing—literally nothing—could halt the process. Engels said this was true, even of America.

I submit that every workingman today, who drives his own car, is making a fool out of Karl Marx and his inevitable scientific, iron laws. I doubt if Marx—far-seeing prophet that he was—foresaw radio. But if he had, he would not have considered it possible for the proletarian to own such a luxury. Every one of you men who work for wages—shall I call you proletarians?—every one of you who is now listening to me over his own radio, is kicking the stuffing out of Karl Marx and his scientific, inevitable laws.

Usually, a man who predicts the end of the world can get a certain following. They will go up on the mountain with him and wait for the crack of doom to come. But when it doesn't come, he is discredited. He can't get people to follow him the next time.

But Marx and his followers have been predicting the crack of doom many times. Marx has been shown up, many times, as not being an infallible prophet. And yet he is still harkened to, his followers still talk about him as though what he said was predestined to come true.

But I would say this of a prophet who has made many demonstrably bad guesses: maybe he isn't so scientific and maybe his main prediction isn't so inevitable, after all.

This is Jack Beall saying good night from Washington.

Problem of the Expellees

EXTENSION OF REMARKS
OF

HON. HAROLD F. YOUNGBLOOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. YOUNGBLOOD. Mr. Speaker, this Congress has been much concerned over the problem of rehabilitation of European countries and the problem of the displaced persons.

In this connection, certain matters have come to my attention which I think should be in turn brought to the attention of the House of Representatives as a whole.

This particular matter which I have in mind refers to the problem of the expellees. There are no doubt Members of this Congress who have some question as to just who are expellees and what their problems are and what solution might be offered for these problems.

To that end, and in explanation, I would like to make the following statement:

PROBLEM OF THE EXPELLEES—WHO THEY ARE

Expellees are the people of German nationality or German ethnic origin who, at the end and after the end of the war, were driven from their homes in East Prussia, Silesia, Pomerania, the Sudetenland, Hungary, Transsylvania, and so forth, into the borders of the Reich proper as constituted by the Potsdam Agreement of 1945 and split into four zones—American, British, French, and Russian.

HOW MANY ARE THERE?

An official census has never been undertaken. According to United States Government sources and careful investigations by the American Friends Service Committee—Quakers, also by the Staatssekretaer für Fluechtlingswesen—State Secretary for Expellees, the figures as of November 1946 are as follows: American zone, 2,904,000; British zone, 3,193,000; French zone, 50,000; Russian zone, 3,912,000; Berlin, 37,000; total, 10,096,000. According to statisticians, this figure had grown to about 12,000,000 by December 1947, so I am informed.

HOW THEY LIVE

According to impartial observers, most of them active in relief work, the lot of these people is pitiful. Because of Germany's economic condition, most of them are unemployed. There is some help from the German "laender" governments, from occupation authorities and from American as well as British relief organizations. The problem, however, is so immense that all these endeavors have proven nearly futile. The province of Schleswig-Holstein, an agricultural district, for instance, has been invaded by more than 1,000,000 of these people, nearly doubling the population, increasing the hardships of postwar life in a devastated Reich and changing the entire economic picture in this and all other parts of Germany, even if conditions were normal. The tuberculosis rate and the child-mortality rate are tremendous; the former 1:45, according to British health authorities. Germany, always over-populated, is even more so today. It is estimated that 70,000,000 people live in a territory which has been shrunken to less than half the size of our State of Texas.

INTERNATIONAL REFUGEE ORGANIZATION AND THE EXPELLEES

No provisions whatsoever for these expellees are contained in the constitution of the International Refugee Organization, successor to UNRRA. In fact, it is explicitly stipulated that people of German ethnic origin, whether German nationals or members of German minorities in other countries are excluded from the activities of IRO. The IRO constitution was adopted by the Senate of the United States and signed by President Truman on July 1, 1947, without any changes whatsoever.

OUR RESPONSIBILITY

The true history of these millions of expellees has not yet been written I know. In fact, there has been a concerted drive by certain groups to keep it from the American public. These people were driven from their ancestral homes—with just what they could carry on their backs—on a few hours' notice. This was done with the more or less tacit approval of the western democracies. Looting and raping were rampant. The fate meted out to these people by the "liberating" Allied armies is fully on a par with what Hitler's legions did in Poland and other countries. We preached decency and Christianity, but we did not practice them. Morally, we failed completely. From the standpoint of an enlightened self-interest, we have failed again. Soviet Russia and her satellites have dropped the problem into our laps and we have done nothing to solve it. We have not yet learned the first lesson of history; that it is the intolerable pressure of people living in a confined space which creates aggression and warfare. This is especially true of overcrowded central Europe which has always been unable to feed her own people and had to depend on tremendous imports to avoid famine. With the German granary in the east turned over to the Poles—if not "de jure," but at least "de facto," by our signature under the Potsdam agreement—we have made an already insoluble problem much, much more insoluble.

HISTORICAL BACKGROUND

It is estimated that among these expellees there are at least 3,000,000 people who lived outside the borders of the Reich of 1938. Over 2,000,000 came from Czechoslovakia, the rest from the Baltic states, from prewar Poland, from Hungary, Yugoslavia, and Rumania. These people had settled there or had been settled there hundreds of years ago. They spoke an often old-fashioned German. Otherwise, there was no kinship whatsoever with the people in Germany proper. These peasants and artisans from Swabia, Saxony, and other parts of the Reich were given land by the Hapsburg emperors in the sixteenth, seventeenth, and eighteenth centuries along the eastern and southeastern borders of the old empire to serve as a bulwark against Turkish aggression and to christianize these outposts. They were hard-working, practical, and often prosperous people, which may well be the principal reason for their expulsion. It is only natural that they felt the constant pressure of the Slav millions all around them and that their separate language and customs as well as their prosperity should have aroused the prejudice and envy of

the rest of the population. This has happened to other races and peoples in the course of history. And it has often been considered a crime by those who were envious of success.

HOW TO FIND A SOLUTION

To solve this immense problem will take many decades. The United States could contribute by giving the expellees who are of German ethnic origin—but not German citizens expelled from the eastern provinces of the Reich—the same status as enjoyed by the displaced persons. A bill patterned after the Stratton bill should be introduced immediately. As far as all expellees are concerned, the United States delegates to IRO, vigorously assisted by Congress, should bend all their efforts toward the goal to admit all expellees to the benefits to be derived from IRO. As far as the expellees of German ethnic origin are concerned, the United States and British occupation authorities should appoint a commission composed of experts in agriculture, handicraft, industry, mining, and so forth, to make a census of these people with their special skills. In a nation such as ours, where the number of farm workers decreases from year to year, there should be ample opportunity—benefiting our entire agricultural life—for vigorous, hard-working farmers with a tradition of hundreds of years of tilling the soil successfully. One need only look at the prosperous farms in Wisconsin, Minnesota, Iowa, Nebraska, and so forth, where many a German peasant settled a generation or more ago to become an efficient American farmer and a good American citizen to boot. Among these expellees of German ethnic origin there are famous glass blowers from Bohemia, clever cabinetmakers, experts in husbandry, chemists, foresters, and many, many others who—in line with an enlightened selective immigration policy—could well contribute toward making this land of ours richer and more prosperous. All Americans have the fullest sympathy for the displaced persons who live a life of sorrow in the camps of central Europe. They should be given help and admittance into the western nations in accordance with a carefully conceived plan. The lot of the expellees is just as hard and just as undeserved. Moreover, their number is much greater. I ask for them the same that may be given to other displaced persons, as far as selective immigration and the work of IRO are concerned.

In a Stew Over Rent Control

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the remarks made this morning in a radio broadcast by the Mutual Broadcasting System's news commentator, Mr. George E. Reedy, over Station WOL, Washington, D. C.

Mr. Reedy expresses the concern of many of us over the important question of rent control. His remarks follow:

There seems little doubt that Congress will extend rent control for another year. But before it happens the legislators are going to have to make a mighty embarrassing decision. It won't be an easy one.

It centers around the 15-percent voluntary rent increase that was slipped into the present law during the last session. At the time it was passed nobody seemed to realize that it would come back to haunt our legislators at a later date.

At the time it was supposed to be merely a cushion against too abrupt relaxation of wartime controls. It offered the landlord a 15-percent increase in his income. But in return he had to give his tenants the security of a long lease in exchange.

The whole idea was based on the assumption that the last day of February would mark the end of rent control. At the time that did not seem too far-fetched. There were some prospects that the housing shortage would ease off in the coming year.

Now that 1948 is actually here, however, those prospects aren't worth a plugged nickel. There are still too many people fighting over too few homes. Even more important, there is not a decent set of plans to solve the situation.

Consequently, there is nothing much that can be done, except extend the Rent Control Act for a longer period. But it is here that the rub comes. Congress simply has to make somebody mad, and there is no way of getting around it.

First of all, let's take the people who agreed to pay 15 percent more rent in return for a long-term lease. They did it only because they expected controls to expire at the end of February. They felt they were following the advice of Congress.

Should Congress simply extend the present law they are going to feel that they were suckers. That is something that irritates almost anybody. They are not going to feel kindly toward the men who are responsible for the situation.

Jacking the others up an additional 15 percent won't help the legislators in the slightest. It will not soothe the feelings of those who signed the long-term lease. It will arouse the ire of those who held out against an increase.

One solution might be to wipe out the 15 percent and send everybody back to the level at which the whole thing started. This, however, would only anger the Nation's landlords, who have already proved themselves a potent force.

The basic difficulty is that any general increase granted now will fall unevenly on the shoulders of the Nation's renters. It will hit those who made the voluntary-lease agreement harder than it hits those who didn't.

No matter how you look at it, it's a tough decision to make, especially in an election year. Hindsight, of course, is always better than foresight, but many a legislator wishes now he had taken a different course when the bill was up last year.

The present situation could have been avoided either by a general rent increase or no increase at all. The important thing was to keep the whole population on an even keel. The mistake was to permit some boosts but not others.

Some of the best brains of the Republican Party are pondering over this dilemma now. Nobody can forecast their answer at the moment. But it had better be good. Rentals and the housing shortage are key 1948 election issues.

The Late Rear Adm. Ingram C. Sowell

EXTENSION OF REMARKS
OF
HON. WIRT COURTNEY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks, I include the following resolution passed by the L. O. Crane Post, No. 63, American Legion, Lawrenceburg, Tenn., upon the death of Rear Adm. Ingram C. Sowell, a citizen of Lawrence County and a life member of that post:

Whereas Rear Adm. Ingram C. Sowell was an honored and beloved citizen of Lawrence County; and

Whereas he rendered valorous and distinguished service to his country during two world wars; and

Whereas he demonstrated his love for his home community and this post by the gift of a plot of ground from his hallowed home place for Legion and civic purposes; and

Whereas he was awarded a life membership in this Legion post; and

Whereas on December 21, 1947, Comrade Sowell passed from this life to his eternal rest and reward: Therefore be it

Resolved, That the L. O. Crane Post, No. 63, American Legion, in regular session at Lawrenceburg, Tenn., does hereby express its great grief for his incalculable loss to our country and to this post, and stand in reverent silence as our charter is draped for this departed comrade; and extend its deep sympathy and sincere solace to his bereaved family; be it further

Resolved, That a copy of this resolution be made a part of the minutes of this meeting, copies to the press services, a copy sent to our Congressman for inclusion in the CONGRESSIONAL RECORD, and the original of this resolution be transmitted to the surviving companion of Comrade Sowell.

ROBERT L. LUMPKINS,
Post Commander.
HORACE W. BLAIR,
Post Adjutant.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1948

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a release issued today by the Power Authority of the State of New York, relating to the development of the St. Lawrence River system.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

Development of the St. Lawrence system as one of the major natural resources of North America, with early construction of the Barnhart Island powerhouse and Long Sault Dam on the New York-Ontario frontier, is recommended by the Power Authority of the State of New York in its annual

report for 1947 submitted today to the Governor and the Legislature.

The project approved by the Committee on Foreign Relations and favorably reported to the Senate, Eigthieth Congress, January 7, for debate this month, should be judged squarely on the basis of public need, the Power Authority states.

Completed engineering plans, public hearings held by committees of the Eightieth Congress, and growth of power demand in New York and neighboring States to record peaks in 1947 are reviewed in the report.

"At the beginning of 1948," the report said, "the immense value to New York State and the Nation of the resources of the Great Lakes-St. Lawrence system has been brought into bold relief by—

"Power shortages in the project area itself, including parts of New York State and the Province of Ontario.

"Rising costs for fuel and transportation.

"Expanding demands for more production to help meet domestic and overseas requirements for food and manufactures.

"Renewed emphasis on the importance of the Great Lakes-St. Lawrence resources to the security of the Western Hemisphere."

Joining in signing the report were the five trustees of the power authority, Gen. Francis B. Wilby, Geneva, chairman; Fred J. Freestone, Syracuse and Interlaken, vice chairman; George Stephens Reed, Lowville; Gerald V. Cruise, New York City; and Samuel J. Joseph, New York City, who retired late in 1947 to become county judge of Bronx County; and Ralph G. Sucher, executive secretary and counsel. Trustee Jacob Grumet, New York City, was appointed by Governor Dewey January 16 to succeed Judge Joseph.

The report contains testimony and recommendations by Secretary of State Marshall, former President Hoover, Secretaries of the Army, Commerce, and Interior, Lieutenant General Wheeler, Chief of Engineers, the Joint Chiefs of Staff, the Permanent Joint Board on Defense, and others on record for the Great Lakes-St. Lawrence development.

The pending United States-Canadian agreement of 1941 to complete the project and Senate Joint Resolution 111, favorably reported by the Committee on Foreign Relations, provide, the report states, for—

"Development of 2,200,000 horsepower at a single site in a major hydroelectric power project on the New York-Ontario frontier, half of which will be located in New York State, producing in the New York power plant 6,300,000,000 kilowatt-hours of low-cost hydroelectric energy a year.

"Improvement of relatively short sections of the existing Great Lakes-St. Lawrence waterway to provide 30 feet depth over lock sills and a continuous channel of a minimum navigable depth of 27 feet, a minimum depth already in use over 90 percent of the length of the system."

The report throughout stresses the need for hydroelectric energy to meet a part of the record growth in demand in New York and neighboring States as well as in the Province of Ontario. Shortages which occurred in 1947 and caused curtailment of industrial power use are detailed in the report. Statistical tables and charts prepared by the power authority supplemented by data drawn from published reports of the Public Service Commission, the Hydro-Electric Power Commission of Ontario, and other agencies are printed in sections II, III, and V.

A complete physical description of the project presented by the power authority at public hearings of the Committee on Public Works, United States House of Representatives, July 16, 1947, appears in appendix 14. Detailed estimates of cost based on 1947 prices, presented by the Chief of Engineers, United States Army, at public hearings of the subcommittee, Committee on Foreign Relations, June 13, 1947, appear in appendix 8.

The report is illustrated by charts showing relative growth of power requirements, supply, and use in New York State and the United States; maps of the St. Lawrence River system; and photographs of the Long Sault Rapids, project sites on the New York-Ontario frontier, and other major works comparable to the proposed St. Lawrence development.

A drawing of the works in the International Rapids section, as they will appear when built, based on engineering plans completed by the Corps of Engineers, United States Army, was prepared for the authority by Alexander Leydenfrost with technical advice from Ivan Sattem, engineer, and is published in the report.

EXCERPTS FROM THE REPORT

Following are excerpts directly quoted from the report issued today:

Conclusions and recommendations

"The policy declared in section 1 (of the Power Authority Act) is implemented in section 5 of the act which authorizes and directs the power authority, in cooperation with United States nd Canadian authorities, to plan, construct and operate the St. Lawrence power development in New York State to the end that the project shall 'be adaptable to,' and 'consistent with and in aid of the plans of the United States for the improvement of commerce and navigation along the St. Lawrence River.'

"Section 5 of the Power Authority Act further provides that 'the said project shall be in all respects for the aid, improvement, and benefit of commerce and navigation in, through, along, and past the St. Lawrence River and the International Rapids section thereof, and that in the development of hydroelectric power therefrom the said project shall be considered primarily as for the benefit of the people of the State as a whole' and shall be utilized to 'permit domestic and rural use at the lowest possible rates and in such manner as to encourage increased domestic and rural use of electricity.'

"Pursuant to the declared policy of its act, the Power Authority has successfully upheld the rights of the people of the State of New York in the St. Lawrence power development and has obtained recognition of these rights under the terms of the joint resolution now before Congress."

Need for hydro development in New York State

"The people of the State of New York possess one of the greatest natural resources of hydroelectric power in the world in boundary waters shared with the Province of Ontario, which carry the outflow of the Great Lakes eastward to the sea.

"In the development of power from these boundary waters, the United States-Canadian Agreement of 1941 and the joint resolution, Senate Joint Resolution 111-House Joint Resolution 192, now pending before the Eightieth Congress give priority to the construction of works in the International Rapids section of the St. Lawrence River.

"In many previous reports, the Power Authority has recommended public development of (1) the 1,100,000 horsepower potentially available to the State from the St. Lawrence River and (2) the additional power, estimated in these reports at more than 780,000 horsepower, which could be made available to the State by redevelopment of Niagara at full head. In renewing these recommendations, and at public hearings on the pending agreement and joint resolution in 1946 and 1947, the Power Authority has directed attention to the growing need for development of New York's major resources of water power on a parity with low-cost hydroelectric projects in other areas."

Rising consumption of coal and oil in fuel-power plants

"The relative decline in hydroelectric-power capacity in New York State, as compared with steam capacity, and as contrasted with hydroelectric expansion in other areas, has inevitably been attended by (1) rising consumption of coal and oil in fuel-power plants of the State; (2) higher costs to customers for electric service than prevail in areas with developed hydro; and (3) a lower rate of usage of electricity and electrical appliances than prevails in such areas.

"As indicated in table V and chart 6, consumption of coal and oil for production of electric energy in power plants in New York State has increased enormously from World War I through the years following World War II. Consumption of bituminous coal reached its peak in 1943, at the time of greatest need of fuel for domestic supply and war production, with a total of 10,316,253 tons. Consumption of oil reached a total of 1,505,707 barrels in 1941, during the national defense emergency, and after declining during the war, rose to a new all-time high of 2,206,127 barrels in 1946. The consumption of these exhaustible fuels has proceeded in 1947 at a rate far in excess of that of any year prior to the war. Chart 7 shows fuel consumption in power plants for the United States as a whole."

Plan for hydro development presented in previous reports

The report for 1947 refers to previous reports of the Power Authority recommending coordinated development of St. Lawrence and Niagara power, and quotes from the Eighth Annual Report of the Authority its conclusion that "a very material reduction in the present cost of power could be achieved with full protection for all present and future private investment in the power industry serving New York State."

"The plan assumes that distribution of power will remain as today, largely in the hands of the private power systems, provided they cooperate in the public purpose of attempting to sell electricity in abundance at the lowest possible rates. It develops an objective rate schedule which offers the incentive of increasing profits as residential use approaches the goal of complete electrification."

The report for 1947 continues:

"Passage of the joint resolution favorably reported by the Committee on Foreign Relations, United States Senate, Eightieth Congress, will provide the necessary enabling legislation for development of New York State's major resource of hydroelectric power in the boundary waters of the St. Lawrence River. It will also set up procedures for later development of the additional power latent in the boundary waters of the Niagara. The need for initiating this program by early construction of the St. Lawrence project, as provided in the pending United States-Canadian agreement and joint resolution, has been confirmed by events of 1947, detailed in the present report."

New York State power requirements and supply

"During 1947 the rate of production and consumption of electric energy rose in the fall of the year to new all-time high records in New York State and the Nation, exceeding wartime peaks.

"Electric-power requirements in New York State expanded to a point at which voluntary curtailment of use of power by industry was asked in up-State areas in October 1947. While the curtailment was temporary and was attributed by utility companies, in part, to drought conditions, it reflected also continued growth in the demand for electric energy from the more than 4,000,000 resi-

dential, rural, commercial, and industrial customers in New York State."

Power shortages in Canada related to New York State power supply

"The large imports of hydroelectric energy from Canada during and since the war must be taken into account in connection with electric power requirements and supply in New York State.

"Over the last 4 years, 1943 to 1946, inclusive, New York State has imported an average of nearly 2,500,000,000 kilowatt-hours of hydroelectric energy a year from the Dominion of Canada to meet requirements in this State. The Hydro-Electric Power Commission of Ontario, which will share with New York State in the development of power from the St. Lawrence River, has been a principal supplier of this imported energy.

"Expanding requirements in the Province of Ontario must be considered in appraising the need for increased sources of supply within New York State. In its last annual report for 1946, the Hydro-Electric Commission of Ontario described the causes of the power shortage which has developed in that Province as follows:

" 'In southern Ontario the Commission, although able to meet all its commitments in respect to delivery of power under its firm power contracts, was not able to meet all the power demands of large industrial users who purchase power on an interruptible basis. Substantial reductions in delivery of both power and energy to this class of customer were necessary during the late fall and winter months of 1946–47; to these customers the power shortage was very real and serious'."

St. Lawrence power required to provide for growing needs and future expansion

"In recommending prompt development of the St. Lawrence River in annual reports and at congressional hearings preceding United States entrance into World War II, the power authority presented estimates indicating substantial growth in the power requirements of the State by 1950, to a point approximated during the war and in 1947. Had the St. Lawrence development been initiated in 1941, its production of hydroelectric energy would have been available to help meet the growth in requirements and would have served to overcome the lack of reserve capacity which became acute in 1947.

"Neither the St. Lawrence project nor the development of additional power on the Niagara can now be expected to relieve existing shortages or to supply needed reserves in up-State areas in 1948, 1949, and the next succeeding years. Construction of the St. Lawrence project, however, would make available to New York State the largest block of low-cost hydroelectric energy which can be readily provided to meet the growing requirements of the State and provide for future expansion. On the basis of the data contained in the present report, the power authority therefore urges authorization and construction of the St. Lawrence project under the measures pending before the Eightieth Congress as the most direct, efficient, and economical means of serving this need."

Use of the project to conserve iron ore and other critical materials

"The Senate subcommittee also received testimony on the value of the St. Lawrence project, in both its power and navigation phases, as a means of augmenting and conserving supplies of critical materials essential in time of war.

"Extensive evidence was taken and the testimony of many witnesses was heard on the depletion of high-grade iron ore deposits in the United States, the discovery of new high-grade iron ore deposits in Quebec-Labrador, and the need for completion of the St. Lawrence waterway to provide a means of transporting ore to the major plants of the steel industry in their present locations in the littoral of the Great Lakes."

New York State's rights in the St. Lawrence power development upheld by the Senate Committee on Foreign Relations

(In section V of the power authority's report for 1947 appears a section of the report of the Senate Committee on Foreign Relations, approved December 18, 1947, and submitted to the Senate January 7, 1948. This section, not previously published in the press, appears below.)

"Extensive testimony was received during the hearings on the need for 2,200,000 horsepower of hydroelectric energy, as well as for the improved navigation facilities, which will be created by the dual-purpose plan for development of the International Rapids section of the St. Lawrence River.

"The use of electric energy by industry, agriculture, and residential customers in the project area rose to new all-time high records in 1947. Actual power shortages developed in New York State and the Province of Ontario which fully confirm testimony taken at the hearings. Continued delay of the St. Lawrence project and resulting lack of adequate reserves of power in these important areas would obviously weaken the security of the United States and Canada.

"Previous reports made by the Committee on Foreign Relations on the self-liquidating power project are set forth in the summary appearing on pages 50 and 51 of the hearings. The committee concurs in the recommendations contained therein." (From the report of the Senate Committee on Foreign Relations, Jan. 7, 1948.)

The recommendations reaffirmed by the committee in the report dated January 7, 1948, appear on pages 121–123 of the power authority's report for 1947.

Tax on Vegetable Oils

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1948

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from the director of the Arkansas Resources and Development Commission, replying to a letter which was written to Representative CHARLES R. ROBERTSON, of North Dakota, by Mr. John Burnham, executive secretary of the North Dakota Dairy Industries Association, which appeared in the CONGRESSIONAL RECORD of Wednesday, January 14.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ARKANSAS RESOURCES AND DEVELOPMENT COMMISSION,
Washington, D. C., January 19, 1948.

Hon. J. W. FULBRIGHT,
United States Senator,
Washington, D. C.

DEAR BILL: I have just read the letter from Mr. John Burnham, executive secretary of the North Dakota Dairy Industries Association, which was written to Congressman CHARLES R. ROBERTSON, of North Dakota, and which appeared in the CONGRESSIONAL RECORD of Wednesday, January 14. In this letter, Mr. Burnham attempts to defend the position of the dairy industry in favoring continued tax on vegetable oils, prepared for table use, and to take you to task for introducing a resolution for removing this tax from margarine.

Mr. Burnham's argument against repeal of the margarine tax grows weak in his disregard for the only two legitimate uses of a tax within this country, which are (a) for revenue and (b) to pay for services in maintaining sanitary inspection and to secure disease and insect control. The present margarine tax does not appear to be imposed for the two principal reasons of taxation. In his zeal to main the present taxes against margarine and in favor of butter, Mr. Burnham chooses to continue the violation of the Constitution of the United States which prohibits tariffs between States. A tariff barrier between States is about all that can be claimed for the present tax against margarine.

The North Dakota Dairy Industries Association assumes that by your resolution to eliminate the Federal margarine tax, you are acting in a selfish manner and discriminating against the dairy States. He is undoubtedly presuming that your State of Arkansas does not have any dairy interests. To prove his point some dairy statistics of North Dakota are given in his letter to Congressman ROBERTSON.

For the purpose of making a simple comparison between Arkansas and North Dakota in the dairy business, here is a table showing some comparative figures taken from the census report. The figures used in Mr. Burnham's letter are supplemented in this table by similar figures from Arkansas. They are as follows:

North Dakota:	
Total number milk cows in State	457,000
Total number farms in State	59,650
Farms reporting dairy cows	58,853
Annual production, milk, in pounds	1,900,000,000
Annual production, butterfat, in pounds	49,000,000
Arkansas (1945):	
Total number milk cows in State	480,000
Total number farms in State	198,769
Farms reporting dairy cows	152,082
Annual production, milk, in pounds	1,478,400,000
Annual production, butterfat, in pounds	63,280,000

According to these figures, North Dakota produces about 49,000,000 pounds of butterfat per year and Arkansas about 63,000,000 pounds of butterfat per year. The actual pounds of butter that North Dakota may make and sell is not readily available to me at this time, but the records show that in 1945, Arkansas sold into the market about 1,300,000 pounds of butter. North Dakota probably sold a great deal more butter. The butterfat in Arkansas was consumed or sold in connection with whole milk and other dairy products and not butter. It is safe to assume that a fairly large proportion of the butterfat produced and sold in Arkansas, regardless of the form in which it was finally consumed, is in competition to margarine. Nevertheless, I know that the people of Arkansas, who are in the dairy business just as much as the people of North Dakota, are overwhelmingly in favor of your resolution to eliminate the Federal tax on margarine. I hope you will continue your efforts to get this resolution passed and signed into law.

Very sincerely yours,

H. K. THATCHER, *Director.*

Accomplishments of the Eightieth Congress

EXTENSION OF REMARKS
OF

HON. CHAPMAN REVERCOMB

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1948

Mr. REVERCOMB. Mr. President, our distinguished colleague the junior Senator from Nebraska [Mr. WHERRY] made an enlightening address on the accomplishments of the Eightieth Congress before a meeting of the Republican National Committee at the Mayflower Hotel in Washington on January 20.

In his address, the Senator discussed issues confronting our country and the Congress. Therefore, I believe his colleagues in the Congress and others throughout our country will be interested in reading what he said. I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Chairman Reece, members of the Republican National Committee, and guests, it is indeed an honor to be invited to address the Republican National Committee men and women again. I shall never forget the happy friendships and relationships I made as western director for the States west of the Mississippi River under the leadership of JOE MARTIN. It was then that I met many of you, and I have cherished these friendships down through the years.

Your coming to Washington is timely. You are here for the kick-off of the new session of the Republican Congress.

In this new session we will carry forward our constructive legislative program that was so well advanced in 1947—a program that has kept faith with the mandate from the people in the 1946 elections.

The passage over the President's veto of the Labor-Management Relations Act, a cut in governmental expenditures, and a balanced budget for the first time in 15 years, they are some of the accomplishments of the first session of the Eightieth Congress.

It was through the efforts of the Republican National Committee, State and local organizations, and the leadership of Republican Members of Congress and candidates on the firing line, that the Republican Congress, governors, and countless State and local officers were elected in the 1946 landslide.

Next June, in Philadelphia, our party's delegates will meet in a free and open convention. They will nominate the next President of the United States.

No clique of alien-minded radicals has captured control of the Republican Party. Ours is a united party with an alert, able, and progressive leadership and a sound, forward-looking program.

The American people know that the Republican Party is the only safe and truly liberal medium through which their will for sound, sensible government can be achieved.

This is not a wild guess nor an excessive statement.

During the past months I have traveled much across the country. I have made speeches and I have talked to many persons. The signs are plain. The ground swell for the Republican Party and good government is unmistakable.

But right here let me utter these words of caution. Do not be overconfident. Overconfidence has lost many worth-while contests.

There are those within our party who feel that because the Democratic Party is divided, all we need to do is stand by, play for the breaks, and let the opposition defeat itself.

But even though the Democratic Party breaks apart at the seams, we—all of us—have to keep battling for Republican victory and good government.

The radical masters of the Democratic Party are past masters in planning confusion and chaos.

They want to divide our united party.

They are fighting all our conservative measures in Congress to cut the frightening high cost of government.

They are fighting our efforts to reduce the intolerable and indefensible wartime tax burden.

They are fighting all our efforts to buttress and hold fast to our American way of life.

What the present administration apparently wants is confusion, emergencies, and crises—to tax and tax, and spend and spend.

A return to sound, constitutional government will end their hope of gaining control over the lives of everybody through orders, directives, and a police state.

We hold that the principles proclaimed by the founding fathers, and so ably enunciated by Abraham Lincoln—the first Republican President of the United States—are as true today as when they uttered them.

Lincoln championed true liberalism. He fought for the greatest good for the greatest number. He stood firm for all the unalienable rights that are guaranteed by our Federal Constitution.

What would Lincoln do if he were President today?

We know by his precepts and examples. Lincoln never faltered in his faith. He believed the individual is the primary unit of liberty. If Lincoln were President how well we all know he would strive to bind the wounds of war in the spirit of Christian brotherliness. He would tell us, as all history shows, that people cannot be bribed into friendships, but must be won by example, precept, and reason.

Lincoln's way was honesty, simplicity, and understanding, and to stand on principles without giving offense.

Two of his statements are especially pertinent in these times. Lincoln said:

"The prudent, penniless beggar in the world labors for wages awhile, saves a surplus with which to buy tools or land for himself, then labors on his own account another while, and at length hires another beginner to help him."

That's freedom of enterprise, and the Republican Party is pledged to preserve that freedom.

And what would be Lincoln's attitude toward present-day Red-Fascist attacks upon competitive enterprise and the property system? I recall for you these words by the Great Emancipator:

"Property is the fruit of labor; property is desirable; is a positive good in the world. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

This is the right to own property—to own a home. Such rights are basic in a free enterprise system.

That is why those of us who believe in these fundamental principles in our American life view with alarm President Truman's almost daily appeals to the Congress for power and more power; power to regiment our people; power to combat communism abroad with totalitarian methods at home; and the kind of power that creates a police state.

Now, let's break this down to specific issues.

What about communism? The Republican Party has been fighting communism at home and abroad a long time. It is the Republican Party that is fighting to keep from the backs of the voters of this country the regimentation upon which communism thrives.

We don't like Communists here and we don't like Communists' aggression abroad.

It is the Republican leadership that has in most instances provided the policy that has been successful abroad in keeping the iron curtain from entirely encircling Europe.

It is the Republican leadership that caused a reversal of Russian appeasement and the scrapping of the stupid Morgenthau plan, that has held back recovery in Europe. Every competent observer knows that the recovery of all Europe depends on a recovery of the German people as well.

THE TAFT-HARTLEY ACT

On the domestic front, let's take a look at the Taft-Hartley Act. President Truman's indefensible veto of that act was a purely political gesture to radicals and a small, powerful group of labor barons.

Workers now know from its operations that it protects their rights, including the right to organize; the right to bargain collectively; the right to control their unions; the right to an accounting of their union funds; and the right to strike.

Why, the Taft-Hartley Act emancipates the workers. It is doing exactly what it was intended to do: Provide sensible machinery for the settlement of labor-management disputes, so that we can have more constant production of the goods so urgently needed by the people.

President Truman vetoed the Taft-Hartley Act. In his recent message to the Congress on the state of the Union, he stated:

"I made my attitude clear on this act in my veto message to the Congress last June. Nothing has occurred since to change my opinion of this law."

I now challenge the President to tell the country if he is going to ask the forthcoming Democratic National Convention to favor the repeal of the Taft-Hartley Act. Will the President repudiate the overwhelming majority of Democrats in Congress who voted to override this veto?

LIVING COSTS

Another important issue of this campaign will be living costs. President Truman has lost faith in the American people. His is a defeatist attitude. His only remedies offered are controls, controls, and controls. He has lost faith in the free-enterprise system and the ability of the American people to produce and distribute their products.

Controls won't drive prices down. Controls stifle production. Controls foster black markets, confusion, and chaos. These are the results of a regimented state. But let me frankly tell you after 5 years as Chairman of the Small Business Committee of the Senate where we handle thousands of claims of the small businessmen of this country, Washington cannot blueprint the economy of 140,000,000 people.

But there are constructive measures that must be taken with courage to halt inflation and bring the cost of living within the reach of all of our American people.

Governmental expenditures must be cut and they will be cut during the present session of this Congress.

The cost of government in the United States is more than the food bill, and you cannot cut Government expenditures and at the same time appropriate nearly $3,000,000,000 more money than was appropriated last year.

The primary causes of high prices are 15 years of deficit spending, reckless dilution of the currency, and an unequal and unwon battle to bring production abreast of consumer demand. This production lag is due

in part to past industrial strife and is vitally affected by huge shipments abroad of the food and materials so scarce for our domestic use.

Although we face the choice of dealing with these problems or risking economic catastrophe, the Democratic administration has shown no disposition to meet and solve any one of them.

The $40,000,000,000 budget that the President asked for the fiscal year of 1949 is the highest peacetime budget in our country's history. It is more than twice all the corporation profits in 1947, and is more than four times the 1939 prewar budget of $9,000,000,000.

Let me restate to you, this Congress is going to cut that budget. Tax reduction and payment on the debt depend upon the budget and we are going to cut that budget to lighten the outrageously high tax burden of the American people.

Twice the President vetoed tax-reducing bills last year, but my friends this is an election year and he now admits that there is need for personal income tax relief, though he presents a tax plan that is as phony as a $40 bill.

With one hand he would give the people tax relief and with the other he would take it away from them in higher prices, because we all know that taxes enter into the cost of everything we buy.

He would increase the consumers' cost by boosting taxes on business. The bill that will be passed by the Congress will reduce the burden for everybody and it will mean more take-home pay and more incentive capital for business, more production, and more jobs.

Finally, on the domestic front, our people should know more about how foreign commitments affect our own domestic economy. Our exports and imports should be reviewed and only those quotas that our economy can stand without further inflationary effects should be fixed, so that the dollar may become stabilized and so that no further inroads will be made on our economy by the inflationary spiral brought about by the gulf between exports and imports.

The net excess of exports over imports last year was $11,000,000,000. If we go through another year on that basis our living costs will be higher and higher and the inflationary spiral will surely climb. It should be remembered that this Administration under the Second War Powers Act has had absolute authority over exports and imports all through this period. They are the ones responsible for this net of exports. Upon them is the responsibility of placing a ceiling on those exports, for we cannot wait until bankruptcy is threatened.

We must call a halt because only a sound, solvent America can lead and help the nations of the world. We want to help and do all we can to help other people help themselves.

If we are to avert the national calamity of a runaway inflation, we must treat the causes rather than the symptoms.

These dangerous conditions cannot be cured by quack remedies, emotional outbursts, catchy slogans, or propaganda designed to divide the American people and set them at each others throats.

We cannot save Europe by going down with Europe to depletion, confusion, and want, any more than one man can save another who is drowning by going down himself.

The misery, the want, and the chaos in Europe today, are the direct result of totalitarian regimentation and ruthless police state methods. These methods have failed even in Russia. They have just made a capital levy of 90 percent on their people.

Contrast this with the production America has attained under the competitive enterprise system and the standards of living of the American people.

THE MARSHALL PLAN

This brings us head-on with the so-called European recovery program, which, of course, is an issue that is to be thoroughly discussed and debated in this session of the Congress.

In the campaign I hope to see the entire foreign policy of the United States reviewed. Our people have a right to know all the facts. They should know what commitments have been made politically and economically. It should be made plain to the individual voter that foreign commitments, no matter how alluring they may be, affect them in their business and home life.

I am quite sure, whatever European recovery plan is finally passed, that it will require that the administration of a great portion of it be in the hands of competent business executives who will get 100-percent results out of the taxpayers' dollars.

Certainly if we are to loan or give money and goods to Europe the time has come when conditions should be prescribed that the European countries produce; that they show satisfactory progress reports.

After all, the purpose of those plans is to aid the recovery of European people. If we require the governments to produce results the individual people will benefit.

And then there is the question of the amount and whether the money should be given or loaned or both.

Those who are responsible for this legislation on the floors of the House and Senate must tell the American people frankly what every venture or commitment in foreign affairs means to them—why the impact—why the price increase—and then, if the American people want to tighten their belts in carrying on such a program it is for the American people through their representatives to decide.

Now, I want to talk about party organization. It is one thing to talk the issues, but it is another thing to go into the homes of America and discuss these issues with the voters who go to the ballot box to decide them.

Our publicity then will depend primarily upon the party organization which, of course, runs from the national committee to the precinct worker. It is our job to take the candidates and the issues to the people. That is the purpose of political parties.

Candidates should welcome an opportunity to discuss the issues. The party workers and the voters have a right to see the candidate, to hear the issues discussed, to know the ideology of those for whom they are working, the same as the salesman ought to know his merchandise.

It is the responsibility of candidates who are nominated to be aggressive and to welcome the opportunity of leading in the discussion of these issues in any forum or on any platform throughout our different States.

Furthermore, there must be an expansion and strengthening of all our divisions at the national committee's headquarters.

The Women's division, under Assistant Chairman Jane H. Macauley, is doing a grand job. Our Republican Party is especially strong among women voters.

Don't forget that the hand that rocks the cradle also does most of the buying for the homes, and the women are alert to what is going on.

The Young Republicans' Federation is growing by leaps and bounds. In the schools and colleges, where the radical New Dealers and the communistic fellow travelers are so busy, much organization work needs to be done.

Among the so-called minority groups a lot of information must be spread—knowledge that the Republican Party is the champion of the rights of all patriotic minorities, knowledge that the Republican Party had its birth in seeing that the rights of minorities shall be protected, and knowledge that it was not the Republican Party that sold small countries of Europe down the river to Soviet Russia.

I remind you that if we had gotten 470,000 more ballots in 10 States in the 1944 Presidential election, Gov. Thomas E. Dewey would be in the White House today.

Of course, we look for a landslide Republican victory come next November. But let's not take anything for granted. Let's work on the basis that victory may be decided by a difference of only 1 percent of the votes—10,000 in a few States or 100 in a county.

To get that job done we need organization and we have a lot to do. We must have teamwork all along the line—national committee, State committees, and local committees, and tieing into the Republican leadership in the Congress.

Chairman Reece and his staff at national headquarters have been doing a good job. Mr. Reece agrees, as do all of us, that between national conventions the policies of our party are made by the record of our Members in the Congress.

In Congress today is where the issues are being fought out and the record made. Mr. Reece has inaugurated a plan for close liaison between the Republicans in Congress and the national committee headquarters.

Men have been assigned by the committee to the Senate and House Republicans, to assist them in party matters, to keep committee headquarters constantly informed on plans and accomplishments in the Congress, and to transmit to the Republicans in Congress any suggestions or information that committee headquarters desires to give.

As I see it, the Republicans in Congress make the record and the Republican National Committee sees that the party's record is energetically disseminated among the people through an efficient publicity division and divisions covering all other phases of the campaign.

We have talked about the political and economic issues confronting the American people. We have discussed the need of party organization in order that the issues may be fairly brought to and understood by the people throughout the country.

But there is one final point I wish to make. We have need in our country today—an aching, yearning need—for a spiritual and moral revival among our people. The Republican Party is prepared to provide the leadership in such a revival, based on the eternal truths and the principles of freedom embodied in our American Constitution.

The eyes of the world—the hopes of all the world's people—are pinned at this critical moment upon America. The survival of world civilization depends largely upon our ability to keep America strong.

Let me say here and now: America is going forward; America is going Republican.

Republican National Committee Dinner Address by Hon. William F. Knowland, of California

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1948

Mr. SALTONSTALL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address by the junior Senator from California [Mr. KNOWLAND] on January 19,

1948, at the Republican National Committee dinner at the Mayflower Hotel, in this city.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the national committee, and guests, 1948 is an important year both for our Nation and our party. If we face up to the challenges of the day it is my firm belief that the ticket we nominate at Philadelphia in June will be elected in November.

I am not one of those who believe that all the virtues are to be found in our party or all the faults in the opposition. If we will only take a realistic look at conditions at home and abroad, we must acknowledge that there are a number of problems that must have American rather than partisan solutions.

Our Nation can survive without our party but our party cannot survive if the republic is destroyed from within or without.

The United States has grown from a colony of 3,000,000 people to a Nation of 140,000,000 in the short space of 172 years. During this time our two party system has played its part in the development of our national well-being and the carrying out of national policies.

This, in spite of the fact that at no place in the Constitution or in the Declaration of Independence does one find any mention of political parties. Yet the very necessities of the situation and the actual functioning of Government developed the need for our two party system.

Political parties come and go but our Constitutional government continues. The Federalist and Whig parties played their part and passed from the political scene. But their demise did not leave for long a void. Other more vigorous groups took their places. Political parties must justify their existence or make way for others that will.

Certainly we cannot command the respect or support of the voters by making our party merely the vehicle for replacing Democratic officeholders with Republicans. We dare not, in the critical years ahead, consider political activity as an end in itself.

Rather it must be as a means to serve the Nation. We must keep our eyes on the future, not on the past. The great questions to which Americans want answers relate to 1948 and the years ahead and not to 1947 and the years behind.

The national interest must in all cases override any partisan advantage. It was in this spirit that the framers of the Constitution drafted that document.

It was not we the Federalists or the Republicans, it was not we the employees or the employers, it was not we the merchants or the farmers, it was not we the landlords or the tenants, but it was, "We the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare and secure the blessings of liberty for ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

Both in the field of foreign affairs and domestic economics the people must be told the facts in clear, concise, and accurate terms. It is no time for sugar-coated generalities or for pleasant platitudes. When sickness strikes our loved ones we want the most competent medical advice possible. Breaking the thermometer so we won't have knowledge of the fever curve is no cure for a high temperature.

From time to time we hear criticism because an individual has made a speech which is interpreted as being the position of our party. We know, however, that the only organization that can speak for the Republican Party of the Nation is the national convention that will be held in June of this year when it adopts the party platform. In the meantime I certainly believe that the expression of varied points of view serves a useful purpose. Republican Members of Congress, governors, and leaders who hold no public offices in fact have an obligation to make a contribution toward the constructive solution of current problems. If they remain mute because they fear criticism, I do not believe they would be discharging their obligations.

On all the great questions of the day there are bound to be honest differences of opinion among the members of both parties. Unless there is to be an irreconcilable split, somewhere along the way a common meeting ground must be found. As a general rule, but not always, the Republican Party seems better able to compose its differences than is our opposition.

The American system of profitable business and well-paid labor go hand in hand. Destroy one and you destroy both. We can, I firmly believe, do more under our American system for our people than the new socialism of Britain or the communism of Russia can do for their respective peoples. We don't need their methods but we can use some of their crusading zeal.

In American industry it is highly desirable that employees who are helping to build such industries or businesses have ever-increasing opportunities to improve their economic position through their contributions to increased productivity. In maintaining the profit system it is vital that an ever-increasing number of our people have a personal interest in its continued existence.

Labor or management must not be shackled. Business must be able to operate with profit and efficiency. There is no constructive future for workers or investors in closed factories or bankrupt firms.

The world needs peace in the international field and America needs domestic tranquillity if full production is to continue to raise our standards of living and permit us to help other nations to help themselves.

That we have a serious economic inflationary situation confronting the Nation is clear. Our responsibility as Republicans is to be sure that the cure is not worse than the disease. What are some of these contributary factors to the present inflationary spiral?

We have a public debt amounting to $256,899,844,854 (as of December 31, 1947) which compares with a pre-World War I debt—(as of March 31, 1917), of $1,282,044,346. The high point of World War I debt was $26,596,701,648 (as of August 31, 1919) and the post-World War I low point amounted to $16,026,087,087 (as of December 31, 1930). Our pre-Pearl Harbor debt was $61,363,867,932 (as of November 30, 1941).

Certainly this huge public debt unparalleled in the history of the world is a contributing factor to the inflationary dangers confronting us. Until substantially reduced it will be a constant threat to the solvency of the Federal Government. It seems to me that a consistent program of debt reduction over the years should have the unqualified support of the Republican Party. Not less than $2,500,000,000 should be provided for debt reduction in each fiscal year.

Another contributing factor to inflation is the total dollar supply (currency, commercial, and savings bank accounts). In 1929, which was considered a boom year, it amounted to slightly over $54,000,000,000. In 1947, it amounted to more than $163,000,000,000. While it is true that production and services have also increased during that period of time the increase is less than 75 percent. No one can deny that Government spending has contributed to the increase of the money supply. This pressure against limited supplies of goods can have but one result.

The cost of the Federal Government has increased by leaps and bounds. In 1913 it amounted to $692,000,000, and by 1932 the cost had increased to $4,502,000,000. In 1941 it amounted to $18,988,000,000. The President of the United States a week ago today presented his budget calling for expenditures of approximately $40,000,000,000.

Interest on the public debt alone will amount to over $5,000,000,000, which is greater than the total peacetime expenditures of any year prior to 1933.

The debt in 1947 was 180 percent of the national income. Three years ago, for the first time in our history, our debt exceeded our national income.

There is certainly room for a skilled congressional operation on the budget presented by the President. The job should be done with a surgeon's skill and not with a meat ax.

Frankly, I do not agree with the views of some of our opponents who follow the tortured reasoning that money spent by the Federal Government is not inflationary while that spent by individual American citizens is in that category.

Despite the need for European recovery funds and adequate national-defense appropriations, together with a debt-reduction program, it is still possible to have a moderate tax-reduction bill this year. After the Republican administration takes office in January of 1949 and the full cooperation of the executive departments of the Government is secured in cutting out the fat from the Federal budget, there will be excellent prospects for additional tax-relief legislation next year.

I was greatly disappointed in listening to the President's message to Congress to find in his State of the Union message, wherein he recommended the reestablishment of a controlled economy for our Nation, that he did not outline a program for reducing Federal expenditures below their 1947 high level. The Government should contribute to the common effort of overcoming inflationary pressures.

A major contribution that can be made to meeting the inflationary problem is to increase and assure the continued productivity of this Nation. In traveling through Europe last year I had the opportunity of getting behind the "iron curtain." Neither in Poland nor in any other country outside of the "iron curtain" did I see anything that encouraged me to believe that controls during peacetime would increase our productivity. To the contrary I came back with the strong belief that such peacetime controls would stifle it.

You cannot, in my judgment, go part way down the road to a controlled economy with regard to manufactured goods or agricultural products. If you control prices you must be prepared to control wages, profits, the allocation of raw materials, and ultimately (as in Britain) the allocation of labor. If we permit this Nation to undergo that type of a rigid control in peacetime, I have grave doubts whether we can come out from under them in the foreseeable future. Speaking as one Member of the Senate I shall oppose their reimposition.

One of the great troubles with this administration is that associated with it are those who have worked with controls so long they have apparently lost confidence in the free enterprise system. While they give it lip service they have no confidence in its ability to do the job.

Businessmen throughout the Nation instinctively know this. They also know that today the power of Government is vast and its actions have a far reaching effect upon economic affairs, not only of this nation but of the world. As a result, under present conditions, many do not believe they can plan with any degree of accuracy or feel confident in making long term investments for the expansion of productive enterprise.

We must face up to the question as to whether or not we believe it is in the best interest of world peace and our own national security to have a rehabilitated western Europe. I have no doubt in my own mind

that this is not only desirable but is essential. An essential corollary is that we must provide this Nation with an adequate national defense on the sea, on land, and in the air and I lay special emphasis upon our air program. This will require an effective constantly modern striking air force in being and not on blueprints. No man can say with certainly how long it will be until other nations are able to manufacture the atomic bomb. Sometime in the not too distant future they will do so. Any nation which has in mind a full scale Pearl-Harbor attack upon the industrial and communications centers of America must be made to understand that no such blow will prevent this Nation from launching a swift, sure, and inevitable retaliation on a far greater scale.

This is not a happy prospect but it is a realistic one. To do less than be fully prepared in these uncertain times would be worse than folly, it would be treason.

Let us make it crystal clear that there is not an atom of satisfaction that the Politburo in Moscow can gain from the Republican victory on November 2.

The peace cannot today be saved by appeasement of international blackmailers anymore than it could be at Munich. The sacrifice of Austria, Czechoslovakia, Ethiopia, and Manchuria did not buy peace but rather made certain that power-hungry aggressors would be encouraged to raise the ante.

Our Nation has assumed obligations under the United Nations Charter. The Republican victory will not weaken but should strengthen the system of collective security.

I firmly believe this for two reasons. First, because a sound national economy and a solvent Federal Government is a prerequisite to a strong America and only under those conditions can we help to rehabilitate the war torn free world. Secondly, a Republican victory will mean a more consistent foreign policy.

It just does not make sense to ask the American people for billions of much needed help to save western Europe from going behind the iron curtain while we permit large shipments from our resources to the one nation that is a threat to human freedom. It certainly does not make sense to make mighty efforts to prevent 200,000,000 Europeans from being enslaved by the Communist terror while complacency is shown about communistic activity which seeks to engulf 400,000,000 of our traditional friends, the Chinese. It most emphatically does not make sense to send numerous strong notes on the Petkov case and then to have our Government give full recognition to the Soviet satellite government of Bulgaria 10 days after they have murdered the leader of the opposition.

For better or for worse we live in the age of the airplane and the atom.

As a Nation we can no more return to isolation than an adult can return to childhood. We cannot, we dare not, turn our back on the rest of the world. If we do, the light of human freedom will go out and some day, in the not too distant future, from out of the ensuing darkness would come the knife thrust or the shot to strike us down.

The Government would not be dealing with candor if it did not make clear that the policies we follow in Greece and Turkey involve risks. If Greece, Turkey, or Iran should succumb to overt outside pressure and lose their independence or have their territorial integrity violated without swift action to support them by all the law abiding nations of the world, then the whole fabric of collective security will disintegrate and the United Nations would join the League of Nations in oblivion.

I feel certain that our people have a growing realization based on the experience of two world wars that peace, in this day and age, is indivisible. The international picture is no different in one respect from that faced by a law abiding citizen. As long as gangsterism runs riot and the police force is unable to cope with crime neither he nor his family is safe. Pulling down the shades of his house and stuffing cotton into his ears so that he can neither see the murder, rape, and larceny taking place on the streets nor hear the cries of anguish of the victims is no solution to that problem either.

Lincoln, in his day, clearly understood that human freedom is also indivisible. In his second annual message to Congress he said: "Fellow citizens, we cannot escape history. * * * the fiery trial through which we pass will light us down in honor or dishonor to the latest generation. * * * We, even, we here have the power and bear the responsibility. * * * in giving freedom to the slave we assure freedom to the free. * * * We shall nobly save or we shall meanly lose the last best hope of earth."

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1948

Mr. WILEY. Mr. President, one of the real concerns in many States of our Nation today is the grave shortage of electric-power facilities for full production. Just today, for example, there was handed to me a copy of the 1947 annual report of the power authority of the State of New York, which describes the adverse effects of the power shortage in the Empire State in reducing production and employment. In this connection, I recently asked Chairman Olds, of the Federal Power Commission, to supply me with up-to-date data on how the St. Lawrence seaway would help answer the power shortage. Mr. Olds sent me a frank reply, and I ask unanimous consent that its text be included in the Appendix of the RECORD. This is but one more strong piece of evidence which, along with countless others, has been presented on the urgent need for the seaway and power project.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEDERAL POWER COMMISSION,
Washington, January 16, 1948.

The Honorable ALEXANDER WILEY,
Chairman, Committee on the Judiciary,
United States Senate,
Washington, D. C.

DEAR SENATOR WILEY: This is in reply to your letter of December 20, 1947, requesting information as to how St. Lawrence project power could help solve present and future power needs.

This Commission's New York regional office recently surveyed the major electric utility systems in New York and New England, including those considered to be in the market area of the St. Lawrence project. In nearly all cases representatives of the systems expressed concern that break-down of major items of equipment or adverse water run-off conditions might affect their ability to meet their expected peak loads.

The Niagara Hudson System, which operates in the greater part of up-State New York, has, on at least one occasion, found it necessary to reduce its over-all load consumption by lowering the voltage on its system as much as 5 percent. The Connecticut Valley Power Exchange has resorted to the same device to decrease its peak-load demands, by reducing voltage 3 percent when hydro storage was being used. On the system of Central Vermont Public Service Corp. it has been necessary to reduce peak loads in the St. Johnsbury division by requesting industrial power customers to turn to night operation.

In northern New York the Niagara Hudson System was forced to cut deliveries up to 15 percent for some time to industrial customers of the Buffalo-Niagara Electric Corp., New York Power & Light Co., Central New York Power Corp., and New York State Electric & Gas Co. This curtailment of electric load has probably resulted in proportional reductions in the output of products of some of the industrial establishments.

In connection with your questions as to what difference the St. Lawrence project's power output would have made in terms of production, employment, etc., if the power were now available, the assistance of the United States Employment Service was enlisted. That agency reports that the Labor Market Letter for November 1947 for the Buffalo, N. Y., district states "Shortages of electric power during the past month, which threatened to curtail production and shorten the workweek in many plants, had no serious consequences. Some factories operating two or three shifts were compelled to reduce night work for a short time, but this did not result in any lay-offs. A possible recurrence of a similar shortage plays only a minor role in management's planning for the coming months." However, the Labor-Market-News for the Caribou Employment Service office for December 1947 stated, "The power shortage, along with freight-car shortages, have resulted in some unemployment. The lack of power has served to make operating schedule adjustments necessary in potato warehouses, starch factories, and fertilizer plants, and in many instances these establishments have had to purchase auxiliary power units to meet their needs."

These quotations indicate the immediate effect of the power shortages. The long-range effects of the shortage of low-cost power in the region may be seen by such an action as the withdrawal of the Aluminum Co. from the Niagara Falls area; it is also understood that the Norton Abrasives Co. is seeking another location where less costly power would be available. These are direct indications of the potential loss of employment and of industrial output for the New York area which may assume serious proportions if construction of the St. Lawrence project should be too long deferred.

The tight power situation in the St. Lawrence market area points up the urgent need for new capacity and gives emphasis to the statements made previously that even under normal conditions of load growth the entire capacity of the United States portion of the St. Lawrence project could be absorbed in the New York and New England area within about 5 years from the time the project begins to produce power. In fact, the total amount of generating capacity that the electric ultility industry in New York and New England, exclusive of Maine, has definitely planned to install in 1948, 1949, and 1950, will be greater than the entire capacity of the United States portion of the St. Lawrence project. The planned installation of new steam-electric facilities through 1950 does not mean, however, that the tight power situation will be remedied. It is possible that the power situation might stay as it is or become worse. During the peak load week of December 1947 New England's energy consumption was 9.1 percent in excess of the like week of 1946 while the Middle Atlantic area's consumption in the peak load week of December 1947 was 8.3 percent above the like week of 1946. In spite of these indicated rates of load growth, present known capacity additions in New York State and in the section of New England which is considered to be in the St. Lawrence market area, will be

at a rate of about 5 or possibly 6.5 percent in 1948, about 5 percent in 1949 and about 4 percent in 1950. It thus appears possible that generating capacity will not be installed fast enough to keep up with load growth in the period through 1950, much less supply the depleted reserve capacity. If the St. Lawrence project had been started early in 1945, it would probably have been ready to help relieve the power situation in that area by late 1948. If the project were started immediately it might be possible to get the plant in operation by 1950 or 1951. It appears from the foregoing factors that barring a major depression, the power supply situation will still be tight in the St. Lawrence power market area at that time.

About 90 to 98 percent of the generating capacity additions, now definitely planned in the St. Lawrence market area for the period 1948 to 1951, are of the fuel-burning type. The New England News Letter published by the New England Council attributes to the head of the New York Power Authority a statement to the effect that "the St. Lawrence development would annually save 5,000,000 tons of coal or 20,000,000 barrels of oil, both wasting assets and would reduce the pressure upon transportation facilities." The news letter also points out that "New England's proportionate use of fuel oil, a costly fuel, to all fuels accounted for 34 percent, whereas the Nation obtained only 16 percent of its power in this manner."

These statements point up the national defense value of the St. Lawrence project. It will be remembered that petroleum products and transportation facilities were in the strategic category during World War II. The greater the percentage of hydroelectric power that can be developed in the New York and New England areas where there is no appreciable amount of local coal, oil, or natural gas, the less their power production will be affected by peacetime or military demands upon the transportation and petroleum industries in time of war.

Sincerely yours,

LELAND OLDS,
Commissioner.

The Case Against Compulsory Arbitration

EXTENSION OF REMARKS
OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1948

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on compulsory arbitration prepared by me.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CASE AGAINST COMPULSORY ARBITRATION [1]

(By WAYNE L. MORSE [2])

The proposal that the Federal Government should require arbitration of labor disputes in all basic American industries means that a system of compulsory arbitration will be imposed upon labor and industry and that voluntary and free collective bargaining procedures in a substantial part, if not eventually all, of industry in the United States will be abandoned. Any program of compulsory arbitration will inevitably lead to increased governmental control and dictation of wages, prices, profits, and conditions of employment. The informed leaders of management and labor, and virtually all careful students of labor relations in the United States, agree that governmental dictation of the conditions under which labor will work and industry will employ, logically leads to economic socialism or fascism.

It may properly be asked why a system of compulsory arbitration of disputes in basic industries is undesirable, when we contemplate the many benefits that flowed from the existence of the National War Labor Board during World War II. That board settled innumerable disputes, although in the final analysis it exercised the power of compulsory arbitration. But it must be remembered that the War Labor Board was a wartime agency, created for a specific emergency period; it operated under a no-strike pledge by the major labor organizations and a no-lockout pledge on the part of American industry. The present proposition envisages, on the other hand, a system of governmental compulsion, during normal peacetime periods, when, insofar as possible, both labor and management should be free to exercise their legitimate economic weapons in the event a full utilization of the procedures of free and voluntary collective bargaining fails to resolve their differences.

Any plan whereby the Government is made available to fix the conditions under which men shall work has the tendency of retarding and impairing the procedures of voluntary collective bargaining. To the extent that compulsory governmental machinery is available, to that extent we will find voluntary procedures abandoned. This proposition is clearly demonstrated by a study of the experience of the War Labor Board. In thousands of disputes labor or management or both went through only the form of collective bargaining before invoking the machinery of the Board. As a result, the Board was engulfed with many thousands of cases which could better have been settled by the parties themselves but for the availability of the Board. Unions and management were indirectly encouraged to make extreme demands and to refuse to yield on many disputed points in the hope that the Board would give them more by way of decision than would be obtained in the give and take of voluntary bargaining. To a substantial extent labor and management lost the art of free collective bargaining during the war period.

When the War Labor Board went out of existence, representatives of labor and industry had to relearn the technique of dealing with each other, with the knowledge that they could not call on the Government to settle their differences for them. There can be no doubt that a contributing factor to the labor-management disputes in the immediate postwar period was the fact that both sides had to adjust themselves to a condition of voluntarism as opposed to compulsion.

The availability of a governmental agency to decide a dispute not only prejudices the particular case, but has important and disastrous effects upon related industries and persons in the same or other industries not involved in the immediate dispute. For example, the Little Steel Formula evolved during the early days of the War Labor Board, or the 18½-cent wage increase pattern recommended by the Government in 1945–46, established patterns for the economy as a whole, from which deviation in individual cases was virtually impossible. The net effect of these governmental decisions—whether they be labelled as recommendations, directives, or reports of fact-finding panels—was to impose a uniform pattern on all industry, totally in disregard of numerous relevant considerations in individual cases, such as competitive factors, locations, nature of product, history of wages, and employment regularity, to mention only a few.

The present proposal would limit governmental compulsion to basic industries. At first glance it would seem that no difficulty would be encountered in arriving at an agreement as to what industries are basic in the national economy. But in view of the integrated nature of our economy, it would be exceedingly difficult to differentiate the industries that are basic from those that are not. Even if a clear line of distinction could be drawn, the fact remains that governmental dictation of employment conditions in the basic industries would establish precedents that could hardly be ignored in the nonbasic industries. Thus, the result would be that for all practical purposes a system of compulsory arbitration would be imposed upon all industry. Here again the experience of the War Labor Board is illuminating. A one-time general counsel and public member of the War Labor Board has summarized that experience as follows: [3]

"The War Labor Board's wartime experience reveals the difficulty of drawing a reliable distinction between disputes that threaten the public interest and those that do not. The criterion of the Board's jurisdiction was an interference, actual or threatened, with the war effort, evidenced by certification of the Secretary of Labor. It was soon found that strikes or potential strikes could not be isolated nor confined within geographical boundaries, nor could their contagious effects on workers not immediately involved be precisely foretold. And it was not easy to explain to workers that their dispute was not serious enough to warrant Government's formal attention. The risk was that such a statement would be accepted as a challenge to aggravate the nature and threatening quality of the dispute. As a consequence, all disputes were held to be subject to the Secretary's certification because, with infrequent exceptions, each contained the seeds of widespread and contagious industrial conflict. It is doubtful that a peacetime agency could successfully resist the adoption of a similar practice."

Legislation is feasible only to the extent that it is workable. It may well be asked by what means would the Government enforce its decision if it were authorized to dictate the settlement terms of a dispute in a basic industry. Constitutional objections aside, how would the Government compel employees to work for a stipulated wage under conditions to which they objected? Again, without going into the serious constitutional problems, how could an employer be compelled to keep his plant open if he did not wish to do so? Although it is possible that the threat of jail sentences or loss of rights under the National Labor Relations Act or other remedial legislation might induce employees to work under terms and conditions distasteful to them, nevertheless, any such sanctions would do great violence to personal freedom and our system of free enterprise. If the recalcitrant party were an employer, governmental seizure and operation of his properties would be the only effective sanction available. Unless the people of the United States are prepared to embark upon a system of public ownership, management, and operation of basic industries, any such procedure would break down in the long run.

Were the Government to assume the role of decision maker in the disputes between labor and management in so-called basic in-

dustries, it would eventually be necessary for the Government to assume control over prices and profits, because the relationship of wages, prices, and profits is an exceedingly close one. Hence, if the Government undertakes to decree what wages an industry shall pay, it logically follows that the Government will have to assume some responsibility in making it possible for management to make a profit under the wage structure established by the Government. And since the wages of the workers have been dictated by the Government, it logically follows that the Government owes a responsibility to the workers to see to it that the profits of management are not unreasonable. From the standpoint of insuring a reasonable profit to management, it follows that prices must be regulated and not left to be controlled by the free play of competitive forces. In fact, price-fixing would probably lead to governmental subsidies to industries, since demand for the product at the governmentally fixed price may diminish. Thus, we see that the Government will be regulating important aspects of business even to the extent of determining who shall remain in business and who shall not. For if the Government finds it necessary to subsidize business on any large scale, it obviously should have the power to decide that only efficient concerns shall operate. Otherwise, the Government would be wasting the people's money.

In discussing the general subject of compulsory arbitration of labor disputes, it is necessary to distinguish proposals for the compulsory settlement of jurisdictional disputes in businesses affecting interstate commerce, similar to those made in the Eightieth Congress by my bill to amend the National Labor Relations Act (S. 858), and in substance incorporated in the Senate Committee bill (S. 1126). The gist of those proposals was that the National Labor Relations Board, or an arbitrator appointed by it, would render a final decision enforceable in court in any dispute between unions regarding the assignment of particular work tasks, unless the parties to the dispute within 10 days satisfied the governmental agency that they had settled the dispute voluntarily or agreed upon a method for settling it. The expectation was that the Board would appoint arbitrators in most such cases. This proposal would have served to minimize, if not eliminate, a serious source of friction between labor organizations and would have curbed a particularly unjustifiable practice that over the years has caused great economic injury to both workers and management. It would not, however, have resulted in governmental regulation or dictation of wages, prices, profits, or conditions of employment. It is not unlikely that labor organizations would have established their own tribunals for the voluntary settlement of their jurisdictional disputes rather than have the Government decide such controversies. Thus, the area and occasion for governmental compulsion in this regard would have been reduced to a minimum. The final version of the Taft-Hartley Act did not adopt this approach, but instead limited the remedy for jurisdictional disputes to unfair labor practice proceedings before the National Labor Relations Board. While the solution adopted may alleviate the problem, it does not seem as effective as the approach originally suggested.

With regard to so-called national emergency or paralysis strikes, the Taft-Hartley Act studiously avoids the ultimate sanction of compulsion by the Government insofar as the final settlement of the dispute is concerned. Conciliation and mediation procedures are made available, including investigation and reports by a board of inquiry and a secret ballot among employees conducted by the National Labor Relations Board. While the Government, through the Attorney General, may obtain an injunction for a period not exceeding 80 days, the terms upon which the dispute is to be adjusted cannot be fixed by the Government. If all procedures fail to effect a settlement, the President will submit a report to the Congress, together with his recommendations. Thereafter, Congress must take action, if it so decides.

My experience in the field of labor relations convinces me that if any compulsory arbitration is established to settle disputes in any industry, the result will be that employers and workers, and the Nation as a whole, will have taken a long step away from our system of free enterprise and private property economy toward a form of totalitarianism. It would constitute a serious setback to the development and improvement of procedures designed to facilitate the peaceful settlement of labor disputes by means of conciliation, mediation, and voluntary arbitration. These procedures have been improved and strengthened in recent years and it is significant that all economic groups, particularly industry and labor, vigorously oppose any system of compulsory arbitration and place their faith in the machinery of free collective bargaining. Just as it was politically and economically unsound for the people of this Nation to exist half slave and half free, so it is politically and economically unsound for American labor and industry to develop and grow if half their disputes are to be settled by governmental dictation and half are to be settled by voluntary agreement.

The Potato Situation

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. MURRAY of Wisconsin. Mr. Speaker, there has been much discussion concerning the potato support program. It is not my purpose to offer criticism of the administration of the program although it could have been improved. At least some effort has been put forth to follow the support program as provided by the Steagall and the La Follette-Taft amendments. The potato growers have not been subjected to the sorry treatment afforded the chicken and egg producers in regard to support prices.

The following is a complete official report on the product in each State in the United States from 1939 to 1948:

Potatoes—Production in the United States, by States, 1939–47

State	Production								
	1939	1940	1941	1942	1943	1944	1945	1946	1947 [1]

[1] Preliminary.

Bureau of Agricultural Economics.

You will note that so far as per capita of population is concerned the potato production is around three bushels per person. Many factors influence potato consumption. The above table shows the States that have kept in due bounds under the support program so far as production is concerned.

No. 2 and ungraded potatoes are selling for 6 to 10 cents per pound in the cities. It appears ridiculous to be feeding or destroying No. 1's while these ungraded potatoes sell for this price. If the producer receives 2 cents per pound and the consumer is compelled to pay 6 to 10 cents per pound, all the responsibility of the cost of living cannot be blamed on the producer by any means. The fact that such sorry-looking ungraded potatoes are selling at retail for 6 to 10 cents per pound make it difficult to understand why so many millions are needed for supporting the potato prices. Again, I repeat this food product has had support even though chickens and eggs do not and have not had the legal lawful support to be guaranteed by the Steagall and the La Follette-Taft amendments.

Socialism and Communism Have Failed

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mr. SMITH of Wisconsin. Mr. Speaker, a well-known writer and liberal, one John Dos Passos, has written a very interesting confession in the current issue of Life magazine. His article is entitled "The Failure of Marxism." I am including it as part of my remarks and I am sure this article will be of great interest to some Members.

THE FAILURE OF MARXISM—BOTH SOCIALISM AND COMMUNISM, AS THEY ACTUALLY WORK OUT, BETRAY THE HOPES FOR THE BETTER LIFE THAT THEY ONCE INSPIRED

(By John Dos Passos)

Not long ago I found myself talking to a pleasant and well-informed woman reporter in a newspaper office in a prosperous city in the middle western Corn Belt. Although the region is usually chalked up as black Republican in politics, the paper she worked for wore a liberal complexion. I was trying to explain to her that socialism as I had seen it working last summer in Great Britain was not necessarily a force for progress. "But I thought you were a liberal," she kept saying almost tearfully, "and now you have turned reactionary." "The Socialists are the conservatives now," I told her, "and the Communists are the real reactionaries." But she remained unconvinced. The reason our conversation was so fruitless was that she had decided that certain words like "liberal," "labor," and "rationing" had a virtuous connotation and there was no way of getting her to look directly at the events that lay behind the words.

It was just this sort of wall of incomprehension you used to meet years ago when you argued the right of working people to form unions and to strike for improved working conditions, or tried to explain that we ought to show a sympathetic interest in the social experiments that were going on in the Soviet Union. Then it was the capitalist slogans that were holding the fort; but during the past 20 years a new set of words has gradually become charged with a virtuous aura in the public mind. Now public ownership, planned economy, controls, and socialized have become words heavy with virtue, while profits, free enterprise, investment, and even dividends have taken on an evil context that needs to be explained away.

The public mind in America that 20 years ago dismissed unheard anything that smacked of a socialistic notion is now receptive to socialistic notions. Partly this comes from a reasoned change of attitude brought about by the success of some of the socialistic measures of Franklin Roosevelt's New Deal, but partly it comes from the unthinking acceptance of the vocabulary of liberal propaganda that spread out in ripples from New Deal Washington, becoming vaguer and more confused and more destructive of clear thinking as the ideas that engendered it lost their vitality at the source. It is in this confused region of the popular mind that the Communists have been able to carry on their most successful propaganda operations. Thus it comes to pass that the liberals who think a man is defeated in argument when they call him a reactionary show very little curiosity about the actual functioning of socialistic-going concerns that have come into being in the last 20 years. The liberal vocabulary that had some meaning in the 1920's has now become a definite hindrance to understanding events in the world of the forties.

Exactly 100 years have passed since Karl Marx and Friedrich Engels issued the Communist Manifesto, which became the first document in the formulation of modern socialism. Nineteen years later the bible of Marxism, Das Kapital, was published, giving immense documentation to Marx's theories that the collapse of capitalism was imminent; that it would inevitably be followed by a socialist utopia.

In the 1920's there were a number of us in the United States who were convinced that this doctrine was valid. Those of us who were willing to be called Socialists had some definite things in mind that we thought would be achieved if ownership of industry were taken out of the hands of the finance capitalists and vested in the community. We thought public service could be substituted for money profit as the driving motive of human behavior. We thought that with the ascendancy of an antimilitarist working class throughout the world, war, and the threat of war, would be replaced by peaceful cooperation in international affairs. Of course it must be admitted that we were caught by the illusory belief that revolution would install utopia. We were carried away by the blind enthusiasm for a new dispensation at hand that was sweeping the masses of the western world.

The revolutions have happened, and regimes and empires have crashed in the mud, but the old problem of how to control man's domination by man remains unsolved.

Enough socialized systems and institutions have been going concerns over a long enough period of time for us at least to begin to get some idea of how they are working out. It's a most curious comment on the blindness induced by dogmatically held beliefs that in all the avalanches of print for and against socialism and free enterprise there's so little comparative examination of capitalist and socialist organizations; there's so little effort to try to discover how they work out for the men and women directly involved.

First let me give an example of a socialized institution that seems to me to have been a success. Rural electrification was one of the New Deal's pet projects. It encouraged the establishment of local committees that gave a much-needed impetus to local self-government in a very important field. Not only did it furnish increased electric service all over the country, but by its brisk competition it shook the private companies out of their lethargy, so that they greatly increased their service, too.

At the other end of the scale in the experience of the average American come the Army and the Navy. We are not accustomed to thinking of the Army and Navy as socialized institutions, but that is exactly what they are. We all admit that in the times of ruin and rapine in which we live we can't do without these vast engines for waste and destruction, but I've yet to meet a veteran of either of these services who thinks that the Army way or the Navy way or even the Air Force way is the best way of running human affairs. About the best face we can put on our Military Establishment is to say that in spite of its cumbrous bungling it has so far managed to defeat our enemies in battle

and that up to now our civilian set-up for production has been so monstrously efficient that we've been able to afford the waste of materials and the frustration of individual effort that the military system implies.

As citizens of a self-governing community it is our first duty continually to be asking ourselves what it is we want from our institutions.

At home in America we have seen enough of the working of socialized enterprises, successful and unsuccessful, to begin to understand the basic problem. We must realize that from the point of view of the well-being of men and women the contradiction is not between capitalism and socialism but between the sort of organization that stimulates growth and the sort that fastens on society the dead hand of bureaucratic routine or the suckers of sterile vested interests. We should by now have learned that the road must be kept open for experiment. We should have begun to learn that no society is stronger than its weakest members. By our habit of government we are committed to trying to keep a rough balance between the demands of different sections of the population. We haven't solved the problem of defending every man's freedom against domination by other men, but we have made a little bit of a beginning.

THE MUSEUM OF SOCIALIST FAILURES

The rest of the world is becoming a museum of Socialist failures. Our first problem now is to understand clearly the needs of our own society and its relationship to the shaky socialized regimes of Europe and to the regime of the law of the club that centers in the Soviet Union. To do this we must free our minds of the stale and rotting verbiage left over from the noble aspirations of old-time Socialist theory.

It was failure to see the world clearly on the part of Franklin Roosevelt and his advisers that deprived us of the fruits of our wartime victory to the point that the things Americans hold most dear are in greater peril today than on the dreadful afternoon of Pearl Harbor. The responsibility for this loss of the peace lies not only in the small group of political leaders in Washington but in the whole body of thinking Americans whose thinking had just not caught up with the times.

The basic reason for this national failure was that as a Nation we had forgotten that our sort of self-governing community can survive only in a world where new avenues for men's ingenuity and enterprise are constantly opening up and where the areas of individual liberty are expanding. We had forgotten that liberty, like peace, is indivisible. We had forgotten that the only sensible foreign policy for the United States was to encourage liberty and oppose oppression.

While not forgetting our own shortcomings, if we are to catch up with the times and to see clearly the hideous world of growing servitude—a world of slavery like chattel slavery in the old South and the slavery of ancient times—which we have helped produce, we must understand the workings of the enemies of liberty and peace. The chief of these, in power and efficacy, is the government of the Soviet Union.

WILSON AND LENIN

When the Communist revolution exploded in Russia in the fall of 1917 the First World War had settled down to a stalemate along the trenches in northern France. The stubborn resistance the French were putting up to the equally stubborn German invasion was bleeding Europe to death. Among the rank and file of all the armies the feeling of mutiny against the senselessness of the butchery was rising to desperation. At that time two separate flares of hope appeared on the eastern and western horizons. In Washington Woodrow Wilson announced his Fourteen Points and in Petrograd Lenin and Trotsky fired the hungry and disorganized Russian mobs with the belief that communism would bring them peace, land and food. No one who was in Europe in '17 and '18 can ever forget the surge of crazy confidence in the future that swept the continent when Armistice Day came and the fighting stopped.

The people's trust in the American way faded as Wilson let himself be trapped into the stale committee rooms of the old men of Versailles, but from Russia came leadership and decisive action. While in Paris they haggled about oil and superannuated boundaries, Lenin let Finland and the Baltic countries form their own governments, let the conscript soldiers go home, distributed land to the peasants and encouraged the formation of workers' soviets, or councils. To many of us at the time these soviets seemed to be a new organ for self-government. For a moment it looked as if the working class under Marxist leadership would succeed in renovating Europe.

It was not to be so easy. The old vested interests of Europe banded together for their own protection; by backing the reactionaries in the Russian civil war they ruined the hopes of free development for the new social system. The Communist Party hardened fast into a military caste. The soviets and trade unions in the Soviet Union, instead of developing into organs of self-government, developed into machines run by a tightly organized and fanatically dogmatic Marxist minority for the domination and exploitation of the masses. Lenin threw overboard the humanitarian baggage of western socialism, an act symbolized in the transfer of the capital from European Petrograd to Asiatic Moscow. The civil war became a struggle for order, any kind of order. The only order the Russians knew was despotism. From the czarist autocracy the Communist government inherited the secret police. Individual liberty had hardly a breathing spell before it was stamped out again, first in the unorganized mass of the people and then, as Stalin struggled for power against Trotsky, within the Communist minority itself.

By the early thirties the social organization of the Soviet Union resembled much more the slave-run military autocracy of the Ottoman Turks than it did any of the European blueprints for a Socialist utopia. This reaction to methods of government that had gradually been losing favor among civilized men for 500 years was accompanied by the building up of one of the most extraordinary propaganda facades in history. A constitution was promulgated on the western model. The entire vocabulary of western self-government was borrowed and applied to the machinery of despotism.

UTOPIA—WITH SECRET POLICE

By killing off the old European-trained Communists and exiling Trotsky, Stalin cleared out of the Kremlin the last traces of western humanitarianism. The organization of a free self-governing Socialist community, which had been the first aim of the Russian revolutionists, was pushed forward into the future, when the millennium should come. Through the pull of this millennial dream Stalin's regime managed to retain its grip over the aspirations of a large part of the European working class. The Communist Party, appealing through this basic utopian dogma to the emotions of confused and tortured people, backed and kept in line by the ruthless and skillfully exercised authority of the secret police, managed to create one of the most efficient machines for the dominating and exploiting of mankind the world has ever seen.

It seems likely, from what we hear faintly through the screen of lies that hems in the Soviet Union, that there the illusions have lost their power in the face of the regime's failure to produce even the rudiments of decent living for its subjects, and that the Kremlin now rules a depraved and exhausted people by brute force. Outside the Soviet Union, however, the utopian illusions of communism still dominate many men's hopes and dreams. Even some Americans opposed to the Communists still talk as if it were an excess of progressiveness and idealism that caused Russian socialism to fail. We find Frenchmen and Americans and Canadians, in all other respects apparently capable of sane and normal thinking, who are willing to turn their backs on the traditions they were brought up in and to give their allegiance to the Kremlin, even to the point of committing treason. The success of the aggressions by the Soviet state in the last few years rests in great part on the Kremlin's command over adherents and sympathizers in the outside world. Largely because the rest of the world has not understood it the Russian socialized state has been allowed to develop into a military force for pillage and conquest. Still the faith of many of our liberals in the Kremlin's idealistic aims has not faltered.

Those of us who believed in socialism in the twenties hoped it would promote self-government, expand individual liberty, and make for a wider distribution of the good things of life. It is obvious even to Mr. Henry Wallace that the Soviet Union is not the place to look for these things. Not even the American Communists really claim any of these achievements; what they say among themselves is that present miseries will be atoned for by the regime of justice and bliss that will be established once communism has completed its conquest of the world.

The Russians are barbarians, the western Socialists will tell you; in England it will all be different.

How different is it? If you go around Great Britain asking questions of as many different kinds of people as possible, as I did last summer, you sense that in its ultimate implications British socialism is turning out to be not so very different from the Russian brand. Of course, there's not the gory police terror of Stalin nor the Hitlerian pomp and parade through which the Kremlin daily expresses its power over the bodies and minds of men. There's not the proselytizing enthusiasm of a quasi-religious dogma that accompanies the agents and armies of expanding Russia. There's not the daily and visible and universal servitude; but neither has socialism brought any broadening of personal liberty. On the contrary, personal liberty in Great Britain has been contracted.

The very humane and well-intentioned people who are running the Labor government are the first to deplore the losses of liberty you bring to their attention. They reassure you with pious hopes that the direction-of-labor measure, which limits the individual's right to work where or when he likes, will be only a passing phase. Listening to these pious hopes, I couldn't help remembering similar reassurances from equally humane and well-intentioned Russian Communists who used to tell me, in the early days, that military communism was a passing phase which would disappear as soon as reactionary opposition was crushed. Thirty years have gone by, and military communism marches on to fresh massacres. A man has a right to ask the British Labor Party whether 30 years from now direction of labor won't be the cornerstone of a new system of exploitation of the productive workers by a new ruling class.

If there is one thing that mankind should have learned from the agonies of the last four decades it is that it's never safe to do evil that good may come of it. The good gets lost and the evil goes on.

DISTRIBUTION OF POVERTY

Of course we must admit that the present situation of the people of Great Britain would be difficult enough if a choir of archangels, superhuman in brains and in self-abnegation, had assumed the government. The island's economy was built up as the processing and financing center of an empire which has irrevocably gone. The class that had ruled

that economy through control of the government, ownership of the land and domination of centralized finance and industry had become overweeningly rich and powerful. In their wealth and self-satisfaction the owners of Britain neglected to keep their industries tooled up to date or to protect the standard of living of their working people or to conserve their natural resources. When the Labor government came in after the war it inherited a concern that had long been bankrupt.

Government control of virtually the entire economy had already been instituted during the war. About all the Labor government has done is to amplify the wartime apparatus of bureaucratic management. The living standards of the working people who were Labor's chief constituents had improved during the war, and the Labor government has continued that improvement, particularly for the lowest-paid third. Because there isn't enough to go around anyway, this has been done at the expense of the middle class, traditionally the nursery of British brains and initiative. Virtually everybody has been reduced by high taxes and high prices to the same bare level of subsistence. Incentive for effort and innovation has tended to disappear. A man is better off if he soldiers along in the shop and spends his Saturdays betting on the races than if he works himself sick trying to rise in the world. The more his income rises the more taxation will take his earnings away from him and the more he'll feel the dead weight of the bureaucratic tangle hampering his every move.

Bernard Baruch's remark, that socialism might not succeed in distributing wealth but would certainly distribute poverty, has never been better exemplified. Up to now socialism in Great Britain has accomplished very little more than to freeze the bankrupt capitalist economy at its point of collapse. Its bureaucratic machinery, operating along the lines of the machinery of bankrupt capitalism, has not been able to stimulate the sort of revolutionary initiative and thoroughgoing reorganization of the economy that might give the British people a chance to escape from their dilemma. Socialism has acted as a brake instead of as a stimulus to enterprise.

Man does not live by bread alone, the Socialists will tell you. The answer is that as strong as the urge to eat is the urge to exercise power over other men. In the past British institutions have done a moderately good job in curbing this deadliest of instincts. But in spite of political democracy British capitalism too often gave too much power to people whose only social gift was the knack of accumulating money. Now British socialism gives too much power to people whose only knack is getting themselves elected to offices in trade unions. At the same time the liberty of movement and the freedom of action that allowed people to escape from under the heel of the capitalist have been seriously weakened.

THE WRONG LEADERS

England has a new ruling class. Added to such remnants of the old ruling class as have remained in office through holding administrative jobs in government, industry, and the civil service, is an infusion of new blood from the trade-union leadership, leavened by an occasional intellectual who has talked or written his way into office. Now, the main training of trade-union officials is in hamstringing production for the purpose of wringing concessions from the owners for the workers. Neither idealistic intellectuals nor civil service employees have any training in industrial production. The result is that at the very moment when the British people need to throw all their energy into discovering new ways of producing food and clothing and housing and export goods, they find themselves in the hands of a ruling class that is hampered by tradition and training from doing anything effective to stimulate production. In recent months there has developed a tendency to give technicians an increasingly bigger share in policy making, but on the whole Britain's new ruling class tends to be so blinded by the utopian glamor of the word "socialism" that it has found it difficult to envisage the problem which confronts the nation.

Well, if the government can't help them, why can't they help themselves? The British people, in my opinion, represent in themselves at this moment just about the highest development of western civilized man. In the middle and upper classes you find a higher level of education than we have reached in America. The level of individual skill and craftsmanship in most trades is higher than ours. In the professionally trained part of the population, though there may be some flagging of creative spirit, there's still a great reservoir of first-rate brains. The British people proved themselves to be still a great people by the dignity and discipline with which they fought off the German air attacks during the war. This great highly trained, highly disciplined, and civilized nation is in danger of dying of inanition because in all the elaborate structure of the state there are so few cracks left where individual initiative can take hold.

The British will tell you that they are "quite free, quite." But we don't need to believe them. When a man can't change his job without permission from someone sitting at an office desk, when he can't perform any of the normal operations of buying and selling necessary to carrying on a business without a complicated correspondence to secure licenses from the Board of Trade, when he can't appeal to the courts from administrative decisions, when he can be sentenced to jail for refusing to work in the mines, he's no longer a free agent. The Briton still has his secret ballot in parliamentary and municipal elections. He's free because he can vote, he'll tell you. Unfortunately the record of history tends to prove that it's very doubtful whether the vote alone, without economic and personal liberty of action, has ever protected any people against the exercise of arbitrary power.

A sinister footnote to the loss of concern for individual liberty that seems inevitably to follow the socialization of enterprise appears in the growing toleration of new forms of slavery. We are growing used to the stories of the vast slave camps in the Soviet Union and its satellite countries, but it comes somewhat as a shock to find the humane British tolerating the use of gangs of German prisoners to do agricultural labor. In all my conversations with farmers in England last summer I found only one man who disapproved of the practice. The farmers paid the prisoners' wages to the government and the government allowed the prisoners nothing more than pocket money. The farmers found that they got more work out of the prisoners if they fed them a hot meal in the middle of the day, but they didn't seem to feel that the working of prisoners of war in this way constituted a backsliding in civilization; most of them regretted that the prisoners would soon be sent home. The wages of agricultural workers in England have been much improved in recent years and the Socialists take justifiable pride in this achievement. The question they didn't ask themselves when they tolerated the enslavement of the defeated Germans was how long a highly-paid plowman or tractor operator would be able to compete with slave labor.

This brings us squarely up against the dilemma of our time. Under the cover of the dazzle of Socialist illusions, and just at the moment when our technology is opening up the certainty of really widespread well-being in material things, the masses of mankind are being plunged back into a regime of misery and servitude such as has not existed in the West since the days of serfdom. We can't go on forever blaming on war damage a situation that results from the fact that socialized economies have not been able to produce. So far the socialized economies, instead of opening up new aspects of self-government and broader reaches of liberty for the individual, have backslid with dizzy speed into aboriginal oppressions. In the Soviet Union, failure to solve the problems of production at home has thrown Russian communism into a dangerous habit of aggression upon the rest of the world. As for Great Britain, we can hope that they will find a way to combine socialism with liberty, or at least that the failure of the socialized economy to provide its people with a decent life at home will produce a new explosion of British migration and colonization that will transmit to the future world of the West the valuable heritages of English culture. In America what we don't want to forget is that we won't have any Western World fit for a freeman to live in unless we keep the avenues open for the freedom and growth of the individual man in the constantly proliferating hierarchical structure of modern industry.

Socialism is not the answer to the too great concentration of power that is the curse of capitalism. We've got to do better than that.

Business Management

EXTENSION OF REMARKS
OF

HON. ROBERT J. TWYMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday January 21, 1948

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal:

BUSINESS MANAGEMENT

Senator BROOKS, of Illinois, has announced that he will lead a group of Members of Congress who will demand that any financial aid extended to the nations of Europe be handled by a business management rather than by the State Department.

Senator BROOKS frequently is accused of being an isolationist, and he undoubtedly has tendencies in that direction. He has been one of the severest critics of the Truman administration's plans for extension of aid to the European nations, so that he might be expected to take a stand against permitting the State Department to administer whatever funds are voted by Congress for European relief.

However, the record of the State Department in past administration of assistance projects gives him some firm ground upon which to base his demand that someone else be placed in charge of the Marshall-plan aid.

State Department representatives have made pretty much of a botch of their handling of such projects in the past with the result that the United States has been shelling out a lot of assistance without getting any credit for it and without accomplishing the purposes which it set out to achieve. Latest failure is in Greece, where we are told that more help is going to be needed just after we have heard stories of great waste and spoilage of previous contributions.

Asserting that production is the key to European recovery, Senator BROOKS asserts, "Nobody in the State Department has ever demonstrated any ability to get production" and the record will bear him out in that.

The Illinois Senator suggests the selection of leaders from the fields of industry, agriculture, and labor to organize the recovery program, much in the same manner as leaders from those fields worked together to organize the American war-production program that resulted in victory in World War II.

The American people who are going to stand the cost of the Marshall plan cannot

afford to have their contribution to world recovery wasted. If the Marshall plan assistance doesn't work, tragedy for the entire world may well result.

It is imperative then that the funds supplied by America be administered efficiently and to the best advantage. The State Department, staffed as it is with a lot of well meaning but ineffective visionaries, hasn't demonstrated that it possesses the ability to do the job.

We should obtain the best men available in our country to supervise the expenditure of our money in Europe and that certainly calls for the "business management" which Senator BROOKS is advocating.

Aid to Europe

EXTENSION OF REMARKS
OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, January 19, 1948

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a letter from Ralph S. Trigg, Deputy Administrator of the Department of Agriculture, with the schedules attached thereto. The schedules show, first, inventories held by the Commodity Credit Corporation as of October 31, 1947. Incidentally, those are the latest schedules on record, I believe. The schedules include figures as to commodities in process of sale or otherwise obligated, and thus do not represent commodities available for sale or other disposition. Second, the schedules show deliveries to cash-paying foreign governments, by country and by commodity, for the fiscal year 1947 and the quarter ending September 30, 1947. I believe the schedules will prove of interest in view of the serious problems that confront us, particularly with regard to aid to Europe and its impact upon our domestic economy.

I am informed that the manuscript will exceed the two pages which may be printed without a statement of the cost, the estimate being that it will make approximately three pages, at a cost of $213. This is the first time I have asked for this special privilege, but I believe these schedules are well worth while printing. I therefore ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

DECEMBER 31, 1947.

Hon. LEVERETT SALTONSTALL,
United States Senate.

DEAR SENATOR SALTONSTALL: In accordance with our letter of December 10, 1947, the following information is enclosed:

1. Schedules showing inventories held by the Commodity Credit Corporation as of October 31, 1947. These schedules include commodities in process of sale or otherwise obligated, and thus do not represent commodities available for sale or other disposition.

2. Schedules showing deliveries to cash-paying foreign governments, by country and by commodity, fiscal year 1947 and quarter ending September 30, 1947.

The following information is submitted with reference to Mr. Mynot's telephone request concerning the grain export allocations for January 1948, as shown by the press release dated November 19, 1947 (USDA 2655-47). The allocations were made in anticipation of the needs of the various countries and with the expectation that the necessary funds would be available from some source. Should the needs of the countries change or funds not be available, the grains would be available for reallocation. No sales will, of course, be made unless full reimbursement for all costs is obtained by the Commodity Credit Corporation. As indicated by the press release, approximately two-thirds of the flour under allocation during January will be obtained through regular commercial channels by the countries concerned.

It is anticipated that deliveries to the following countries will be on a cash basis: Belgium, India, Netherlands, and Portugal.

Deliveries to the United States-United Kingdom zone of occupied Germany and the occupied zones of Japan and Ryukyus will be paid for from funds appropriated to the Army for occupied areas, while deliveries to Greece will be paid for from funds appropriated under the Greek-Turkish aid program (Public Law 75, 80th Cong.).

Deliveries to Austria, China, France, Italy, and the French zone of occupied Germany under the January allocations are subject to funds being made available from the proposed interim-aid appropriations or from other sources. The allocation of grain to these countries in advance of any financial arrangements merely reflects the advance planning necessary where limited supplies must be apportioned among potential recipients. Should funds not be available during the month for which the allocation is made, the quantities planned for export are adjusted or reapportioned.

Sincerely yours,

RALPH S. TRIGG,
Deputy Administrator.

Inventory as of Oct. 31, 1947

[U. S. Department of Agriculture, Production and Marketing Administration, Commodity Credit Corporation]

European Recovery Program

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. ARNOLD. Mr. Speaker, the need for clarification of the purpose and motive behind the European recovery program is brought out by Andre Visson's article in the Washington Post of January 18. Under leave to extend my remarks, the article is quoted below:

DOLLARS ARE NOT ENOUGH
(By Andre Visson)
ERP MISCONCEPTIONS

At the very moment when the administration is doing its best to make Congress understand the necessity for and the purpose of the Marshall plan, reports from Europe indicate that many Europeans also appear to be in need of clarification.

To be sure, Europeans do not question the necessity for American aid to assure and speed up their victory. But many of them are at a loss to understand the real motives behind the determination of the United States to pour billions of dollars into European countries where both political and economic conditions are so uncertain, and at the very time when so many people, both in Europe and in the United States, are beginning to fear that World War III may be around the corner.

The most perplexing thing to European minds is the American insistence on the humanitarian aspect of our aid to Europe. European nations have never had an opportunity to practice humanitarianism on an international scale. So they simply cannot understand that any nation could seriously consider the giving away of billions of dollars just for humanitarian purposes. Whenever Europeans hear responsible Americans insist on the humanitarian aspect of the Marshall plan they become suspicious and ask themselves, "What do these Americans really have in back of their minds?"

The fundamental European misconception about the Marshall plan is that the funds and goods which Europe is to receive will come from American surpluses. One of the most important tasks for American information services abroad will be to give Europeans the real facts, and especially to emphasize that the Marshall plan definitely means a sacrifice on the part of every American taxpayer.

Another, perhaps even more urgent task for the Administration, is to make Europeans realize how wrong they are in their suspicion that the Marshall plan may be used for American economic expansion. The bogey of American imperialism, unfortunately, is not limited to Communist circles. Many western European industrialists welcome the Marshall plan for the opportunity it offers them to obtain the badly needed raw materials with which to renovate their obsolete equipment and improve the general economic and social conditions in their countries so as to increase the people's resistance to communism. But at the same time they cannot help having fears about the increasing American economic grip.

Lord Beaverbrook's press in England protests against what it terms the "selling of British sovereignty for scrambled dry eggs." And the French industrialists, complaining about the clause on the import of American movies which was attached to the loan obtained by Leon Blum in 1945, wonder what new clauses of a similar character we may attach to the grants and loans given under the Marshall plan.

The Socialists in western Europe, on the other hand, are afraid that we may attach some political strings which may curtail or even completely end any further socialization in the countries receiving American aid. Socialist leaders are planners, and all planners want the greatest possible independence of foreign influences. Thus we have the paradoxical situation, that while Socialist planners insist on political internationalism, in the economic field they tend to behave like isolationists.

This trend is more obvious in England than in France. Sir Stafford Cripps wants short bilateral agreements which would not tie his hands too much. All western Europeans, whether Socialists or not, believe in international free trade as an economic ideal. But European Socialists—especially the British—are most reluctant to put off their socialistic reforms, even for the sake of world recovery. And they are prepared to resist most strongly any American demands to curtail socialization.

Thus we have the bogey of American "economic domination" raised both by Lord Beaverbrook's "imperial isolationists" and by Sir Stafford Cripps' "socialistic planners." Both groups are prepared, if necessary, to increase British austerity if it will lessen Britain's dependence on American aid.

I do not believe that it will be too difficult to prove to Europeans—Socialists and conservatives alike—how unfounded are their fears about the alleged American intentions to control and dominate the European economy. The motto of all imperialists throughout history has been: "Divide and conquer." The United States follows exactly the opposite line. It says to the European nations: "Unite, the better to help yourselves and to make it easier for us to help you to become stronger."

No imperialist nation has ever tried to strengthen those whom it wanted to conquer. No imperialist nation has ever tried to bring together those whom it wanted to dominate politically or economically.

Europeans should learn that of all the developments in western Europe, few have been more heartily welcomed both by responsible Americans and by American public opinion than the customs union of Belgium, Luxemburg, and The Netherlands. While the ideal development from the Soviet viewpoint would be to see all western European nations reduced to the size of the Grand Duchy of Luxemburg, from the American viewpoint the ideal would be to see the newly formed customs union of Benelux expand to include all western Europe. And this, every intelligent European will have to admit, can hardly be interpreted as American imperialism.

Los Angeles Needs Additional Postal Facilities Because of Tremendous Population Increase

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. McDONOUGH. Mr. Speaker, the population of Los Angeles has increased at an unprecedented rate during the war and postwar years. War workers and servicemen from all parts of the country came to southern California, most of them to the Los Angeles area, and since the war most of them have remained. Latest estimates indicate that the population of southern California has increased by 1,000,000 since 1940, most of this increase in the Los Angeles area. And the migration still continues.

During this same period many nationally known concerns have moved their headquarters to Los Angeles, and new industries have sprung up in this area and now have become permanently established in Los Angeles.

All of these factors have contributed to a tremendous increase of almost 100 percent in the amount of mail which

must be handled by the Los Angeles post office. And during this same period not one single square foot of space has been added to operate this post office even though it has been necessary to almost double the number of persons employed.

The receipts of the Los Angeles post office for the year 1942 were $15,000,000. In 1947 these receipts increased to almost $29,000,000. With the growth of Los Angeles continuing at its present unprecedented rate, it has been estimated that the Los Angeles post office will reach, the $40,000,000 class the top bracket in which only New York and Chicago are now classified, by late 1951 or early 1952.

These figures present conclusive proof of the necessity for immediate provision for additional post-office facilities for Los Angeles.

H. R. 4845, which I have introduced, would authorize construction of a parcel-post building adjacent to the Terminal Annex Post Office. It will also provide for extensive remodeling and the construction of an additional floor on the Terminal Annex Post Office where the tremendous volume of incoming and outgoing mail is handled.

It would also provide for the construction of a post office garage building. Since the post office garage facilities in Los Angeles are used not only for storage and repairs on vehicles operated in southern California but also for repairs and servicing of vehicles operated in the Southwest area including Arizona and Nevada, this garage building is necessary to maintain efficient mail service.

The construction of adequate parking space and loading-zone facilities would also include landing space for helicopter delivery of air mail.

More space is needed for the handling of the mail in the Los Angeles Post Office. At present with almost double the number of employees working in space designed originally to accommodate only half that number, resulting unsatisfactory working conditions tend to lower the morale of workers and may not maintain maximum protection of the health of employees.

The need for construction of the additional facilities for the postal service in Los Angeles is evident if working conditions for employees are to be restored to normal and satisfactory postal service maintained in Los Angeles. I, therefore, urge the Members of the House to act favorably on H. R. 4845.

Reduction of Federal Expenditures

EXTENSION OF REMARKS
OF
HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. PLOESER. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the following resolution adopted by the United States Savings and Loan League at the fifty-fifth annual convention, San Francisco, Calif., September 1947:

The United States Savings and Loan League desires to commend the first session of the Eightieth Congress, particularly the House Committee on Appropriations, for their work in making a start at retrenchment in the war-swollen activities and expenditures of the Federal Government. Their task was a stupendous one, made more difficult by the organized resistance and propaganda technique of the bureaus and agencies whose appropriations were threatened. The achievement of any reduction required courage, conviction, and a knowledge of what was truly essential and what could be eliminated without impairment of necessary or helpful services. They deserve the gratitude of every taxpaying American citizen and should be encouraged to renew their efforts for a more economical and efficient Federal Government in the coming second session.

Salary Increase for Postal Workers

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. DAWSON of Utah. Mr. Speaker, the postal employees of this country are suffering great hardship as a result of the increased cost of living. Under leave to extend my remarks in the RECORD, I include the following statement made by me on January 16, 1948, before the United States Senate Committee on Post Office and Civil Service:

I appreciate this opportunity of appearing before the committee in support of increase in salary for postal workers.

I have received numerous letters and wires from my constituents in Utah emphasizing the fact that under present living conditions, the salary which is received by most of them is not sufficient to maintain a decent standard of living.

Today we hear very little about the almighty dollar because it has lost its mightiness. The purchasing power of the dollar, as we all know, is far below its prewar purchasing power. It is dangerous to quote figures nowadays because with the vicious rise in prices recently, statistics compiled a month ago would be obsolete today.

I am sure, gentlemen, that we are all aware that the cost of living has far outdone any increase in salary that postal employees have received in recent years. This fact has been borne out by evidence already presented by other witnesses before this committee. I do not feel that it is unjustified to urge a reasonable salary increase at this time.

The employees of the United States Government, as I understand, are expected to meet all financial obligations, otherwise they are subject to dismissal. The cost of living has soared to such heights that the least little extra expense not expected puts a person behind, often in debt, and makes it impossible to save for a rainy day. In fact, a rainy day is here now for most of the employees of the Postal Department and other underpaid Federal employees unless a salary comparable to the cost of living is given to them. I therefore feel that it is only fair to them as loyal Government employees to recommend a reasonable salary increase at this time.

Memorandum Summarizing Labor's Position

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I include the following statements of the Congress of Industrial Organizations:

THE BASIC 40-HOUR WEEK CAN GIVE THE U. S. A. FULL PRODUCTION

A sunny fair day is the best time to repair the roof.

A period of high employment and high wages is the best time to strengthen our protections against long hours, low wages and unemployment.

In other words, 1948 is the best time to strengthen provisions of the wage-hour law, so that it will operate in the public good in good times and bad.

The CIO believes that the Wage-Hour Act should be improved by the Eightieth Congress—to increase the minimum wage from 40 cents an hour to 75 cents; to bring protection of wage-hour standards to important, sizable groups of workers who are now exempt and thus do not now enjoy protection of the law.

But, powerful forces, in and out of Congress, are moving in just the opposite direction. They would weaken, not strengthen, the wage-hour law.

They would use the present sunny weather, not to strengthen the roof, but to punch holes in it. The damage would be serious enough right away—but it will show up even more quickly if an economic storm breaks upon us.

At the present time the law provides (1) for a minimum wage of 40 cents an hour; (2) for time-and-one-half pay for all hours over 40 hours a week which a worker puts on the job.

Notice this: The law does not prohibit the employer, in any way, shape or form from keeping workers on the job more than 40 hours each week. He can employ his workers 44 hours, or 50 hours, or 60, or 70. The law does say that he must pay them no less than 40 cents an hour—and that for each hour over 40 hours in any workweek, he must pay them time-and-one-half their regular rate of wages.

Forty cents an hour for 40 hours is just $16 a week—not enough in these days of soaring prices for any adult to support himself, let alone his family, on decent American standards.

A 75-cent minimum would guarantee a $30 weekly income—still pretty low, but a big improvement over the present minimum rates. It is still below the minimum necessary for an adequate American standard of living—and purchasing power.

People who oppose improving wage-hour standards don't like to talk cold, $16-a-week facts; they seem to prefer propaganda claims and doubtful theory.

They say the present law hurts production. The false implication is that the employer may not work his employees more than 40 hours a week—and so production is cut, but that simply isn't so.

They say an improvement in minimum wages would be inflationary. That isn't so either. The CIO recognizes that most workers are making more than 40 cents an hour today; but CIO feels that Congress should remember three facts:

1. The Department of Labor's minimum budget for a family of four now ranges between $3,000 and $3,500 a year, which is far more than a large proportion of our industrial workers now receive. For a full year's work at 75 cents an hour a worker would bring home only $1,560.

2. The amount of inflation deriving from an increase in minimum wages from $16 a week to the still below-standard $30 a week is not enough to have any effect on the American economy; and, it isn't inflationary to put butter on children's bread and clothes on the backs of workers who need clothes.

3. Every cent of buying power for necessities will be important—and in depression both workers and businessmen will be grateful for the positive effects of a 75-cent minimum and for the fact that it will act as a meaningful floor under wageslashing and sweatshopping.

These same groups who want to weaken the Wage-Hour Act argue that the overtime pay provisions should be lowered in the hope of increasing output. But many Government studies show clearly that lower overtime rates will not increase production.

For one thing, overtime work cuts overhead costs, makes it easy for employers to pay higher wage rates for that "cheap time." In many big industries—auto, textile—longer working hours per employee would have no effect on production, since the basic difficulties arise from material shortages in which the labor problem is insignificant. In the steel industry, where operations are on continuous process basis, working hours cannot be added to their working day. In many other industries, cutting the overtime pay rates would merely stretch out the working time of employees already on the job. They would be working at a cut in hourly wage rates. And, lastly, lower overtime rates would act as no real incentive to workers to do overtime work where it is necessary. Pay to compensate them for the risk of accidents, increased fatigue, etc., that come with long hours, is only fair.

Thus, a cut in overtime rates will bring no higher production, but it will produce a bumper crop of bad industrial relations and friction.

We cannot use wage cuts to buy the sort of production and industrial stability we need.

Many groups appearing at wage-hour hearings say, in effect: "O. K. Let's raise the minimum wage, but let's weaken the law here, and here, and there, and there." Such changes amount to piecemeal repeal of the act. The minimum wage, whatever it may be, should apply to all industry; and the law should give protection to everybody in interstate commerce or whose work affects interstate commerce. If we fail to do so, we have created an incentive to wage-cutting and sweat-shopping and thereby are digging a grave for full consumption, full production, and full employment.

In summary, CIO says: Raise the minimum wage under the wage-hour law from 40 cents an hour to 75 cents an hour. Extend the law to cover important groups of workers, now not protected. Abolish exploitation of children for profit. Don't tamper with the overtime provisions of the Wage-Hour Act. Don't make the law meaningless by weakening its important provisions while going through the motions of raising the minimum rate. Don't make that gesture a joke played on millions of the lowest-paid workers of the Nation.

A constructive program on the Wage-Hour Act will help America, help industry, help labor.

For your convenience, we list herewith a point-by-point examination of CIO's views on the hours provisions of the act.

CIO'S VIEWS ON THE HOURS PROVISIONS OF THE ACT

1. The law prevents the undermining of good standards through unfair competition: The act was intended to put a floor under wages and to provide national standards in regard to child labor, the length of the work week, and overtime payment so as to provide basic minimum protection to American working people. It is especially helpful to unorganized wage earners who are least able to protect themselves. The law contemplates that employers will succeed in the competitive struggle through better management rather than through sweat-shop conditions.

Without minimum legal standards, some firms will seek to undersell their competitors by lengthening hours and slashing wages, thus undermining the decent standards established by unions and other employers. State laws on wages and hours, where they exist, are limited and completely inadequate to meet the national problem.

2. The provisions in regard to hours are flexible: The law does not prohibit hours longer than 40 a week. It provides merely that pay for such excess hours should be at one and one-half times the regular rate. The effect is to establish 40 hours as a standard rewarding the wage earner if he must work longer, and requiring the employer to pay more for the extra time, which brings savings in overhead for him.

3. The threat of weakening amendments is real. Proposals have been made for nullifying the hours provisions by various methods. Some advocate outright repeal; others, changing the hours to 44 or 48; others changing the rate at which overtime is to be paid. Of the latter, some suggest that overtime be paid on the basis of time-and-one-half the legal minimum. Even if the legal minimum is increased considerably it is still a minimum. If overtime were paid at time-and-a-half an increased minimum, it would still be below the average hourly earnings of many workers, and would be meaningless.

This is merely a design to increase profits by getting extra work out of each worker without fair compensation. It undoubtedly would result in a lowering of pay for overtime which would also result in decreased purchasing power and a lowered standard of living for a large segment of the population. Furthermore, all incentive to work overtime would be removed. In short it is a left-handed way of killing the 40-hour week.

Another suggestion calls for a new definition of "regular rate of pay" on the grounds that under the present interpretation regular bonuses are included in "regular rate of pay." Actually both management and labor accept the fact that such extra wages for production as regularly paid premiums, incentive rates, and bonuses are part of the regular wage and must be counted as such. If the definition of "regular rate of pay" is altered to exclude all except the straight hourly rate, it will simply mean a wage cut which workers are not going to accept.

Another proposal states that overtime pay should be any sum agreed upon in a bona fide collective bargaining agreement. Such an amendment would be an underhanded way of annulling the 40-hour week for unorganized labor, because in nonunion shops the workers have no way of carrying on negotiations and cannot participate in setting up fair agreements. This proposal would also lower overtime payments for members of new or weak unions that do not have sufficient economic strength to negotiate fair agreements.

4. The present overtime provisions are not a bar to increased production. American output can and should be increased, but this must be done by planning to overcome bottlenecks in steel, power, food, etc. These bottlenecks will not be remedied by a change in the basic workweek. Production is already at record-breaking levels in many fields and shortages of materials and power arise from this very fact. Capacity must be expanded in steel to meet demand at home and abroad. Until this is done, metal-fabricating industries, such as autos, will be limited in output not by working hours but by lack of material. Similarly, an industry like cotton textiles could not produce more in 1948 with a longer workweek because there is not enough raw cotton and synthetic yarns. If some employers work long hours and use a larger share of the cotton supply, others will have to lay off employees.

The Council of Economic Advisers has supported the pattern of an 8-hour day and 5-day week. The council also states that "Even in those manufacturing lines where materials are adequate and weather impediments not the significant factor, it is not clear that merely stepping up the amount of labor effort would meet the real economic problems which confront us."

To insure greater production, there should be concrete plans for greater capacity in steel, etc.; careful allocation of scarce materials; a constructive farm program; compulsory licensing of patents; elimination of waste; and constructive cooperation between management and labor through industry councils to overcome bottlenecks.

5. Much manpower is now being wasted or used less efficiently than is possible. Many workers are unemployed, many more are underemployed in terms of hours or their potential skills. Women and minority groups are often denied training and advancement. Too little effort is made to adapt working hours to the needs of older people and partially disabled victims of war or industrial accidents. Improved training, health, and placement policies, with more efficient employment offices, can substantially increase the supply of labor. The proper approach is to make improvements in these matters, not to let employers take the easier course of simply imposing greater burdens on their employees.

6. The 40-hour week, with time and one-half pay for overtime, has become accepted as the American standard: It must be remembered that many workers must spend an hour or two getting to and from work each day in addition to the time at the work place. The speed-up, poor ventilation, and other bad working conditions often undermine the workers' health even in a 40-hour week. Longer hours have been proved repeatedly to mean more accidents, sickness, and waste. A recent study of the United States Bureau of Labor Statistics confirms these facts and also indicates that output in the extra hours is apt to decline.

Millions of workers are close to or above 60 years of age or are veterans whose health was impaired or mothers with children to care for. They would suffer especially from a change in the scheduled week and so would their children. Undoubtedly some would be driven from the labor market.

The basic 40-hour week, with payment of time and one-half for overtime, is now embodied in most union-management contracts. These terms were found in 85 percent of a large group of agreements recently studied by the United States Bureau of Labor Statistics. Amendments of the Fair Labor Standards Act in this regard would affect first of all the unorganized workers not covered by such agreements. Insofar as employers would seek to change the overtime provisions in union agreements, industrial unrest would be increased.

American wage earners want adequate real wages rather than longer hours, especially since they know lay-offs may come without warning. Some few workers may be driven by low wages to work hours beyond their strength but they will pay the cost later and so will the Nation. The remedy is to increase their pay and limit rising prices, not to eliminate overtime provisions.

7. Inflation will not be remedied by changing the basic workweek or ending the payment of time and one-half for overtime: Food prices are highest of all due to shortages, and rationing of meat and other prod-

ucts with control of their prices is essential. Labor costs is a very small part of the bill in the food industry, and working hours are already long.

Industrial prices have soared because of shortages or because of deliberate setting of prices by companies at a level that is too high to permit mass consumption. With profits at the record-breaking level of $17,000,000,000 after taxes, it is clear that the cost of the overtime payments is not a real deterrent.

As former Commissioner of Labor Statistics Lubin testified, an employer is apt to make additional profits, and not lose anything, by lengthening the workweek, even though he pays time and one-half rates.

For example: Present straight-time hourly earnings in manufacturing average $1.21. A 44-hour week at customary overtime rates would yield weekly earnings of $55.66. If the employers got what some of them are asking for, the worker would receive only $53.24, a reduction of $2.42. Applied to a wage for the 44-hour week, it would mean a wage cut of about 4½ percent.

Below the Belt

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD an editorial from the Washington Evening Star of January 21, 1948. This editorial illustrates the type of thinking which marks the Republican national chairman but which I think is not typical of the majority of the Republican Party. It is too bad that Mr. Reece does not have the common decency to represent the views of honest Republicans rather than his own. His vicious and unfair attacks on the Democratic Party, the Democratic President, and the Democratic national chairman will not, and should not, sit well with the American people. As the editorial says, Mr. Reece hits "below the belt" when he continues the tactics which have marked him as the hatchetman of the Republican Party.

BELOW THE BELT

Republican National Chairman Carroll Reece's latest pronouncement gives a disquieting preview of things to come in this year's Presidential campaign.

According to Mr. Reece, Henry Wallace's entry into the field has resulted in the desperate efforts now being made by Mr. Truman to recover his disreputable lost foreign legion. And so that no one shall be in doubt as to the meaning of this foreign-legion reference, Mr. Reece goes on to discuss the domestic partnership of the Democratic Party and the Communist Party.

One must expect, of course, that the Republicans will make what political capital they can out of the Wallace challenge to President Truman. But the line which Mr. Reece seems bent upon following is a pretty shabby reward for a President who has had the courage to stand up for what he believes to be essential to the security of this country, knowing full well that such a stand would alienate the Wallaceites and that it might throw the election to the Republicans.

There have not been many rules in American politics and we have come to expect our political battles to be rough. But, granting all of this, Mr. Reece still is hitting below the belt, and it is quite likely that a good many Republicans will find it hard to stomach this smearing of a President who, if Mr. Wallace and the Communists have their way, is going to be liquidated politically because he refused to surrender on such vital points as military preparedness and the Marshall plan.

Time for Action on Displaced Persons

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. KLEIN. Mr. Speaker, aid to the displaced persons of Europe, tragic and helpless victims of war, is beyond all partisan consideration.

American public opinion has solidified in favor of immediate action. The highest leadership of both major parties is fully in favor of immediate action on the Stratton bill, or on some acceptable and practicable form of it.

The facts are known. The only remaining segments of public opinion rejecting the necessity of immediate action along the lines of the Stratton bill are the irreconcilables who refuse to accept facts.

Under leave, I present for the RECORD an editorial from the New York Herald Tribune published yesterday which expresses the views of the most distinguished editorial voice of the Republican Party—a view with which every American who glories in this country's past can agree:

FOR ACTION ON THE DP'S

Excellent reports on the displaced persons from Members of Congress and others who visited the European camps last year have discredited opposition to the resettlement of a reasonable number here. That opposition had its chief basis in the murky and mistaken suspicions of American isolationists. A move by State governments to facilitate the resettlement of needed farm workers, particularly in the Middle West, indicates that opposition on economic grounds was likewise baseless.

There is everything to be said for permitting a fair share of the displaced persons to come to our shores. The United States responsibility for leadership toward a just and permanent peace requires that we offer a solution of the war's gravest human problem. Resettlement is now the only acceptable solution for the hard core of refugees remaining in the DP camps. This country must open its doors if it hopes that other nations will open theirs. The refugees are, for the most part, people this country wants and needs. They hate tyranny; they have miraculously maintained self-respecting ambition through years of camp life. There are large groups of Poles and Balts who cannot return to their homelands for fear of persecution. They are like the 48 sailing Estonians whose plight, following their landing in Miami in late 1946, stirred the sympathies of the country. Such people still come to our shores in their small ships. Twenty-three reached Savannah last summer, only to be interned on Ellis Island. This group has just received permission to enter Canada. Is it not time that the United States opened its doors, took such people in?

It is far more costly to support a barren existence for the displaced in camps than to permit them to be self-supporting. If we are to offer that solution—it will be to our eternal shame if we do not—the offer must be made soon. Some of the best of the displaced are filtering off to countries which bid for special skills; the morale of the others cannot be maintained forever in internment camps. We urge that Congres speed the action required to admit a fair share of those whose loyalty to democratic principles is something to be nourished and sustained in this modern world.

Need for Investment Capital

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 13, 1948

Mr. CRAWFORD. Mr. Speaker, the enterprise system which we operate here in the United States is one which must continually expand in order to accommodate the new workers coming from an increasing population and, furthermore, all to the end that the goods and services which our people require and have reason to assume, will be available to them, may be produced.

It is a fact that here in the United States we do have more buildings, machinery, and machine tools for the use of our people than has any other country. Skilled and intelligent workers who desire to work have access to this machinery and machine tools, and when the skilled intelligence of the worker is combined with the productive machinery and tools, there comes forth great production per individual worker and these goods are placed on the market at prices which the masses can afford to pay.

There was a time when England and the western Europe countries enjoyed heavy production and a better standard of living than at the present time. But in due course, western European governments and England adopted a procedure and has since followed a course which has not been conducive to the individual citizens of those countries accumulating savings and investing them in buildings, machinery, and machine tools and thereby providing themselves with modern equipment. These people of western Europe and of England have participated in too many wars, have taxed their people beyond the capacity of the people to pay taxes and at the same time maintain their productive machinery and the necessary skilled workers.

The United States, Canada, and Japan stepped ahead of England and western Europe in the building and operation of modern machinery and machine tools, and the western European countries along with England began to lose their export markets to Japan, United States, Canada, and Australia.

Now the United States appears to be moving in a direction which imposes upon our people tax burdens for the purpose of maintaining heavy military operations, for the purpose of extending aid

to these countries to which I have referred, and for the purpose of providing Federal revenues to do so many other things which are not encouraging to the exercising of thrift and the investment of savings in the necessary buildings, machinery and machine tools to provide the people of the United States with the industrial goods which our citizens expect and demand.

Today there is a shortage of funds to be invested in capital goods. This shortage is becoming more acute. Mr. Truman, as you will remember only a few days ago, called upon our people to invest $50,000,000,000 in the tools of production. At the same time, Mr. Truman followed the usual New Deal angle and proposed a taxing formula that would siphon off much of the money that would normally go into capital investment. If the people are to accumulate money for capital investment purposes, those who receive income will have to be permitted to retain enough of it to so invest. People of large incomes have historically furnished a great amount of the capital for investment here in the United States. If those with substantial incomes are forced to put most of it in the tax box, from what source can capital for production purposes be obtained?

To illustrate some of the forces with which we must deal, I would like to insert in the RECORD the following article from the New York World-Telegram of December 19, 1947, by Lawrence Fertig:

TOOLS AND PROGRESS—BIG RISE IN NEW MACHINERY INVESTMENT NEEDED TO AVERT LIVING STANDARD DROP, SAYS ECONOMIST

(By Lawrence Fertig)

It is a startling fact, not generally recognized, that the standard of living in this country must decline over the year unless there is a tremendous increase of investment in the tools of production. Better tools and more tools, which can turn out more goods at lower cost, is the basic reason why any country increases its living standard in the long run. All other schemes—tinkering with money, raising wage rates, subsidizing one part of the population at the expense of another—are mere delusions. Production is what counts and tools make production.

It is disturbing to note that, by comparison with past decades, we have been falling far behind in our new capital investments. In every decade between 1880 and 1930 we increased our production plant from twenty to forty billion dollars (measured in dollars of 1929 purchasing power). In the 1920 to 1930 decade the increase totaled thirty-five billions. But from that point on our investment fell off.

As a matter of fact, during the 10 depression years after 1930, we actually decreased our productive plant by about $17,000,000,000, and today it is interesting to note the investment behind each worker in industry is actually smaller than it was in 1930 (measured in 1929 dollars). During the current year the capital market has been far from vigorous.

SAVINGS SHRINKING

The SEC reports that new securities issued for cash during the first 9 months totaled three and nine-tenths billions—a billion dollars less than last year, and this in the year of the highest volume and highest earnings in history.

The curious fact about this situation is that it is the direct opposite of the predictions made by the British economist, Lord Keynes, who was the father of the New Deal economic school and his followers. There could not be enough investment opportunities, they said, to absorb the oversupply of the people's savings. But where is this oversupply today?

Our actual savings are shrinking rapidly. There is not enough saved to meet the tremendous new demand for capital. Capital savings are made, to a great degree, by those who earn larger incomes—above $10,000 a year.

Despite the fact that there are twice as many such incomes as there were in the years 1925-29, the total of such incomes is about a billion dollars less. And as everyone knows, a great part of these earnings is taxed away by the Government. How can enough capital be accumulated to improve the average man's living standard if the Government takes it away in taxes?

Obviously a radical tax decrease in high-income brackets will have to be made if this situation is to be remedied. Labor leaders who oppose this move for political purposes will be cutting off their noses to spite their faces. Such opposition will, in the long run, lower the living standard of every laboring man in the country.

CONFIDENCE SHAKEN

It is confidence in the future, more than anything else, which encourages a man to give up his hard-earned savings for a possible future return. That confidence was badly shaken during the 1930's, first by the depression, and then by the experiments and business attacks of the New Deal.

More recently that confidence has been cooled by the widespread predictions (especially by administration representatives) of a coming depression. Another factor in dampening investment ardor has been the persistent barrage against high profits and fear of some Government action.

In a year like 1947 in which wages and salaries will probably total 125 billions, dividends paid out will be about six billions and total corporate profits will amount to 17 billions. When such dividends and profits are declared unconscionable by administration officials, many people hold fast to their preciously saved dollars and who is to blame them?

The Detroit Board of Education Requests Increased Allowances for Veterans' Educational Program

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following resolution that was adopted by the board of education, Detroit, Mich.:

Whereas there are in attendance at Wayne University approximately 8,000 veterans, the majority of whom are receiving educational benefits of the Servicemen's Readjustment Act; and

Whereas it is evident that the rising costs of living are forcing many of these veterans either to withdraw from school, seriously modify their schedules of study, or undergo undesirable personal privations to remain in school: Be it therefore

Resolved, That this Board inform the Veterans' Administration of its belief in the necessity and importance of an upward adjustment of the subsidies for educational benefits; further,

Since married veterans under Public Act 346, and especially married veterans with children, are most sorely affected by the inadequacy of present allowances, that special consideration be given to such adjustments of subsistence allowances as will enable those veterans to pursue their educational programs; and further,

Since many Wayne University veterans must engage in some measure of outside employment to supplement their inome from other sources, that favorable consideration be given to raising the level of restrictions on earnings for veterans attending school so that they may to a greater extent than now possible assist themselves in meeting the increased costs of living.

Keeping Guard on Our Fisheries

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an editorial appearing in the Seattle Post-Intelligencer on Friday, January 16, 1948:

KEEPING GUARD ON OUR FISHERIES

Encouraging progress is reported by Congressman HOMER R. JONES in his efforts to bring about the appointment of an Assistant Secretary of State charged with representing the interests of the American people in ocean fishery matters of international character.

This is of vital importance—not only because of the benefits which would be derived by the fishing industry from such a step, but because of its effect on the welfare and security of the whole Nation.

The Pacific Fisheries Conference, held in San Francisco last September, did not overstate the case in its "policy for fisheries—a policy for peace" when it declared:

"War or peace may hang upon the fishery clauses written into the peace treaty granted to Japan. Controversies over fisheries have led to war in the past. This danger is doubled today when nations compete for food in order to survive.

"Alone among industries, ocean fisheries are international affairs. In the fisheries alone, Americans compete in physical contact with men of other nations in areas where only international law applies—and few holds are barred. * * *

"Other nations recognize the international importance of fisheries, and the need for a firm voice in their behalf. They have ministers; we have subordinates. In our State Department there is no official of rank who can meet with the fishery ministers of other maritime nations on a basis of equality. Now, when we are granting a treaty of peace to Japan—the foremost fishery nation of the world—there is among our diplomats no authority competent to represent American fisheries."

The Seattle Chamber of Commerce has gone on record in support of the Pacific Fisheries Conference demand and only this week laid the matter before the Western States Council, as part of its program for the development of Alaska. Council approval would bring the concerted backing of all the chambers of commerce in the 11 western States.

Meanwhile Congressman JONES has been enlisting the support of Senator ARTHUR VANDENBERG, chairman of the Senate Committee on Foreign Relations, and Senator ROBERT A. TAFT, chairman of the Republican policy committee.

Senator VANDENBERG has promised to urge the State Department to give urgent consideration to the matter, and Senator TAFT expressed deep interest in the subject when he visited Seattle last autumn.

Thus we have reason to be optimistic, but we must not be complacent. We must keep up the fight until it is won.

The urgency of the situation was well expressed by Miller Freeman, chairman of the Pacific Fisheries Conference, in his keynote address.

"Almost alone," he said, "America liberated the Pacific—but we do not ask that it be made an American lake. We seek only equal opportunity for our fishermen on this greatest of oceans—but an equality measured in realism which recognizes:

"1. Difference in standards of living.

"2. The iniquity of employing debased currency and debased labor as weapons of international competition.

"3. The rights of Americans in the markets of America.

"4. The preferential position which a record of conservation and protection confers in fisheries.

"Finally, that the young men of the Pacific, who redeemed the Pacific, will not be driven from the sea."

As Mr. Freeman observed so eloquently, we must see that "the things America bought with blood are not given away by visionaries"—and an adequate fisheries secretariat is essential for that purpose.

President's Civil Rights Committee

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution passed December 17, 1947, by the Willard Straight Post, No. 842, the American Legion, New York:

Whereas the concepts of Americanism and the American way of life are inseparable from the concepts of human equality and political fredom; and

Whereas an essential condition of human equality and political freedom is that individuals and minority groups shall enjoy guaranties of civil rights and be protected by the State in exercising them; and

Whereas the members of the American Legion have fought in two wars to defend Americanism and the American way of life: Be it

Resolved, That the American Legion, New York County Organization, endorses the report of the President's Civil Rights Committee, headed by Charles E. Wilson, president of the General Electric Co., and urges the President and the Congress to take action to effect the carrying out of the recommendations of that report; be it further

Resolved, That the commander of the county organization transmit copies of this resolution to those Senators and Representatives who represent New York County in Congress and to the legislative representative of the American Legion in Washington for information, and to the Department for its consideration.

IRVING M. ENGEL,
Commander.
FRANK GLICK,
Adjutant.

Truman, New Deal Regular

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article which appeared in the editorial page of the St. Louis Post-Dispatch for January 19, 1948:

TRUMAN, NEW DEAL REGULAR

(By Roscoe Drummond, in the Christian Science Monitor)

(Latest message to Congress as well as 10-year voting record in Senate show President to be devoted to liberal cause, says correspondent, but he may not press program on unwilling Republicans, preferring to concentrate on European aid, inflation, and defense.)

WASHINGTON.—There is nothing in his annual message to Congress which makes President Truman any more or any less of a New Dealer than he always has been.

His entire voting record as a 10-year Senator from Missouri and every State of the Union address which he has delivered to Congress show that Mr. Truman has consistently embraced all the essential social and economic objectives of the administration in which he was elected Vice President in 1944.

Mr. Truman has not departed from these purposes since he has been in the White House, and his election year message of this week does not add to the public-welfare program he has espoused in the past. The President has varied his tactics, as when he greatly muted his requests upon Congress after the Republicans won control of both Houses in 1946. At different times it has been suggested, either superficially or wishfully on the basis of surface events, that Mr. Truman was turning to the political right. He wasn't.

ADDRESSING THE VOTERS

The fact is that, without altering his objectives, the President made only a mild and moderate appeal for them to a Republican Congress which he knows is not going to follow his leadership. Actually, he was addressing himself more to the voters than to Congress and was setting forth the platform on which he will be campaigning for election next fall.

Even in the field of public-welfare legislation, the difference between the Republican and the Truman position is one of degree and of method.

Both the Republican and Democratic leaders are on record as endorsing a widening of social-security coverage and benefits, Federal aid for education, housing and medical care, and a higher minimum wage.

The Truman approach is to ask for large Federal appropriations to achieve most of these ends and to create new Federal agencies to administer them.

The approach of Senator ROBERT A. TAFT, Governor Dewey, and others, if they can carry the Republican Congress with them, is to begin spending in these fields in a more modest compass and to have Federal funds made available to the States and administered by the States. Mr. Truman is not alarmed at increasing the role and authority of the Government in public-welfare functions, while the Republicans wish to avoid expanding Federal bureaucracy by increasing State bureaucracy.

TAFT OPPOSES TVA

An examination of his speeches shows that Senator TAFT, for example, does not stand out against the stated social welfare objectives of the New Deal, except that of applying the TVA technique to the Federal development of other river valley projects. He resists and rejects its methods. He, as do most Republicans, wants the administration largely by States; the New Dealers, like Mr. Truman, want administration largely by Washington.

Thus, as contrasted with the New Deal concept of the "social security state," the Republican spokesmen, like Senator TAFT, bespeak the concept of the "social security states"—the 48 States aided financially by the Government to achieve social and educational objectives which their own resources do not permit their people to enjoy.

The tenor of his messages suggests that Mr. Truman may not press his long-range New Deal objectives upon the present session of Congress. He stated them in general terms, offered no specific recommendations. He has made his record and can stand on it.

The need right now is to concentrate on what imperatively needs to be done in the interests of the internal and international security of the country and not to stir up controversies which can't even safely be entered upon—let alone settled—until first things have been put first.

The first things are: Passage of the European recovery program on time; meaningful measures to control still-mounting inflation; the beginning of universal military training.

Inability To Deport Alien Communists in the United States

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. BOGGS of Delaware. Mr. Speaker, under unanimous consent given me to extend my remarks in the RECORD, I am including herewith a news article by Joseph Dear captioned "Russians hard to send back once admitted to United States," which was published recently in the Wilmington (Del.) Sunday Star.

I recommend a careful and thoughtful reading of this article for it points up a serious need for some revision in our immigration and naturalization laws and emphasizes another real threat to our national security.

You will note from this article that, according to the Commissioner of Immigration and Naturalization, there are now approximately 3,000 Russians legally in the United States. It is reported that more than 1,500 of them were admitted in 1947 alone. In addition, there are known to be at least 80 other Russian aliens who are deportable because they have been adjudged to be Communists and who are roaming at liberty about this country because Russia has refused to take them back or because acceptance of them by Russia is still pending. The use of the word "pending" is questionable, however, since many of these cases have been in that status for periods up to 15 years. In addition to

these approximately 80 Russians, the immigration authorities state that there are approximately 45 other alien Communists who are deportable, but who, after short periods of detention, have been freed because their governments have refused to permit them to return.

I am told that under our existing laws the only requirement with which these alien Communists must now comply is to report to the immigration authorities any change in permanent address. Consequently, it seems to be admitted that this Government does not know what these alien Communists are doing; what their sources of income are; or what associations they maintain.

This situation, I say, needs prompt and appropriate remedial action. We are spending billions of dollars annually for national security. Yet, these aliens who are known to profess an ideology which includes the overthrow of our Government—by force, if necessary—are allowed to roam at will throughout our country.

Certainly this is an incongruous situation which merits our immediate attention. Therefore, it is my earnest hope that the Committee on the Judiciary will study this problem in an earnest effort to find and to establish legislation which will tend to control the present situation and make certain that no new cases of this nature can arise.

In this same connection, I wish to commend the Committee on the Judiciary on the prompt action it has taken to consider H. R. 4555 and House Joint Resolution 263, both of which were introduced during the recent special session and both of which would establish a reciprocal arrangement controlling the number of citizens of Soviet Russia and its satellites residing in or visiting the United States.

The afore-mentioned article from the Wilmington (Del.) Sunday Star follows:

RUSSIANS HARD TO SEND BACK, ONCE ADMITTED TO UNITED STATES

(By Joseph Dear)

WASHINGTON.—Once a Russian gets into this country it is almost impossible to get him out.

He may be a Communist agent disguised as a businessman here on a 2-month trip, he may be visiting friends and relatives, he may have entered the country illegally, he may have entered lawfully with the intention of taking out naturalization papers; but no matter how he comes, the United States is powerless to deport him unless Russia agrees to take him back.

This little publicized possibility exists because of the present immigration laws. The joker in these statutes is: Aliens can be deported only to their own country, and only if that country is willing to readmit them.

These revelations were made by Immigration Commissioner Watson B. Miller to the Sunday Star.

They have some lawmakers on Capitol Hill worried.

Suppose Russia should purposely refuse to readmit a citizen because she wanted him to stay in the United States and operate as an agent? Suppose it has been done many times already?

More than 1,500 Russians were admitted to the United States in 1947, says Representative CHARLES EATON, Republican, of New Jersey, chairman of the Foreign Affairs Committee. Apparently they can stay, if their country wants them to, no matter how Uncle Sam feels.

Miller also stated the United States cannot keep deportable aliens in custody "for an unreasonable length of time," even if it is known they are agents of a foreign power.

According to the Immigration Commissioner, an agent would have to be given virtual freedom after a period of 4 months to 1 year, if his native country would not issue him a passport.

Miller disclosed that Russia "became diffident" about issuing passports to its traveling citizens about 1938.

Even if a Russian should enter the country illegally, he could stay as long as his government deemed it necessary.

Immigration laws state aliens can be deported to the port of embarkation for the United States.

If the alien sailed for this country from a French port, the United States could return him to the French port and let authorities there worry about him.

But if the alien sailed from a Russian port, or from the port of a Russian satellite country, the United States could not deport the alien unless Russia was willing to lift one of her iron curtains to readmit him.

Earlier this week Commissioner Miller testified to a subcommittee of the Senate Judiciary Committee that Russia has refused to take back between 160 and 180 of her deportable aliens now in the United States.

Some observers suggest Russia would refuse responsibility for the actions of her agents. If an agent were arrested in the United States for a criminal offense, Russia would claim the agent acted completely on his own initiative.

Veterans Hospital at Birthplace of Booker T. Washington

EXTENSION OF REMARKS
OF
HON. CLAUDE I. BAKEWELL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mr. BAKEWELL. Mr. Speaker, under unanimous leave to extend remarks granted to the Members of the House on January 19, 1948, at the time that H. R. 3814 was approved by this body, I wish to extend my remarks as follows:

It gives me particular pleasure to urge the establishment of a veterans hospital at the birthplace of Booker T. Washington in Franklin County, Virginia. As a member of the Veterans' Affairs Committee I cast my vote in favor of this legislation when it was first considered by our committee.

By our action here today, we are providing $5,000,000 to honor a great American in the manner in which he would most like to be honored—not by erecting a marble shaft or a bronze statue, but by creating a vital, living thing which will be of benefit to the people of the community where Booker T. Washington was born and lived. It is highly appropriate that on this occasion the rules should be suspended in favor of so worthy a bill.

The Veterans' Affairs Committee has had the benefit of the loyal cooperation of the Booker T. Washington Memorial Association and of its president, Mr. S. J. Phillips, during the time this bill was pending in committee. The assistance which they rendered was of inestimable value and I should like to extend to them my personal appreciation.

No Grain Saved

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mr. MORTON. Mr. Speaker, I attempted to make a factual study of the whole problem of grain allocation for beverage distilling purposes. In a few days this matter will once again face the Congress, and I think it very important that we approach the problem in a realistic and unemotional manner. Unfortunately, when any legislative problem affecting the distilling industry comes before the Congress, the wet and dry issues inevitably become involved. Such issues have absolutely no place in the matter of allocation of grains, and I have tried to approach the problem from the standpoint of what should be done to assure maximum food production. Maximum food production is needed to increase domestic supply and thereby control further price advances and to provide foodstuffs for export to the starving people of the world. In my opinion, serious curtailment of beverage distilling operations does not increase the over-all food supply, and this point I will attempt to prove.

AMOUNT AND TYPE OF GRAIN USED

In 1935 through 1940 this country produced an average of about 4,500,000,000 bushels of feed grains per year. The distilling industry used 34,000,000 bushels per year, which amounted to 0.76 percent. I think we Members of the Congress realize that the distilling industry uses less than 1 percent of our annual grain production. Much of our grain remains on the farm, but of the grain which is actually marketed, less than 2½ percent is used by the distilling industry. Except during the war years, when the distillers were directed to use wheat because at that time it was in surplus and we had no means of shipping it to Europe, the consumption of wheat by the distilling industry is almost negligible. It amounts to about 1 bushel out of every 25,000 bushels raised. For the most part, distillers use grains which are not in themselves end-food products. Corn is the grain used in largest quantity in the production of distilled beverage spirits. Corn is not primarily a human food grain, but it is a means toward beef, pork, dairy, and poultry products.

THE ANIMAL FOOD VALUE OF THE BYPRODUCTS

To understand this problem, we must know something about the byproducts from the distilling process. Two principal byproducts of the industry are distillers' light grains and distillers' solubles. Distillers' light grains are secured by the drying of the coarse grains which have been screened from the spent stillage. For each 100 pounds of grain used by a distiller, about 16 pounds of light grains are obtained. By an evaporation and drum-drying process, distillers' dried solubles are obtained. This amounts to another 16 or 17 pounds from each 100

pounds of grain mashed. It can, therefore, be seen that 32 to 33 pounds of dry byproduct is obtained from each 100 pounds of grain used. The interesting fact to note is that this 33 pounds, when used as a supplement feed, has greater value for animal nutrition than the original 100 pounds of corn. The plus value comes from the addition of yeast in the distilling process. A recent test was made on 30 head of steers averaging 840 pounds each. They were fed during the course of this test 1,000 bushels of corn and 13 tons of roughage. In 112 days, they gained an average of 160 pounds each. Thirty similar steers, averaging 840 pounds each, were fed 800 bushels of corn plus the distillers' feed made from 200 bushels of corn, and only 11 tons of roughage. These cattle in 112 days showed an average gain of 205 pounds per head. In other words, by using the same amount of corn and 2 tons less of hay, the cattle fed with distillers' feed made from a portion of the corn showed an average increased gain of 45 pounds. This is the way to produce more food.

We are all very much concerned with the acute shortage of dairy products. In 1943, 24,000,000 pounds of dry skim milk was used in animal feeds. This can be completely replaced with 29,000,000 pounds of distillers' dry solubles and the dry skim milk can then become available for human consumption.

Since the grain used by the distillers is feed grain, which will ultimately lead to animal products in our agricultural economy, I cannot see how human food supplies are increased with the curtailment of distilling operations, when the byproduct from the distillery proves to be a better animal food than the grains used by the distillery in the production of that exact amount of byproduct.

Address by Hon. James A. Farley Before Lynchburg Chamber of Commerce

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 21, 1948

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a very fine speech made by Hon. James A. Farley before the annual meeting of the Chamber of Commerce of Lynchburg, Va., on January 15, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am very happy to meet with the businessmen and civic leaders of Lynchburg. Never was there more need of such leadership as this body is giving to its city, its State, and its Nation. Our major economic problem is production, and it is up to American business to meet that problem with vigor and vision. I congratulate you and wish for you a prosperous and productive new year.

A very special reason for my happiness in being here is rooted in many personal memories. Lynchburg gave Carter Glass to the world and to history. Here he was born, was educated. Here, too, he was a civic leader and a businessman. And here he was always at home.

No man in this century gave more devotion to his State, his Nation, and the world. His statesmanship was in the great Virginia tradition of Washington, Jefferson, Madison, Marshall, and Wilson. He was a worthy successor to these great builders. And his constructive achievements will live as long as the Nation endures.

I cherished his personal friendship for many years. The proudest moment in my life was made possible by an act of splendid unselfishness by Carter Glass. In 1940, he stood before a not-too-friendly National Democratic Convention in Chicago and commended me for whatever services and loyalty I had given to the country and to my party. When he did that he was giving of the fast-ebbing physical strength of 82 years, and he was braving the resentment of time-serving men. But when personal and public loyalties were involved, Carter Glass never counted the cost. He gave all that he had, over the long years, in the most difficult situations and on to the very end of a long life.

We might tonight, in framing our policies and planning our course, draw our inspiration and our ideas from the faith of Carter Glass. For his ideas live on. The dangers we face he always saw. The remedies for our present ills were what he believed. His spirit can carry us through, if we are as loyal to that spirit as he was loyal to us.

Carter Glass was a man who thought for himself. He never hesitated to tell the truth as he saw it. A long succession of Presidents knew and respected him, but he never hesitated to criticize them when the public interest was involved. He laid it on the line in words no man could misunderstand.

And that, above all, is what is needed in these times. Time-serving and face-saving in public office only deepen the dangers that we face. These times call for plain speech and courageous action.

But while Carter Glass blazed with independence, he believed in party government. A man cannot serve by himself alone. He serves when he works shoulder to shoulder with like-minded men. If we all go our separate political ways, we shall be lost in a wilderness. We shall be the prey to alien and domestic enemies.

We should belong to a party—some party. When our party is wrong we should say so and we should try to make it right. Sometimes that way is hard. We may be misunderstood for a time. But in the long run, a party is controlled by the best blood within it. In the long run, a party comes back to its best traditions. In the long run, it finds its way home. That Carter Glass believed and that should be the faith of all of us, whatever party we join.

We have already heard of the rise of a new party. So far, it seems to be a one-man party. Perhaps it will end as a one-man party. It is significant that the founder of this new party has in one lifetime already been for a few years in each of the old parties. In neither party has he found happiness. We may only hope that now that he has a party of his own, he can be happy in it and be loyal to it.

Another great principle for which Carter Glass stood was sound finance and sound, economical administration of government. In these days we are in great need of the lessons taught by Carter Glass in keeping our country on the road to stability and prosperity. A great war and great foreign demands since that war have given us full employment and a full measure of prosperity. Our task now is to see that we can sustain this high level of production and jobs without the old familiar slide down into the depths of depression. Never was it so essential to do this, because our whole influence in the world depends upon our remaining strong and stable. The Communist world is eagerly expecting that economic trouble at home will weaken us abroad. We must disappoint that hope at all costs.

This effort to avoid economic disaster should, in the last analysis, be no mere party issue. It ought to be an American issue. Nonpartisanship in this field has already shown itself in the cooperation between Democrats like Senators BARKLEY, CONNALLY, GEORGE, and BYRD, with Senator VANDENBERG and Congressman EATON, like-minded Republicans.

We must find the means of curbing inflation without destroying freedom of enterprise, and we ought to do it without seeking partisan advantage.

One of the basic principles of Carter Glass was that, while government could do many things which might destroy confidence and retard natural economic progress, it could not provide a substitute for economic progress. The great ideal of government ought to be to discover the needs and trends of free enterprise and to lend what aid it can to furthering those needs and trends. Government spending can never be a real and lasting substitute for private investment and venture capital. Taxation should be used for two purposes—to gather revenue for the legitimate expenses of government and to promote the essential expansion of our industrial production through private funds. Taxation should not be an instrument for redistributing wealth for political advantage.

Moreover, we should, in times like this, when Government revenues are high, attempt to reduce, not increase, the costs of Government. Whatever can be saved should be saved here and now, for we cannot be assured that our national income will always remain at the immense and unprecedented levels it has now reached. In his incessant labors to reduce the costs of Government and the burdens of taxation, your able Senator, HARRY BYRD, has well served his Nation.

I am not one of those who indulge in vain hopes or gloomy predictions of the future. Last year many of our experts were predicting a great recession of business in 1947. They little reckoned on the great productive capacity of the American people. They made the mistake of selling the United States short. They were proved to be wrong.

But because they were wrong and because we ended the year prosperously, we must not assume that good times are to be with us always and that we need not exercise all prudence and energy. We can move forward if we are alert and if we work as we should.

The great demands of our people and the vast needs of Europe and Asia require production and yet more production. We cannot produce without work. And we cannot constantly reduce our work hours and increase our leisure hours without courting trouble. Labor and management must work shoulder to shoulder at the task of lifting our standard of living through the making of the goods necessary to that standard of living. A man does not attain a full life by a full pay envelope alone. His life is made up of what his money will buy.

Our greatest inflationary problem is in the realm of food. From August 1939 to August 1947 farm products rose nearly 200 percent. Food rose 150 percent. But the products of machines, such as motor vehicles, metal products, house furnishings, and agricultural implements rose on an average less than 50 percent. (These figures are from Bureau of Labor Statistics.)

Thus, the most serious problem before us is the price of what we eat and drink. The prospects for checking inflation in that direction are not particularly dark.

In 1947 European crops were worse than in 1946. To make matters worse, our own corn crop was 850,000,000 bushels less than in the preceding year. We had a better wheat crop, but that did not make up the difference. All of this means that our meat supply will be shorter and shorter for some time. I think we have every reason to believe that the food

situation will be very much better this year. I am optimist enough to believe that we will not have two successive years of bad corn crops. Moreover, there will be less demand for corn for animal feeding, because there will be fewer animals.

The wheat prospects are not so good as last year, but they are far above the prewar average. The new estimates of the wheat crop are now almost up to 1,300,000,000 bushels. This is 50 percent higher than before the war. The Canadian wheat crop looks good. And the Argentinian wheat crop is already larger than was anticipated.

In Europe, the crop prospects are better than they were last year and the year before. More acres are being planted. The winter weather has been more favorable. Europe has more fertilizers and better seeds than last year.

Over the world the situation in fats and oils is better. Rice prospects are somewhat better than last year, especially in places like Burma.

Even Russia is going to export a large amount of grain. Some of this will go to England, and that will relieve us of part of our burden.

In the face of these favorable prospects, it is not rash to believe that the inflationary trend may be checked by natural causes.

I am not a business prophet, but I am certainly able to distinguish between a good prophet and a bad prophet a year after the facts are in. As you remember, a year ago many of our economists were telling us that 1947 would be very bad, especially in the latter part of the year. The prophets were all wrong. They are not prophesying with such certainty this year, and perhaps that should be a note of warning to us. I certainly would be frightened if they were all predicting good business for the whole year, because they have been wrong in the past.

However, I find among reliable businessmen a note of caution, particularly with reference to the second half of the year. This spirit of caution is a very good thing, because it will mean careful inspection of all the signs and careful control of inventory and prudent investments.

Since the President's budget has got itself involved in a political controversy, I shall limit my comments on Government finance to a few very general remarks. I am not in the administration and I am not in Congress and, therefore, I can look upon this controversy with some detachment. It seems to me, however, that at a time like this it may be wise to defer as many of the Government expenditures as possible and perhaps hold them for a period, later on, when there is greater unemployment and greater need for stimulating business.

It is not wise, however, in the troubled state of the world to economize in matters that affect our national defense. We are living in a world in which our diplomacy must be firmly backed up by undiminished strength. We should maintain our Navy in a state of the highest efficiency and provide for a sound and national system of military training. Whether this is to be based on conscription or not is a matter for Congress, after a careful examination of the facts, to determine. Above all, however, we must not starve those agencies in our military services which are developing higher and higher degrees of scientific perfection. The next war, if it must come, will be a clash of scientific and mechanical inventions and developments. We have led the world in this field and we must continue to lead it, not only as a measure of national defense, but as a sound measure for production in civil life.

I am sure that if Carter Glass were here, he would favor the general principles of the Marshall plan. Carter Glass served under the great war President, Woodrow Wilson. He supported Wilson loyally on that great man's effort to establish the machinery of peace. Glass was no isolationist. He believed that the great power of this country, of necessity, would project it deeper and deeper into the affairs of the world. We cannot remain safe and prosperous in this country if Europe is permitted to disintegrate and to fall into the hands of communism. We must lend a strong hand in preserving in western Europe ideals and institutions from which we derived our own principles and system of government. President Truman and General Marshall have proposed a plan which utilizes to the full the cooperation of all those countries and also offers to them material means of recovery.

This is not a party question, nor is it a question that ought to be thrown into the arena of partisan debate. We are asked to provide assistance over a period of years and to fix the amount of our assistance for the first 16 months at something over $6,000,000,000. Those of us who are not in the Government are unable to ascertain all the facts that are involved, and I have confidence that our congressional leaders in both parties will ultimately make a wise judgment in this vital matter.

Whether Congress can or should pledge any amount for the years beyond July 1949 is beside the question. The important thing, it seems to me, is to agree on principles of wisely helping Europe in attaining recovery and in building up free institutions as long as that may be necessary. We can determine that as we go, if we agree on the principles now.

However, it is not the amount of aid that we give that is most significant. It is the way it is to be administered. We must avoid as far as possible the mere subsidizing of governments through the careless giving of money and goods. Our aid ought to be built into the vital economic structure of these countries. If France, Italy, and other countries have sound and productive economies we can feel assured that a prosperous people will not turn to communism. They will support governments based on principles of freedom, justice, and fair representation of all groups. Communism grows only in confusion.

I am convinced, therefore, that in setting up the administrative machinery to conduct our European aid we should draw into its management some of the best strains that America's free-enterprise system has created. We must look for management and direction to those who have successfully managed and directed great productive enterprises in the United States. In setting up this plan we ought to have the trained and experienced advice of men like B. M. Baruch, Herbert Hoover, and many others that I might mention. These men ought to be drawn into this service regardless of the party to which they owe allegiance.

And we ought to make sure in setting up this program that every dollar that is not needed for the actual relief of hunger and cold is used to build productive enterprise so that Europe will ultimately attain a sustaining basis.

Along with all this economic help should be the wisest and the most trained service in the diplomatic field. The time is past when we can look upon the foreign service of the United States as a minor part of the Government. We need training of the most intensive sort in our institutions of learning and in our Government to see that those who represent us abroad truly stand for all that is best in American life.

I have had some experience in the field of exports, and in the course of my business I have traveled over the past years in most of the civilized countries in the world. I have met hundreds of foreign businessmen and public officials. I have seen how American enterprises are respected abroad. And I have come to realize with more and more intensity how important it is to develop the best brains in matters relating to foreign service—both in business and in government. The greatest export that this country can provide is an export of brains.

With respect to that, I think we might be guided by the spirit of Virginia's great educator—Thomas Jefferson. I need not remind you that Jefferson gave the last and best years of his life not to public service but to the development of education. It was his firm belief that free governments could survive only with an educated citizenship. In the educational system that he conceived, there was to be not only training of average citizens, but the training of leaders. That is why he conceived the great idea of the State university—an idea that has gone out from Virginia and has permeated every State in the Union. In my own State of New York, a subject of discussion now is the establishment of a State university. This idea, which is so vital in this year of 1948 in the State of New York is a direct outgrowth of the thinking of Thomas Jefferson.

America is launched upon a career of world-wide influence and activity. In this we are not following the lines of the old imperialistic exploitation. When the Roman Empire stretched its power over the world, it was in pursuit of selfish gain. Wherever it went, it exacted tribute from conquered states. The same thing was true of the Spanish Empire of 400 years ago. And it was true of the British Empire in its earlier stages.

Americans must avoid this mistake that, in every case that I have mentioned, brought proud empires down to death and dissolution. While we cannot avoid the enormous spread of our influence, we must win the confidence and respect of the peoples with whom we come in contact. At the present moment we are manifesting what may be called "imperialism in reverse." Instead of exploiting those countries with which we come in contact, we are offering help. There is no reason why we cannot continue this wise and unselfish policy. We have at home the greatest sources of wealth in the world. We can, if we maintain a sound economic system and retain the blessings of political liberty, support ourselves at home on a continually rising standard of living and at the same time help stabilize the world. Wherever our goods are sold throughout the world, we want those who buy them to know that they are getting full value and that we are seeking no selfish ends.

It is this vision of constructive international cooperation that should enlighten our public policies. The great statesmen who came from Virginia—Washington, Marshall, Jefferson, Madison, Wilson, and, I may add, Carter Glass—stood for this kind of foreign policy. It is for us, upon whom the responsibilities of a new generation have fallen, to continue this enlightened policy. The tasks ahead of us are very great, but with the light of the past to guide us and with the firm determination to be loyal to our traditions, we can move on to increased influence and sound and stable peace.

The Federal Government's Position in Housing

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mr. KILBURN. Mr. Speaker, on January 20, 1948, Congressman RALPH A.

GAMBLE, chairman of the Joint Committee on Housing, made a statement opening a public hearing on the Public Housing Administration of the Housing and Home Finance Agency.

This statement contains startling information about the ever-upward rising cost of Government ownership and operation in housing.

How many of you are aware that already, in this Nation, whose strength was derived from and rests upon private enterprise, our Federal Government's position, direct and contingent, in housing, foots up to $20,000,000,000?

The statement follows:

THE FEDERAL GOVERNMENT'S POSITION IN HOUSING

(Opening statement by Chairman RALPH A. GAMBLE at hearing of Joint Committee on Housing, January 20, 1948)

Early in our inquiry, Mr. Raymond M. Foley, Administrator of the Housing and Home Finance Agency, kindly prepared for us an excellent summary of all Government agencies related to housing, whether or not under his supervision. Although I sent this summary to the members of the Joint Committee on Housing I now should like to include also a copy in the record.

In preparing for the hearing today Housing and Home Finance Agency, at our request, provided further voluminous information on the Federal Government's present over-all position in housing. While I, personally, was most concerned with expenditures, commitments, and results, I also was interested in the effect which Federal Housing policies may be having on the housing shortage, which every member of this committee is trying to overcome.

From this latest information which I now submit in its complete form for inclusion in the record, a brief analysis has been made. The outstanding fact of this analysis is that the Federal Government's position in housing today involves at least $20,000,000,000.

The expenditures made by the central agency, its predecessor agencies, and the various agencies which at one time or another have been engaged in construction and other activities related to housing from about 1933 down to June 30, 1947, appear to total approximately:

Operating expenditures	$1,624,000,000
Construction expenditures	2,754,000,000
Subsidies to low-rent housing and to producers of materials	80,000,000
Total expenditures	4,458,000,000

The financial commitments by the Government for housing which come under the jurisdiction of the Housing and Finance Agency may amount in the periods through which these commitments run to the following sums:

Contribution to low-rent housing during the next 50 years

Maximum amount less loans and loan commitments, which would be wiped out by such contributions	$641,000,000
Insurance, maximum now authorized plus $1,000,000,000 which the President is empowered to add to the authorization	9,158,000,000
Total commitments	9,799,000,000

The expenditures and the commitments of the Federal Government which fall under the jurisdiction of the Housing and Home Finance Agency therefore total as a maximum approximately $14,257,000,000.

In addition to the expenditures and commitments summarized above the Federal Government has made further expenditures and commitments in other agencies, as—

Insurance of GI housing loans through the Veterans' Administration.

GI housing loans as of Dec. 25, 1947:	
Number of loans guaranteed	1,056,771
Amount of Federal commitment	$6,107,000,000

Federal National Mortgage Association, under the jurisdiction of the Reconstruction Finance Corporation.

The Reconstruction Finance Corporation has provided a secondary market for the purchase of mortgages on homes through the RFC Mortgage Co., the authority for which expired June 30, 1947, and through the Federal National Mortgage Association. The amount of the mortgages purchased or for which there are commitments to purchase totals:

For RFC Mortgage Co	$146,000,000
For Federal National Mortgage Association	4,700,000
Total	150,700,000

Public housing under the jurisdiction of the War and Navy Departments.

This housing is located at posts or stations of the Army and Navy, so is not considered herein as part of the public-housing commitments of the Government.

Much has been said by the public and in the hearings about the lack of help and participation by the Federal Government in the housing program past, present and future.

Consequently, it should be helpful to the country to know more about the participation by the Federal Government. According to a compilation of figures from the multifarious Federal agencies which I have just seen, I wonder whether the Government's right hand knows what its left hand is doing? I personally doubt it.

As indicated by the above summary, the Federal Government has made specific commitments and obligations by direct guarantees of bonds and contingent guarantees, and/or contingent liabilities of guarantees on bonds and/or subsidies, from 1933 up to June 30, 1947, apparently involving at least $20,000,000,000, plus such expenditures and commitments as have been made by the Housing and Home Finance Agency and its underlying agencies since June 30, 1947. I would say that was a sizeable amount.

Against this must be offset, of course, revenues from operation, such as rentals on properties directly operated by the Government, fees, and insurance premiums, etc., and the difference between the interest rates which the Government charges for use of credit and the rates at which money is made available by the United States Treasury. Much of the income from the operations of Federal housing agencies which has been reported by the Housing and Home Finance Agency up to June 30, 1947, appears to be of a nonrecurring nature, or at least subject to very substantial shrinkage in the years ahead.

There is also the asset value of properties either directly owned by the Government or which it may be forced to take over. Apparently there is no well-defined and comprehensive appraisal of asset values. The realization values that may be obtained through liquidation are, of course, impossible to estimate. As one example of the uncertainty of realization from capital expenditures may be cited the war housing programs which to date have cost $2,468,024,000, from which the realization as reported by Housing and Home Finance Agency to June 30, 1947, has totaled only $16,826,900.

The reserves accrued to date, principally on physical properties, appear to total only about $152,000,000, to which should be added the reported net worth of insurance funds amounting to about $152,000,000, making a total of about $334,000,000 compared with potential commitments by H & HFA alone of nearly $15,000,000,060.

The information on expenditures and commitments made under the United States Housing Act indicates that there are loan commitments, of more than $106,000,000 for construction of dwellings that has been held up largely because the cost of completing the projects would be in excess of the limits set in the United States Housing Act of 1937 as amended. Considerable land has been acquired and some expenditures have been made on these projects which are designed to provide 17,649 urban dwelling units and 6,460 rural dwelling units. In view of the present serious shortage of dwelling units, especially of the multi-family type, it would appear that every effort should be made to utilize as promptly as possible any lands and structures now frozen under the "deferred projects". Public Law 301 authorizes State and local authorities to activate these projects through contributing funds required in excess of the limits set for Federal funds. Action either by such bodies or provision of authority for private developers to complete the projects would contribute directly toward solving the housing shortage.

The information submitted by Mr. Foley contains a comprehensive discussion of the effect of Federal housing policies on the housing shortage, the subject of one of the questions put by the committee. The conclusions expressed in that treatment of the subject appear to boil down to the following:

Rental ceilings on new construction, based on a fair return on investment, have not impeded the volume of desirable new construction.

The solution of the housing shortage is large and sustained production of houses, especially rental and low-priced homes.

Increased capacity and production of basic materials and better use of the materials is necessary to a higher rate of production of homes.

Some price increases are necessary to increase of production.

FHA title VI insurance has increased effective consumer demand for dwellings.

Title II insurance which requires the mortgagor to put up substantial equity has not been as extensively used in 1946 and 1947 as the more liberal title VI insurance.

The Veterans' Administration loan program does not provide as great a direct aid to production as that offered by FHA title VI insurance.

Government aids to the production of housing have increased production substantially—and also have added consumer pressure.

Veterans have been given a preferential position in the supply of new housing which, however, has tended to be most effective in the higher income groups of veterans.

To the extent that credit aids increase demand without increasing production or reducing costs and prices they are not only futile, because the extra credit is drained off in higher prices, profits, and incomes, but they are also harmful to the economy as a whole because of their inflationary influences. Future Government credit aids for housing should be guided by this principle. Legislation embodying these principles have been before Congress during the last 2 years.

The Public Housing Administration has the responsibility for all development of housing projects in which the Federal Government is interested; for operating the federally owned projects and for supervising the fiscal side of the operations of the locally owned low-rent housing projects. It is also responsible for disposing of the properties embraced by the vast program of war housing and

other projects assigned to it for liquidation. The low-rent housing developments covered by the United States Housing Act of 1937 comprised a total of 215,310 dwelling units in which about $884,000,000 has been invested. Federal loans and direct construction account for $504,000,000. The average investment per dwelling unit is $2,340.

In order to maintain the low-rent nature of the developments, the Federal Government under the law is authorized to contribute up to $28,000,000 yearly to the expenses of operating and meeting the debt service and other expenses of the housing projects. Up to June 30, 1947, a total of $56,211,600 has been contributed to the expenses of the local housing authorities.

From an immediate monetary standpoint one of the most important phases of the operations of the Public Housing Administration today is the responsibility for disposing of the war housing built under the Lanham Act and various other acts enacted to provide housing for war workers. The total investment by the Federal Government in property assigned for disposal is almost $2,000,000,000. This includes expenditures made under the veterans' reuse program, which converted some of the war housing structures to use for distress cases and others to meet the demand for dwellings to house veterans and their families at educational institutions.

Nearly 700,000 dwellings units are involved in this program. Of these over 100,000 dwelling units are of a type comparable with the low-rent housing built under the Housing Act and nearly 80,000 are demountable structures which can be left in place or moved as desirable. The temporary structures must be disposed of, according to the law, before July 25, 1949; the permanent housing "as expeditiously as possible."

The Public Housing Administration reports that it has budgeted for its operations for the fiscal year 1948 a total of $11,500,000 for administrative expense. A total of 1,872 persons were employed as of December 31, 1947, in administrative work compared with employment of 4,273 as of June 30, 1946, and 3,380 at June 30, 1947.

As of December 31, 1947, Housing and Home Finance Agency had a total of 11,888 employees, of which 6,296 were with PHA.

The record as to dates of approval by PHA of the budgets for locally owned projects with local fiscal years ending in the Federal fiscal year 1947 is as follows: Of budgets approved for 254 statutory projects, only 62 were approved in advance of the beginning of the local housing authority fiscal year; 61 were approved within 1 month after the beginning of the local fiscal year; and of the remainder, 30 were approved within 2 months, 40 within 3 months, 25 within 4 months, 8 within 5 months, 8 within 6 months, and 20 were approved more than 6 months after the beginning of the local fiscal year. There were 10 instances where project budgets were not approved for that fiscal year.

To sum up: Including commitments, the Federal Government's position, direct and contingent, in the ownership, operation, and insurance of housing today, appears to involve at least $20,000,000,000. How is this position justified in the face of demands for price reductions, tax reductions, increased appropriations for our armed services and increased appropriations for European relief?

In this experiment, of the type that led to the establishment of the present British Government, it appears that the Housing and House Finance Agency has 11,888 employees, of which 6,296 are with the (Federal) PHA, and that, of the latter 6,296 PHA employees, 1,872 are assigned to administrative work, which work carries a budget for the fiscal year of 1948, of $11,500,000. When the urgent national demand is that every worker be a producer how can this economically nonproductive expense be justified?

In the above total, no account is taken of employees and administrative expense in the 254 statutory local housing projects. I wonder what this bill to the taxpayer foots up to? I propose to find out.

Finally, I note that considerable numbers of these local housing authorities apparently keep on spending money regardless of whether or not their budgets are approved by PHA, as required by Federal regulation, based on the law. What is the law? And what can the taxpayers do to regain fiscal control of these local public-housing operations, which now apparently function in a financial no-man's land, free from real control by the Federal, State, or municipal governments, yet heavily endowed by the Federal Government, and sustained by Federal subsidies, plus local subsidies, in the form of virtual tax forgiveness?

Communism Defined

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, January 21, 1948

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Defines Communism," which appeared in the first issue of the Young Republican News of Washington, D. C., under date of January 15, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFINES COMMUNISM

Recently a nationally known radio commentator awarded a $10,000 mink coat for "the best definition of a Communist."

We already had a best definition from William Z. Foster, head of the Community Party in the United States.

Under oath before a Committee of Congress, as reported in the CONGRESSIONAL RECORD, he revealed the world-wide objectives of communism.

The testimony:

"The CHAIRMAN. Mr. Foster, does your party advocate the destruction of religious belief?

"Mr. FOSTER. Our party considers religion to be the opiate of the people, as Karl Marx has stated, and we carry on propaganda for the liquidation of these prejudices among the workers.

"The CHAIRMAN. To be a member of the Communist Party do you have to be an atheist?

"Mr. FOSTER. Many workers join the Communist Party who still have some religious beliefs, and when he joins the party he will soon get rid of them.

"The CHAIRMAN. Well, can members of the Communist Party in Russia be married in the church and maintain religious belief?

"Mr. FOSTER. My opinion is that a member of the party of the Soviet Union who would be married in the church wouldn't be of any value to the Communist Party.

"The CHAIRMAN. And now for loyalty to our country. If I understand you, Mr. Foster, the workers of America look on the Soviet flag as their flag.

"Mr. FOSTER. The workers of this country and the workers of every country have only one flag. That's the Red flag.

"The CHAIRMAN. Mr. Foster, do you owe allegiance to the American flag? Does the Communist Party owe allegiance to the American flag?

"Mr. FOSTER. I stated very clearly that the Red flag is the flag of the revolutionary class and we are part of the revolutionary class and all capitalist flags are the flags of the capitalist class and we owe no allegiance to them."

The Tariff Issue

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of January 20, 1948:

THE TARIFF ISSUE

A year ago it appeared likely that the tariff issue would be one of the big fights in Congress. But for better or worse, the new Republican majorities were beguiled from going to bat for their historic pledge of tariff protections.

The result has been a huge increase in the number of tariff reductions, coupled with a determined effort on several New Deal fronts to "freeze" this Nation into a free-trade policy.

Despite the fact that several phases of the tariff issue will come before Congress in connection with other matters, it does not appear probable that the tariff question, as such, will be fought through to a conclusion at the present session.

The fact of the matter is that the tariff issue, large as it looms during normal conditions, is dwarfed by other special issues raised by current foreign and domestic policies.

Inflation is uncurbed. What matters high or low tariff if the Nation is going broke? The Marshall plan calls for the siphoning off of billions of dollars in money and commodities—the giving of them to foreign countries so that, among other things, they can afford to buy more of our exports. This will produce, for its duration, a wholly abnormal state of world trade in which tariff questions will have little immediate importance.

The war clouds grow. Defense expenditures are climbing steadily. Stock piling is a new device of government by which, along with subsidies and insurance, the effects of unsound trade policies can be concealed from the American people. Moreover, our Government has frankly seized upon the dictatorial device of monopolistic control of exports and imports.

Still further, it is gradually becoming apparent to a growing number of persons that protective tariffs never were the war-breeders and trade-barriers they were depicted; and that there are a number of other trade controls (quota systems, import licensing, currency juggling, slave labor, government subsidies, etc.) which, while not so loudly maligned as the much-abused tariff, nevertheless include the real offenders in upsetting proper trade relations.

It is very likely that the Truman administration is going to refrain from making an issue of the protective-tariff principle. This is true for several reasons. One is that the hopeful nations abroad, eager to industrialize, are very insistent on their right to do what the New Deal free traders insist is wrong in this country—which is to protect their own industries by setting up tariffs to keep

out American goods at prices less than their own production costs.

Another interesting development is the awakening of a new tariff consciousness in the South and in the West, where there are now innumerable baby industrial plants that would be the first to close if this country were to be flooded with cheap slave labor, foreign versions of the articles they are manufacturing.

Both Republicans and Democrats realize quite well that the general tariff situation in this country is ambiguous and anomalous—so much so that there is a distinct touch of humor in the matter. The ruling law on tariffs, a hold-over from the Hoover administration, is strongly protectionist, both in its general statements and in its detail. Yet under that law, by means of the Reciprocal Trade Agreements Act, there has been worked out the closest approach to outright free trade in a century.

Again, the Constitution says that the control of trade is a function of Congress, yet under the present laws Congress has next to nothing to say about tariffs, virtually all the authority has been usurped by the President and State Department, and the courts, supposedly created to rule on such disputes, either cannot or will not assume jurisdiction.

From present indications, nothing short of an economic crisis is going to break the deadlocks thus produced.

But the crisis may be nearer than is generally realized. Soaring domestic prices could be one of the factors which would hurry it along. Every cent which our home-front prices rise make it just that more attractive for foreign producers to send their output here, where there is not only the demand, as in their own countries, but also money with which to pay for the goods.

Two factors have, thus far, held back the almost inevitable flood of cheap foreign merchandise which the tariff protections were erected to keep out. The tariff protections themselves have been swept away. The only remaining automatic protections are, first, lack of industrial production abroad, and, second, lack of available ships to carry the goods to American shores.

England has made a desperate effort to build up her industrial machinery to the stage where she could skim the cream off the American market while we, delayed by strikes, Government red tape and interference, and a general slow-down of individual energy, are still unable to meet our own requirements.

Because England has been experimenting with socialism, she has missed the boat—and may have to look to it to keep her own head above the water. But that does not mean all the other nations of the world will be equally unsuccessful.

Meanwhile, the Truman administration, worried though it professes to be about the course of inflation and the nearness of another depression, is industriously trying to perpetuate the executive authority over foreign trade and the present free-trade policies.

One approach is through the International Trade Organization charter now being written at Habana. This will include all the essential provisions of the Trade Agreements Act, so that ratification of the charter by Congress would make the program perpetual.

Another approach is by putting the provisions of the act right into the trade agreements so that, once these are accepted by Congress, they again would become permanent.

This means that the fact that the present Trade Agreements Act expires this summer, so that one would expect a vigorous pro-and-con battle on it, may be a matter of no importance whatever. The strategy of the Administration appears to be, not to demand an extension of the Act, but to get its provisions enacted permanently in some different fashion.

Of course, the long and short of all tariff arguments this year is that they are going to be answered in the presidential election.

It really makes very little difference, in the long run, precisely what may or may not be done with the various legal and treaty questions during this summer. But it makes all the difference in the world who is elected next November.

If the next President is a protectionist, all the globaloney laws conceivable, on the books, won't seriously impede him in restoring the principles of the protective tariff.

And if the next President is a disciple of free trade, under whatever current term may be fashionable, then no imaginable process or legal barrier can possibly prevent his continuing the long-standing New-Deal practice of using American production, American industries, and American jobs as political bribes to foreign powers.

Constitution Is Ignored in Civil Rights Hysteria

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 21, 1948

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article written by Mr. Donald R. Richberg, which appeared in the Washington Star of January 4, and which I think is of very great interest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSTITUTION IS IGNORED IN CIVIL RIGHTS HYSTERIA—MOVE TO LEVEL INEQUALITIES RESULTING FROM DIFFERING ABILITIES CITED AS THREAT TO END COMPETITIVE FREEDOM

(By Donald R. Richberg)

People are pleased to be told they have a "right" to do what they want to do. They applaud the politican who assures them that they have a "right" to enjoy the things they desire.

It is much more comforting to be assured that you have a right to obtain a good job from some one, than to be informed that you have a duty to do a good job for someone. But, let's not forget, that no right can be enforced for one person without compelling another to fulfill a duty. In the language of the courts: "When a right is invaded a duty is violated." "There is no right where there is no remedy."

A PHILOSOPHER'S VIEWS

Even the basic right of my individual liberty cannot be enforced except by imposing restraints on your individual liberty. The claim of a right is worthless unless it can be enforced; and, as more rights are enforced against more and more people, there will be less and less liberty; more and more domestic conflicts, less and less internal peace.

Long ago a great philosopher pointed out that "the right of all to all things" means "the war of all against all." The surest way to destroy the fundamental freedoms of American life would be to build up a vast legal structure of social, economic and political rights, all of them creating corresponding duties, and all of them enforced by governmental restraints upon individual freedom.

Communists and their dupes complain that a "hysteria" of anticommunism is causing the suppression of civil rights in the United States. So now they are diligently fomenting a counter-hysteria for expanding civil rights until the basic rights of life, liberty, and property will be completely lost in a maze of petty rights and duties and regulations which only a communistic dictatorship could possibly enforce.

BAD EXAMPLE OF HYSTERIA

The horrible and outstanding example of this civil rights hysteria is the recent report of the President's Committee on Civil Rights, which is probably the most mischievous document that has been published since Marx and Engels produced the Communist Manifesto 100 years ago.

In the name of liberty this report proposes to compel American men, women, and children to live and work in a social and economic system created and regulated by Government, a system in which their most profound emotions and ambitions are to be suppressed at the will of political monitors.

Here are the two most fundamental recommendations of the committe, in its own language:

"The elimination of segregation, based on race, color, creed, or national origin, from American life."

"The enactment of a Federal Fair Employment Practice Act, prohibiting all forms of discrimination in private employment, based on race, color, creed or national origin."

Please note that segregation is to be eliminated—not only from Government operations, but everywhere "from American life." That is precisely the aim of the committee, which announces, with the voice of omnipotent omniscience: "We can tolerate no restrictions upon the individual which depend upon irrelevant factors such as his race, his color, his religion or the social position to which he was born."

A CURIOUS OBSERVATION

Hundreds of millions of Protestants, Catholics, Jews, Mohammedans, Buddhists, and Hindus have believed and taught for centuries the one way of living, or the one road to salvation, was divinely ordained and revealed in the articles of their particular faith. Anyone's religion is necessarily a restriction on him and, if he is to be free in the exercise of his religion (a freedom expressly guaranteed in our Constitution), then he must be free to restrict his associations with others in accordance with his feelings and his convictions as to what is necessary and desirable. Yet the committee would have a man forced by law into associations which may be repulsive to him—not because of any narrow prejudice but because of his profound religious convictions.

Race and color may seem irrelevant to the committee. Yet differences of race and color have divided mankind for centuries. They may fade in the coming centuries. But they cannot be wiped out by a State or Federal law; and every such foolish effort only intensifies prejudice and intolerance, creates disrespect for law, and is itself an intolerant violation of individual liberty.

Curiously enough the committee observed that an essential part of our freedom is that we are free to be different. Evidently the committee is willing to have us differ in our taste for cigarettes, but not in our taste for companions. But, in another breath, the committee says: "In a democracy, each individual must have freedom to choose his friends and to control the pattern of his personal and family life." Nevertheless, in order to eliminate segregation and to prevent discrimination, the committee insists that this free American shall be compelled to spend his working life with undesirable associates, and to send his children to schools, to eat in restaurants, to live in hotels, and enjoy

all public amusements in the company of those whose company he would not voluntarily choose.

LOGIC HARD TO FOLLOW

The logic of the report is very difficult to follow. But, as the king said in Alice in Wonderland, "If there's no meaning in it that saves a world of trouble, you know, as we need'nt try to find any."

Let us assume, however, that every like or dislike based on race, color, or religion is unreasonable and unfair and that such prejudices ought to be eliminated from human thinking. Nevertheless, is it proper or even possible for the government of a free people to attempt to prevent men and women in business or social life from acting in accord with their prejudices? Now this is an entirely different question from asking whether the Government itself should deny equality of opportunity to some of its citizens.

Political equality, in the right to vote, in the administration of justice, and in the rendering of public services, is due to all citizens. But unless government is to destroy an economic system of competitive freedom and a social system of free association, it cannot undertake to level down the inequalities that result from differing abilities and opportunities, or to interfere with the voluntary selection of one's associates in work or play.

No one would dare to propose that an employer be given the right by law to compel a man to work for him. That would be "involuntary servitude"—slavery. Yet it is solemnly proposed (in Senate bill 984, which is evidently approved by the committee) that an employer shall be forbidden to refuse to employ a "qualified" man because of his race, color, or religion. This means, in practical effect, that if a Government regulator says that a man is "qualified" and rules that he has been denied employment because of race, color, or religion, then he must be employed.

LESSON OF EXPERIENCE

We know from experience under the Wagner Act that the employer would be presumed to be wrong. "Sentence first, verdict afterwards" is the conventional procedure. It seems to be forgotten that an employer works for his employees just as they do for him. He is obligated by law to do a great many things for his employee. So the proposed law would force an employer into involuntary servitude to men who are under no obligation to work for him.

Superficially, it may seem to be a noble project for government to insure to all citizens an equality of opportunity to earn a livelihood and to enjoy the benefits of society. But, no government can insure equality of opportunity to human beings who differ so widely in natural capacity and who, because of parental variances in ability and fortune, are so differently nurtured. It should also be pointed out that the benefits of a democratic, free society are not gathered by an omnipotent government into one treasure house for distribution to a dependent population. On the contrary, individuals in a host of big and little enterprises, work and produce things and seek to gain out of their cooperation with others the benefits and satisfactions which they desire and for which they are willing to work and sacrifice.

The concept of a society in which all are working for the common good and obtain only their proportionate share of the total product is the idealism of communism. Now that the world has had a good look at communism in actual operation, it has become quite clear that only a ruthless despotism can compel human beings to live and work in such a regimented society. Furthermore, it has been demonstrated up to date that the productivity of free men and women, working primarily for their own gain and reaping individual rewards, is far, far greater than the productivity of a people working ostensibly for equalitarian progress. Indeed, the reward of individual merit has been reluctantly adopted in Russia as a drastic compromise of communistic theory which was necessary to prevent economic disaster.

SLOGAN SIGNIFICANT

It is most significant that the shrill slogan of all those fomenting the civil rights hysteria is "equality," although the great declared purpose of the Constitution was not to achieve an impossible equality among unequal human beings but to secure the blessings of liberty so that men could be free to be different and to realize their differing ambitions with their differing abilities. Every law which seeks to give a man a right to something which as a freeman he cannot gain for himself, must impose burdens and restraints on the freedom of other men.

We may, reasonably, tax the fortunate. We may, reasonably, prevent the abuse of freedom by those who heedlessly or ruthlessly injure others in the pursuit of selfish gain. We may reasonably enact laws to protect the right of every citizen to an equal participation in government and to equal treatment in all Government operations. But, let us be watchful against every effort to create by law a right in one man to compel others to associate with him or to accept obligations to him in the domain of private enterprise or private life. Let us realize, not only that it is a part of our heritage that a "man's house is his castle," but also that freedom of association in work or play is the most precious of all our liberties.

It is well at this time to recall the words of the late Justice Brandeis—whom no one would ever accuse of religious intolerance or racial prejudice. He wrote:

"PURSUIT OF HAPPINESS

"The makers of our Constitution undertook to secure conditions favorable to the pursuit of happiness. They recognized the significance of man's spiritual nature, of his feelings, and of his intellect. They knew that only a part of the pain, pleasure, and satisfactions of life are to be found in material things. They sought to protect Americans in their beliefs, their thoughts, their emotions, and their sensations. They conferred, as against the Government, the right to be let alone—the most comprehensive of rights and the right most valued by civilized men."

Increase of Death Compensation of Dependents of Members of the Armed Forces

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following bill introduced by me to increase the rates of service-connected death compensation payable to certain widows, children, and dependent parents of persons who served in the active military or naval service, and for other purposes:

Be it enacted, etc., That paragraph IV of part I of Veterans Regulation No. 1 (a), as amended, is hereby amended to read as follows:

"The surviving widow, child or children, and dependent mother or father of any deceased person who died as the result of injury or disease incurred in or aggravated by active military or naval service as provided in part I, paragraph I hereof, shall be entitled to receive compensation at the monthly rates specified next below:

Widow but no child	$60
Widow with 1 child	84
Widow with 2 children (with $15 for each additional child)	102
No widow but 1 child	48
No widow but 2 children (equally divided)	72
No widow but 3 children (equally divided, with $12 for each additional child; total amount to be equally divided)	96
Dependent mother or father	54
Dependent mother or father (or both), each	30"

SEC. 2. Subparagraph (c), paragraph I, part II, Veterans Regulation No. 1 (a), as amended, is hereby amended to read as follows:

"(c) Any veteran or the dependents of any deceased veteran otherwise entitled to compensation under the provisions of part II of this regulation or the general pension law shall be entitled to receive the rate of compensation provided in part I of this regulation, if the disability or death of such veteran resulted from an injury or disease received in line of duty (1) as a direct result of armed conflict, or (2) while engaged in extra hazardous service, including such service under conditions simulating war, or (3) while the United States is engaged in war."

SEC. 3. Paragraph III of part II of Veterans Regulation No. 1 (a), as amended, is hereby amended to read as follows:

"The surviving widow, child or children, or dependent mother or father of any deceased person who died as a result of injury or disease incurred in or aggravated by active military or naval service as provided for in part II, paragraph I, hereof, shall be entitled to receive compensation at 75 percent of the rates specified for such dependents in paragraph IV, part I, hereof, as now or hereafter amended."

SEC. 4. The increases provided by this act shall be effective from the first day of the second month following the passage of this act.

Federal Office Building Needed in Los Angeles To Adequately Serve the Public Demands

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mr. McDONOUGH. Mr. Speaker, there is great need today for a new Federal office building in Los Angeles. The population in southern California has soared during the war and postwar periods until today that area has a population increase of at least 1,000,000 since 1940. Most of this increased population is located in the Los Angeles area.

At the same time the present Federal building in Los Angeles has become overcrowded, and the Federal Government has found it necessary to rent additional commercial space to house its activities, including warehouse and storage facilities.

This rental-space area has now reached the staggering figure of approximately 1,410,805 square feet. And the cost for the annual rental of this space amounts to approximately $1,284,306.

At the same time, private businessmen, lawyers, doctors and others are unable to find office space in the downtown area in Los Angeles where the Government has taken up much of the office space normally available for professional men.

The construction of a new Federal office building would effect a large annual saving to the Government in rentals, and it would release office space in the Los Angeles metropolitan area that is needed by business and professional men.

It would centralize the activities of the Government and eliminate great inconvenience to the public because of present inadequate quarters and the wide dispersion of locations of various Federal offices in the Los Angeles area where at present Government business is carried on in 43 different buildings.

A new Federal office building is needed in Los Angeles to serve the public and to provide adequate space for Federal agencies in that area. I have introduced H. R. 3795 to authorize the construction of a new Federal office building in Los Angeles, and I urge the Members of the House to give this bill favorable consideration.

The following is a list of the locations of Federal agencies in the Los Angeles area where rental space is now being used:

Treasury: Heilman Building, Juasti Warehouse, Juasti Building, Bendix Building, 621 South Spring, 617 South Olive, 417 South Hill, 110 Broadway, First National Bank, Tenies Building, Citizens Bank, Ninth and Hill.

Navy: 210 West Seventh.

War: 751 South Figueroa, 621 South Hope Street, 815 South Figueroa, 556 South Flower, 808 South Western, 220 North Virgil, 3636 Beverley, 111 West Seventh Street, 610 South Main, 1252 East Colorado.

CPA: 1206 Santee, Ninth and Hill, 117 West Ninth Street.

OPA: 1206 Santee, 110 East Anaheim, 85 East Colorado, Chase Hotel.

War Assets: Transportation Building, 155 West Washington Boulevard, 3636 Beverley, 836 Santee, Bendix Building, 215 West Fifth, 2019 Bay Street, Fries and A Street.

Agriculture: Ninth and Hill Streets, 148 South Mission Road, Black Building, 909 South Olive, Western Package Products Co., Financial Center Building, Wholesale Terminal, Live Stock Exchange, Bendix Building.

Commerce: Commerce Exchange, 1500 Fourth Street, Builders Exchange, Pacific Building, Eleventh and Colorado, 1515 Fourth Street, Burns Building, Lockheed Air Terminal, 3201 Winona Street, Municipal Airport, 411 California, Singer Building.

Interior: 751 South Figueroa, Rowan Building.

Justice: Security Building, Rowan Building.

Labor: H. W. Heilman Building, 1206 Santee.

Veterans: 1031 South Broadway, 2334 Mortenur, 215 American, 301 Olive, 1905 Lincoln, Legion Building.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. ANDREW L. SOMERS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1948

Mr. SOMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following item appearing in the New York Times on January 14, 1948, being the statement of Mayor William O'Dwyer in opposition to the St. Lawrence seaway:

Mayor O'Dwyer renewed yesterday his opposition to the plan for a St. Lawrence seaway, sending telegrams to that effect to President Truman and Senators Robert F. Wagner and Irving Ives.

The mayor has denounced the seaway proposal as a piece of Federal boondoggling that would ruin the port of New York by taking business away from this harbor.

He was joined in his opposition yesterday by the Chambers of Commerce of Brooklyn, Queens, and Staten Island; the Central Trades and Labor Council, the Maritime Association of the Port of New York, the New York Board of Trade and the West Side Association of Commerce. The Commerce and Industry Association registered its opposition last Monday.

MAYOR'S MESSAGE

In identical messages to the President and the two Senators from New York, Mayor O'Dwyer said:

"I respectfully urge that you refrain from support of Great Lakes-St. Lawrence project in view of its high cost to all United States taxpayers and its lack of possible benefits to inland areas to compensate for tremendously destructive effect upon port of New York. Cost to the United States of construction of navigation project alone would be hundreds of millions of dollars.

"Maximum annual revenues from United States commerce would be small as compared with heavy annual interest amortization, operation and maintenance charges. New York and New Jersey taxpayers would have to pay 25 percent of these costs and in addition would have to bear the heaviest part of the burden of diversion of commerce from port of New York.

"While project would not be self-supporting and would serve no essential purpose, over one-third of our overseas traffic would be diverted from the port of New York. This would gravely injure general economy of entire New York-New Jersey port area, dealing a severe blow to its greatest industry, and causing possible loss of jobs upon which 200,000 people are dependent.

"I submit that the Great Lakes-St. Lawrence proposal carries no proof or even promise of national or essential benefits, but without doubt threatens to increase the cost of national government and to impair the welfare of the country's greatest port. I am in sympathy with the potential public development of power from the St. Lawrence, but the figures indicate that the State of New York could obtain St. Lawrence power at a lesser cost under a compact between the State of New York and the Province of Ontario without adding unnecessary and destructive seaway."

BLOW TO CITY SEEN

Opposition to the seaway among mercantile groups in the city centered on its high cost and their belief that it would take shipping away from the port of New York.

Cornelius M. Callaghan, executive vice president of the maritime association, described the project as one that would be a fatal blow to the American merchant marine. James J. Danahy, vice president of the West Side Association of Commerce, said the project would injure not only the city but the Nation as a whole. George F. Mand, president of the Bronx Chamber of Commerce, said it would be detrimental to the city's interests.

The Public Records of the District of Columbia

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. AUCHINCLOSS. Mr. Speaker, under authority granted me, I am very glad to include in my remarks an article by Meredith B. Colket, Jr., entitled "The Public Records of the District of Columbia" and urge that my colleagues in the House read this article.

In its study of the District government the Subcommittee on Home Rule and Reorganization has in many instances referred to the records of the District and it is a fact that there are many historical documents which have disappeared and which should have been preserved.

The city of Washington, commonly known as the District of Columbia, plays a very definite part in the history of our country and the development of our Government, and steps should be taken without delay to collect and preserve all the historical documents which can be found.

The article I refer to follows:

THE PUBLIC RECORDS OF THE DISTRICT OF COLUMBIA

(By Meredith B. Colket, Jr., of the National Archives, and Curator of the Columbia Historical Society)

Before the District Court of the United States for the District of Columbia there has just been decided a case designated simply as *U. S.* v. *Groen*. The question involved was whether certain property owners were entitled to fill in land below the 1794 waterline of the Potomac River. Necessary evidence could not be obtained from printed materials, so it was essential to examine original records before presentation of the case. Mr. Robert R. MacLeod, an attorney in the Lands Division, Department of Justice, attempted to trace certain records in order that the Government might effectively present its case. His research took him into a labyrinth of documents—from the Surveyor's office, the Washingtoniana Division of the Public Library, and the Columbia Historical Society on the one hand, to the National Archives and the Manuscript Division of the Library of Congress on the other. All had original governmental records relating to the subject of his inquiry; but none could produce a specific document he desired, a document that had disappeared since the days of Governor Shepherd. Thus forcibly does Mr. MacLeod bring to our attention the fact that while the Federal Government has centralized and, to a considerable extent, organized the inactive records of permanent value of the Government of the United States, the records of the Government of the District of Columbia are dispersed and are without a home.

The records of the Federal Government were not always housed in a beautiful building on Pennsylvania Avenue. They were scattered in basements and attics, in many

cases heaped in great disorder, the valuable interspersed with the valueless. Not the least of those who advocated their careful preservation was the distinguished American scholar who subsequently became executive director of the American Council of Learned Societies, Dr. Waldo G. Leland. Just 40 years ago he addressed the Columbia Historical Society on the archives of the Federal Government, and became cocompiler of a guide to the Federal records, which has become a classic in the field of archival publications. His address, subsequently published in the Records of the Columbia Historical Society, became one of the milestones in the march toward the establishment of a central archival depository for the Federal Government. Today, the lawyer, the political scientist, the historian, the biographer, scholars of many interests, can utilize with an ease never before possible these Federal papers. Such records have been recognized, however belatedly, as worthy evidences of the experience of our past, and have been received and nurtured in a depository well suited to their needs. The records of the local government at the seat of our National Capital, on the other hand, have been as orphans, ill-clothed and ill-fed, almost entirely neglected, though a few have found their way into such agencies as the Manuscript Division of the Library of Congress.

It is our purpose tonight to call attention to the pathetic state of our local records and to give special emphasis to the problem of maintenance in a proper building of those inactive records of permanent value.

An inquiry into the nature of the District records reveals some interesting separations of governmental authority. From an archival point of view, it is clear that the records of the District of Columbia embrace those records of agencies created by Congress to perform municipal functions for the District, their subsidiaries, and their legitimate predecessors. Included in this category are the records of the present government of the District of Columbia, consisting of the records of the Commissioners, which have been on file since the Organic Act of 1878, together with the records of those offices under the Commissioners, such as those of the Assessor, the Board of Education, the corporation counsel, the health officer, the municipal architect, and the Surveyor.

The records of the predecessor governments of the present municipality include those of the temporary government of commissioners, 1874–78, and of the Territorial government (with a governor appointed by the President) which was in existence from 1871–74. Before 1871 the District records consisted of the records of the county of Washington, the boundaries of which are coterminous with the present District of Columbia. The county of Washington had been created by act of Congress approved 1801 and subsequently its powers were vested in a levy court. The records of the District not only include the records of the levy court but also the records of two municipal corporations, the city of Washington created in 1802 and Georgetown, granted municipal powers by Congress in 1802, but which had been given a government under the laws of Maryland in 1751 and later became a town. The records of the District of Columbia do not, of course, embrace the records of the county and city of Alexandria, the land of which was retroceded in 1846 to the State of Virginia.

The records also extend, however, to local entities which do not seem to be clearly within the orbit of the present Commissioner government, such as those of the Recorder of Deeds and the Register of Wills.

In addition to the type of records falling under the jurisdictions above described, there are some records relating to local affairs of the District of Columbia which are created by agencies not purely or wholly municipal in character. These agencies are agencies of the Federal Government, and are charged with dual responsibilities. This springs from the fact that Washington, D. C., is not only a municipality; it is also the seat of the National Government. Thus, some of the most important records of interest to the student of local history are the records of the Commission of three appointed by President Washington in 1791 under authority of Congress to survey the Territory. Among other Federal agencies is the National Capital Park and Planning Commission, which is charged not only with planning memorials of interest and benefit to the Nation, but also with developing recreational facilities of foremost benefit to the local residents. The District Court of the United States for the District of Columbia, one of two Federal courts in the District forming a part of the local court system, deals in part with matters of distinctly a Federal character, but also has jurisdiction over matters which in the States would be handled by State courts.

The separation of functions into local and Federal has, of course, resulted in the separation of records into local and Federal. But the line of demarcation is not always a clear one, for when Government entities are abolished or reorganized by Congress, the innocent records are sometimes split in all directions. Thus, records of the Record Office for the Territory of Columbia which, according to the Sentinel of Liberty of May 13, 1800, was moved from Georgetown to the city of Washington, have been dispersed widely throughout the city. These were the records of the three early Commissioners. The Commissioners had been charged by Congress to perform the Federal functions of surveying the Territory, purchasing land, and providing for suitable Government buildings. But also they had been granted by the Maryland State Legislature specific municipal powers which were binding until Congress provided its own local law. In 1791 the Commission had been empowered to appoint a clerk to record deeds, to license the building of wharves, to regulate the unloading of vessels, to make building regulations, to provide penalties for violations, and to grant licenses for the retailing of liquors in the city of Washington. Today one can find a central core of the records in the National Archives. But one can find other important ones in the Manuscript Division of the Library of Congress (which had received them from the Department of State before there was a National Archives), still others in the Surveyor's Office of the District of Columbia, and others with the Recorder of Deeds. Some, including an important early volume of the Proceedings of the Commissioners, can't be found at all. Understandably enough, the very nature of the arrangement of the files prevented any really logical functional separation of records so that the separations that have been made must have been on an arbitrary basis.

Sometimes as functions are transferred from the local government to the Federal Government, or vice versa, records, the victims, must transfer their character as rapidly as chameleons change color. Before 1936 physicians' licenses were recorded with the Health Department, between 1896 and 1929 with the Supreme Court of the District of Columbia, a Federal agency, and, since 1929, with the Commission on Licensure, a local agency. The Commission on Licensure possesses the early registers maintained by the Health Department, but not those filed with the Supreme Court of the District of Columbia. If the recommendations of the Subcommittee on Home Rule which were released 2 weeks ago are approved, there may be created similar record problems of this character.

The public records of the District of Columbia not easily available to the scholar are those in the custody of the government of the District of Columbia. It is toward these that our attention is centered. Where are these records, what are they, and of what value are they? A room in the basement of the District Building, Fourteenth and E Streets NW., contains 31 large wooden boxes. In these are some of the most valuable records of our city government. For the period before 1871 are record sets of the laws of the Corporation of the City of Washington, the Ordinances of Early Georgetown, the Proceedings of the Council of the City of Washington, and Ordinances of the Levy Court. For the period of the Territorial government there are the original laws of the legislative assembly and basic correspondence relating to the policy of the government. For the period of the subsequent Commissioner forms of government are incoming and outgoing correspondence from 1874 to 1929. These records were boxed and stored away as a precautionary war measure 5 years ago. Material in them is practically unobtainable to the historian today, although under certain circumstances the Commissioners have been most courteous in seeing that specific information is secured. The secretary's office of the board of commissioners has kindly given me the carbon of a typed list describing the contents of each box and it gives me great pleasure to make this available for inspection.

Such records, however, represents but a single high light in the unfortunate story of our city's records. If one would examine the basement storeroom in the District Building, one would see hundreds and hundreds of early volumes of the city and great quantities of unbound materials rapidly gathering dust. They are in such shape as practically to bar scholarly use. One could multiply the volume many times if one should visit those storerooms and offices throughout the District including even rooms in the new District building on Indiana Avenue.

The best historical materials from the public records are to be found in the correspondence and minutes of the Commissioners and the correspondence of the primary departments and boards under the Commissioners. But there are many other records which contain a wealth of research data, including ledgers, journals, tax lists, assessment lists, birth and death records, statistics, surveys, and reports. From such records one can obtain excellent materials dealing with the history and growth of the school system; the transition of the city streets from dirt paths to beautifully paved boulevards; the development of the commercial areas and the segregation of the residential areas; the spread of the city northward and eastward; the development of the early system of canals and how they operated; the responsibilities of the local government in the Civil War, when large numbers of troops were quartered within the city limits, and in World War II, when the city had to support an abnormally large population; the part the city played in welcoming distinguished guests from the day when Lafayette paid a visit to the day President Aleman paraded here; the history of the old city markets; and the impact of the early automobile on city life, with the regulatory measures established to control its use.

The political scientist should have an opportunity to study the system of the Commissioner government, to examine its actual operations and evaluate it as a successful governmental entity. He should make studies and comparisons of many phases of civic life and determine in what ways Washington is advanced over other cities and in what respects it lags behind. He can inquire into the success of our zoning regulations. For perspective he can see how certain areas became beautiful developments of which the

citizens can boast because of careful planning, while others became an unreasoned combination of business firms and dwellings because of the lack of planning.

The sociologist should have a greater opportunity to inquire into the success of the city in improving family and community life. He should be able to see how the undernourished and impoverished are aided, how the child-welfare program is working, and whether recreational facilities are adequate.

The public records, of course, are by no means the only sources for information about city life. Primary vital source materials include (1) public records, (2) newspapers, and (3) private letters, diaries, memoirs, merchants' accounts, and the like. The public records, except for some for the very earliest years, have been sadly neglected. The newspaper, on the other hand, has been given a high place by the student of local history. W. B. Byran, for example, in A History of the National Capital, drew heavily on such excellent sources of local information as the Star and the National Intelligencer. An interesting story can be told of how files of the National Intelligencer fill in an important gap in the public records, a gap resulting from the loss of an early Journal of the Board of Aldermen. Private letters, diaries, and memoirs of this city have not been assembled in a systematic manner and there lies ahead a great field of collecting and assimilating. It is only by intelligent utilization of all of these varied sources of information that the scholar can produce scientific, thorough, and well-integrated studies of our local life. There are indeed many valuable forms of local records that in no wise can be duplicated among records of a more national character.

The assembling of these public records in a central place should not only prove a boon to scholarship but should create a wider civic interest. Our community lacks a critical biography of its great benefactor, Governor Shepherd, and many deserving figures of lesser fame. Our community lacks and desperately needs a well-woven history of the city's development from the date in 1878 when Historian Bryan stopped his narrative. Our local schools need a good text on the local government of our community. Our schools of higher learning, such as George Washington, Catholic University, and American University, and especially their graduate bodies, could be encouraged to study our local life and to produce works of outstanding merit.

Centralization of these records is important enough for the scholar of the present; but it is also most important for posterity. The passing of each decade means the losing of many more valuable records through carelessness, neglect, fire and other hazards. Until a thorough survey is made, it is impossible to tell exactly what records are lost. But it is not hard to echo the sentiment of H. C. Gauss as printed years ago in the published records of the Columbia Historical Society "The history of the records of the city of Washington is that of most of our American records. They have been used for the purpose of the moment without thought of perpetuation." Over 90 percent of the city's records for the 70-year period from 1801 to 1871 including most records of the mayors, the boards of aldermen and the common councils have completely disappeared. What seems to be available today of the regime of Governor Shepherd may only be a fraction of what once existed. Old-timers say that when the District building was moved from First and Indiana Avenue to 462 Indiana Avenue great quantities of records vanished never to appear again. Sometimes valuable early local records turn up in the hands of descendants of city officials and are sold. In such cases the manuscript division of the Library of Congress has lent a helping hand. Some of the earliest records of old Georgetown were secured some years ago by the Library of Congress, which preserves them and makes them available for research purposes.

Other municipalities have had most tragic records losses. Records of the cities of San Francisco and Chicago were destroyed in large quantities at the time of spectacular holocausts. It is reported that during the Revolutionary War the early records of the city of New York were moved back and forth in the province, depending upon the fortunes of war of the patriot armies. During the nineteenth century these records were stacked loosely in large boxes; while it is suspected that many people helped themselves. New York City was quite fortunate, on one occasion, by bringing suit and recovering an original holograph letter signed by George Washington and addressed to the mayor and aldermen of New York. This municipal record was recovered in 1868 as the document was exchanging hands for $2,050. Other less fortunate New York City records got into the hands of rag dealers and junkmen about the turn of the century. Some of these, recognized as of considerable value, were purchased by individuals and deposited with the New York Historical Society.

Philadelphia, a city which particularly holds sacred the history of its past, is also a great loser of local records. In 1848 one gentleman wrote of the deplorable maintenance of the early records, how some which had been in the mayor's court were removed to a waste room. When the room was wanted for other purposes, the records were dumped into a cellar. Finally the cellar was used for the caring of stray dogs so the records were carried in boxes, bags, and baskets to a loft of the Supreme Court room. To use the writer's words: "In the summer of 1845 they were in the utmost disorder and neglect, and were rapidly disappearing." This man succeeded in preserving a few samples which he gave to the Historical Society of Pennsylvania.

Concentrated efforts were made at different periods in Washington's history to improve the condition of the records. Early in the present century the board of managers of the Columbia Historical Society appointed a committee on the early city records. This committee, which was composed of such well-known antiquarians as W. B. Bryan, H. T. Taggart, and M. I. Weller, was authorized to contact the Commissioners. They carefully examined the records of the city of Washington for the period 1802-71. Those records that were not bound were arranged into two groups, papers connected with the mayors' office and of subordinate offices of the executive branch of the city government, and papers connected with the business of the various city councils. It is to be regretted especially that the recommendations then made for the publishing of certain of the early records by this society could not be consummated, for District officials are today unable to explain what became of these records. Fortunately, some were copied by members of the Columbia Historical Society. From the copies now in the library of the society are obtained important evidence for legal cases in which the Government has an interest.

In November 1938 an attempt was begun by the Historical Records Survey to describe the records of the government of the District series by series, and to publish inventories showing the work accomplished. Projects of such a nature had already been undertaken in many other cities. Consequently, municipalities such as Cleveland, Ohio, can boast of informative published inventories of the utmost interest and usefulness. The survey of city records for the District of Columbia was headed by Mr. H. B. Dillard, now of the Division of Manuscripts of the Library of Congress. Approximately two dozen individuals were employed in the work. Unfortunately, the project got under way too late to make a lasting contribution; for, when the project came to a close in 1941, the only production was a 31-page processed inventory of municipal archives of the District of Columbia. This has little value to present-day historians, since it deals with but four minor boards, all of which have been created during the last 25 years. It illustrates, however, what could be done.

The material collected by the survey workers was transferred to the Library of Congress. A careful examination shows that this data is extensive and would take one man a great many years to duplicate. Almost entirely in stencil form is inventory No. 2 of District records which describes the records of about two dozen local offices in detail. It is a pity that thousands of the taxpayers' dollars went into the preparation of this second inventory, yet not $100 needed to put it in final form has been found. Here lies a challenge to a civic-minded group to investigate the possibility of issuing and marketing this partial inventory of our city's records.

For years records-minded citizens of the District have recognized the importance of obtaining copies of the early Maryland land grants pertaining to this area as well as other records such as tax lists created prior to the establishment of a federally authorized local government. A systematic and intelligent examination of basic Maryland records including those filed at the Hall of Records, Annapolis, ought to be undertaken. Such a study should result in the careful reproduction of essential materials to be maintained permanently for public inspection in Washington.

The Board of Commissioners of the District government has, in late years, given special consideration to two different aspects of the record problem. One was the duplication on microfilm of strategically valuable records so that in the event of their destruction in wartime, the information would not be lost. The second was the destruction of records in order to save space. The dual program was effected by the establishment in 1942 of the Committee on Microfilming and Disposition of Obsolete Records, with A. R. Pilkerton, auditor, as chairman. This committee instigated a general survey of all District records with a view of microfilming those of greatest strategic value. All plats in the surveyor's office, in the assessor's office, in the Water, Sewer, and Electrical Divisions of the Engineers Department were microfilmed at a cost of $5,500. The tiny film, totaling 2.5 cubic feet in volume, was deposited in temporary storage with the National Archives.

The second problem, the problem of space, was and is an acute one, since inactive records of the District have been occupying space valued at $1.50 per square foot per year. This space is desperately needed for current administrative use. Should these records be microfilmed, and then destroyed, the District might not only save space but might also sell the records as waste paper. Microfilming, however, runs into money and should not be undertaken for this purpose without careful consideration of the character of the records and their arrangement. To date, the District has not microfilmed records with the view of destroying the originals.

The committee recognized that it was better to ascertain what were the noncurrent records of no value and destroy these than to microfilm records simply because they were noncurrent. The District has centered its records program, therefore, on the disposition of useless papers. It is estimated that, since the establishment of the committee, 33,000 pounds of records have been destroyed each year. By an order dated 1945 the Commissioners asked the heads of departments to prepare a comprehensive survey of records in their custody. In the case of useless records, they were directed to make accurate descriptions of the records

and to present conclusive reasons why each category of records had no further value. In accordance with a Commisioner's order of May 28, 1946, the primary responsibility of disposing of old records was vested in the departments themselves. The department heads were instructed to designate an experienced and responsible person in each office or department to go through the files from time to time in order to retire old records and thus reduce the need for new file cases.

It is earnestly hoped that disposition of records is not based entirely upon a determination of whether documents have future administrative value. It is earnestly hoped that careful evaluations are given as to the research values of administratively obsolete files. We should look forward to the establishment of a responsible district officer, whether he be called archivist, supervisor of public records, or records administrator, to be responsible for passing upon the future research values of records no longer of use to the departments. That District officials are giving consideration to this problem of future use is suggested by a report from a custodian of medical records: "The retention of medical records appears to be a matter of purely professional determination and ought to be approached from that angle rather than soliciting a layman's opinion."

Proper and careful evaluation of the records of a municipality is of the utmost importance. Records should be analyzed, series by series, to determine (a) what groups of records have sufficient administrative, legal, research, or other value to be maintained permanently, and (b) what groups of records can be destroyed safely. It is wise to vest responsibility of such evaluation into the hands of a single accountable records official, whose actions are subject to review by a committee. He could draw some information from the Federal Government, but he would find that many types of records have no parallel in Federal experience; he could learn something from other municipalities, but he would find that they have not yet evoked a clear program as to the types of municipal records that should be preserved; he should also consult experienced persons skilled in specialized fields of technical knowledge; but above all he must have a clear historical perspective and sound judgment. No records should be destroyed unless formal permission is granted in writing after a written description of the records is made and reason for destruction given.

One must always guard against the philosophy not uncommon throughout the country that because certain records in a basement have not been used for years they have no value and must be thrown out. By destroying them one may save space and, by the sale of waste paper, add to the municipal treasury, but, at the same time, one is apt to throw away rich historical material about the early history of the city and its growth, material which future generations will have serious cause to regret.

The problem of the proper maintenance of noncurrent records of permanent value is, from the point of view of administration, but a phase of the larger story of a sound records program. Such a program calls for the establishment of a basic records act covering the maintenance, preservation, repair, duplication, authentication, and disposition of records. It calls for an act setting up a records office of trained personnel to deal with records. Finally, it calls for the construction of a public-records building.

Whether the records office should be an independent establishment or should become a part of the Board of Education or some other agency is a matter of detail that need not be explored at this time. The matter of a place for the housing of the records, however, is a matter worthy of special consideration. It is not sound for agencies of a local government to place inactive records in basements and storage vaults. It is recognized that many inactive records have a degree of administrative use but not a sufficient degree to maintain them near the operating offices. Such records should be among those centralized in a single place.

Other cities have had extremely interesting experience in handling their inactive records of value. In the past they have often turned over the more valuable to historical societies or libraries, and sometimes local entities have made a small annual contribution for their make-up. Here in Washington, before there was a National Archives, the Manuscript Division of the Library of Congress became the depository for Federal records. But a library has only limited facilities, and, as the work of a municipality increases and its records increase, a library finds it has not the technical training, interest, or storage facilities for the upkeep of records. But the library can afford a splendid service as a temporary stopgap for the preservation of the basic records of a municipality until the formal archival program is innovated.

It has been pointed out that there is a close relationship between certain local records which have been created by Federal agencies and records of the government of the District of Columbia. It is of primary importance that adjustments be made in this overlapping of local and Federal records. The National Archives might be of especial service in this connection, but also it could be relied upon for advice. The National Archives has developed a wide range of experience in the field of archival operations. The National Archives possesses elaborate technical equipment and knowledge, especially in such fields as photoduplication and repair. Finally, a close relationship could be fostered readily because of the physical proximity of the National Archives and the District government offices.

It is recognized that the National Archives Building is not large enough to house the inactive Federal records for plans are being formulated for the construction of an additional building or buildings. To what extent there can be a close cooperation and development with the National Archives is a matter of future administrative determination and legislative action. It is clear, however, that the primary responsibility for the maintenance of District archives lies with the District government, not with the Federal Government.

I would like to see a public records office of the District of Columbia, a building separate and distinct from other local government buildings, that could offer the departments, boards, and agencies, a high caliber of service on the older records. I would like to see the historian, the sociologist, the political scientist, the lawyer and the genealogist also have ready access to some of the basic records of our everyday life. Such an institution could do many things to improve the record situation in the District. Such an institution could house the bulk of the inactive files of the District as the office of recorder of deeds houses a specialized group of records. A program of this character is very much in line with the kind of thing that is being developed during the present decade in many of the States, counties, and municipalities of the Nation.

In closing, I should like to quote from the recently published report of the advisory committee on New York State's records system, a report prepared by a committee of three consisting of Dr. Solon J. Buck, Archivist of the United States, Dr. Luther H. Evans, Librarian of Congress, and Miss Margaret C. Norton, archivist for the State of Illinois. In this case a State archives is proposed:

"A separate building is of benefit to the records agency and records program in a psychological sense in its relation to other agencies and to the public. It is a symbol of the State's maturity and permanence. It is an obligation the State owes to its own history and to the men and women who produced it. It is an obligation it owes to their descendants of the present and the future. The records of the past that are worthy of preservation are their rightful heritage."

Now is the psychological time to plan a records program and a public records building for the District of Columbia. In the first place, the practical knowledge and rich experience accumulated by the National Archives during the past and present decades are ready to be tapped. Second, a formal records program could be given impetus and fostered by the Auchincloss subcommittee of the House District Committee. Such a committee might initiate much needed legislation relating to District records. Third, a drive for a public records building might logically form part of the program of the recently established National Capital Sesqui-Centennial Commission for the celebration of the one hundred and fiftieth anniversary of the removal of the Capital of the United States from Philadelphia to Washington. Out of a similar celebration in 1900 grew many excellent programs for civic planning and improvement, centered in the McMillan plan. The part that the Columbia Historical Society has played in creating an interest in the history of this city makes our organization a fitting one to sponsor and encourage the development of a vigorous, substantial, and worth-while records program.

Return of World War II Dead

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. TEAGUE. Mr. Speaker, I have received a letter from the father of a deceased serviceman regarding our program for the return of World War II dead whereby the next of kin may elect to have the remains returned to this country for burial. It has been stated that the boxes the Government uses to enclose the caskets are not suitable to use in burial and if the parents or the widow choose to secure an adequate vault for burial purposes, they must purchase one at a price of $150 to $300.

You can readily see that the $75 allowance for home burial of returned war dead is not sufficient to defray these expenses. I urge that the Congress give serious consideration to this matter in order that the allowance may be increased to provide suitable burial for our war dead.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter received from Mr. Cyrus McCaskill, of Ennis, Tex., who has forcefully described this situation:

ENNIS, TEX.

HON. OLIN E. TEAGUE,
Sixth District of Texas, House of Representatives, Washington, D. C.

MY DEAR MR. TEAGUE: There is a condition existing respecting the burial of the returned dead war veterans from overseas which I do not believe is generally known, and which, I think, is a reflection on the good faith our Government should have for our sons who gave willingly their lives for the protection of America.

As you know, I have a son, a first lieutenant of infantry, now buried in the Third Army Cemetery, Hamm, Luxemburg. His body should be returned about August 1948. He willingly gave his life for our country and I would not have him to know that our Government thinks so less of his honorable deeds to give him a decent burial in the land he gave his life to protect. Accordingly, I am furnishing you a report on the information the undertaker here, J. E. Keever, funeral director, gave me respecting the returned war dead.

J. E. Keever, funeral director, showed me through his storeroom of vaults (boxes) which the next of kin in charge of the returned dead purchase to enclose the caskets of the loved ones. The vaults run in prices from $150 to $300. There is no part of this cost borne by the Government. He also showed me the thin, fiber, boxes the Government enclosed the returned caskets in, and he frankly stated that they were not suitable for boxes to use in burial. Are our sons due a decent burial at the cost of the Government in whose service they gave their lives? The kind of burial their loved ones are only willing for them to have? The Government, unlike a corporation, pays nothing for the lives taken in the protection of their country. My son was a minor. I had with love and care given him an education to his senior year in college. Now he gave his life in action for his country. All we ask is that our Government give him a decent burial in the land he gave his life to protect. Will the Congress of the United States permit for any less?

I shall thank you to call this matter to the attention of the Texas Members of Congress. With kindest regards, I am,

Sincerely yours,

CYRUS MCCASKILL.

Antilynching Bill

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. KEATING. Mr. Speaker, it was my privilege to appear yesterday before a subcommittee of the Senate Committee on the Judiciary on behalf of my antilynching bill, H. R. 4528.

It is my hope that favorable committee action will ensue and that this or similar legislation, so sorely needed to maintain our domestic tranquility, as well as our world position as the leading proponent of fundamental freedom and equal justice, will soon be the subject of debate on the floor of the other body. My understanding is that it has been accorded a favored position on the legislative calendar, which should insure this result. It then remains to be seen whether the bitter opponents of such measures, who have so effectively blocked action for years, can again succeed in this Congress in denying to a large, although admittedly minority, segment of our citizenry the equal protection of the laws guaranteed to them by the United States Constitution.

In order that there may be no undue delay in the final enactment of legislation, if the minority opposition in the other body is successfully routed, it is my sincere plea to the House leadership that an early date may be set for hearings on antilynching legislation in this body. Although it is true that such bills have frequently passed the House only to suffer defeat in the Senate through a well-organized filibuster, the party of Abraham Lincoln, it is submitted, should not accept these previous defeats as a precedent but should press on toward the victory of even-handed justice over racial discrimination which now lies within our grasp.

Practically all of the bills which have been introduced in both Houses to correct the existing blot on the fair name of our country provide for punishment to lynchers and those who fail to prevent lynching or apprehend offenders and also for compensation to the victims of lynchings. With regard to the latter, I fear that in many instances the provision for monetary recompense to those who suffer at the hands of lynch mobs may be rendered nugatory unless there is embodied in the legislation a provision peculiar, so far as I am aware, to my bill, H. R. 4528.

The various measures provide that a determination of the amount to be paid to the injured person, or his next of kin, within certain minimum and maximum limits, shall be made by a court in an action brought and prosecuted by the Attorney General of the United States, and that if payment of any amount awarded is not forthcoming, it may be enforced by any process available under the State law for the enforcement of money judgments against governmental subdivisions.

It is well known to lawyers that in any jurisdiction technical difficulties exist to the collection of a money judgment against a municipality or the State itself which are not present in the case of an established liability against an individual. Thus, oftentimes, in fact, so far as I am aware, without exception, it is necessary to bring a separate action in the nature of a mandamus proceeding to compel the legislative authorities of a city, town, or county to levy a tax to collect a judgment, unless they take such a step on their own initiative. In addition, I entertain the fear that those States which might be unsympathetic to this Federal legislation might pass laws or take administrative action which would render it even more difficult than it now is to turn the piece of paper which we call a judgment into cash in hand for the unfortunate victims of lynch mobs.

Therefore, I have provided in H. R. 4528 that if such a judgment is not paid, upon proper certification by the Attorney General, the amount of the award shall be paid out of the unappropriated funds in the Treasury of the United States and deducted from any funds which would otherwise be available for payment to the State, where the violation occurred, under any grant-in-aid program. It is submitted that this provision has teeth in it, which will insure that the legislation is effective to accomplish the purposes desired. I trust that in the hearings before the committees of both Houses and in the framing of legislation this provision will have sympathetic treatment.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. MELVIN C. SNYDER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. SNYDER. Mr. Speaker, it seems that the President, who, under the Constitution, is charged with making the foreign policy of our Nation, has definitely committed our country in giving aid to 16 western European nations, under what is commonly known as the Marshall plan.

The Congress is being asked to implement that policy by the appropriation of money. Under the Marshall plan we are being asked to appropriate some $6,700,000,000 for the next 15 months.

It is the responsibility of the Congress to examine carefully the items for which aid is being requested. Among the nations who will get aid we find Ireland, Portugal, Turkey, Norway, Sweden, and Switzerland. Certainly in some of these countries it is not necessary to appropriate money to stop communism, and some of these countries were not devastated by the war. In fact, some prospered to a very high degree by reason of the war. Many of the countries for whom aid is requested are not broke.

I call attention to the following editorial which appeared in the Martinsburg Journal, Martinsburg, W. Va., on Saturday evening, January 17, 1948:

THEY'RE NOT BROKE

The idea that the 16 "beggar" nations of Europe, who are clamoring for another $17,000,000,000 cash hand-out from the United States taxpayers, are broke, is completely erroneous. Entirely aside from reputed foreign holdings of $15,000,000,000 to $17,000,000,000 liquid assets in the United States, Britain, France, Belgium, Holland, Turkey, Norway, Sweden, and Portugal at least have formidable holdings of critical minerals which we would need should we be called upon to fight another war. The magazine World Report gives us an excellent picture of what these nations could do to compensate us with minerals if they were willing. Here is the list of what they have:

Asbestos, Southern Rhodesia; bauxite, British and French Guiana, Dutch East Indies, Surinam; chromite, New Caledonia, Southern Rhodesia, Turkey; cobalt, Belgian Congo, Northern Rhodesia; columbite, Nigeria; copper, Belgian Congo, Northern Rhodesia, Norway, Sweden; corundum, Nyasaland; graphite, Ceylon; lead, Morocco, Tunisia; manganese, Gold Coast, Morocco; mica, Madagascar; nickel, New Caledonia; tantalite, Belgian Congo; tin, Belgian Congo, Malaya, Dutch Indies; tungsten, Portugal; zinc, Belgian Congo; diamonds, Belgian Congo, Gold Coast, Sierra Leone.

It will be remembered that when war was imminent many months before December 1941 Congress authorized the stock-piling of rubber. When asked afterward why the rubber stock pile had not been assembled, Jesse Jones, RFC Chairman, gloomily replied, "We thought Singapore would hold out longer." It was one of the saddest confessions ever made by an American patriot. If we now take these needed minerals from the nations clamoring for our dollars, they might stand us in good stead in some future day of need.

American Legion Supports Marshall Plan

EXTENSION OF REMARKS
OF

HON. WILLIAM J. CROW
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mr. CROW. Mr. Speaker, under leave to extend my remarks, I include the following statement of James F. O'Neil, national commander, the American Legion, before the Senate Committee on Foreign Relations, Wednesday, January 21, 1948, on the Marshall plan:

Mr. Chairman and gentlemen of the committee, I desire to take this opportunity to express to you as national commander of the American Legion our appreciation for this opportunity to appear before your committee on this matter so vital to the peace and security of our country as exemplified in the action taken by the national organization of the American Legion.

The American Legion strongly endorses the European recovery program now before Congress. The American Legion gives full support to the principles of this program. The report of our Foreign Relations Committee shows an early appreciation of conclusions which have been largely accepted by most Americans.

The greatest menace facing America today is the aggressive spread of communism, fostered by a powerful totalitarian state. We must combat this resolutely. In doing so, our most important instruments at this moment are the constructive principles of what has generally been known as the Marshall plan of approach to European rehabilitation and our active policy in the Balkans.

The principles of this plan which the American Legion is advancing are of vital concern to every American. Its purpose is to help rehabilitate western Europe, whose nations are holding back the rising flood of communism. If that dam should break, the Red tide would pour through to the Atlantic. We cannot ignore the fact that the Communists are actively hindering European rehabilitation for the very purpose of creating chaos. This we must not permit.

Our American economy must be kept sound, strong, and healthy. But time is of the essence, since the Communists are hard at work striving to bring about an economic collapse, both here and abroad. Therefore, we earnestly recommend that the principles here set forth shall be given fullest support by the people of the United States, to whom they are of vital interest, and that the American Legion accept leadership in this task.

At the meeting of the National Executive Committee of the American Legion at Indianapolis, October 30 to November 1, 1947, the report of the foreign relations committee stated flatly: "The Marshall plan is vital, not only to the rehabilitation of the world, but to our own self-preservation."

The resolution on the foreign situation adopted by the national executive committee at that meeting stated: "That in our endorsement of the Marshall plan for the rehabilitation of western Europe we emphatically urge that the President and the Congress of the United States:

"1. Maintain the closest supervision over all such expenditures, the use and distribution of all materials and the purposes to which they are devoted;

"2. Insure that the people of countries receiving our assistance be made fully aware that the United States is the source of such aid; that it be made clear that the purpose of this aid is not to interfere in any nation's government, but to assist it in resisting totalitarian infiltration or aggression and to reestablish a self-sustaining economy."

These passages I have quoted indicate the extent to which the American Legion has supported and now supports the Marshall plan. I do not wish to enter into the organizational details of the program. We feel that those are in good and expert hands, the hands of Secretary Marshall and of the Congress of the United States. But I am sure that a great proportion of our total membership, who see in Secretary Marshall the defender of the peace as well as the architect of victory, would go along with his considered judgment on these questions.

The American Legion speaks for a great and Nation-wide body of patriotic Americans. The largest veterans organization in history. Our total membership as of December 31 was 3,272,060. The membership of the American Legion Auxiliary was 933,052. American Legion posts today number 16,816. Units of the American Legion Auxiliary number 11,987.

But the place of the American Legion in the Nation is far larger than its numbers. The American Legion is a cross-section of the country and reflects the over-all sentiment of the American people. It includes all kinds and all professions and types of business. It is essentially a grass roots organization, for it is in the little towns and communities that the Legion posts are most active and play the greatest role in civic and community life. Its entire membership are veterans, the men and women who fought and worked to win two world wars. A great part of our members have survived battle; they know what war is, and they want to prevent war being brought to America.

In these questions of national security—and the European recovery program is, among other things, a question of national security—the voice of the American Legion should consequently be counted as particularly significant.

The European recovery program, adequately implemented and effectively carried out, will perform three vitally important functions for the United States, in each of which the American Legion has the deepest interest.

First, it will block the expansion of communism. The American Legion has fought communism for 25 years. The insidious manner in which this would-be world-conquering ideology is now seeking to expand over Europe has been demonstrated in the totalitarian tyranny forced upon the formerly free nations of eastern Europe and the Balkans, in the strikes inspired recently in France and Italy and in the so-called "Protocol M" providing for strikes and sabotage in Western Germany.

That the Communists are engaged in a cold war against the United States, as the immediate phase in their struggle for Europe and the world, has been amply shown. A failure to bring about the economic recovery of western Europe at this critical time would have disastrous consequences for the United States. It could reverse the favorable trend in western Europe, which has developed on the basis of confidence in the Marshall plan, and result in the economic, political, and social collapse of the western European nations and the spread of communism to the Atlantic.

Such a catastrophe would increase immeasurably the threat of communism to the United States and our American way of life, as Secretary Marshall indicated when he stated in his testimony that: "The way of life we have known is literally in the balance." It would be very likely in the future to heat up the cold war the Communists are waging against us. For as they expanded their hold on Europe and Asia and gained new territories, industries and resources and manpower, they would become stronger. What valid grounds are there for believing they would not eventually attack us if they ever thought they could do so successfully? The men in the Kremlin look upon the United States as the citadel of capitalism and free enterprise and the principal obstacle to a Communist-controlled world. We cannot afford to risk the peace and security of the United States and the future existence of some of our great cities on a hope that they would refrain forever from seeking to eliminate this obstacle by war.

The European recovery program, adequately implemented and effectively carried out, is our best means of preventing a Third World War. That is its second great function for the United States, a function of particular concern to the 4,000,000 veterans of the American Legion.

We see in the European recovery program a direct insurance of the future peace and security of the United States. And because it must be expected that war with the new weapons now being developed would strike without warning within our country, we see in this program an insurance of our great cities and of millions of American men, women and children.

A week ago, the Secretary of Defense made it clear in his testimony that if this program were not to be carried out, he would feel constrained to ask the Congress for an increase in defense appropriations of 25 to 50 percent. Why would we need such increased appropriations? Because without this program the United States would be less secure. Because without this program there would be increased danger of war.

The Secretary of Defense explained also that totalitarian control of western Europe and its industrial and military potential could be a threat not only to the peace of the world but also to the very existence of the United States.

Those of us appearing before you who are not officers of the Government are in a position to speak with greater freedom. I wish to place before you certain aspects of such a situation which I believe demand your most earnest consideration.

Communist control of western Europe, the probable result of failure to implement this program, would bring at least half a billion people under the control of the Soviet Government. It would marry the manpower and natural resources of eastern Europe to the industries and industrial efficiency and skill of the western European workshop. The offspring would necessarily be a vastly increased war potential at the disposal of the Soviet Government, a war potential which could in the future surpass our own.

Such a war potential, including within it the precision industries of western Europe, would increase tremendously the capabilities of the Soviet Government for production of atomic bombs and the means of delivering them, such as bombers, guided missiles, and rockets. Through control of the Atlantic coast of Europe, the Soviet Government would have gained bases for future use of such weapons against our country.

Nineteen hundred and fifty-two, 4 years from now, is the year in which this program is designed to make western Europe self-sustaining. Nineteen hundred and fifty-two, 4 years from now, is also the year in which the President's Air Policy Commission reports we must become prepared to meet a sustained atomic attack upon the United States.

If failure to implement this program will increase the threat of war to our country, we must recognize clearly the kind of war with which we would be threatened. After 1952, 4 years from now, that war could be atomic war, with consequences for our people and our cities entirely beyond either our previous experience or our imagination.

We must recognize also that the danger of war which failure to implement this program would create is not solely long-range, but could arise acutely even within a year. To appreciate this it is only necessary to look at the map, note how the colonial territories of western Europe extend widely over the earth, and then consider whether our Government and the American people would be willing to remain passive while all these territories became bases and potential springboards of the Soviet Union. Some of these territories, such as parts of north Africa, are of great strategic importance. Others, such as the French and Dutch territories in the Caribbean, are within the American Hemisphere. It seems clear that for the Soviet Government to extend their system into this hemisphere through control of these territories would be a direct contravention of the Monroe Doctrine.

I believe that all those who have questioned the need of adequate implementation of this program should face squarely the acute and dangerous problem which the collapse of western Europe would raise for the United States in respect to these far-flung colonial territories, and should themselves consider just what action would be required to solve that problem.

The third function of the European-recovery program, which is of particular interest to the American Legion, is the rehabilitation of western Europe.

A large number of our members are businessmen who know the importance of foreign markets and continuing exports to our economy. A large number are workers in industries which have important export markets. The many who have given serious study to economic problems realize that this country cannot long remain an island of prosperity in an impoverished and chaotic world. They realize also that European recovery actually involves the whole world, due to the central role of Europe in world trade. The world cannot regain economic health without Europe, while European recovery will rapidly benefit all other continents.

A great proportion of our members have fought in Europe in the two World Wars. Their battles either saved or liberated the people of Europe from tyranny. Only they have known the peoples of Europe at first-hand and wish to see them healthy, prosperous, and free. Today the free peoples of Europe are threatened with a new tyranny to which, without the aid contemplated in this program, they could be forced to bow. To untold thousands of the veterans who fought in Europe such a catastrophe would mean that they had fought in vain, and that their comrades who did not come back had died in vain.

When Secretary Marshall appeared before you he said, "Though the war has ended the peace has not commenced. We must not fail to complete that which we commenced." The veterans of the American Legion agree wholeheartedly that we must complete the task of winning the peace for which we fought. The cost of this program is small, very small compared to the cost of war, and involves a reasonable assessment each citizen can and should bear for the prevention of war. It is also small compared to the program's value as an instrument for wining the peace and as an insurance of our peace, our national security, and our American future.

The American Legion has always worked for peace and is still working for peace. The only way to prevent war and critical situations such as exist in Europe today is to act firmly, promptly, and adequately but with complete readiness if war should be forced upon us. Time is of the essence. There must be no appeasement. Respectfully I urge upon this committee speedy consideration of this legislation so vital to the peace and welfare of our people and its speedy enactment into law.

Tax Reduction

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Huntsville (Ala.) Times of January 13, 1948:

TAX REDUCTION NOT EVERYTHING

The perpetual slogan of the Republican Party in Congress is "Cut taxes."

Apparently little else matters to most of its Members. National security, aid to Europe, internal improvements—all these are secondary to a reduction of taxes.

Everyone, of course, wants tax reduction. It is a natural urge, for Federal taxes as a result of World War II, are at fantastic heights. They are a sore drain on individual and corporate pocketbooks. They add to the mounting cost of living.

But national welfare and private interest often conflict. They do so today, greatly.

At a time when our national security is scarcely less perilous than when we were at war, because of the attitude of Russia; when the possible collapse of Europe stares us in the face, unless food and funds are provided for reconstruction; when the national debt is at an astronomic height, it is certainly debatable whether the time is here when there can be any slashing of taxes, just because individuals are galled and vexed by the burden they impose.

And certainly the gnashing and ranting of the Republican majority upon this sole topic is not either very informative or impressive.

National security and debt reduction are assuredly entitled to prior consideration.

The Old Age and Survivors Insurance Law Should Be Amended

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. MACK. Mr. Speaker, under leave to extend my remarks, I include the following radio address made by me recently to the citizens of my district:

The present social-security law, enacted in 1935 and which went into effect in 1937, has now been in operation for 10 years. As is the case with nearly all laws, time and experience have revealed injustices and inadequacies in this one. In simple justice to the more than 40,000,000 workers who are covered by this act and to the 30,000,000 others who at present are denied its protection, the shortcomings and defects in social security which time and experience have revealed should be corrected by this Congress. The correction of exposed and revealed injustices in old laws often is of as great or more importance to the people than the enactment of new legislation.

My attention was first attracted to injustices in the present old-age and survivors' insurance clause (title II) of the Social Security Act by a group of public-power district workers in the State of Washington.

These workmen, for many years, had been employees of a private power company. For six of those years these men had paid social-security withholding taxes to the Government for old-age and survivors-insurance protection. Then a public power district bought out the holdings of the private company.

As employees of the private power company, these workers paid withholding taxes every pay day and were entitled to old-age and survivors-insurance benefits at the age of 65. But, now as workers for a publicly owned utility, they no longer are permitted to pay withholding taxes, even though they wish to do so, and forfeit all benefits from the payments in withholding taxes which they made over 6 years as employees of the private company. They not only are denied old-age benefits but the money they have paid into the fund for this protection is forfeited to the Government. They never will get any old-age benefits for the payments they made. Not a cent of money they paid into the fund ever will be refunded to them. Obviously, this is unfair and unjust.

The same injustice is perpetrated by title II (the old-age and survivors insurance clause) of the present social-security law on every worker of a privately owned bus line, water company, or other utility that later is transferred to public ownership.

The policies of private insurance companies carry a cash surrender value and paid-up insurance clauses. The policyholder is assured of getting back something of what he has paid in should he for any reason discontinue making premium payments. Why should not our Government be as fair to those whose money it collects for old-age protection as private insurance companies are to their policyholders?

Obviously, the Government should assure the worker some measure of old-age protection for the money the worker has paid in withholding taxes or part or all of the worker's premium payments made in the form of withholding taxes should be refunded to him. Otherwise, the money collected from a worker to whom no benefits accrue and to whom no premium refunds are made becomes an unjust and discriminatory tax because it is levied not on everyone but only on a limited group.

This injustice is all the more apparent when we consider the worker's withholding taxes are taken away from him by compulsion, he having no choice as to whether he wishes to come under social security or stay outside of it.

If employees of private power companies that later are acquired by public bodies were the only ones affected by this unjust provision of old age and survivors insurance the need for amendment of the act might not be so pressing. However, many other groups of workers are similarly affected.

The same injustice would have occurred had these people been employees of a privately operated bus line, a privately operated water company, or any other private utility that later was transferred to public ownership.

But public utility district employees are not the only ones injured by this injustice in the present social-security law.

A young store clerk may pay social-security taxes for 9 years and 9 months (39 quarters) and then become a partner in the business. As a clerk he is in a covered employment. As the owner, or part owner, of a business he is in uncovered employment. By changing his status from employee to employer, he forfeits not only old-age pension benefits at 65, for which he has paid, but he also loses all the premium payments, in the form of withholding taxes, which he has made.

The same is true of any employee in a covered employment who quits to go into business for himself, as merchant, manufacturer,

or farmer. These people should not lose everything they have paid into the fund.

Likewise, workers who quit covered employment to take a position with the State, a county, a city, a port district, a school district, or with any governmental body lose both benefits and also what they have paid into the fund, for governmental workers are not covered with old-age and survivors insurance under the present Social Security Act.

An individual's loss in such payments may total a considerable sum. A worker receiving a $250-a-month salary in a 9-year-and-9-month period has $585 paid into the fund by himself and his employer for his old-age protection. Yet, under the present law, he will not receive back a cent of this $585 or be entitled to obtain any benefits should he leave his covered employment at the end of 9 years and 9 months. Obviously, this is unfair and unjust. It is a wrong that Congress ought to right. How can Congress correct this?

The simplest and quickest way to right this wrong is for Congress to broaden social security to bring under it many groups which now are not covered.

At the present time there are an estimated 7,300,000 self-employed persons, not counting those in agriculture, who are in business for themselves. These 7,300,000 people are mostly small businessmen and professional people—lawyers, doctors, and accountants. Social security should be broadened to include and protect them. By covering these business and professional people, the injustice to the covered worker who quits his covered employment to go into business for himself can be largely eliminated and his investment in social security previously made by him through withholding-tax payments thereby can be preserved.

At the present time the owner of a small incorporated business is legally an employee of his own corporation, pays social-security taxes, and is entitled to old-age and survivors' insurance benefits. The owner of an unincorporated business is not. Certainly, the owner of the unincorporated business should enjoy the same rights as his competitor, who is the owner of an incorporated business.

The Social Security Administration estimates that there are 4,300,000 employees of State governments and their political subdivisions, including public power districts, public bus lines, and other public utilities. Today these public employees are denied a chance to participate in social security. The act should be broadened to admit them, with possibly a provision for teacher, police, and firemen groups, who in some communities and States have their own old-age pension plans, being permitted to come in or stay out of social security as they elect.

The benefits of old-age and survivors' insurance should also be extended, I feel, to employees of medical, health services, religious, charitable, and membership organization employees who are not now covered.

The broadening of old-age and survivors' insurance coverage of self-employed persons, of employees of States and their political subdivisions, and of several other special groups will bring an additional 12,000,000 to 15,000,000 persons under old-age and survivors' insurance protection.

This, in my opinion, is both good business and good humanitarianism. It will provide old-age and survivors' insurance protection for almost everyone and at the same time, within not too many years, largely wipe out the tax drain for State old-age public assistance which now is costing the States and Federal Government almost $1,000,000,000 a year.

Under title II of social security everyone, if possible, should pay during the earning years of his youth for the protection he obtains in his old age. This is not added tax expense for the general public, for all will be paying while they earn for protections in the period when, through old age, their power to earn declines.

Another injustice in the present social-security law is the provision which takes away the pensions of a covered worker of over 65 whenever he or she earns in a covered employment more than $14.99 in any calendar month.

This provision leads to many absurdities. For example, a Congressman who has built up social-security pension qualifications while in private life, can draw his social-security benefits at age 65, while at the same time drawing a salary of $1,000 a month from the Government. This is true because the Congressman obtains his $1,000 salary from an uncovered employment.

At the same time another person over 65, if he earns as much as $15 working part time in a covered employment, loses all social-security benefits.

Under the present law, a person over 65 who has an old-age and survivors' insurance pension can continue to receive that pension even though he draws $1,000 or more a month in profits, interest, or rents, while one who has no income at all except his social-security pension, forfeits that pension if he earns as much as $15 in any month in any covered employment. Obviously, this is unjust and unfair to pensioners. It is absurd. More than that it is economically unsound in the light of the present desperate need for more and more production to supply the goods and services which the people of this Nation want and need and which they are prepared to buy were these goods and services available.

In my opinion, the amount of money a worker may earn in any calendar month in covered employment without forfeiting his old-age benefits should be raised to at least $50 a month or the clause limiting the pensioner's earnings should be wiped out altogether.

Workers over 65 who are in good health and find happiness in working part time should be encouraged, not discouraged, for working part time if they desire to do so. They should not be penalized for working. Work alone produces wealth. The more people who work the more goods this Nation will have to divide and the higher our American living standards will become.

Another defect in present social security and old-age survivors' insurance is that it does not now provide as adequate monthly pensions to persons over 65 as the huge sums being collected by withholding taxes justify.

I am convinced that any fair-minded study of social security's income compared to its outgo during the last 10 years will reveal that substantially higher monthly pensions can be paid to persons over 65 without disturbing the soundness and stability of old-age and survivors' insurance.

The old-age and survivors' insurance reserve fund—a fund that represents the amount of money social security has collected from workers over and above what it has paid out on November 30, 1947, contained $9,380,000,000.

In the 5 months between July 1 and November 30 of last year, social security and survivor insurance fund receipts were $580,000,000 more than it paid out during those same 5 months. In short, old-age and survivors' insurance reserves from which pension payments are made are increasing at the rate of more than a billion dollars a year, more than $116,000,000 a month or $3,800,000 a day.

This great surplus of income over expenditures is not something new. It has been going on for a long time. During the last fiscal year which ended last June 30, the Federal Government collected from workers for old-age and survivors' insurance $1,459,000,000 in withholding pay-roll taxes and the old-age and survivors' fund received another $163,500,000 from interest on investments.

From these gross receipts of $1,623,000,000 there was paid out last year for both administration and for old-age and survivors' pensions a total of only $455,400,000 with the result that last year alone more than a billion dollars were added to the old-age and survivors' reserve fund. Of every $1 collected for old-age and survivors' insurance, 26 cents was paid out for benefits and 74 cents went into the reserve.

In the light of the great increase of receipts from withholding taxes over and above expectation, and of disbursement below expectations, I feel that a substantial increase in present benefits is easily possible without any danger to the financial soundness of the reserve fund.

The maximum monthly pensions which now may be paid to a worker over 65 and who has paid into the fund continuously since its start 10 years ago are $44 to the single worker, $66 to a couple both of whom are over 65 and $33 to a surviving spouse. The pensions payable to persons who have not been covered for the full 10 years or whose earnings were less than the maximum $250 a month taxable salary, are much lower.

This schedule of old-age-pension benefits is, in my opinion, inadequate in the light of present day living costs and should be increased and, I believe, can be increased safely probably by about 25 percent.

Our goal in old-age and survivors' insurance should be the bringing of every possible group under its protection. By doing this we will be providing nearly all Americans protection in their old age. At the same time, we will be reducing the heavy drain in taxes levied on the people by the States and Federal Government to support the present system of State old-age assistance which now costs approximately $1,000,000,000 a year, for the more people we have under old-age and survivors' insurance, if its pensions are made adequate, the fewer we will have on State old-age assistance.

The broadening of old-age and survivors' insurance and the making of its pensions more adequate provides a way to make old age more secure and general taxes less burdensome.

I sincerely hope Congress will do something this year toward making social security a better and a more just law by so amending it that some of the defects and shortcomings in this law which time and experience have revealed will be eliminated.

Scio-Ohio Pottery Co.

EXTENSION OF REMARKS

OF

HON. EARL R. LEWIS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mr. LEWIS. Mr. Speaker, on December 11, 1947, a fire destroyed the main plant of the Scio-Ohio Pottery Co., located at Scio, Harrison County, Ohio, in my district. It is another episode in the challenging story of a prosperous little Ohio town.

In November 1932, using the run-down buildings of an abandoned pottery, Mr. L. P. Reese, president of the Scio-Ohio Pottery Co., began the construction of this plant. He interested the townspeople in his idea; and, with only the hope of jobs, virtually everyone turned out during Thanksgiving week, 1932, to repair roofs, replace broken windows, re-

build the road, and clean up weeds and debris. He then redesigned the kilns and set up machinery and equipment, using the assembly line theory for the mass production of tableware. In the intervening years the plant has grown, until last year it produced more individual pieces of pottery than any other plant in the United States, and has brought unexampled economic health and wealth to the community where it is located.

In the week before Christmas, 1946, Mr. Reese gave a Christmas party, at which time he distributed bonuses totaling $705,000 to his 825 employees. The bonus was computed on a sliding scale based on length of service and was made possible by the accumulation of profits while wages were frozen during the war. Eighty people received $3,500 each, and a man who went to work the day before received at least $10.

In early December 1947 Mr. Reese issued invitations for another Christmas party at which he intended to distribute bonuses in excess of $440,000. When the fire almost completely destroyed the plant the 1947 Christmas party had to be canceled, but 2 days later Mr. Reese announced that the plant would be rebuilt. Immediately the citizens of Scio and the surrounding countryside began to clear the charred ruins for reconstruction of the plant. So spontaneous and genuine was their response to the challenge posed by the destruction of their sole industry that men, women, and children of that community, whether former employees of the pottery or not, turned out as one man to aid in clearing the grounds to make way for the new building which will house the pottery. This constituted such unusual community action that the Pittsburgh Sun-Telegraph of December 14, 1947, published a feature story describing it. The article follows:

SCIO, OHIO, December 13.—This is one place on earth where good will toward man is more than just a theory.

The town which L. P. Reese put on the map with the Scio-Ohio Pottery Co. now is helping to rebuild the pottery plant which was half ruined by a $1,500,000 fire last Thursday.

Saturday men, women, and children wielded brooms, pushed wheelbarrows, and helped sort seared and broken china in the twisted shell of the gutted plant.

Working as hard as the rest were Reese, who started the factory 15 years ago, January 5, and his brothers, George, the purchasing agent, and Scot, superintendent of the plant.

MINISTER AIDS

Also working, in lumbermen shirts and wool caps, were the Reverend Herbert B. Shiltz, a Methodist minister, and the mayor of Scio, P. W. Getter.

Gone are the plans for the Christmas party and the annual Christmas bonus with which Reese rewarded the townsmen who built the plant from scratch.

Said Mayor Getter: "The town is back of them 100 percent. The industry is the town."

R. W. Bushy straightened over a shovelful of debris and said: "You're doggoned right I'm going to help rebuild. I helped when the industry started 15 years ago and I'm going to do it again."

ALL PAID

Last night at a meeting in the Scio High School auditorium, L. P. Reese handed out the paychecks for December.

His message to the people, was that the pottery would rebuild, that those who helped rebuild would be paid, and that those of the 830 employes who could not be employed in the rebuilding should get other temporary jobs, seek unemployment compensation and be on hand when the pottery reopens on full schedule

He expects to have two or three kilns operating in three weeks, but full production is at least 6 months away.

Stacks of yellowed and cracked plates, cups, and dishes littered the cinder-covered floor of the pottery.

Back in the war days, said George Reese, "L. P.," the "long-headed" brother, foresaw that any of the 139 items which the firm produced would not be considered essential, so he cut down production to such necessities as cups, saucers, plates, meat platters, and bowls.

MANY ORDERS

Said George Reese:

"The result was we never lost one hour during the war and we're still running a year behind on orders."

In the fire, $400,000 worth of tableware was destroyed. Ironically, Thursday was not shipping day, and the fire hit the products which were to be shipped on 11 waiting freight cars the next day.

Biggest item, though, is the machinery.

Last week a $9,000 cartonsealer was operated for the first time. It was destroyed.

But promises of help are coming from many directions. Companies in Cleveland, Pittsburgh, and New York are calling "L. P." and telling him they'll do all they can to put the firm on its feet again. That also includes the Pennsylvania Railroad.

Meanwhile, in portions of the plant which the fire did not touch, secretaries and clerks are going on with the paper work.

MUSEUM

At the height of the fire, when it was feared the entire plant would go, files were hastily cleared; "the museum," a room wellfilled with animal trophies shot by both L. P. and employees, was emptied.

Strange combinations of papers, mounted animals and intact pottery found its way into the homes of the workers, who are now returning the goods they saved.

In the steel skeleton of the ravaged part of the plant men swing at work like monkeys in the cages of a weird, king-size zoo. Women on the floor below pile the unbroken china in stacks

While the self-appointed salvage crews clear up the debris, Aaron Wagner, the construction engineer, is taking inventory of the destroyed machinery and placing his orders immediately with George Reese.

It isn't much of a Christmas party that Scio is celebrating this year, but it is certainly demonstrating that good will is there.

According to M. W. Horton, druggist:

"We've been here 67 years, and we have seen the Reeses come, and now we've seen them go, but we know they'll be back again, twice as good as before."

Mr. Speaker, the man whose energy, ability, and foresight led to the construction of the Scio-Ohio Pottery Co. and the development in that community of one of the most successful businesses in America is an unusual man. I know him well and count him among my warmest friends. The people of Scio and those who work in the pottery are splendid people. I know many of them personally; they are industrious, thrifty, and dependable. The combination of an unusual leader, like Mr. Reese, working with splendid men and women, like the citizens of Scio, has resulted in an employer-employee relationship that is almost without parallel in the United States. The fact that such a relationship exists in Scio points to the possibility that other such relationships between employer and employees can be established elsewhere in these United States of America to the immense profit and advantage of both employer and employees and the ultimate welfare of our Nation as a whole.

In conversation with Lou Reese last week he told me that the new building to house the pottery will be ready for occupancy and operation by February 13, 1948. I think this a truly remarkable accomplishment of remarkable people.

Expand and Extend Rural Electrification

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mr. EVINS. Mr. Speaker, recently the Rural Electrification Administration Administrator, Claude R. Wickard, announced a major change in REA loan proced re. The announcement was to the effect that loans will no longer first be allocated and later a loan contract signed. Instead, the allocation and contract will be effected at the same time. This will not only speed up the process of making funds available for furtherance of the rural-electrification program but serve to allay the often-advanced criticism that funds are available within the Rural Electrification Administration which have not been contracted. Heretofore, an allocation was necessary prior to the signing of the loan contract. The existence of this procedure allowed many so-called friends of REA to proclaim their "support" of REA while at the same time claiming that REA had all the money it could use, as they pointed to unadvanced funds. The smoke screen of allocation made their argument seem real but in fact not representative of the true situation. Henceforth, unadvanced funds will be contracted for by REA and borrowers in a single step.

During the special session of the Congress, an effort was made to appropriate a sorely needed $200,000,000 deficiency for REA loan authorization. This measure failed of passage by a few votes because some Members of the House insisted that REA was retaining at the time substantial unadvanced loan funds. Actually these funds had previously been allocated and there presently exists a need on the part of the REA for funds for the approval of outstanding applications for loans which cannot be approved by reason of insufficient appropriations for furtherance of the rural electrification program.

Mr. Speaker, moneys provided to REA do not represent gifts but loans for a most needed purpose in our own country and every cent appropriated for building rural electrification power lines will be paid back and returned to the Treasury of the United States. It is hoped that the Congress will appropriate adequate

funds for furtherance of the rural electrification program during this session of Congress.

In this connection, Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an editorial from the Rural Electrification Magazine, January 1948, entitled "Year for Courage and Action." The editorial is as follows:

YEAR FOR COURAGE AND ACTION

Nineteen hundred and forty-eight—a year for men of courage and foresight.

We have passed through one of the most trying years in the short history of the rural electrification program. Complex problems—material shortages, a critical power supply deficiency, inadequate loan authorizations, and intensified private utility enmity—hampered the program last year. Happily, deliveries of materials have improved during the last 12 months and the outlook for '48 is brighter. But the shortage of generating capacity lingers—and even the utility officials who deny that any shortage exists (merely an "excess of demand over supply," as they say) are worried about winter peaks. An attempt to secure a deficiency loan authorization for REA during the special session of Congress failed during the waning days of 1947; hopes flicker dimly for a deficiency authorization during the regular session. The obstructions and delaying tactics of the private utility industry are something we evidently must resist as long as we seek to exist.

But courage and foresight saw us through 1947, and enabled construction of 52 percent more miles of rural line than were built in the preceding year. Courage and foresight can pull us through in the most trying of years ahead.

It will take courage to fight—to fight until we win—for adequate loan authorizations, to convert unadvanced funds into completed construction quickly enough to silence our critics, and to stave off utility spite-line and lobby attacks. It will require courage, and probably provident rainfalls and pure luck tossed in, if the power shortage is not to plague our people.

As we begin the new year there is more reason for hope than despair, though. Our hopes are pinned on the unity and cooperative spirit displayed by the Nation's rural electric systems during the year just past. Their foresight in joining State organizations and their national association in order to meet mutual problems as they arose is encouraging. Their support of REA before congressional committees adequately answered utility attempts to drive a wedge between the Agency and its borrowers early last year.

All of this promises that new records established by the rural electrification program in 1947 can and should be shattered in 1948. More money should be advanced, more miles of line energized, and more new members served than ever before in any one year.

The year 1948 will be a year of growing maturity among REA-financed systems. Older co-ops and power districts are already assuming tasks formerly performed as a part of REA's divisional services. And they are doing it without, in any way, increasing the Government's negligible risk. As the new year begins, only one-half of 1 percent of interest and principal payments to REA are 30 days overdue. The record continues to be one of the most enviable of all time.

It is probably true, as opponents of increased REA loan authorizations have stated, that Congress will continue to add new loans each year. However, from the standpoint of finishing the rural electrification job in the quickest and most efficient manner, Congress has failed to provide adequate loans during the past year and demonstrates an unwillingness to correct a deplorable situation. Applications on hand in REA now exceed unallocated (uncontracted) loan authorizations by the staggering amount of $157,000,000—an amount which is pyramiding at a rate of $25,000,000 each succeeding month.

We must meet this problem of inadequate loan authorizations head on in 1948, and meet the other problems just as squarely, too, if the rural electrification program is to accomplish what it should this year.

Naval Air Transport Service Has Record of No Passenger Fatalities During 1947

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mr. VAN ZANDT. Mr. Speaker, even though the Naval Air Transport Service is a unit of the United States Navy, yet its chief mission is the transportation of passengers and cargo.

The record of completing a calendar year without any fatalities on the part of the NATS reflects credit upon the United States Navy and, in particular Rear Adm. J. W. Reeves, Jr., United States Navy, and all of his officers and men for their efficiency in maintaining and flying NATS planes.

I take pleasure in joining thousands of Americans in complimenting the NATS for the splendid record that has been established as revealed by the following statistics:

The Naval Air Transport Service flew more than 320,000 passengers a total of almost 500,000,000 passenger-miles during 1947 with no passenger fatalities, according to an operational summary released by Rear Adm. J. W. Reeves, Jr., United States Navy, commander of NATS.

Approximately 75 percent of the route miles flown by NATS lies outside the continental United States, and is flown in support of deployed fleet units and shore establishments.

Although figures included in the operational summary cover only scheduled flights, the Naval Air Transport Service had no passenger fatalities throughout the system during the year. Approximately 90 percent of all transport flying done by NATS is scheduled flying, while the other 10 percent is carried on as special missions, training, and test flights.

The operational summary follows:

NATS operational summary, 1947

I. SERVICES PERFORMED

1. Route miles (December 1947):	
Domestic	7,972
Overseas	32,863
Total	40,835
2. Transport hours flown	[1] 117,569
3. Transport plane-miles flown:	
Domestic	[1] 5,044,660
Overseas	[1] 16,981,110
Total	22,025,770
4. Passengers loaded	[1] 312,522
Air-evacuation patients loaded	8,254
Total	320,776

NATS operational summary, 1947—Con.

I. SERVICES PERFORMED—continued

5. Passenger-miles flown:	
Domestic	[1] 106,826,143
Overseas	[1] 370,975,997
Patient-miles flown	[1] 18,091,035
Total	495,893,175
6. Cargo loaded tons	[1] 25,526
7. Cargo ton-miles flown	[1] 34,231,775
8. Mail loaded tons	[1] 5,053
9. Mail ton-miles flown	[1] 10,760,292
10. Total tons loaded	[1] 59,558
11. Total ton-miles flown	[1] 98,770,966

II. SAFETY RECORD

1. Passenger fatalities per 100,000,000 passenger-miles	0

III. DEPENDABILITY OF SERVICE

1. Percent scheduled flights canceled	5.1
2. Percent scheduled departures delayed (Jan. 1–Dec. 13)	11.3
Average hours per delay (Jan. 1–Dec. 13)	2.80
3. Percent scheduled miles completed (Jan. 1–Nov. 30)	98.0

IV. SATISFACTORINESS OF SERVICE

1. Percent of passengers who submitted reactions	57.1
2. Percent passenger reactions received that were unfavorable	1.5
3. Ratio of actual to scheduled shipping time of NATS priority cargo	116.1

V. EFFICIENCY AND ECONOMY

1. Average number of transport aircraft assigned	116
2. Average aircraft operational utilization hours:	
R5D	[1] 6.8
RAD	[1] 2.4
JRM	[1] 8.5
3. Average load factor (January through November)—percent	83.3
4. Average personnel on board	[2] 5,766
5. Average month ton-mile per unit of personnel	1,427

[1] December estimated.
[2] These on-board figures include transport personnel only.

Rubber in National Defense and National Economy

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 20, 1948

Mr. CRAWFORD. Mr. Speaker, this Congress will soon be called upon to consider legislation having to do with rubber both in relation to our national defense and in relation to our national economy.

Recently the Chemical Engineers Club of Washington made the rubber problem the topic of a symposium and, under the unanimous consent privilege given me, I desire to submit for consideration of Members of Congress the views of two of the speakers, Rear Adm. C. E. Braine, chairman of the Army-Navy Munitions Board rubber committee, and Mr. C. B. Hadlock, of the Office of Rubber Reserve of the RFC.

Their statements follow:

THE NATIONAL RUBBER SITUATION FROM THE VIEWPOINT OF OUR NATIONAL DEFENSE

(By Rear Adm. C. E. Braine)

One of the peacetime duties of the Navy Department is war planning. This includes

industrial-mobilization planning, which is one of my functions in the office of the Under Secretary. One of the most important materials in this program is rubber.

Industrial-mobilization planning is no different from any other planning. First, we estimate the situation. What do we desire to achieve? What is available to us? What obstacles must be overcome? Then make our decisions. Such planning is similar to attacks on all problems, but in this case the scope is so broad and so many factors are involved we need a supercharge of magic. This element, fortunately, has been provided by the wholehearted patriotic cooperation of scientific societies, business associations, industry, labor and government, which all together form our great democracy. A democracy is based on a view of the role of the people's will in government. If we will to have a strong national defense, which means wish it with a knowledge of the price and a willingness to pay for it, we shall have our will. If we merely want it, making no great effort to find the means, we go the way of many admirable societies which died because they were politically inadequate to the necessities of the times in which their fate was decided. We hear that 1948 will be a year of momentous decisions. I agree that decisions made now will affect our lives drastically, and I hope that we do not lose sight of the lesson of history in regard to the importance of rubber to our life and as a necessity for national defense.

Fortunately, I believe, that the price the taxpayer will have to pay in this case will be small and soon we will have a new self-supporting national asset in the form of a new industry using American management and labor. We must become as self-reliant as possible and not have to depend on others. Information which is not secret indicates that due to the brains and ability of the American chemists we soon can expect substantial improvements in American-made rubber. This does not mean that the entire product will be synthetic, and I am not losing sight of the proper proportion of natural rubber. Such amounts must be stock-piled for safety, but without an impossibly large stock pile, we must retain an active and readily expendable, technologically advanced, American rubber-producing industry. This should be backed up by retention of sufficient stand-by capacity from our presently owned plants to permit rapid and prompt mobilization if needed. This proposed plan for the rubber industry does not differ radically from that for other basic materials, such as magnesium. During the war, certain progress was made in the growing and processing of certain plants within the limits of the United States which gave a sap from which a natural rubber could be obtained. Peace came before this was perfected, but the promise was there, and a small development program along these lines is being carried on by the Department of Agriculture at our request.

I am sure that Mr. Kennedy will cover the State Department's position in regard to cooperation with rubber-producing countries. We fully realize the importance to national defense of a healthy world and have no wish to ruin any country. However, others are much more willing to cooperate with a strong country than a weak one, and we must always try to be in a position where decisions regarding our national defense are in our hands.

You are all aware I am sure of the history of the American rubber industry. After VJ-day the Interagency Committee on Rubber Policy continued under Mr. Batt's chairmanship. The military departments were members of this committee and their views in respect to defense matters were given full consideration. When this committee was dissolved, it was re-formed under the Army and Navy Munitions Board and I became chairman. In general the membership remained the same representing all departments and agencies of the Government interested in rubber. Therefore, when the Army and Navy Munitions Board undertook to send a draft of legislation to the Congress in July the resultant effort followed the lines this committee had been pursuing for the past several years. This draft met certain objections particularly from parts of industry. An analysis of these differences of opinion showed that the controversial features were not important from the defense viewpoint as long as legislation was passed securing our basic aims. These were clarified in writing and I am delighted to say that everyone with whom I talked gave them full support, with the exception of the size of the active industry to be retained. All agree there should be such an industry but figures vary depending on the viewpoint.

This does not mean that there was an unanimous agreement on methods of supporting this industry, its management, or the ownership of plants. But the Munitions Board speaking for the military departments has decided that such decisions which affect our country and its citizens as a whole are not proper matters for their jurisdiction but properly must be decided by the Congress. We all stand ready to offer our official and personal opinions and to assist as we can, and I am sure that the hard work and intelligent study of Mr. Shafer's committee will bring forth the best possible legislation which will protect our defense interests and the welfare of the whole country.

The most recent comment on this matter by Mr. Hargrave, chairman of the Munitions Board, is that legislation should provide:

(a) About one-third of the total new natural and general purpose synthetic rubber used in this country should be general purpose synthetic rubber manufactured in our plants.

(b) A small amount of synthetic rubber of the type suitable for use in inner tubes should also be kept in production.

(c) The total operating and stand-by capacity for the manufacture of general purpose synthetic rubber should be about 600,000 long tons per year.

(d) The simplest possible method, with the minimum of Government control, should be used to accomplish the above objectives.

(e) Mandatory usage appears to be the best method of fulfilling these prerequisites; such mandatory usage to be confined to as few products as possible.

They also emphasize the need for the active operation of as many plants as possible in dispersed locations.

The Munitions Board will continue to be interested in rubber from the viewpoint of rubber products required by the military forces. The other aspects of the whole picture will come under the cognizance of the National Security Resources Board which handles all raw materials subject to the restrictions placed by the Congress in the new legislation.

As a naval officer, I can state wholeheartedly that our country needs a self-reliant domestic rubber-producing industry as a vital element of our national defense and should war never come, as we hope, I believe it will be a national asset.

SYNTHETIC RUBBER INDUSTRY AND ITS RELATION TO OUR NATIONAL ECONOMY

(By G. B. Hadlock)

If there are any full-fledged economists listening to me tonight, I hope they will bear with me for a moment while I invade their field of operations. It is not my purpose to expound any weighty arguments that might leave me over my depth. Instead I shall ground my approach to a fundamental segment of economic principle—the law of supply and demand. That law governs just about everything we have in our daily lives.

As long as there is a free play of economic forces in the world, the old law of supply and demand works with clock-like precision. But when those forces are distorted by artificial means of one sort or another, somebody has to suffer. This is clearly shown when the supply of a basic commodity is restricted by means of a reduction in output, through arbitrary curtailment of productive acreage, or the withholding of goods from the market. The laws of this country have worked rather effectively to eliminate artificial controls over domestic production, but wherever we are dependent upon foreign sources for our supplies of vital materials we have to pay the other fellow's price. He can release supply when prices are high, and contract them when they are low.

This Nation was paying the other fellow's price for crude rubber a few years ago, and there was nothing we could do about it. Not only that, but we had to haul our purchase over 11,000 miles. All too often that purchase represented only what the British and Dutch dominated cartel was willing to allow us. Certainly that constituted a precarious supply line for the largest consumer of rubber in the world.

But that was the shape of things before your synthetic rubber industry came into being. As long as enough rubber came in to cover our requirements and we could all buy a new car every year or so, there was little or no occasion to ponder over the fact that 92 percent of the world's rubber was produced so far away. As the war in Europe grew in intensity and spread its influence to the Far East, the danger to a continuance or dependable shipping became more and more apparent. Almost suddenly the supply of ships soon became alarming. As stocks in the hands of manufacturers began suddenly to drop dangerously low, it began to look as though this Nation on wheels might soon become a nation of pedestrians. Let us not lose sight of that scare when we consider the value of our newly established synthetic rubber industry.

But this new industry could not be created overnight. It took over 2 years of unremitting labor, employing the best technical brains in the Nation, to produce the first pound of synthetic rubber. Meanwhile, the best that your Government could do was to buy all the crude rubber there was to be found, wherever it was and whatever the price demanded. The RFC stood on the doorstep of the rubber cartel—virtually with hat in hand—seeking to purchase all the crude rubber they would sell us.

The last lot to leave Malaya on January 25, 1942, was under a rain of Japanese bombs, but that final cargo was more precious than gold. It was one small thumb in the dyke that was getting weaker every passing minute. We combed the wilds of the Amazon Valley for rubber and spent $135,000,000 before another 100,000 tons was added to our rapidly dwindling stock pile.

The sight of that small handful of rubber cast a gloom over every thinking man and woman. The sad story was brought home with poignant effect as the public was admonished to turn in their old tires and household rubber articles—bath mats to garden hose—so that our armed forces might move forward on wheels.

Such was the atmosphere as the man in industry enthusiastically joined hands with the Rubber Reserve Organization in getting that first synthetic rubber plant in operation.

We were deep into the war when the first ton of synthetic rubber oozed through the Firestone plant at Akron, Ohio, on April 26, 1942.

We were now over the hump—operating an American-owned, strictly independent source of rubber. It was now upward and onward, free of the hesitation that had characterized the plans of 1940 for the first synthetic

plants. A new industry had been established on which the Reconstruction Finance Corporation had expended about $760,000,000, adding about one-third to the Nation's rubber industry investment. Included in this new industry were 51 plants representing $335,000,000 in butadiene plants, both alcohol and petroleum; $77,000,000 in styrene plants; $51,000,000 in butyl rubber plants; $200,000,000 in copolymer and neoprene plants; and $20,000,000 in various miscellaneous projects representing catalysts, minor chemicals, etc.

Starting with 500 tons in April 1942 those plants turned out 2,241 tons during the year, rising to 738,000 tons in 1944, and 802,000 in 1945. While capacity was estimated at 833,000 tons, an operating rate of a million tons had been achieved by VJ-day. At the height of production in 1945, there were about 22,000 employees engaged in these operations. We are now employing approximately 12,000 persons in the production of approximately 400,000 tons annually.

I shall not attempt to draw any comparisons of synthetic rubber with the natural product, because I am rather confident that my audience of eminent chemists have already given some thoughtful consideration to that subject. But let me dwell for a brief moment on the fact that this synthetic rubber has performed a war service that is virtually without parallel. When General Eisenhower swept across Germany and on to Berlin, synthetic rubber was on every moving vehicle. It went with General MacArthur into Tokyo. It is keeping up that service today wherever American troops are stationed, while here at home it affords us continued and efficient transportation. Through postwar exports, synthetic rubber has kept transportation in foreign lands at a high peak of efficiency.

Here at home no vehicle of essential transportation ever had to stop because of a lack of wartime rubber. Although rigid conservation was demanded by the War Production Board, rubber was available for every essential industrial use. Rubber balloons were out for the duration, as were rubber toys, and rubber heels were not as easily obtainable as they were prewar, but rubber moved into war plants with constant regularity, permitting an uninterrupted flow of munitions to our fighting forces. We were breathing easier with this dependable supply of synthetic rubber, but without it we could have lost the war.

It is certainly not easy for me to tell an audience of chemists anything about the quality of today's synthetic rubber. I do think, however, that you will agree with me that a product that has performed such an outstanding job is entitled to a more acceptable designation than the word "synthetic" connotes. I venture the opinion that time and public acceptance will ultimately bring about the discarding of that tag label and the products that flow from our plentiful supplies of petroleum, coal, and alcohol will be known only as rubber.

Then synthetic rubber will join a respectable group of other products that have enriched our lives through the miracles of chemistry. In this group there are many essential materials, only a few of which have come out of the caldron of war. Rayon and nylon come quickly to mind as staunch competitors in the field formerly preempted by silk. In the manufacture of dyes, whoever today would think of reverting to the archaic methods employed before Perkins, an Englishman, who in 1856 synthesized dyes for the first time. By the turn of the century, the natural product from indigo fields had virtually vanished, along with the enormous expense of money and labor for their cultivation.

Actually, there are horizons unlimited for the further development of synthetic rubber. In this age of scientific research and development the potentialities are limited only by the capacities of man's mind. Contrast this, if you will, with the improvements that have been made over the years in the quality of natural rubber. And the synthetic product is right here at home, closer by 11,000 miles, with potentialities for increased production dependent only upon the opening up of more valves and using up available quantities of raw materials.

Where and how is this synthetic rubber used? Here in these United States, 76.2 percent of all synthetic-rubber production goes into the transportation industry, 23.8 percent into auto accessories, mechanical rubber goods and general-purpose uses, such as adhesives.

This market did not have to wait for rubber from foreign lands when the collapse of Japan put us back on a peacetime footing. While shortages were evident in a wide assortment of other essential materials, there has never yet been any delay in getting as much rubber as is needed. The automobile manufacturers, largest of any user, have been delayed time and again by the lack of steel, copper, and lead. As a consequence, you may have to wait another 2 years before automobiles are in ample supply. But that delay has come about at a time when the automobile manufacturers can get all the rubber they want. What a different story this would be if we had to wait for rubber to start moving in this direction from the Far East after the surrender of Japan. Today there is rubber for every requirement, from the large industrial establishments employing from 60,000 persons down to the little shops with as few as 10 persons. They have all been able to swing back into peacetime activity. We have had good quality rubber heels for a long time now, and the little rubber dog and toy balloons are all over the place again.

Plentiful and cheap, synthetic rubber has made it possible for you and me to have new tires on our automobiles. At 18½ cents a pound GR–S, we can now buy a tire for $15. Do you remember the state of things after World War I, with crude rubber selling at $1.06 per pound, and tires selling at $35.00. This plentiful supply of synthetic rubber has made it stand out as a one essential commodity in which there is no black market, no gray market; only a normal everyday buyer-seller market.

What has this contributed to our postwar national economy? Well, take a look at the earnings of our tire manufacturers. In 1946 and 1947 they have benefited tremendously, with earnings at all-time records. These earnings have been made with a minimum of hazard that formerly characterized their operations. No longer do they have to carry huge inventories over periods of from 6 to 9 months, and face the ever-present possibility of having to write off inventory depreciations at the year end. Today these rubber companies can get their raw materials as they are required, carrying an inventory that normally amounts to a 30-day supply.

Now I anticipate that some people may chide me about some of these things I have said tonight in view of the temporary short supply of GR–S. The present situation is the result of human error—failure of industry and Government to foresee consumption requirements and to plan accordingly. Errors of planning certainly cannot indict the fundamental truths nor detract from the value of our synthetic-rubber industry in our national economy.

In short, the rubber industry has today reached a state of stability unknown before. The synthetic product has brought this about. It has also placed this Nation in the enviable position of substantial independence of foreign supplies in the event of another war, which I pray God never blights this fair land again.

Government Services, Inc.

EXTENSION OF REMARKS
OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. HOFFMAN. Mr. Speaker, Government Services, Inc., operates some forty-odd cafeterias in Government buildings serving thousands of Federal employees. Because the officers of the union to which the employees belonged and who worked in those cafeterias, would not sign the affidavits, especially the anti-Communist affidavit, required by the Taft-Hartley Act, the company refused to deal with them, so they went out on a strike and threw a picket line around the Government buildings where the cafeterias were being operated. There was this exception. The marshal of the United States Supreme Court and the Secretary of Labor closed those two cafeterias, that is, the cafeteria operating over here in the Supreme Court Building and the one in the Labor Department.

The point is this: the picket lines' purpose was to close those two cafeterias. The corporation rendering the service was able, as I understand Mr. Fleming, to give adequate service to the Government employees. All the cafeterias were open except those two. By what right was this done? Yesterday Mr. Schwellenbach testified that he knew of no law which authorized him to close that cafeteria; nevertheless, he closed it.

The Marshal of the United States Supreme Court, Thomas E. Waggaman, requested the cafeteria in the Supreme Court building, which serves the employees of that building and the members of the public who desire such service, be closed. That, at least, is the testimony.

We do not know whether the cafeteria in the same building which serves the Supreme Court Justices was closed.

Carved in stone over the entrance to the Supreme Court building is the legend "Equal justice under law." Recently we have heard not a little about the evils of discrimination about the right of every man to vote, about the right of the Negro to equal opportunity to work, to attend institutions of learning, about the right to vote without the payment of a poll tax required of his white brother.

It is more than passing strange that in a building set apart to, among other things, prevent unconstitutional discrimination, men and women, white and black, should, by a Federal official, who draws his compensation from the Federal Government, be denied the opportunity to work just because the officials of the union, who will not officially declare that they are not Communists, do not follow the teachings of an organization, which by force advocates the overthrow of our Government, threaten to picket that building. It does not seem possible that the Justices, sworn to see that every citizen is to have equal justice

under law, know of this action by their Marshal.

It does not seem possible that any Federal agency, having charge of public buildings, any court charged with the duty of administering equal justice, the head of the Labor Department, should join a picket line in its efforts to close a cafeteria which is being operated in accordance with the law of the land.

That which the picket line of local 471 was unable to do, that is, close these two cafeterias, the board, headed by Mr. Fleming, the Marshal of the United States Supreme Court, and the Secretary of Labor, accomplished by order.

Thus, these two agencies and the Marshal assisted this union, whose officials refused to forswear allegiance to the Communist Party or their Communist affiliation, in depriving men and women, black and white, of the opportunity to earn a livelihood. They aided that union in depriving thousands of Government employees of the opportunity to eat a needed meal in a cafeteria lawfully operated. It would seem that here in Washington we should have a little more clear thinking, a little more of equal justice under law, a little less of political maneuvering, a little more support by Government agencies and officials to not only the letter of the law enacted by Congress but to the spirit of that law. It would seem as though, while we are being asked to appropriate some $17,000,000,000 to stop communism abroad, we have a little less support to communistically inclined individuals here in the Capital.

Strong Air Force Needed

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include herewith an editorial from the Jackson (Miss.) Daily News of date of Tuesday, January 20, 1948, which states one of our most vital needs today:

STRONG AIR FORCE NEEDED

Stark facts regarding the inadequacy of American air power as it exists today and looking to the frightening possibilities of atomic warfare within a few years are presented to the people of the United States by the President's Air Policy Committee.

This group—all civilians—unanimously declare that the Nation must spend billions to enlarge and strengthen the Air Force and must plunge into air research as never before against a not distant day when we shall no longer have a monopoly of atomic weapons.

That day is computed as the beginning of 1953—5 years hence. It is the time when, these five men believe, "other nations will have atomic weapons in quantity and the equipment to deliver them in a sustained attack on the United States mainland."

It is the time when, they also declare, we must have "a counteroffensive air establishment in being which will be so powerful that if an enemy does attack we will be able to retaliate with the utmost violence."

But what, in the reasoned judgment of this committee, is the condition of the United States Air Force today? They assert it is "inadequate even now." For that grim atomic future—now so close—the prospect is infinitely worse. On the present basis of planning and preparation, American air power would be "hopelessly wanting" in a period of "serious danger of atomic attack."

What the committee sets forth is not fear mongering. It is a cold, reasoned analysis of conditions which cannot be denied and which it would be a fantastic extreme of folly for the American people, their Congress, or their Government to ignore.

Even without the vast perils of the atom it is indisputable that our country can be protected against all possible risks only by dominant air power.

On the record we do not have it now. We have not begun, seriously, to achieve it. To do so will involve enormous costs, the most thorough planning, and great efforts. Not to do it involves—invites—destruction.

Chairman Thomas K. Finletter and his associates on the President's committee soberly express the conviction that in the absolute sense the United States can be secure only if war itself is "abolished under a regime of law."

We should not despair of that. We should pursue, however, what the Finletter group outlines as a double-barreled policy abroad: to achieve world peace through support and development of the United Nations and at the same time "prepare * * * for the possibility that war may come."

We must, indeed, strive for peace with all our might. But we must never, in the sad present state of world affairs, make the unutterable mistake of neglecting our defenses.

The Air Force now plans to create 55 groups. The committee urges 70 by the end of 1949, with double the present basis of 3,500 first-line planes. It recommends swift modernization of the Navy's air branch. It earnestly urges extended air research, particularly in supersonic speeds, and calls attention to the condition that such research is now virtually at a standstill.

These recommendations and many others of great importance with reference to both military and civil aviation will call for Government outlays high above any that have heretofore been envisoned. It is, at least, encouraging to note that President Truman's current budget proposals seek substantial advances toward the committee's goals.

Are we, in this vital matter, going to count the money cost and say it is too much? We dare not be so blind. We should seek peace, by every honest means. We must not, however, run a single risk of atomic warfare against us. America must be made invulnerably strong in the air as quickly as the task can be done. There is little enough time. We must make the most of it.

Tax Reduction

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. KEATING. Mr. Speaker, after a thorough study, I cannot escape the conclusion that the most equitable method of tax reduction is by an increase in the personal exemptions and reduction of percentage points on the surtax. My bill, H. R. 5064, effects a graduated tax reduction ranging from 100 percent for a single person with a $700 income or married man with a $1,400 income, down to 4 percent in the highest income brackets. Though differing in details, this is the principle embodied in the tax-reduction bill which I introduced last year.

Conceding that the so-called Knutson bill, H. R. 4790, is a definite improvement over H. R. 1 and H. R. 3950 passed last year, I feel that, in the light of greatly increased living expenses, still further consideration should be given to those who now simply find themselves unable to make both ends meet.

There is certainly some bare minimum beyond which we should not go in forcing our people to contribute directly to the expense of running the Government. That principle is now recognized in the $500 exemption for a single man and $1,000 for a married man. If these figures were fair when established, certainly a $200 increase now is amply justified.

I do, however, subscribe to the doctrine that there should be some reduction all along the line. To argue that equality is achieved by reducing the tax of a married man, who is now paying $100 to $20, and of a man who is paying $10,000 to $9,920 is political demagoguery of the rankest type and a long step toward destruction of the very economic system which has permitted our lower income groups to enjoy a standard of living to which none other in the world is even remotely comparable.

My bill is in the nature of a compromise measure which, I feel confident, if enacted would either not suffer a veto or, if vetoed, would speedily be enacted in both bodies by the necessary two-thirds majority. It would insure tax-reduction legislation at this session of Congress.

Attached are schedules showing the tax under present law, under the President's proposal, H. R. 4790 and H. R. 5064.

It will be noted that the significant difference between H. R. 4790 and H. R. 5064 is that under my bill for single persons the reduction in tax under a $1,000 income is substantially more, and above $25,000 income substantially less, and also for a married couple with two children is substantially more under $5,000 and substantially less above $20,000.

Schedule showing income-tax reduction under various proposed plans

[Net income in first column is after allowable deductions, but before personal exemption]

The Share of the Sixth Missouri Congressional District in Foreign-Aid Cost

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. BENNETT of Missouri. Mr. Speaker, it is difficult for the mind to conceive the size of the gifts this country has provided in the past and is being called upon to provide in the future to various foreign countries. Perhaps it will help my constituents to get a better understanding of their individual or per capita share of this program if it is broken down into county and town and compared with local county revenues.

Assistance this country's taxpayers have given other countries from July 1, 1940, through June 30, 1947, totals $73,092,058,013. This includes war expenditures.

The assistance we have provided foreigners since the end of the war, through June 30, 1947, amounts to $24,099,211,087. This sum does not include approximately half a billion dollars more recently voted by Congress in special session at the request of the President as stop-gap aid pending a decision on the Truman-Marshall plan.

The Truman administration is now asking Congress for seventeen additional billions for foreign aid, with six billion eight hundred million of it to spend in the next few months.

The amount already provided since the end of the war equals $183 for every man, woman, and child in America, on the basis of the last official census. It has cost each average American family more than $25 per month for each of the last 2 years. That is the main reason for high taxes and high prices.

The official figures show four things:

First. The cost of foreign aid since VJ-day to the residents of each county and principal town in the Sixth Missouri Congressional District.

Second. The per capita cost to residents of each county and town of the proposed Truman-Marshall plan for $17,000,000,000 more.

Third. Total foreign aid provided and proposed.

Fourth. Net amount of taxes received by each county for county, county road and bridge, special road and bridge, and school purposes. The county tax total was derived from real estate, personal property, merchants and manufacturers, railroads and utilities, and covers a period from March 1, 1945, to February 28, 1946, inclusive, the last dates available for such comparison.

Summary by counties, Sixth Missouri Congressional District

County	Foreign aid July 1, 1945, to June 30, 1947—peacetime assistance	Foreign aid proposed by Truman-Marshall plan now pending	Total foreign aid provided and proposed	Annual county tax receipts from all sources
Barton	$2,589,084	$2,065,608	$4,654,692	$164,274
Bates	3,574,173	2,751,526	6,325,699	249,503
Cass	3,574,722	2,851,964	6,426,686	366,637
Cedar	2,140,551	1,707,762	3,848,313	92,443
Greene	16,569,003	13,218,986	29,787,989	1,148,942
Henry	4,083,279	3,257,698	7,340,977	301,548
Johnson	3,955,911	3,156,082	7,111,993	378,115
Pettis	6,100,488	4,867,056	10,967,544	562,254
Polk	3,184,200	2,540,400	5,724,600	183,549
St. Clair	2,405,718	1,919,316	4,325,034	126,172
Vernon	4,682,238	3,735,556	8,417,794	282,149
Total	52,859,367	42,071,954	94,931,321	3,855,586

From the tables here provided, the individual reader can readily compute how many years it will require for his county to pay its per capita share of foreign aid, assuming all of the county's revenues could be diverted to such a purpose. It is fantastic to assume that the people, if given opportunity to do so, would vote to place such a mortgage on their counties and so obligate themselves and their descendants. As their representative in Congress, I cannot bring myself in good conscience to vote to place such an obligation on them, to keep their taxes and cost of living high.

The best thing we can do for our own national security and the peace of the world is to have an economically prosperous and sound America. A continuation of extravagant foreign aid may keep the boom going until after the election, but, judging from history, it is also the sure road to bust as well as boom, to war and the loss of liberty. Returns from 53,000 questionnaires I recently distributed in my district on the subject, to all rural, star, and post-office boxholders, and 12,000 telephone subscribers show my constituents about six to one against the Truman-Marshall foreign-affairs policy.

Real Democratic Party Should Benefit

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. TEAGUE. Mr. Speaker, I believe it will be of interest to know of the reaction of a county Democratic party leader to Henry Wallace's announcement to seek the position of President on a third-party ticket. Mr. A. B. Brady, chairman of the Robertson County Democratic Executive Committee, Hearne, Tex., very ably describes the response of a true Democrat to the recent action of Henry Wallace.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include Chairman Brady's statement which appeared in the newspaper, the Hearne Democrat, on January 9, 1948:

REAL DEMOCRATIC PARTY SHOULD BENEFIT

A. B. Brady, chairman of the Robertson County Democratic Executive Committee, thinks that Henry A. Wallace's bid for the Presidency on Third Party ticket should benefit the true Democratic Party. Mr. Brady has issued the following statement:

"It will make true Democrats take more active interest in the campaign. It will at least show the real alinement of the voters that still believe in the democratic principles of Thomas Jefferson from those of Mr. Wallace and his communistic backers. It is true that in Mr. Wallace's imaginary campaign for liberalism there will be some innocent and sincere people to fall in his camp.

"Let us not forget that it was a Henry A. Wallace who formed the first Republican Thousand-Dollar Club (every member gave a thousand dollars) to help elect his personal friend, Herbert Hoover, in 1928.

"Is there anyone living now that was living then that could forget what happened after the election of Herbert Hoover and the overwhelming Republican House and Senate? Could anyone forget that 4 years of terror in which the economical structure of our country almost collapsed? Is there any one in Robertson County that could forget that cottonseed dropped to $8 a ton; cotton to 6 cents a pound; nice size hogs as low as $4 and $5 each, and some cattle $7 and $8 a head; eggs, 3 dozen for 25 cents? Many other items of like drop in value could be enumerated. But most of all, can anyone forget the poverty-stricken situation of the 25,000,000 people that were out of work during the Hoover administration? Mr. Wallace and his thousand-dollar clubbers promised the voters a chicken in every pot and a car in every garage. Well, voters, you know what you got.

"Then came along that great leader, Franklin D. Roosevelt, who led the country out of chaos and the throes of revolution. Then came the turn-about-face. Things looked greener in the other fellow's pasture and Wallace got on the bandwagon. He was so convincing that Roosevelt eventually chose him as his running mate. Wallace's ideas were so mystifying that Roosevelt dropped him for a running mate on his fourth race and chose that great leader, Harry S. Truman to run in the place formerly held by Mr. Wallace. Mr. Truman, to appease Mr. Wallace, gave Mr. Wallace a place in the Presidential Cabinet. When our administration saw that we had to get firm with Russia, Mr. Wallace buoyantly repudiated the stand of the administration, much to the embarrassment of our Government and its foreign policy.

"President Truman had to ask for Wallace's resignation. There was only one camp left for Mr. Wallace—the Red camp and so sprung the third party with Mr. Wallace as its Presidential candidate.

"Loyal Democrats do not fall for false theories. While this country and all its people prosper, the farmers of Russia turn their wheat over to the Government and in turn are given back black bread to eat.

"Loyal Democrats do not forget the Thousand Dollar Clubs and the great Hoover depression. Don't forget that $8 a ton cottonseed, 6-cent cotton; 15 cents a bushel oats; 50 cents a bushel wheat, and that miserable 25,000,000 people out of employment.

"Let us be on the alert and as active, loyal Democrats we will not have to worry about the grand old party of Thomas Jefferson, Jackson, Woodrow Wilson, Franklin D. Roosevelt, and of our now great President, Harry S. Truman, being overwhelmed either by Henry A. Wallace, and the Red baiters of Joe Stalin's atheistic communism, or by Taft or Dewey or anyone of the Republic Party. In other words we are going to defeat Wallace's Russian theories and the Republican depression theories. Let us remain democratic and our country prosperous."

Former President Realistic and Patriotic

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks in the RECORD, I wish to include an article by Ted Lewis, which appears in the Washington Times-Herald of even date, which covers a statement by former President of the United States Herbert Hoover, which, in my opinion, is at long last a realistic and patriotic program for this country to assume to protect and preserve our own great Nation.

The article is as follows:

HOOVER CITES PERILS, ASKS DRASTIC REVISION OF MARSHALL PROGRAM—SEES CAVE-IN OF DOMESTIC UNITED STATES ECONOMY IF PLAN GETS APPROVAL IN PRESENT FORM

(By Ted Lewis)

The Marshall plan in its present form threatens to cause a cave-in of our domestic economy "and thus defeat all world recovery," Herbert Hoover said yesterday in urging a sweeping revision of the program.

In a letter to the Senate Foreign Relations Committee, the former President proposed that:

1. Congress refuse to make even a "moral commitment" for 4 years of aid, but confine assistance to 15 months only.

BIPARTISAN COMMISSION

2. A bipartisan policy commission heads up the foreign-aid program, which is too big to be handled "by one man or any one department of our Government."

3. The proposed $6,800,000,000 appropriation for 15 months, plus the $2,000,000,000 slated for other aid abroad during the same period be reexamined for possible economies.

4. The $5,000,000,000 in holdings in this country of citizens of the 16 Marshall-plan nations be used as collateral for United States loans by those nations.

IMPACT ON UNITED STATES ECONOMY

5. A flat $3,000,000,000 of initial aid be in the form of gifts of food, coal, fertilizers, and similar goods. Steel and other capital goods "can be paid for out of the increased productivity they create."

6. An absolute prohibition be made against use of American money by the aided nations for payment of goods from other countries.

Hoover's proposed changes were based on the major premise that the Marshall plan at present fails to take properly into account the impact on domestic economy of a huge relief burden involving hiked exports, a drain on natural resources, and continued "excessive taxation, all of which might bring depression and thus destroy the strength of the one remaining source of aid to a world in chaos."

SUGGESTS SCALING DOWN PLANS

He specifically proposed that in view of the oil shortage, plans for sending $650,000,000 worth of petroleum products to western Europe in the next 15 months be scaled down. Similarly he urged that steel and machinery shipments for the period be cut.

In suggesting that "even a moral commitment to a 4-year program is unwise," Hoover said, "we cannot enforce ideas upon other self-governing peoples, and we should keep ourselves entirely free to end our efforts without recrimination." Moreover, he added, Europe could always bank on the United States for "aid against hunger and cold."

Backing foreign aid in principle he reminded that "the front against communism lies not alone in Europe" and that "the food supply and reconstruction of industry in Germany, Japan, Korea, and China are inseparable from the 16 (Marshall plan) countries."

Subsistence Allowance for GI Students

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mrs. SMITH of Maine. Mr. Speaker, I bring to the attention of the House first-hand facts which I have received from students attending the University of Maine. These summarize impressive and constructive facts emphasizing how imperative it is that we increase the subsistence allowance for GI students who have proved their earnestness and perseverance in equipping themselves with a better education. The education of our youth is the most important investment of our country.

We must match the courage and determination of these young people by immediate action to give them greater financial aid and encouragement through an increase in their subsistence allowance.

Under unanimous consent to extend my remarks, I include a letter from Dalmar S. McPherson dated December 17, 1947, and a letter from Bernard W. Dubay dated January 11, 1948; also a survey of housing and economic conditions at the University of Maine as submitted by Mr. Dubay, representative of the GI student body:

ORONO, MAINE, *December 17, 1947.*

Mr. EARL WHITE,
Men's Senate, University of Maine,
Orono, Maine.

DEARL EARL: Following is a résumé of answers to certain questions on the group study of south apartments made for the department of economics and sociology.

There were 115 families answering both, the question, "How many children do you have?" and "Approximately how much a week has it cost you to live this past year?"—all of whom live in south apartments low-rent housing and all of whom are veteran students.

Answers were tabulated as follows:

Number of families	Number of children	Average cost of living per week per family during 1947
56	0	$33.82
51	1	36.23
7	2	35.00
1	3	40.00

Average cost of living of all families was $36.26.

Of the 115 families, 53 husbands worked part time, 34 wives worked full time, and 12 wives worked part time to supplement Government subsistence.

Not one family was able to manage on Government subsistence, and most used part of their savings or received aid from their relatives to supplement the subsistence money.

On a monthly basis, you can see from the above that the average family's expenditures have been quite far above the monthly $90 income supplied by the Government.

Sincerely,

DALMAR S. MCPHERSON.

UNIVERSITY OF MAINE,
Orono, Maine, January 11, 1948.

Representative MARGARET CHASE SMITH,
House of Representatives,
Washington, D. C.

DEAR MRS. SMITH: Enclosed are the results of surveys concerning economic conditions, housing conditions, and part-time working possibilities with rates of pay. I hope this information will help in our fight for a subsistence increase.

The student senate asked me to express their gratitude to you for the way you aided Roger Thurrell and me during our recent Washington visit.

Sincerely,

BERNARD W. DUBAY.

SURVEY OF HOUSING AND ECONOMIC CONDITIONS AT THE UNIVERSITY OF MAINE

Enrollment figures

Number of men veterans	2,600
Number of married veteran students (approximately one-third of total enrollment of all men)	900
Total university enrollment at Orono	3,894

Housing conditions

(Figures from the housing manager's office)

Number of university dwellings (including trailers, cabins, and FPHA units)	[1] 247
Number of students on housing manager's waiting list	674
Number of expected vacancies in 1948	81

[1] Of these 247 dwellings, 65 are occupied by faculty members.

SUMMARY

About one-fifth of all the married students attending the University of Maine can expect to get university dwellings. The others must seek housing in Bangor, Orono, and Old Towne. All these towns have housing shortages, Bangor having the most critical shortage. Many students are living in dormitories or fraternity houses, while their wives and children are forced to live with their parents or in-laws. Most of these students have given up hope of being able to find housing in the immediate locality. Dow Field personnel are taking some of the apartments and houses in the area, making it more difficult for the college student to find a place to live. Any aid toward housing military personnel of Dow Field would also help the married students at the University of Maine.

PART-TIME WORK FOR COLLEGE STUDENTS

(From Mr. Brockway at the University of Maine placement bureau)

In an interview with Mr. Brockway, he stated that there are not enough part-time jobs for all the students who desire to work.

The wages paid for part-time work are between 60 cents and 75 cents per hour. The university pays 60 cents per hour for part-time work.

Mr. Brockway's statement: "Considering the existing rates of pay for these part-time jobs, the University of Maine administration does not expect a student carrying a full course of study to be able to earn more than $30 a month."

European Recovery Plan

EXTENSION OF REMARKS
OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of January 22, 1948, embodying excerpts of a statement of former President Herbert Hoover concerning the proposed foreign-aid program:

EXCERPTS FROM HOOVER'S STATEMENT ON THE ERP

First of all I wish to make clear my conviction that we should help to the full extent which does not weaken our own economy and thus defeat all world recovery.

There are three dominant reasons why we should do so:

First, the spiritual character of the American people has always led them, and will for all time compel them, to prevent hunger and cold to the full extent of their surplus, and even to the extent of personal self-denial.

Second, while the defeat of communism in western Europe is of vital importance to the preservation of moral and spiritual values for which we stand, it is also of vital importance to us that the economic and political unity of western Europe should be stimulated.

Third, the project builds for peace in the world.

We must take some risks, and I should have liked to be able to give unqualified endorsement of the ECA as presented to the Congress. I am compelled, however, by conscience to say that the plan as presented should have certain constructive modifications and more safeguards.

SIX MODIFICATIONS SUGGESTED

I suggest six directions of such action:

First, as to its organization.

Second, as to the scope of the plan.

Third, as to positive conditions to which the recipient countries should agree.

Fourth, as to the period to which we are committed.

Fifth, as to limits of burden upon the United States.

Sixth, as to some suggestions for lightening the burden to the American taxpayer and upon our economy, and yet preserve our purpose.

No one would contend that the political relations involved in this plan should not be controlled by the foreign policy branch of the Government. But this plan is far more business and economic than political.

By this proposal, together with other authorities, and our other foreign-aid projects, we are placing the control of the whole American economy in the hands of the organization which directs these operations. Its policies can determine the volume of exports, and thus prices, wages, rationing, inflation, and the progress of the incomplete reconstruction in the United States.

Beyond domestic questions, there are momentous foreign economic policies to be decided by the administrators of these powers.

HERTER PLAN FOR CONTROL BACKED

Such power should not be placed in the hands of any one man or any one department of our Government. Obviously the administrative work involved should be conducted by one man. But its policies should be directed by a group, no doubt including department heads, but also including nonofficial citizens. The proposals of Congressman CHRISTIAN HERTER insofar as they imply group conclusions come nearer to meeting this requirement.

I assume it is intended to carry out this operation as a bipartisan enterprise, for only thus can we hope for success. There is far too much at stake to permit partisan approach. If these policies are to be bipartisan, then the members of this board or commission should be selected by prior consultation with the congressional leaders.

Even if administration of these funds is limited to the 16 countries, the scope of policy determination must be far wider. The front against communism lies not alone in Europe, it stretches through Latin America and Asia. We have to bear in mind that the exports of the United States include also very necessary exports to those countries which supply us with essential imports and whose economies are positively linked with our own as, for instance, the Latin-American States.

We must, if we pursue this national policy, include aid to China and other nations, together with the occupied territories of Germany, Japan, and Korea. There are thus not 16 countries directly under relief, but 20, and possibly more

The food supply and reconstruction of industry in Germany, Japan, Korea, and China are inseparable from the 16 countries. Both logic and administrative management suggest that they be placed in the hands of this commission.

GERMAN TRIZONAL UNION NEEDED

Moreover the reopening of German and Japanese industrial plants is not only essential to provide needed materials in Europe and Asia but the situation is at present an "operation rathole" to the extent of $1,500,000,000 for each year of charitable food from the United States to keep these people alive. With restoration of their production and exports that sum could be applied to reconstruction by ECA, not used to keep idle thousands of German and Japanese plants and workmen. Specifically those of the 16 countries concerned should agree to the trizonal economic union of western Germany, a peace with Japan, a cessation of plant destruction and removal, and abolition or increase in levels of industry in these two countries.

The plan originally proposed an authorization to ECA of $17,000,000,000 and a 4-year program. The first 15 months' appropriation is proposed at $6,800,000,000. But in addition to this, we are committed to western Germany, Japan, Korea, and possibly China, and perhaps others, for supplies amounting to about $2,000,000,000 in this same period of 15 months, or a total of nearly $9,000,000,000.

It was prudent not to require that commitments be made by the United States at the present time for more than the first 15 months, until July 1, 1949. We cannot even hazard what the export and financial possibilities of the United States will be for more than a year in advance. Food being

the largest item in the whole program, we can only judge from harvest to harvest.

Even a moral commitment to a 4-year program is unwise. We cannot enforce ideas upon other self-governing peoples, and we should keep ourselves entirely free to end our efforts without recrimination.

Whether the American economy can stand a burden of $9,000,000,000 of relief in this 15 months must arouse great anxiety.

PRICE-WAGE PROBLEMS WEIGHED

Another disturbing question is the effect upon prices, wages, and inflation generally of the volume of exports and finances here proposed. In the fiscal year 1946 we exported $4,400,000,000 more goods than we imported. In the fiscal year 1947 we exported $7,000,000,000 worth of goods more than we imported. (In both cases services are omitted.)

These differences were represented by gifts and loans to foreign nations. They were bumper-crop years, yet the volume of exports in fiscal year 1947 and since have undoubtedly raised prices and started inflationary spirals. It seems difficult to believe that we can continue at the rate now proposed and not produce the same effect.

It is an illusion that scarcity and thus increasing inflation can be more than temporarily retarded by compulsory fixing of wages, prices, and rationing. Aside from the reduction of primary freedoms involved, history and our national experience prove that any such course sets up chain reactions which ultimately decrease production and defeat their very purpose. A part of western Europe's present difficulties is due to these practices.

The only safe road for us is not to overexport. We can to some extent increase the amounts available for export and hold prices by adopting strong voluntary conservation measures; by using voluntary restraints on prices and wages; by doing more and harder work with uninterrupted production. Such voluntary organization, if vigorously and systematically administered, avoids most of the evils of the coercive system.

If some of the imported quantities scheduled be reexamined in the light of supplies, if certain principles were established by Congress, if certain requirements were fixed, and if an effective business organization were set up, I am confident that the burden upon the American taxpayer could be lessened and our essential purpose accomplished.

FOOD DEMAND HELD VERY HIGH

First. The food programs, when correlated to the needs of the rest of the world, would appear greater than the world supply during the first period from April to June 1948, and at the same time maintain rations in the occupied areas and some "plan" countries at an endurable level. Further, these programs seem to imply a dependence upon world harvests much greater next year than last.

Second. The program for agricultural reconstruction seems imperative, but the program for industrial production implies not alone a restoration of prewar productivity but a great increase in such production above prewar. That is indeed greatly to be desired, but whether Americans are able out of production and taxes at this time to provide more than a restoration to prewar levels is another question.

Third. The program calls for export of about $800,000,000 of capital goods, including steel and machinery from the United States in the 15-month period. Both the Harriman and the House of Representatives reports cast doubt upon our ability to supply this amount of steel production and to maintain our necessary exports to other vital quarters. A House report states that these demands are "a staggering deficit to impose upon steel in the United States * * * it is difficult to see how * * * it would be possible to fulfill this program without seriously weakening our economy." The capital goods programs of the 16 nations of necessity may need to be extended over a longer term.

HOME NEEDS EMPHASIZED

In fact, our productive machine today is crippled by the insufficient railway equipment for the prompt delivery of goods; our food production is lessened by scarcity in agricultural machinery; we have sporadic oil famines due to lack of oil-well, refining, and transport equipment; our automotive industry is short of raw materials; we are dreadfully short of building materials for veterans' homes. No further evidence of shortages is needed than the black market where steel is selling for over 100 percent premiums.

It would seem that the possibilities of early steel and machinery production in Germany should be more vigorously undertaken, obviously with readily effective curbs as to any munitions diversion. With removal of the inhibitions on these German industries, with vigor and working capital, a large segment of this program could be supplied from that quarter, instead of by increasing scarcities and delaying reconstruction and increasing taxpayer costs in the United States. It may be said that Germany cannot do this and export coal to the 16 nations. Pending increase in Ruhr coal, some increase in United States coal exports might be found to be better. The same policies should be applied to fertilizers and to oil refining in Germany.

In any event, it would appear that the 15 months' capital goods program must be extended over a much longer period.

Fourth. The estimates of over $650,000,000 of petroleum supplies to the 16 nations for the next 15 months represent a considerable increase over the last 15 months and would seem to be greater than the supply. Pending development in the Persian Gulf, the world is already short of oil and there seems no source for any such an increase.

Fifth. Inquiry might be made into methods of relieving the United States Treasury of some of this cost through collateral loans by, say, the RFC or by the Export-Import Bank.

There are citizens in some of these European states who have large private property in the United States and in other parts of the Western Hemisphere. Prior to the war, the British Government collected a group of such investments and borrowed money on them in the United States.

There are large sums of this character still outstanding, and they could be collected by the various European governments, paying their citizens in their own bonds; these assets could then be pledged as security for loans in the United States. If there is protest that taking over these privately held resources is a hardship to the owners, it may be pointed out that the alternative is a far greater hardship for the American taxpayer. In the first instance, the owner would be reimbursed in full in his own currency; in the second, the American citizen would be taxed the full amount and never see it again.

Sixth. Some expansion of private enterprise in supplying of capital goods to the 16 nations, and thus relief to the United States Treasury, might be found in the use of foreign currencies realized from the sale by the recipient countries of United States goods coming to them as gifts or grants.

Seventh. It is proposed that this nearly nine billions in 15 months shall be by grants, which are gifts, as well as by loans. I suggest the Congress should define some general principles of distinction between gifts and loans.

We must disillusion ourselves of the idea that loans from the United States Government, except where secured by transferable property, or other specific security, are real loans. They are gifts. There are economic as well as political reasons why such loans will not, and cannot, be repaid. We will act more intelligently if within the minds of our own people and those of the recipient peoples we separate our gifts from our loans. We should separate charity from business.

AMERICANS WILL GIVE COMMODITIES

That division can be made clear if we confine our gifts to the actual American surplus of consumption goods, such as food, coal, fertilizers, and cotton (not for reexport), which are essential to maintain life. I believe the American people are perfectly willing to give these commodities as a gift to those countries which cannot pay for them. While giving these away will be privation, yet we can reproduce the agricultural products and we have ample future resources in coal and some fertilizers.

The total of such relief goods from the United States during this 15 months might amount to $3,000,000,000. Such an amount of gifts would enable participating countries to use their exports to pay for other goods in their programs.

The relief exports to Germany, Japan, and Korea should be a first charge on all reparations.

Eighth. I do not believe we should be called upon to make gifts or grants of steel and other capital goods. They can be paid for out of the increased productivity which they create.

Ninth. I do not believe we should make gifts or grants of American money to pay for goods from other countries.

The program of supplies apparently calls for a large part of $3,500,000,000 of Western Hemisphere goods to be purchased with American money from Canada, Argentina, and other Western Hemisphere states. Of this amount under $200,000,000 represents capital goods, the rest being mostly agricultural products. As the latter represents surplus production of the other Western Hemisphere countries, it would appear that they should be anxious to sell and, no doubt, to cooperate in creating world stability. It would seem, therefore, that these states should extend credits to the 16 countries for such goods. A partial guaranty, or advance, against such credits by the United States through the Export-Import Bank is the most that we should be asked to give.

The State Department and ERP

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks, I include the following article entitled "Our Swollen State Department," by Felix Morley, which appears in the issue of Pathfinder for January 28, 1948:

OUR SWOLLEN STATE DEPARTMENT

(By Felix Morley)

Twenty years ago the listing of the Department of State required just over one page of the Congressional Directory. Now it takes 13 pages of the same reference book, merely to give the names of the divisions and bureaus and offices in this single governmental department.

If you are concerned about what is happening to your Government you will find it useful to visit the nearest public library and examine copies of the Congressional Directory. A new volume is issued for every session of Congress and the volume for the Second Session of the Eightieth Congress, which convened on January 6, will be available shortly.

Each volume is a mine of well-arranged information. But what makes the Congressional Directory particularly valuable is its continuity. You can compare the current issue with one of 20 years ago, as I have been doing. That shows you the changes that are taking place. It also shows why it is difficult to bring taxes down.

The way in which the Department of State is spreading out is simply fantastic. Twenty years ago it had a dozen divisions, each moderately staffed and headed, for administrative purposes, by four assistant secretaries and an under secretary.

Now it is almost impossible even to count the number of assistant secretaries, executive assistants to assistant secretaries, special assistants to assistant secretaries and so on. Under them are a score of separate and often overlapping offices, each composed of numerous divisions. It is a fair guess that Secretary Marshall himself cannot name all of the divisions over which he presides.

As an illustration of runaway bureaucracy one may take the new Office of Intelligence Research, with a director, a deputy director, an executive officer, and five subordinate divisions. Each of these divisions has its chief and sometimes an assistant chief as well, so that the modest title of one petty officer is "Chief of the Division of International and Functional Intelligence of the Office of Intelligence Research of the Department of State." You probably never heard of the man who has this title.

But alongside the Office of Intelligence Research has grown up a separate Office of Intelligence Collection and Dissemination, with a separate director, a deputy director and four subordinate divisions. There is, for instance, an "Acquisition and Distribution Division of the Office of Intelligence Collection and Dissemination." It has a chief and an assistant chief.

Of course all these agencies continuously get in each other's way. So to keep them straight still another division has been established, entitled "Division of Foreign Activity Correlation." It isn't getting things very well correlated, however. Perhaps that is because of the "Office of Special Political Affairs." This has a director, a deputy director, a special deputy director, a special assistant to the director and—for good measure—an executive officer above all that.

This maze of bureaucracy explains why there is so much Congressional opposition to letting the Department of State administer the European recovery program.

During the war and postwar years the State Department has grown to such size and complexity that its right hand no longer even knows what its left hand is doing. And there has really been a "left" hand in this department, as the loyalty investigations have shown.

Whatever money is appropriated for European relief from now on must be spent efficiently. That is why there is growing support for the Herter bill, which would make the administration of ERP responsible to Congress, rather than to the Department of State.

Reclamation

EXTENSION OF REMARKS
OF

HON. A. L. MILLER

OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mr. MILLER of Nebraska. Mr. Speaker, I ask permission to insert in the Appendix of the RECORD my own remarks and include seven resolutions passed at the annual meeting of the Nebraska Reclamation Association which was held this month.

Mr. Speaker, the Nebraska Reclamation Association at their annual meeting at Kearney, Nebr., on January 15 and 16, passed some resolutions which I recommend as good reading for my colleagues.

The development of reclamation, which includes electric energy, has been retarded in Nebraska until recent years. The Nebraska Reclamation Association is giving new force and focusing the attention of the public upon the great need for developing and using the natural resources which we have in the State. Nebraska has a large supply of water which is not now being used, either for irrigation or the production of electric energy.

It is my opinion the Nebraska Reclamation Association is rendering a great service to the State in promoting the full use of all of our natural resources. Nebraska can well be the new Garden of Eden if we use wisely the great reservoir of water now stored in the State.

The resolutions follow:

Resolution 1

Whereas we recognize that the greatest obstacle to progress in the field of reclamation is the subversive influence of special interest groups; and

Whereas these groups operate under various pretenses as interested in the public welfare and under names often misleading; and

Whereas associations with genuine interest in progress are frequently infiltrated with a purpose to hamper their efforts: Now, therefore, be it

Resolved, That we urge State associations and the National Reclamation Association to safeguard democratic processes in their activities and to avoid undue influence of special-interest groups seeking selfish ends.

Resolution 2

Whereas a Nation-wide as well as a Statewide shortage of electrical energy exists: Now, therefore, be it

Resolved, (1) The Nebraska Reclamation Association reaffirms its faith in public-power development as a corollary of irrigation as the most beneficial and efficient means of providing ample electrical energy for every use; (2) we commend the Nebraska public power and irrigation districts for the efforts they have put forth to meet the emergency involved in the current shortage of electrical energy and for their effective coordination and planning under the most difficult conditions; (3) we ask the utmost of cooperation from both State and Federal governmental bodies in the efforts of the Nebraska hydros to erect additional facilities for the production of electrical energy and we, as an association, pledge our complete cooperation toward that end.

Resolution 3

Whereas the conservation and effective use of water resources is undeniably essential to the welfare of all of the people of Nebraska; and

Whereas the harnessing of the tributaries of the Missouri River flowing through Nebraska is an integral part of the development of the whole Missouri Valley; and

Whereas the solution to the most beneficial use of water in Nebraska can only be achieved through the mechanism of such an over-all program as the Pick-Sloan plan, which already has been given the approval of the Federal Congress; and

Whereas attempts to obstruct the development of the Missouri Valley can only serve to delay the further application of water to Nebraska acres: Now, therefore, be it

Resolved, (1) We endorse the Pick-Sloan plan, and we call for an acceleration of that plan in conformity with Nebraska law in Nebraska, as well as in conformity with the laws of other States in the entire Missouri Valley, so that we may enlarge our available supply of electrical energy, bring more acres under irrigation, and strengthen our existing means of flood control; (2) we recommend the construction of a high-level dam at Fort Randall so that the maximum amount of electrical energy may be produced there to help alleviate the present power shortage and contribute materially to the repayment of reclamation district construction costs, thus reducing the cost of irrigation to the farmers.

Resolution 4

The Nebraska Reclamation Association wishes to commend in highest terms the Nebraska Legislature for the passage of L. B. 350, authorizing the formation of reclamation districts. We believe that these districts will have a far-reaching beneficial effect on the irrigation program in Nebraska.

We also wish to commend the sponsors of and the participants in the reclamation district now being formed in the central Platte Valley for their prompt adoption of this aid to a balanced use of gravity and pump irrigation.

We recommend that other areas in the State having similar problems give serious consideration to the adoption of that procedure.

Resolution 5

Whereas in the expenditure of Federal funds for the reclamation of lands by the application of water from a Government-financed project, the national policy under which the Bureau of Reclamation functions has been to limit the acreage owned by individual persons, before construction costs are paid, to 160 acres: Now, therefore, be it

Resolved, That the Nebraska Reclamation Association favors a policy of limitation of acreage to individual farmers on family-sized farms and opposes the application of water from Government-financed projects to large tracts of land under centralized ownership farmed by tenants under corporate management.

Resolution 6

Whereas the need for an adequate knowledge of the supplies of ground water in the State of Nebraska has long been recognized; and

Whereas the various State and Federal agencies studying ground water have collected immense amounts of data and are diligently continuing their surveys: Now, therefore, be it

Resolved, That we commend the substantial progress that has been made and urge the various agencies involved to fully coordinate the data obtained so that the greatest possible benefits may be derived therefrom; be it further

Resolved, That we urge the Nebraska delegation in Congress to continue diligently to seek adequate appropriations for the further development of this investigation to the end that at the earliest possible date we may have a subsurface map of our State which will not only give information as to water levels but also the permeability of materials and the rate and directions of movement of our ground water.

Resolution 7

Be it resolved, That we believe that a sound reclamation program in Nebraska can only

be developed when a large majority of our citizens understand the full significance to the future welfare of the State involved in the conservation of our soil and water resources. We highly commend the University of Nebraska, its board of regents, Chancelor Gustavson and the faculty, for their recognition of the importance of the need for highly qualified technicians in this field and their effort to offer a complete course in the conservation and development of our natural resources. It is particularly noteworthy and significant that increased emphasis is also being placed by them on the research phases of reclamation problems and their solution. We express our special gratitude to Chancelor Gustavson for using his exceptional talents in marshaling the various research agencies into a coordinated program designed to bring to bear on our urgent problems the combined results of their research.

Commercial Fishing Operations in the Trustee Island Area

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. CRAWFORD. Mr. Speaker, in the far Pacific and in the general vicinity of Guam, Samoa, and all of the trustee island area, we are taking on new responsibilities.

In my opinion, it is very important that American citizens operating American commercial fishing equipment, be permitted to do business in the general area here referred to so that our own people will have the opportunity to study weather conditions and observe ocean shipping activities and operations of the nationals of other countries.

There is an American firm with headquarters now in Honolulu which desires to expand its commercial fishing operations into the trust territory area. A few days ago, the members of the Subcommittee on Territories and Insular Affairs had an opportunity to hear an explanation of this general subject by Mr. Carl H. Holm. We are informed the State Department, the Department of the Interior, and the Navy Department are now all giving consideration to this question.

For the information of the Members of the House, I submit the following letter which I have just received from Mr. Holm:

ARLINGTON, VA., *January 14, 1948.*
Hon. FRED L. CRAWFORD,
United States House of Representatives,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN CRAWFORD: I desire to extend my very sincere thanks for your kindness in arranging the unrecorded executive meeting of your committee this morning to which I was allowed the privilege of stating our views in connection with the establishment of American industrial enterprise in the trust territory.

Especially do we appreciate your acute understanding and appreciation of the problems involved.

I know that the members who were present and heard your very succinct explanation gained considerable benefit in foreseeing the obstacles which must be surmounted before American free enterprise, along the line we propose, can be with security established in that area.

I should like again to emphasize the importance of the three main considerations which are in need of determination prior to the investment of American industrial capital in any project in the area.

First, it is necessary that such industrial enterprise be afforded the opportunity to purchase or lease on a long term basis real estate for operational bases.

Second, it is necessary that products of the area enter the United States duty free.

Third, the importation under special permit of a limited number of nonnatives to the area for purposes of special training of the natives in the nature of the particular industry involved.

It is difficult to overemphasize the pioneering effort necessary in activities such as those which we contemplate. They involve transportation of every item of material, ingredient, and living requirement more than 4,000 miles southwestwardly from Honolulu, and 6,000 miles from continental United States. We are therefore entering an area more than 6,000 miles from the mainland from which we must transport all of the industrial essentials and to which we must transport our finished product.

Your explanation of this aspect of the problem this morning reflected a complete understanding of the situation on your part. The necessity of security of investment as an incentive for the establishment of industry under the American system of free enterprise in the area is one of prime importance without which there can be no development of the area. I think also that the consideration so far as the present world food situation is concerned is one which should strike the chord of common sense in the deliberation of those having to do with the determination of the policies for the trust territory.

The sooner American enterprise is allowed to enter the area then so soon are native problems to be converted from a dole existence to one of self-sustaining economy.

I shall be pleased to present any additional information the committee may deem beneficial.

I am leaving Washington tomorrow for Honolulu.

With kindest personal regards, I am,
Very truly yours,
CARL H. HOLM.

Need for Fullest Information and Facts Concerning European Recovery Program

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. BOGGS of Delaware. Mr. Speaker, like all other Members of Congress and, I hope, all of our people, I have been devoting much thought and study to the European recovery program, or Marshall plan, as it is familiarly known.

Never before has so much effort been expended to convince the Congress and the people that they should loan—or give away—so much money to so many foreign nations. The initial proposal involves spending at the rate of $5,440,000,000 per year, a sum in excess of the total Federal expenditures in fiscal year 1933.

Thus it behooves all of us to study carefully all phases, all aspects, all implications of the Marshall plan proposal. In fact, the President's Committee on Foreign Aid had this to say:

> The people of the United States face a momentous decision. It is one that should be made only after the administration has laid before them and their Congress all the available facts bearing on the critical world situation which it has so fully and frankly given to this committee. The committee has faith in the sound judgment of the people and of the Congress when they have learned the whole truth.

In that statement of the President's committee, I wholly concur. However, in that 286-page report I was unable to find any reference to the fact that as of last September the 16 European nations seeking our aid, or their nationals, have in the United States alone assets totaling nearly $12,000,000,000. Nevertheless, as the result of correspondence with the Department of State initiated by me last October 24, I have been informed that the 16 nations comprising the Committee of European Economic Cooperation, or their citizens, do have in the United States gold and dollar balances as well as securities and other assets approximating $12,000,000,000.

It has been explained to me by the State Department that the great bulk of these foreign assets in our country are required as working balances so that the flow of foreign trade will not be hampered and as reserves against their currencies, their note circulation, and certain of their bank deposits.

I am further informed that only a relatively small portion of these foreign assets could be utilized to offset the cost of the Marshall plan to our own taxpayers. Certainly, however, every foreign dollar which can so be used should be spent for that purpose before a corresponding dollar of the American people's money is used.

However, the principal point I wish to make in connection with these billions of foreign assets is the failure of the President's committee and of the executive departments of the administration to disclose, initially and forthrightly, the existence of these foreign assets with such explanation as may have been deemed necessary so that the people and the Congress would have, in the words of the President's committee, "laid before them all the available facts." Failure to make such disclosures certainly serves to create a basis of suspicion with respect to other aspects of the proposed program—a basis of suspicion which, perhaps it can be clearly established, has no basis in fact.

It should also be clearly understood that the approximate $12,000,000,000 of foreign assets to which I have just referred represents only the known assets of these foreign governments and their private citizens in the United States. It is a generally accepted assumption that they also have in the United States, within their own boundaries, and in other countries, additional undisclosed assets in amounts which, therefore, have not been determined.

In my letter of October 24 to the State Department, I asked to be told

what efforts had been made to ascertain where such other assets exist and in what amounts. In reply I was told—and I note that within the past few days the Secretary of the Treasury has reaffirmed this position of the State Department—that the problem herein involved is how far our Government can properly go in aiding foreign governments to obtain information which has been supplied to our Government on a confidential basis by the banking community, or the compulsory disclosure by our banks which would violate the relationship between banks and brokers and their clients. Yet, very recently, information has been released publicly disclosing the private business of private American citizens concerning their activities in the commodity markets. Such speculative activity by our private citizens is not illegal, although certain basis for criticism may exist. It is not my purpose to condemn or condone either speculative activities on the commodity markets or the public disclosure of the private transactions of our private citizens.

What I am unable to understand, however, is why, under these circumstances, the business of foreigners remains sacrosanct. Why is it so disturbing to our Government to disclose the assets and business transactions of foreigners at precisely the same time when that same government discloses similar information about our own citizens? I believe that in rendering aid to European countries, not one dollar of our taxpayers' funds should be used if there is a dollar of foreign assets which could first be used toward achieving foreign recovery and rehabilitation.

Let me give you an example of the type of thing which I hope can be avoided, and which I believe must be avoided, before our people agree to pour out billions of their own funds on behalf of those in other countries. In connection with the $522,000,000 provided for Austria, Italy, France, and China in the interim-aid bill approved in December, it was stated, and frequently emphasized, that these funds were solely to provide fuel, food, fertilizer, and medicines for the people of those countries throughout the winter months—in other words, to preclude human suffering. Nevertheless, we find that of the $228,000,000 allocated for France, $26,000,000 was to service that country's foreign debt; $17,000,000 was to enable France to make payment to Belgium on its commercial account; $3,000,000 was to enable France to make payment to Brazil on its commercial account; and $10,000,000 to enable France to make an additional contribution to the International Monetary Fund.

I want to make it entirely clear that it may have been important for France to make these payments. It may even have been advantageous to the United States for us to provide the funds for those purposes. But what concerns me is the apparent assumption that the United States is the only nation responsible for the economic recovery of Europe, or perhaps the assumption is that we are the only country rich enough and wealthy enough to do so. That, of course, raises another question: Is it not quite an assumption in itself to assume that this Nation, which now has a national debt of considerably more than one-quarter of a trillion dollars—and I suppose we had better get accustomed to the word "trillion"—is wealthy?

But I want to go back for a moment to our gift of $3,000,000 to enable France to pay Brazil. If it is true that Brazil is financially unable to contribute large sums toward European recovery, could not that country at least forego payments on accounts for the time being and either renegotiate or grant an extension of time to France?

I want to make this point clear: I am not opposed to rendering aid to foreign nations when it is practicable and in the interest of the United States and its people to do so. Nevertheless, every effort should be made to ascertain and understand all of the facts so that the ultimate burden to be borne by this country and its citizens will be kept to a minimum.

In connection with the comments which I have just made, I believe that at least a portion of an article by Mr. Walter Lippmann which appeared a few days ago in his widely syndicated column is pertinent. That portion of Mr. Lippmann's column follows:

> There is a notion, held by some in Washington, that the only way to win the support of Congress for the Marshall plan is to frighten it. I believe that nothing but mischief can come of that, and that to organize a propaganda of fear would be wrong in itself, would not deserve to work, and would not in fact work.
>
> A campaign of fear, designed to ride roughshod over all doubts and hesitations, would be at bottom an attempt to rob the Congress of its right to be convinced and its duty to deliberate. The notion, though it is put forward by fervent, even frantic, opponents of the totalitarian system, is profoundly undemocratic.
>
> It lacks a decent respect for the dignity of representative government, and it rests on the self-righteous assumption that the true believers in whatever it is that is to be stampeded through Congress are entitled to do evil that good may prevail.
>
> The practitioners of this notion have been operating for nearly a year, ever since the crisis of last March during which the Truman doctrine was improvised.
>
> That crisis, which arose out of a diplomatic failure to anticipate and to prepare for the recession of the British power in the Eastern Hemisphere, caused a panic within the administration. The panic caused it to stampede Congress into voting aid to Greece.
>
> The campaign of fear employed to stampede Congress, though it may have been successful in lining up the votes, committed the United States so publicly and so irretrievably that it was then impossible to make a success of the Greek policy.
>
> In order to frighten Congress, the administration put itself in a position where, in fact, it was married indissolubly to any Greek Government in Athens which, no matter what else it did or did not do, proclaimed its anticommunism.
>
> The propaganda employed to sell the Truman doctrine for Greece deprived the United States of its leverage and influence in Greece.

The State of the Nation

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. ARNOLD. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an article by Felix Morley in the Nation's Business of January 1948 under the heading "Trends of Nation's Business." This article recites the disastrous results throughout history from all attempts at State controls or regulations which suppress individual initiative:

TRENDS OF NATION'S BUSINESS

THE STATE OF THE NATION

The humble potato has played a considerable role in history. Failure of that crop in Ireland a century ago was the proximate cause of the famine which cut the population of Erin by one-third. A volume could not trace the full effect of the hundreds of thousands of Irish immigrants who then swarmed to this country.

It was in 1847 that the Irish potato crop fell away to almost nothing. It was in 1947 that a catastrophic decline in the English potato crop became apparent. The acreage sown has gone down, but the yield per acre is off even more. The total British potato crop for 1947 is estimated by the Ministry of Food as 20 percent under 1946.

Writing of the Irish potato famine, the English historian, J. A. R. Marriot, says: "So severe and general was destitution that by June 1847 no less than 3,020,712 persons (nearly 40 percent of the population at that time) were daily supported on government rations." But food subsidies did not avert starvation in Ireland a century ago. And they are not averting a destitution not far removed from starvation in England now.

On November 9, 1947, potato rationing went into effect in Great Britain, on the basis of 3 pounds of the tubers per person weekly. Cards must now be punched to obtain one of the few basic foodstuffs heretofore unrationed in Great Britain. The present potato ration is 11 percent below the average prewar consumption of this vegetable in England, and 44 percent below the average consumption during the recent war, when the acreage planted in potatoes was greatly increased. Even this ration may have to be cut.

English historians, seeking to gloss a far from admirable chapter of English history, generally ascribe the Irish famine to the malevolence of nature. Bad weather was held responsible then, much as bad weather is blamed for the current decline in English production. Professor Marriot, however, went beyond climatic irregularity to assert that "the most obvious" cause of the Irish famine "was the appalling rapidity with which during the last century and a half the people of Ireland had multiplied." The same might be said for present food shortages in England.

But there was one contemporary Englishman, the great Quaker member of Parliament, John Bright, who was not interested in alibis for governmental failures, no matter whether the government was that of his own or another country. Early in 1848, speaking of "the agonies which have been endured by the population of Ireland," he told the House of Commons that:

"We must retrace our steps. We must shun the blunders and, I would even say, the

crimes of our past legislation. We must free the land; and then we shall discover, and not till then, that industry hopeful and remunerated, industry free and inviolate, is the only sure foundation on which can be reared the enduring edifice of union and peace."

What John Bright was criticizing in this famous speech was absentee landlordism. What he meant by freedom of the land was the removal of state controls, exercised over Ireland from London, which made it virtually impossible for the Irish peasant either to own, or to improve, or even to cultivate intelligently the soil on which he labored. When arbitrary state controls produced the Irish famine, John Bright blamed neither the weather nor the Catholic Church. He put his finger on the source of the decay—a governmental system dedicated to suppression of individual initiative in behalf of a privileged governing class.

In the century since John Bright argued for industry free and inviolate, the wheel has come full cycle in the British Isles. The Irish people have achieved their independence and, far from fearing famine, now eat in a manner which is the envy of their English neighbors. And there is bitter irony in the fact that the English Socialists, who worked devotedly for Irish freedom, have misguidedly fettered on their own people a governmental system as crushing as the one from which they helped to liberate Ireland.

On November 17, President Truman asked the special session of Congress for authority to impose a price-fixing, wage-fixing, rationing and production-allocation program going beyond anything which the American people endured as a part of the war effort. In a radio broadcast that night Senator TAFT aptly referred to English experience under what the President has himself described as a "police state" economy. Said Mr. TAFT:

"The English have complete price control and rationing, and they haven't got enough to live on. They have no incentive to get production. Men don't work longer hours, because there isn't anything to buy with the money they will earn. Surely, with that example before us, we don't want to socialize and regiment America."

The tragedy of the English experience should be better appreciated in this country. I have before me material from the official British Information Services, issued 10 days before potato rationing went into effect in Great Britain. It points out that "Government subsidies control the price of basic foods" and mentions potatoes at 2¼ cents a pound as an illustration of the advantage of this price-fixing policy to the consumer. Almost before the ink was dry on this propaganda the British housewife found herself unable to buy more than 3 pounds of potatoes a week, and forced to queue up to obtain even that pathetic hand-out.

Ten years ago I was in Berlin, when the Nazis were going strong and very proud of their planned economy. But the anxious German people had a grim joke, passed round by word of mouth because in a police state no paper dared to print it. "Hitler keeps down the price of eggs," they said. "The only defect in his planning is—there are no eggs."

That is the catch in national socialism everywhere. The British Government has certainly kept the price of potatoes down, but nobody in England can now have more than "one medium-sized boiled potato" a day. It is interesting to see how a "ministry of public enlightenment" can play both ends against the middle. At the end of October the British information services were emphasizing the cheapness of potatoes. At the end of November they were emphasizing the scarcity of potatoes.

The potato is only a symbol, though an important one. If a controlled economy meant merely a shortage of this particular food, men would survive the hardship. The Irish peasants survived by emigrating to the United States. We are no longer so hospitable to immigrants. But we are glad to give of our surplus to save demoralized Europeans from starving in their own countries.

But that sort of help can never be more than a palliative. Before Ireland could become prosperous it had to be freed, as John Bright pointed out, of absentee landlords. Before England can become prosperous again it will have to be freed of absentee bureaucrats—those who are absent from productive enterprise so that they may hamper the production of others with countless decrees, controls, taxes, and regulations. There are fewer potatoes in Britain than there were 2 years ago. But in this period the Ministry of Food has added more than 10,000 employees to its pay roll. By ironic coincidence, the percentage decline in potato production is the same as the percentage increase in officials planning for agriculture.

Perhaps the most tragic part of the English picture is the effort to eliminate the disasters of a controlled economy by adding more controls. On December 8, conscription of labor, on the true national socialist pattern, started in Great Britain. The first men and women to be drafted, for mining, agriculture, and textile factories, are the "spivs" and "drones"—those who have no occupation or who live by betting operations and the like. Are there no "spivs" and "drones" among the 53,600 employees of the Ministry of Food?

The great majority of Americans are descendants of men and women who came to this country to escape those countless regulations which kept them from being productive in Europe. America today attests what men and women can do when they build on what John Bright called the only sure foundation.

Will a free people accept the national socialist devices which have been so disastrous for Europe?

FELIX MORLEY.

Mikolajczyk Tells of the Appeasement of Russia Even at the Nuremberg Trials With Regard to the Massacre of the 11,000 Polish Officers

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two additional installments of articles published in the Milwaukee Sentinel which describe how the murder of 11,000 Polish officers was contained in the Nuremberg indictments, but when it appeared the proof indicated that the Russians were guilty of this crime the matter was strangely dropped.

Following are Mikolajczyk's two additional installments:

RUSSIANS MURDERED 11,000 POLE OFFICERS AT NAZIS' SUGGESTION

(By Stanislaw Mikolajczyk, former Prime Minister of Poland and president of the Polish Peasant Party)

(Installment X)

The complete story of the murder of 11,000 Polish officers in the Katyn Forest near Smolensk has never been told.

But because I am free today I can shed new light on a catastrophe which, while numerically small in the great picture of World War II's mass murders, remains significant because it gave Russia a long-awaited reason to break diplomatic relations with Poland and because it remains a milestone in the appeasement of the U. S. S. R. by the British and Americans.

I have already outlined the repeated inquiries made of Stalin and other Russian leaders by the Polish Government-in-exile concerning the missing officers.

As late as March 13, 1942, Russian Ambassador Bogomolov had replied—in a formal note—that the 11,000 missing officers had been released in the so-called amnesty of July 1941. But less than 400 of these men, who had been held as prisoners of war at the Red Army camps of Kozielsk, Starobielsk, and Ostashkov, had reported to General Anders. These 400 were sent to Moscow when the others were sent westward to their doom.

In London we had been receiving disquieting news from our Polish underground concerning these men—the very cream of Polish manhood. We learned, for instance, that they had written to their families in the spring of 1941 that they would be sent home. Germans in Warsaw readily told our citizens that the officers could be expected on an exact date in April of '41.

Then all mail from the officers suddenly stopped. And all we were able to receive from the Russians thereafter were evasive replies or outright untruths that the men were free and just did not choose to report to General Anders for further prosecution of the war against Germany.

Here is the true story. There are two "holes" in it—voids that can be supplied only by American and British sources who, at this late date in communism's war on civilization, still do not choose to speak.

TRAIN UKRAINIANS

In the spring of 1941 when Hitler and Stalin were still allies, the Germans decided to train 30,000 Ukrainians for service in the German armies. They set up training camps at Krosno and near Zakopane. The Ukrainians in question had escaped from the Soviet-occupied zone of Poland and had made their way across the Ribbentrop-Molotov line to the German zone of occupation.

The Russians soon learned of these training plans and protested to their Axis ally. Communications were exchanged and out of these came a deal whereby the 30,000 Ukrainians were to be exchanged for the 11,000 Polish officers the Russians were holding.

But the Germans tired of the whole business, and when the deal was completed, and the Ukrainians delivered, the Nazis remembered certain fundamental Nazi precepts; among these being the need of room, but no more people, and the planned extermination of the intelligentsia of conquered countries.

MURDER FOR ECONOMY

So the Germans informed the Russians that the Polish officers could be murdered, to save transportation and other problems.

Still believing they were going home which, as bleak as the prospect was, must have lifted their hopes a bit, the Polish officers from Kozielsk, Starobielsk, and Ostashkov were led into the Katyn forest and, in what must have been a scene that sickened Heaven, were murdered. Each man was shot through the back of the head, after his hands had been tied behind him by fence wire.

The Russians threw the bodies in a long single grave. Beyond the crime of the act itself, they made one other mistake. The ground in which they placed the dead officers was of a peculiar composition which virtually mumifies dead objects placed in it. What might have become unidentifiable skeletons in a few months remained almost perfectly preserved corpses * * * with papers and other means of identification intact.

DISCOVERED BY GERMANS

On April 12, 1943, as the Germans retreated slowly back into Poland, after having advanced to within sight of Moscow, the German News Agency announced the discovery of the bodies and added that the men had been killed by Soviet political police following the occupation of that region by the Red Army in 1939.

In London the Polish Government faced the stern reality of restoring the suddenly broken morale of our Poles who were now fighting bravely on the same side as the Russians. The Germans, making heavy capital of their discovery, posed as the outraged defenders of human rights. They placarded Warsaw and other Polish cities with startling posters condemning the Russians for their act.

We ordered a counter-propaganda wave that reminded the Germans of their infinitely greater crimes against the Polish people—including their hideous extermination of Polish Jews—and anxiously awaited some convincing denial by the Russians.

ASK RED CROSS AID

On April 14, with Moscow still silent, we asked the International Red Cross to investigate the German claim. We knew it was fruitless to appeal to the Russians to investigate—for, unknown to the world, we had been quietly asking for such information for nearly 2 years. We had to secure some explanation now for our outraged people.

The Russians were informed immediately of our appeal to the Red Cross for an impartial investigation. On April 15 the Soviet information bureau called the German allegations "vile fabrications."

The Polish cabinet met the next day and made a public announcement that we had asked the Red Cross to inquire into the tragedy, and we made it very strong that we were unwilling to accept the German side of the story.

LIST GERMAN CRIMES

Our formal statement declared:

"The Polish Government denies to the Germans the right to draw from a crime which they ascribe to others; arguments in their own defense. The profoundly hypocritical indignation of the German propaganda will not succeed in concealing from the world the many cruel, repeated, and still lasting crimes committed on the Polish people."

We listed a number of those crimes, "* * * so as not to enable the Germans to lay impudent claims to appear in the role of defenders of Christianity and European civilization."

On April 18, a campaign of abuse against the Polish Government opened in the Russian press. The following day Pravda, in its lead article, declared that members of General Sikorski's government had "swallowed a carefully baited hook thrown out by the German propaganda agencies."

Our simple appeal to the Red Cross, Pravda said, aided the German fabrication of "a foul lie which will fill all people of common sense with repugnance * * * Those Poles who willingly snatch at Hitler's forgery and support it and are ready to cooperate with the Hitlerite hangman of the Polish people, will go down in history as Hitler's helpers. The Polish people will turn away from them."

Stalin, as I have earlier noted, had set up his own Communist-dominated Polish "government" in the Union of Soviet Socialist Republics, and we in London now knew that he had seized upon the Katyn murders as a reason to break with the true government in London.

The blow fell officially on April 25 when Molotov handed a note to Tadeusz Romer, our Polish Ambassador to Moscow. It was the now historic note which began:

"The Soviet Government considers the recent behavior of the Polish Government with regard to the Union of Soviet Socialist Republics as entirely abnormal and violating all regulations between the two allied states."

The note accused the Germans of the murders, charged that we in London had been plotting to seize territory (the area of Poland which the Red army had occupied as Hitler's ally in 1939) from the Union of Soviet Socialist Republics, and it concluded:

"All these circumstances compel the Soviet Government to recognize that the present Government of Poland, having slid on the path of accord with Hitler's government, has actually discontinued Allied relations with the U. S. S. R. and has adopted a hostile attitude toward the Soviet Union.

"On the strength of the above, the Soviet Government has decided to sever relations with the Polish Government."

FINDS WELLES CHILLY

General Sikorski immediately asked to see Anthony Eden and was criticized for his "impetuous" act. In Washington our Ambassador found Sumner Welles suddenly chilly and impatient.

We who had been advised by Britain and the United States not to reveal to the world our long quest for the men were now placed in the difficult position of provocateur in a split among two Allied powers.

The International Red Cross dropped our plea on April 27 because no "corresponding invitation" had been received from Moscow.

TRIAL AT NUREMBERG "CONVICTED" SOVIETS OF POLISH MASSACRE

(Installment XI)

Before I leave the question of the Russian murders of 11,000 Polish officers in the Katyn Forest in the spring of 1941--which was used as a pretext by Stalin to break relations with the Polish Government and recognize a Polish Communist "government" which he had formed in the U. S. S. R.—I must trace this tragedy to its bitter end at Nuremburg.

When I returned to Poland as a member of the cabinet in the Communist-dominated provisional government in 1945, I soon discovered that the Polish people had maintained their hatred of the Russians because of the Katyn murders.

I learned that Russian-trained Polish officials were considering staging a "trial" in which it was planned to acquit the U. S. S. R. of the murders and pin the crimes on the Germans.

General Prosecutor Sawicki, acting for Minister of Justice Swiatkowski, approached me and asked if I thought it would be a good idea to stage such a hearing.

"Katyn stays in the hearts of the Polish people," he said.

"Certainly," I replied. "Let us have a public trial and introduce all the proper documents. A fair trial will unquestionably prove the identity of the murderers."

Sawicki hesitated before he asked me what I would be prepared to testify when called to the stand.

"Only what I know," I answered. "I know positively that there was a secret agreement between the Germans and Russians by which the Germans released 30,000 Ukranians to the Reds, in exchange for our 11,000 officers, and that the Germans gave the Russians permission to shoot our men because the Germans did not want to be bothered with them.

"I would testify, too, that we in London made repeated efforts to gain information from the Russians about the whereabouts of the men. I would point out that Russian Ambassador Bogomolov stated formally, a year after they had been murdered, that they were 'released,' and I would tell of the vigorous efforts of the retreating Germans to salvage all documents pertaining to this crime."

Sawicki asked me what I knew about documents. His concern was obvious. I said:

"The Katyn documents were taken by the retreating Germans from Cracow to Breslau, from Breslau into Germany and finally to Czechoslovakia, where there is every indication they were recovered by the American forces."

I told him, too, of Polish Red Cross documents concerning Katyn which were sent "to the west."

Sawicki left me, mumbling that such testimony would not "prove" the identity of the murderers. He reported this conversation to the Polish security police and then he and Swiatowski went to Moscow, where they were ordered to drop all plans for such a trial.

HOPES FRUSTRATED

Poles still looked forward to the official war criminal trials at Nuremberg as their hope of repudiating the Russian lies. But, once again, we were frustrated.

The indictment against the Nazi war leaders made specific mention of the Katyn murders. But the prosecution of German crimes in eastern Europe was handed to the Russian members of the international tribunal. The court ruled that prosecution and defense might call three witnesses each.

Goering, Ribbentrop, and the others on trial were permittted to introduce the official German White Book which accused the Russians of the murders. They were also permitted to put on the stand a scientist who testified unequivocally that the Russian claims of innocence were false because trees—growing out of the communal grave of our officers—were old enough when the grave was discovered to prove that the men had been buried there sometime in the spring of 1941. The Russians occupied the Katyn area at that time.

OWN STAR WITNESS

The Russian prosecutor produced his own star witness—a Bulgarian scientist who had been used by the Nazis in 1943 as an official observer of the opening of the grave.

The Bulgarian now testified that the Germans had permitted him to examine the grave for only 15 minutes and that he had been coerced, at gun point, into making his report which accused the Russians.

As for the Bulgarian witness, the tribunal failed to note that he had been arrested by the Russian secret police when the Red Army entered Bulgaria, had been confined to prison for a long period, and now was telling an entirely different story from the one he had presented before

The ultimate sentence of the Nazi war leaders eliminated mention of Katyn, though it had been prominently mentioned in the indictment.

Obliquely, then, the Germans—though certainly guilty on other counts—had been acquitted of killing the 11,000 Polish officers.

REDS ESCAPED BLAME

But the blame was not pinned on its real perpetrators, the Russians. Why? Because not even Nuremburg, the first such court of justice in the history of civilization, was immune to the appeasement of Russia by its allies.

The rupture of Polish-Russian relations in April 1943, over the Katyn incident, did not lessen our participation in the war against Hitler and our efforts to reestablish our relations with the Kremlin.

On April 28, 1943, 3 days after the break, General Sikorski formally denied the Russian charges that we sought any part of Russian territory. He reminded Stalin that thousands of our men were fighting the common enemy wherever that enemy could be reached, and said that Poland would continue to live up to the pacts it had signed with Russia concerning prosecution of the war and restoration of Polish sovereignty after the war.

INDIRECT ANSWER

Stalin answered indirectly on May 4 of that year, in the course of replying to two questions submitted to him by the Moscow correspondent of the London Times and New York Times. I quote the questions and answers:

1. "Does the Government of the U. S. S. R. desire to see a strong and independent Poland after the defeat of Hitlerite Germany?"

Stalin: "Unquestionably, it does."

2. "On what fundamentals is it your opinion that relations between Poland and the U. S. S. R. should be based after the war?"

Stalin: "Upon the fundamentals of solid good neighborly relations and mutual respect, or, should the Polish people so desire, upon the fundamentals of an alliance providing for mutual assistance against the Germans as the chief enemies of the Soviet Union and Poland.

General Sikorski took note of that.

"It is difficult for me not to show reserve," our prime minister said, "even in the face of such a favorable declaration by Premier Stalin, at the very moment when the Polish Ambassador has left Russia and the masses of Polish population in the U. S. S. R. are left without the care and assistance of their government."

At 11 p. m. on July 4, 1943, General Sikorski's Liberator struggled off the short runway at Gibraltar, was sorely buffeted by a gale and failing engine power, and plummeted into the water.

He, his beloved daughter, all of his staff, and a British Member of Parliament attached to him went to their deaths. The only survivor was his Czech pilot. Poland and the world had lost a great man.

Objectives of ERP Must Be Defined

EXTENSION OF REMARKS
OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. KERSTEN of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter from one of my constituents which contains many thoughtful considerations with regard to the contemplated European recovery program.

Unless we clearly understand our objectives before we take positive action the resources of our country would be dissipated or even used against us rather than in the defense of our civilization. "Make haste slowly," was an old Roman saying, and applies to the tremendous problem facing Congress.

Following is the letter of Alfred J. Kieckhefer, president of the National Enameling & Stamping Co., Milwaukee, Wis.:

MILWAUKEE, WIS., *December 18, 1947.*
The Honorable CHARLES J. KERSTEN,
House Office Building,
Washington, D. C.

DEAR SIR: There has been much discussion relative to the proposed Marshall plan, and this undoubtedly is one of the most important issues that Congress will have to deal with in the very near future.

I have talked personally to Mr. Ernest Weir, of the Weirton Steel Co., Mr. Walter Harnischfeger, of the Harnischfeger Corp., and Mr. Floyd Blair, vice president of the National City Bank, all three of whom spent from 4 to 7 weeks in Europe this past summer visiting England, France, Belgium, and Germany. They made many contacts with various people in the countries enumerated, talking to individuals in all walks of life. They naturally have been able to bring back much information that is valuable, particularly as it pertains to the consideration of the Marshall plan and the impressions that I am about to give you are the result of the combined thinking of these three men. There isn't any question that if the Marshall plan is accepted or rejected such decision must be based upon careful and intensive study of the facts, also very deliberate judgment as to what our aid could reasonably be expected to accomplish.

Up to this point it is very apparent to me and to many people that our efforts up to this time to aid foreign countries fall far short of reaching their objectives. We apparently had two aims, one to relieve the existing starvation period forced upon the people in the war area, and second, that by means of help that we give we hoped that we would thus enable the beneficiaries of our aid to get back into production and thus work to a self-supporting basis. To some extent relief to the starving people has been accomplished. The second of our objectives has not been realized in countries that are now asking further help under the Marshall plan.

It is intended, of course, under the Marshall plan that further aid be given, but the success of the method of giving such aid depends entirely upon the administration of the plan, the follow-through that we make on it, and the measure of cooperation that we procure from the benefited nations. It is also essential that there be a mutuality of helpfulness between the participating nations.

If our sole aim is to help the people of Europe to get back into production and enjoy a reasonable standard of living, it is very necessary that the plan itself be administered in a nonpartisan way not only domestically but in a larger sense abroad as well. We cannot support any particular type of government in any of the countries of Europe that will fall under the Marshall plan except that we must be hopeful that by aiding the people to the extent that they can live decently and be gainfully employed there can be justified the type of government that will insure them a better way of life. If we extend money it must be utilized for the purposes for which it is granted and except in a dire emergency there can be no compromise whatsoever in the matter of utilization of the funds given.

It seems apparent to me that under any Marshall plan we should have before us balance sheets of the benefit countries. If we do not know precisely their economic conditions and their own potentialities for self-help we cannot make effective a practical plan. It is a well-known fact that gold hoarding has long been in vogue in some of the nations we now propose to help. This is undoubtedly due to the lack of faith that people have in their own paper currency. What program is contemplated by the governments asking aid to force this gold into circulation? If a nation's people are facing starvation, surely it is their obligation to help each other as best they can without asking outside aid. It is a well-known fact that in farming communities in some of these countries food is being withheld or diverted into black markets. If this is a known fact, and many people have so reported, what is the plan that is set up by these governments to undertake to get the food distributed to the people in the populated areas? The most important need in these countries is a sound financial program and it seems to me that if they are intending to set up a sound fiscal program a prime requisite would be a stabilized currency.

Very recently there has been published in the papers the estimated amount of dollars invested in America by foreign countries which total is about $15,000,000,000. It has also been stated that there are approximately $10,000,000,000 of gold exchange in our own country owned by foreign nationals and their countries. Of course, not all of these assets are owned by the countries or their people who would participate in the Marshall plan but the people of those countries and their governments do own a part of this reserve and it would appear that one of the required plans for self-help should be the use of a part of these assets by participating nations in their own rehabilitation programs. This phase in connection with the Marshall plan, of course, should be very carefully explored because it is not to be expected that the nations should utilize all of these assets as some of these investments and some of these balances are not in excess of their minimum needs for the proper conduct of their commerce. We therefore must know just what is proposed to be done by way of using these balances and investments by our prospective debtors.

Undoubtedly the argument will be made that these assets are privately owned and consequently not available to the governments with whom we are dealing. It is most important for us to explain to the people of foreign nations our own position with respect to the help that we are asked to extend to them and that the Government of the United States has no money to give or lend to Europe. All our Government has is a debt of $260,000,000,000 and the power to tax its people. Any aid we give to Europe will come from our taxing power unless we intend to go further in debt in which case the ultimate payment of the added debt will result in further taxes. Expressing it a different way, if we agree to the Marshall plan the American people will be giving their private property to aid the distressed people abroad, therefore, to the extent that the distressed people have investments and balances over here beyond their commercial needs it is only right that they use these for their own national objectives as they call upon us for future aid.

It is about time that we put over to the people of Europe that this Nation does not have an inexhaustible supply of resources. We have only to think back to realize that our destruction of livestock, our plowing up of crops, and other unjustifiable programs have undoubtedly led people of Europe to believe that we are so wealthy that we can afford to waste. The British Empire has much more in the way of natural resources than we possess. Half the development of these resources has not kept pace with that in this country. It is up to the participating countries to step up their production to justify our tapping our resources to aid them in an emergency.

It is most vital that in the consideration of the Marshall plan that you give very careful thought to the set-up toward the end that we do not exhaust our own natural resources. Exploitation in the past years has resulted in a production that has taken a very heavy toll of many materials and much of our natural resources. The aid, therefore, that we give abroad should be directed toward the development of their resources so as to enable them to produce all or more than their needs on their own account. They must be made aware of the fact that we have to lighten the withdrawal of our resources in the years to come and that some day undoubtedly our grandchildren may be forced to draw on them for some materials.

In the careful analyzation of the question as to the Marshall plan, particularly referring to England, I feel that England can and still does do business on its own exchange with many of the countries under consideration in the plan. Some of the segments of the British Empire right now are short of much desired dollar exchange and thus there is a limitation to the extent to which they can deal in sterling even with their mother country. However, they certainly can do more than they are doing at present. France, likewise, is a nation with greater possibilities for supplying her own needs than she has exhibited. All of these matters are essential to a proper evaluation of the Marshall plan.

Any aid under the Marshall plan even though expressed in dollars will actually be fulfilled in goods and services. With our postwar domestic demands there is definite competition for our goods and services between our own people and those of Europe. It is only academic that at the present time to a great extent this competition has been responsible for the increased food prices that have developed and the result is that every man, woman, and child in this country is paying a secondary tax to aid Europe when they purchase the necessities of life.

There is a very definite political aspect in the Marshall plan, both at home and abroad and therefore it is vitally important that the administration of the plan here and abroad be carried on in a strictly nonpartisan way. We are extending aid to the peoples of Europe but not to the party in power in any particular nation. We do not lend endorsement to the British socialistic program in helping Great Britain. Unfortunately, however, much of the money set up for use by Great Britain has been wasted by the British socialistic program. We are seeking to help people toward a fuller and more comfortable way of life, hoping that they will choose a form of government that will bring about a more peaceful world and a higher standard of living in an atmosphere of freedom and self-determination.

We must not overlook the fact that much of the fund must be used for the purpose of production of goods and services for which there is an expanding import need in this country. The measure of cooperation in this respect, therefore, is that we must recognize that as a creditor Nation we must increase our imports.

If we accept the Marshall plan and if we put into effect the checks and balances suggested above and if we are given real cooperation by the participating countries in the fulfillment of the conditions of the plan it could prove an incomparable contribution toward a peaceful world. It is believed that some of the nations are conscious of these conditions but now is the time when the promises that they make to us must be backed up by performance. Unless we consider the proposal from all of its practical aspects and put on an intensive program both here and abroad, the money we extend will not enable Europe to reach its objective. Throughout the history of the world a wanton prodigality has brought contempt upon the people of the nation that has practiced it. The constructive creditor, on the other hand, has merited respect.

While the Marshall plan will be debated in Congress we must not lose sight of the fact that it is the problem of every citizen of this country and of the peoples of the participating nations. It needs the best and most logical thought of every individual. If it is put into effect we must set up the workings of the plan so that it will not fail us or the hopeful people of other nations who are willing to work for an opportunity. We here must realize that if the plan is made effective it will result in an artificial stimulation of our economy during its life and therefore we must plan carefully and wisely to avoid a serious depression when the production due to the plan has ceased, and make preparations to meet a normal situation when eventually and inevitably we face it.

It is a very important responsibility that has been placed upon your shoulders as a representative of the people of the State of Wisconsin. It requires very careful analysis on your part of those particular things that I have brought to your attention above. I believe you are aware of the seriousness of this problem and before putting yourself on record as for or against the Marshall plan you will make very careful studies of all of its aspects. Your responsibility is tremendous because of the many important reactions that will result to our economy because of the adoption of this plan.

Yours very truly,

ALFRED J. KIECKHEFER,
President, National Enameling and Stamping Co.

European Recovery Plan

EXTENSION OF REMARKS
OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by Henry J. Taylor:

Exactly who gets the money in the latest European recovery plan? Seventeen billion dollars. I've just found out for sure. I think you'll be very surprised to know.

Our money doesn't grow on trees. It's hard for most any of us to get along at best. Before we're challenged further by the idea that the $17,000,000,000 new European plan must be all or nothing and start paying the bill in our homes and work places and the high cost of living, we need some facts that are contrary to public impression and which were withheld in the original presentation of the plan itself.

Fact No. 1 is who gets the money. It's hard to imagine that fact was left out but it was, and I think we have a right to know. We've already spent $22,000,000,000 abroad since the end of the war. And now we're expected to spend seventeen billion more. Yet, in the mountains of words and figures, this fact was of itself an amazing omission. Actually, the plan, to be truly revealing, should never have been given to Congress and to the public without this fundamental information—who gets the money?

After all, who is more entitled to know where his money goes than the man who pays the bill, which means us all? But the State Department in Washington could not reveal and still feature the anti-Communist angle, my friends, on an over-all $17,000,000,000 basis, on an all-or-nothing basis. So in order to be factual and exact in discussing on the air this latest project, so important in your land and mine, so heavily involved in our inflation, high prices, taxes, the cost of living that is bearing down on us all, and on our future, I've been making for weeks in Washington every possible attempt I could make to get official information regarding what countries in terms of percentages were to get our new seventeen billions.

So at long last here are the facts to plug that loophole, the official figures obtainable only yesterday. They indicate much we've not been permitted to know.

First, you will find that in percentage of dollars, a full third of our $17,000,000,000 plan is primarily another aid-to-England project. The lion's share of the funds goes to the British Isles, one-third of the entire amount, $5,348,000,000 of the seventeen million—billion, to be exact. Now, certainly, that part hasn't anything to do with buying off Communist popularity there and to this large extent the Marshall plan should not have been presented to us an anti-Communist measure any more than the last $3,750,000,000 we gave England in 1945.

Maybe they need it, I don't know. But they certainly don't need it to stop communism in England. No one has even had the nerve to suggest that the British are on the verge of voting Communist. Had the fact that a third of the money we sent—or are to send—was to go there been made public, and early, it would have been impossible to present the powerful appeal for the over-all seventeen-billion fund on an anti-Communist basis, all-or-nothing basis, in the official support for the outlay, at least to the extent of one-third of the entire proposition.

Now, next with England, seven additional countries are ruled out in the same way, where there is, by common consent, no more idea of the population voting Communist than there is in England—this plan or no plan. I refer to Holland, Belgium, Luxemburg, Denmark, Ireland, Norway, Portugal, and little Iceland. So let's see what they'll get. Some of the figures are unbelievable, my friends, but they are correct and official and at last come from our State Department itself.

Do you know how much all of us are to be taxed for the Dutch? Holland is to get $2,436,000,000 American dollars. Fantastic as it may seem, the plan gives Holland, a little country with fewer people than live in New York City, $2,436,000,000. And if that's a calculated risk against communism in Holland it's quite a calculation, yet imaginable. The plan is nevertheless presented as "take the whole plan or nothing, all or nothing." Why, the figure for Holland alone means a charge on us for $308 for every man, woman, and child who lives on the shores of the Zuider Zee.

Denmark is supposed to get over a half billion dollars, $582,000,000 to be exact. For this one little country alone, with a population less than Chicago, that's as much as all the stopgap aid for which the special session of Congress so dramatically called last November. Denmark, a half billion dollars.

Now Ireland: Ireland was not in the war. Ireland is an island. The Communists would have to swim to get there and if there's a Communist there now not an Irishman knows it. But Ireland is to get a half billion dollars, $497,000,000 to Ireland to be exact. So, my friends, $3,500,000,000 out of the seventeen billion go to Holland, Denmark, and Ireland.

For good measure, even Iceland. Apparently there must be quite a Communist threat in Iceland and a lot of western civilization tottering on the brink there besides, for Iceland (SIC) comes into the Marshall plan, and for $38,000,000. Fewer people live on that island than live in Trenton, N. J. And Iceland is just about as much in the throes of chaos, just about as much tottering on the brink of giving up western civilization as Trenton, N. J., except that there isn't much western civilization in Iceland (SIC) anyway. But they're to get $38,000,000 from us, all or nothing, just the same.

Then there's Norway, where the Communist vote is about 7 percent. But Norway is in for $234,000,000 from us. The plan gives $234,000,000 to Norway.

Next comes Portugal in deciding whether or not the propaganda for the plan is padded in its over-all anti-Communist appeal to our

public. Now, in Portugal, the Communist vote happens to be nonexistent. For 20 years the country has been and remains in the hands of a Fascist dictator, Dr. Salazar. Portugal did not fight in the war. Portugal profited immensely in the war by Portuguese standards. Yet Portugal gets our money just the same. Portugal gets one hundred and fifty million American dollars in the Marshall plan. All or nothing. Can the seventeen billion be cut? Can the first installment now asked for $6,800,000 be cut? Well, I should say so, and now.

The anti-Communist angle is valid to a degree in some places where the money is to go, like Italy. But, my friends, the simple truth is, now that we get the figures, so belatedly published and in a most confusing way, only yesterday, the truth is that over ten billion of the seventeen billion is going to countries—I visited every one of them myself—that are by common consent no more on the verge of voting Communist than the State of Indiana, which I visited last week and which hardly looks on the verge of voting Communist to me.

Or take another angle: The appeal is made to us that we are aiding the victims of war-torn countries in gratitude for their losses in the war. Now, there are other appeals that are sound and very much better. That isn't a very good one. How many billions are ruled out on that one? Of the 16 countries in the Marshall plan, over $6,000,000,000 out of the $17,000,000,000 are to go to enemy countries—Germany, Italy, and Austria—for which there are other reasons to help, not gratitude. Seven hundred million goes to countries that stayed neutral, did not fight in the war, and, in fact, got richer than they've ever been in their lives during the war, largely at American expense. They might well be giving something back to us—as if anything like that could ever happen. Sweden and Switzerland, however, have asked us for nothing, praises be.

Now, my friends, all summer long in one European country after another, in England, France, Italy, Greece, Switzerland, Belgium, Luxemburg, Holland, Germany, and in broadcasting in Paris, where the 16 nations were meeting to put in their requests for additional American funds in substance now being decided, I tried to say on the air as factually as I could, right there on the scene and repeatedly, from London, Rome, Athens, Zurich, Berlin, Brussels, Paris, and a dozen other places, and since I've been home, that the objectives of the Marshall plan are good—heaven knows there's no question about that—but that the gigantic amounts asked for were overstated, inflated, padded, padded, and padded, and shockingly weak in respect to how the money should be administered to get the results on which we pin our American hopes.

In short, I think we should be for the objectives of the Marshall plan. But the plan is no longer just an idea, you know. It's now a tangible piece of proposed legislation, ready to be enacted into law and to absorb billions in our American people's money and goods. It shouldn't be approved as written. I'm convinced it will not be. Once we get the air pumped out of the claims and make the necessary changes suitable to the real problem over there, which is a production problem and needs realistic, production-minded American handlers to whip it, we can stop sailing in the pattern of the twenty-two billion that has already gone with the wind since the end of the war and really get some place, really serve ourselves and Europe and the cause of lasting peace by the changes that must be made in the plan, and save ourselves billions and billions besides, that would have been wasted had we allowed our judgment to be blitzed.

The Spirit of Old Greer County

EXTENSION OF REMARKS
OF

HON. PRESTON E. PEDEN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. PEDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an editorial which appeared in one of southwestern Oklahoma's leading newspapers, the Altus Times-Democrat, Altus, Okla., for January 18, 1948. The pioneer Oklahoman mentioned in this editorial is D. C. Jester, Mangum, Okla., 90-year-old Greer County resident.

It is heartening to know that there still exists this loyalty and patriotism as demonstrated by Mr. Jester's unselfish act.

The editorial follows:

Maybe you're not worrying about what has happened to the spirit that built America—the spirit that came ashore when the *Mayflower* landed. But you should be, because we can all take self-inventory and discover it's about gone from within us. What we are thinking today is of today only, and that's a crime being committed against generations to come.

Had it not been for the spirit of thinking of the good that you can do today to make a better tomorrow, southwestern Oklahoma would have been left to the prairie grass. The men and women who came here first and stuck it out couldn't have been thinking of that current day only. They wouldn't have stayed. They stayed because they were possessed of a spirit of America that gave them the foresight to see the fruits ahead for their children and grandchildren—springing from the seeds of labor they planted.

What kind of path are we preparing today for our children and their children? Right now it looks like a blind alley. Although we may deny that we were personally, individually responsible for the recent war, certainly it was our war, and certainly we are responsible now for preparing for peace—or another war.

The cost of what has happened and what is to happen is prohibitive. Seventy-nine percent of the almost $40,000,000,000 budget for the 1949 fiscal year is devoted to peace and/or war preparation. Don't do it, you say. Then let's line up and cut our own individual throats in unison. That's stupid, of course, so we will spend the money gambling for peace and gambling against war.

But here we are trying to dodge the issue of paying the fiddler. We all want income tax back on a prewar basis when there's not a thing in this world except maybe the ocean tides still the same. We don't want to pay our share of the freight—and justly our share should be more than that the future generations will have to pay.

We've lost the spirit of taking care of our own troubles and making every effort to make the path ahead a little smoother for the next generations.

That is, most of us have lost it. There's still a drop or two of the old Greer County spirit left, because, we guess, there are still a few of the old Greer pioneers still living. And there is proof. The Bureau of Internal Revenue Saturday told the story. A 90-year-old Greer County farmer refused an exemption he was entitled to under Oklahoma's community-property law even though it would save him about $500 in income taxes. He made an income-tax payment of nearly $3,000, passing up the exemption of $500 with this statement: "I've got plenty of money and my Government needs it more than I do."

He looked out after us by helping conquer the prairie grass. He loved his country then for the hopes it held tomorrow. And he still does.

Most of us, we fear, love our country for the haven it provides us today.

Russia—The Truth Will Out

EXTENSION OF REMARKS
OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. LARCADE. Mr. Speaker, it seems that it takes an appropriation crisis for the Congress to obtain vital information on matters connected with our foreign policy, and while it seems to be expected that the Congress is not presumed to know anything about such matters, and is expected to vote for any and all appropriations presented to "save" Europe from communism, starvation, and so forth, regardless of the effect upon our own economy or the welfare of the people, the protection and the preservation of our own beloved United States, and these so-called secret documents are fed to us as the occasion arises for such action as is desired by those in authority. Therefore, Mr. Speaker, I ask unanimous consent to include in these remarks the latest release reported by the State Department published under Associated Press caption in the Washington Times-Herald, of even date, as follows:

PACTS SHOW PLAN TO DIVIDE EAST EUROPE—CAPTURED DOCUMENTS REVEALED BY MARSHALL

Secretary of State Marshall threw the book at Soviet Russia last night—a massive array of captured Nazi documents baring details of the partnership between Russia's present leaders and Hitler's Reich for the division of eastern Europe.

With Marshall's sanction, the State Department published the entire record of 260 formerly secret records disclosing that Russia:

1. Backed Germany heavily in her war against the west, furnishing supplies by the hundred thousand tons, striving to the last for friendship with Germany and aiding the Nazi campaign to keep Turkey neutral.

HAD PACT AGAINST UNITED STATES

2. Agreed with Adolf Hitler that the United States, as well as Britain, should be shut out of Europe, Asia, and Africa.

3. Lost Hitler as an ally, and paved the way for Germany's invasion of Russia, by demanding among other things a military base within range of the Bosphorus and the Dardanelles and assurance that the oil-rich area south of Batum and Baku in the general direction of the Persian gulf be recognized as the center of the aspirations of the Soviet Union.

Starting with an official report of the first Soviet bid for closer ties with the Nazis, months before World War II, the book embodied evidence whose release Russia blocked at the Nuremberg war crimes trials.

PLANNED TO SPLIT POLAND

Included in the 362-page volume were secret agreements, signed by Soviet Foreign Minister Molotov, to partition Poland and slice eastern Europe into Russian and Nazi spheres of control. The final entry dealt with Hitler's invasion of Russia.

The State Department said the documents were all from the official archives of the Nazi foreign office, were captured by American and British troops and were published now to complete the record.

While there was no reference to the present state of United States-Russian relations, the circumstances nevertheless gave the sudden release the effect of a major diplomatic stroke.

The first document records a proposal for better and better relations between Moscow and Berlin—advanced April 17, 1939, by the Russian ambassador to the Reich. This was at a time when Britain and France were seeking to enlist Russia in a collective security pact to head off Nazi aggression.

PACTS TOUCHED OFF WAR

The agreements to divide eastern Europe were in the form of strictly secret annexes to the published Russo-German nonaggression treaty of August 23, 1939, which sealed Poland's fate, rebuffed France and Britain and touched off the world conflict. They were signed by Nazi Foreign Minister Von Ribbentrop, who was hanged at Nuremberg as a war criminal, as well as by Molotov.

Other documents detailed Russia's help to the Nazis in the form of grain, oil, cotton, and other materials until Adolf Hitler turned on his partner with the signal for the Wehrmacht invasion.

In the array of first-hand evidence were:

1. Reports of Count von der Schulenburg, Nazi ambassador in Moscow, on Molotov's prewar negotiations with the British and French envoys at a time when he was treating secretly with the Nazis, Schulenburg advised Berlin that with the British and French Molotov "sat like a bump on a log" but with the Nazis he was "very communicative and amiable." The envoy noted earlier that Molotov "is known for his somewhat stubborn manner."

STALIN SHOWN ANTIBRITISH

2. A very secret memorandum on a discussion in Moscow among Ribbentrop, Stalin, and Molotov the night of August 23–24, 1939, quoting Stalin as remarking that if England dominated the world "this was due to the stupidity of other countries that always let themselves be bluffed."

3. Terms of the German-Soviet trade agreement by which Russia for 2 years helped the Nazis defeat the British blockade. A foreign office memorandum showed that even in April 1941, when relations between Hitler and Stalin were becoming strained, the Nazis received from Russia 208,000 tons of grain, 90,000 tons of petroleum, 8,300 tons of cotton, and 6,340 tons of copper, tin, and nickel. Four thousand tons of raw rubber were shipped across Siberia.

4. German embassy reports on Moscow's difficulties in justifying the Red Army's grab of eastern Poland. In the end Stalin himself drafted a joint communication.

PRAISED FRENCH INVASION

5. A very urgent telegram of June 18, 1940, from the Moscow Embassy reporting to Berlin that Molotov had expressed the "warmest congratulations of the Soviet Government on the splendid success of the German armed forces" in their invasion of France and the Low Countries.

6. Scores of documents detailing subsequent Nazi-Soviet quarrels over division of territorial spoils beginning with the Red Army's occupation of the Baltic States. Russia went beyond the secret agreement and seized northern Bukovina and the strip of Lithuania allotted to Germany, and Berlin claimed compensation.

7. A record of a conversation between the Fuehrer and Molotov in Hitler's air-raid shelter November 13, 1940, on terms for Russia's full partnership in the Axis. Hitler argued that Soviet expansion should be in the direction of the Indian Ocean, and opposed any new Russian move against Finland or territorial changes in the Balkans. Molotov demanded a free hand in Finland, quarreled with Nazi actions in the Balkans, and said Russia had the right to "obtain a guaranty against an attack on the Black Sea via the straits."

JAP TALKS DISCLOSED

8. Detailed memoranda on conversations among Hitler, Ribbentrop, and Japanese Foreign Minister Matsuoka. In one of these Ribbentrop asserted Nazi flyers reported American planes they had encountered were "junk."

Hitler and Ribbentrop, one memorandum said, sought to dissuade Matsuoka from negotiations for a Soviet-Japanese pact, urging instead that Japan attack Singapore. The document quoted Ribbentrop as contending "Roosevelt would not let it come to war since he was well aware of the impossibility of any action against Japan." Japan, he advised, "could occupy the Philippines and in this way deal a severe blow to Roosevelt's prestige." Hitler was quoted as promising that if the United States did fight, Germany would go to war beside Japan.

Congressman Gallagher Congratulates Mrs. Eleanor Roosevelt

EXTENSION OF REMARKS
OF
HON. JAMES GALLAGHER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. GALLAGHER. Mr. Speaker, I notice in an Associated Press item from Hyde Park, N. Y., in today's Washington Post a statement by Mrs. Eleanor Roosevelt to the effect that the Russians are dangerous.

In view of the fact that Mrs. Roosevelt has heretofore advocated a "Be nice to Russia" policy, I want to congratulate her upon her ability to do an about-face stunt. Russia is not a friend of the United States, and we are glad that the doors of the White House are no longer open to the Communists, so far as this lady is concerned. The Republicans believe that we should look after America, while doing something for the rest of the world. The news item reads as follows:

SOVIET DANGEROUS, SAYS MRS. ROOSEVELT

HYDE PARK, N. Y., January 20.—Calling the Russians dangerous, Mrs. Eleanor Roosevelt says that unless the United States "finds ways to be strong enough, so Russia will work with us, we will have to build for another war."

"We need tact as well as strength in dealing with the Soviet," she said last night. She recently returned from last month's Geneva meeting of the United Nations Commission on Human Rights, of which she is chairman.

"If the United States withdrew from Europe, Russia would go in everywhere we went out," the President's widow told a meeting of the Hyde Park Historical Association.

"We are the most powerful Nation in the world," she said. "Russia is next. She is newer, therefore not so secure. * * * They infiltrate where they can, and they are going to expand if they can. They really believe their way is the only way to govern the world. We have to believe just as strongly in our way."

"The Communist economy is not one of plenty, but one which people turn to when there is nothing else to turn to," she said, adding:

"Europe is in that position. It's Russia or the United States. Either we work together in the United Nations, or face each other as enemies. That would be very painful for all of us."

Foreign Aid

EXTENSION OF REMARKS
OF
HON. WILLIAM C. COLE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Daily Mirror of January 20, 1948:

BREAKING IT DOWN

What a good day it would be if one should go by without a single cry of crisis out of Washington.

The approved Capitol formula for meeting every crisis is, of course, greater power for the Federal Government over the lives of the people, plus more of the people's wealth to ward off the most critical effects of the crises.

There is a crisis, and so the planners get busy with their schemes to ration meat again—thus inviting back the black market, with its hundreds of millions of dollars out of our pockets to fatten the underworld and escape the tax collector, with its substitution of filthy crooks for honest dealers.

There is a crisis, and the New Dealers are able to figure it out, to the penny, no less, how many of our billions can set Europe back on its feet.

It is as if we were to be narcotized by repetition. As if it were planned that our senses should be so dulled that nobody would sit down soberly and count the costs.

The CONGRESSIONAL RECORD, however, discloses that one man, Senator KEM, of Missouri, has done some cost-figuring, and done it in such a down-to-earth manner that it can be easily understood.

Senator KEM asked the Library of Congress, Legislative Reference Service, for some figures and came up with these whoppers:

Our foreign loans, property credits, advances, relief and rehabilitation grants and other authorizations, from July 1, 1940, through June 30, 1947, came to $73,092,058,013.

Writing off the war years, the Senator found that peacetime foreign relief, July 1, 1945, through June 30, 1947, totaled $24,099,211,087.

Since it is hard for anybody, particularly the administration, to understand what a billion dollars is, Senator KEM broke the figures down to common terms.

The little $24,000,000,000 item cost $183 for every man, woman, and child in America, $616 for each family. KEM comments:

"Foreign aid has cost each American family $25 a month for each of the past 24 months. This would pay all the income tax a married man with two children pays on a $4,000 income."

Still the Senator wasn't satisfied. So he took all the counties and cities in Missouri and prepared a table showing how much each has contributed to foreign aid on a per capita basis.

His native Macon County, for instance, has paid $3,915,468 for foreign aid since VJ-day.

That is a figure more than 10 times the county's annual tax receipts, $332,332.

The Marshall plan, if adopted, will cost the residents of Macon County as much in the next 4 years as all their county, county road, and school taxes will cost in the next 9 years, according to Senator KEM's figures.

Progressive Kansas City, Mo., recently voted a $41,500,000 bond issue for civic improvements. It was a tough job. It required and got a two-thirds majority ballot. It will take 20 years to pay off.

But, per capita, the people of Kansas City have provided $73,049,524 in foreign aid in the past 2 years. The Marshall plan would tap them for $58,000,000 in 4 years. Senator KEM writes his own editorial, saying:

"It is interesting to speculate how the people of Kansas City would vote on a $58,000,000 bond issue to pay their share of the Marshall plan.

"It would be even more interesting to see what would happen to city officials who would raise every city tax and license fee the necessary 85 percent for the next 4 years, just to pay Kansas Citians' per capita share of the Marshall plan."

World Crisis in the Mediterranean

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. HAGEN. Mr. Speaker, I recently read a report on the crisis prevailing in the Mediterranean which I consider so significant that I am making it a part of my remarks.

It was authored by Dr. Christopher Norborg, who was formerly with the Office of Strategic Services, and whose book Operation Moscow received so much comment in past months. Dr. Norborg is a former Minnesota resident but now resides in Washington, D. C., at 3817 Cathedral Avenue NW.

The article appeared in the January 17 issue of American World Intelligence, which is a biweekly intelligence letter mailed from Washington. The article is important because it gives a clear bird's eye view of the tremendous Soviet pressure upon a strategic area, where the destiny of America and the world may well be decided.

The article follows:

Some time ago American world intelligence mentioned how the commander of the United States Mediterranean Fleet had stated that our fleet was not leaving the Mediterranean, since the United States had permanent interests in those waters. During the past weeks dozens of new reports have come in to give an over-all intelligence picture of what is really happening in that explosive area, from Gibraltar to Basra, from Klagenfurt to Eritrea and Oran.

Five years after the north African invasion American troops embarked once again from these shores to wherever they will be needed in the Mediterranean during the coming months. At the same time the chairman of the United Nations Palestine Commission, Dr. Karel Lisicky, defined, in New York, the prospects of his mission's success in these pathetic words: "No one can expect miracles from five lonely pilgrims going to Palestine." The Mediterranean and the Near East have become the show-down area between American commitments and Soviet expansion—between the Truman doctrine, backed by armed force, and the Cominform, backed by Soviet power. Military logic says that, irrespective of the numbers of armed forces present, where a big power flies its flag, its total military power is engaged.

The United States is facing an explosive situation directed by Moscow according to the classic advice of Nikolai Lenin: "Stop the imperialist war and start the civil war." Washington has served notice that it is about to demand a stop to Soviet civil war in Greece, Iran, and, if need be, in Italy. American military power backs the integrity of these states, even if the attack should take the Soviet form of "a people's revolt." Our military moves in this theater of tension indicate that we are no longer trying to pay off realities with words.

The American Ambassador to Iran said: "Patriotic Iranians * * * may therefore rest assured that the American people will support fully their freedom to make their own choice." That commitment was made in face of recent intelligence reports of renewed Soviet troop activities north of the Araxes River and intensified Soviet espionage from the Baku MVD headquarters via Erivan, Miyandaub, and Mahabad. The world has not heard the last about Kurdish resistance and the Mosul oil fields.

To Moscow, the open transfer of four American fleet submarines and eight motor mine sweepers to Turkey can only mean that the Black Sea is no longer a Soviet lake. The transfer of the British military mission to Salonika can only mean that the Soviet pressure on the Dardanelles is going to be stopped. The Anglo-Russian declaration of August 13, 1941, is being enforced where Moscow declared that it had "no aggressive intentions or claims in regard to the straits." The ridiculous Bulgarian demand for western Thrace is going to be rejected as is any Soviet-Yugoslav appetite for Macedonia.

Power politics has its own stern logic: The moment the Truman announcement of American assistance to Greece was uttered it was obvious that Mr. Dean Acheson was merely daydreaming, when he testified: "The present plans do not include sending troops to Greece and Turkey." The constant military expeditions which Mr. Tito continues to operate from Corizza (Albania), Bitol, Prilep, and Skoplje into Greek territory must either stop or be crushed by military power.

Recent intelligence reports prove that the chosen instrument for Soviet pressure on the Mediterranean is the Cominform, about which further details are now coming to light. It was created to relieve Moscow of any "responsibility" for the actions of the satellite Soviets. Headquarters was, therefore, placed in Belgrade. The reported top leader will be the present Bulgarian Premier, Georgi Dimitrov, who will abdicate the moment Tito and Moscow find the time right for uniting Bulgaria and Yugoslavia into one state, "from Trieste to Varna."

During Tito's November visit to Sofia, the Bulgarian Vice Premier, Traitcho Kostov, received great applause when he demanded "the complete unification of the South Slavs by the creation of one common Yugoslav motherland." And Mr. Kimon Georgiev, the Foreign Minister, echoed, "We South Slavs are so situated that only if we are firmly united can we effectively defend our interests." The creation of this greater Yugoslav Soviet Republic makes any real settlement of Trieste impossible.

Which fact fits into the picture of the Soviet Ambassador. Mr. Kostylev's approach to Italian Foreign Minister Count Sforza that Moscow might back Italian claims to a mandate over the former Italian colonies provided Italy would break with America. Count Sforza pointed to America's postwar record of great helpfulness. At that, the Italian Communist Party has grown from 402,000 (December 1944) to 2,253,000 members (reported October 1, 1947), with no less than 105,000 students and intellectuals, and with 52,500 Communist cells (as compared with 38,200 such party cells in France). The relative peacefulness at present on the Italian scene does not deceive informed observers. Neither does it change the burden of the American commitment: "If we betray Italy as we betrayed Poland, I leave it to you to decide where that leaves us as the greatest nation on earth" (Congressman LODGE, in the House of Representatives, December 5, 1947).

From London the report comes that Mr. George Marshall has received the promise of the Egyptian Government that Egypt will remain neutral, when the question comes up about the disposal of the Italian colonies: Overpopulated, democratic Italy may be considered. Above all, arrangements will be made whereby famed Tobruk goes to the British as permanent base in a defense triangle: Cyprus, Tobruk, and southern Red Sea harbors: main weapons to be jet-fighters and guided missiles.

When the British Foreign Office announced to the United States State Department that British warships would intercept two Panamanian ships out of Soviet controlled Constanza, it based its decision upon intelligence reports from Istanbul to the effect that the Jewish refugee ships were carrying as high as 4,000 young Soviet-trained troops to Palestine. This discovery squares with the announced policy of eastern European Communist parties "to control immigration to Palestine and to see to it that the best fitted elements emigrate." Recently the Jewish organizations of Rumania, Poland, and Bulgaria have been reorganized by the Communists to give the leadership to the democratic elements among the Jews. The Bulgarian Jewish National Organization in its recent congress voted to lead the movement into the anti-imperialistic formation. From the Stern gang and the Irgun Zwai Leumi the men of Moscow received resolutions of thanks for the Soviet attitude in the question of Palestine.

Throughout the Mediterranean, as elsewhere, the Cominform has ordered the Communist Parties to enroll as the storm troops in the fight against the imperialistic Marshall plan. In the case of the free German movement the Belgrade directive significantly enlists the members to fight American intervention in European affairs.

Students of history have suggested that the month of February 1948, marking the centennial of the February Revolution and of the Communist manifesto, may have been chosen by the Politburo (Moscow) as the occasion of a global demonstration of the strength of the Marxist idea.

In fact, rumors indicate that the next month may see the announcement of a Communist liberation center for Asia, where American political initiative has suffered from lack of imagination and extremely faulty timing.

Congressman Gallagher Protests

EXTENSION OF REMARKS
OF
HON. JAMES GALLAGHER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. GALLAGHER. Mr. Speaker, under leave to extend my remarks, I insert an editorial from the Times-Herald, of Washington, D. C., under date of January 21, which deals with the fuel-oil shortage.

This editorial says "the Truman outfit" is too busy sending petroleum to other countries in the world and is overlooking the people of the United States.

We have a fuel-oil shortage in Philadelphia, Pa. People are having a hard time to heat their homes. I suggest that the Democratic administration take notice of its mistakes and read this editorial, which is as follows:

WHERE'S OUR OIL GOING?

Secretary of Defense James V. Forrestal day before yesterday, pursuing the Truman administration's policy of trying to scare the boots off the American people to gain administration ends, painted a horrific picture of our oil situation at a session of a House Armed Services Subcommittee.

We're already short of petroleum for one reason or another, said Mr. Forrestal—which was scarcely news to Atlantic seaboard and Midwest home owners, hard pressed for fuel oil to heat their houses.

But, according to the Defense Secretary, that is only the half of it. The rest of it is, the man says, that in another major war our own oil production would most likely run short of our needs by 2,000,000 barrels a day; that the uproar in Palestine may result in Arab cutting of various Near East pipe lines; and that we'd better get busy now on building up a synthetic-oil industry in this country at an eventual cost of $8,000,000,000.

It so happened that last Saturday evening our Ambassador to France, Jefferson Caffery, told the American chamber of commerce in Paris that between December 16 and January 10—the first 24 days of the stop-gap aid program—France had received $53,000,000 worth of essential materials from the United States. Among these, Mr. Caffery added, was 200,000 tons of petroleum; he didn't say in what form, whether crude, gasoline, light or heavy fuel oil, or shipments of all of those commodities.

According to reliable sources of information here, the Caffery statement must have been oversimplified—meaning it seems impossible that 200,000 tons of petroleum could have gone to France from the United States in those 24 days. That comes to 1,500,000 barrels of crude, and 14 tankers would have been required to carry it.

November United States petroleum shipments to France totaled 294,000 barrels; October 251,000; September, 141,000—with December figures as yet unavailable here. It doesn't seem likely that United States shipments would have ballooned to 1,500,000 barrels between December 16 and January 10.

It is entirely probable, though, that Caffery's over-all figure was correct, and that France did receive in the period under discussion 200,000 tons from various sources—the United States, South America, the Near East, and so forth.

One more statistic, if you don't mind: Under ideal refining conditions, you can get a 17 percent yield of No. 2 fuel oil out of a mess of crude petroleum. That means the 200,000 tons that went to France would have yielded 34,000 tons of this favorite heating oil. Whatever petroleum is sent out of the United States carries with it a potential 17 percent of fuel oil which Americans don't get.

United States oil companies control, process, and distribute about 80 percent of all the world's petroleum outside Russia.

On the face of these facts and figures, it looks to us as if the Truman outfit is being far too zealous about funneling oil to other countries and far too lackadaisical about the defense, manufacturing, and home oil needs of the American people. Maybe we're wrong, but we think a clear and detailed accounting is due the people as to just what the administration is doing with petroleum and its products.

Federal Trade Commission Appropriations

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1948

Mr. PLOESER. Mr. Speaker, I am extending the following testimony of Mr. George J. Burger given before the House Appropriations Subcommittee on Independent Offices. It is important because it carefully relates a serious handicap regarding antitrust enforcement. As chairman of the Select Committee on Small Business of the House, I addressed a letter to the same subcommittee on the same subject several days before this testimony.

Mr. Burger's testimony follows:

My name is George J. Burger. I am a member of the board of directors of the National Federation of Small Business, Inc., head office San Mateo, Calif., a national organization, which has the largest individual membership of any business organization in the Nation. I am also in charge of the Washington Office of the National Federation of Small Business, Inc., located in the Bond Building, Washington, D. C.

I also own and operate the Burger Tire Consultant Service, 250 West Fifty-seventh Street, New York City. I represent only independent tire and tube retailers and independent tire rebuilders. My clients are located in each of the 48 States of the Nation.

Mr. Chairman and members of the committee, I wish to take this time to thank you and your committee for giving me the opportunity to appear and present to you in as few words as possible the reason for my appearance. My sole purpose is to speak on anti-trust-law enforcement and as to those agencies responsible for their enforcement and the part the Federal Trade Commission may have in handling their portion of these antitrust laws. I say to you, without fear of contradiction, that to permit any program to continue that would not be all-convincing that there is a vigorous program of these laws being enforced, then I say that small business of this Nation might just as well know now as later on that they are through.

I make this statement not as a professional witness but as one who has owned and operated a retail establishment from 1909 to 1935, and know well from actual experience, that due to the violations of these laws and the lack of all-out enforcement by the Federal Government, it is impossible for small business to continue. Some of you might say this is quite an irrational statement and I will answer that by saying that I will refer you to the testimony of the then Assistant Attorney General, the Honorable Wendell Berge, appearing before the Senate Civil Service Committee on February 13, 1947. You will find that he made some very startling statements as to what has taken place in the enforcement of these antitrust laws during the past 35 or 40 years. In substance, his statement was that merely lip service has been given to the laws by the administrations during that long period. How did this happen? It was merely due to the fact of a lack of sufficient and adequate appropriations to have these laws vigorously enforced. Further, when appropriations were made by the Congress, no directive was made as to how these appropriations were to be expended when in productive or unproductive activity by those agencies. Were these appropriations utilized in matters entirely foreign from the antitrust enforcements? In my opinion, all aid that the Congress may consider as a help to small business of this Nation in the near future, such as tax relief, capital loans, educational programs, and so forth—all these will be of no avail to save the life of small business until we get at the cancer that is destroying, namely, lack of sincere, vigorous, antitrust law enforcement. I know this from costly experience and so do thousands upon thousands of other small businesses know this to be the fact.

At this time it is necessary to place on the record the wisdom of the Congress when, in the fall of 1940, they voted to establish the Small Business Committees in the Congress. Goodness knows what would have happened to small business, especially during the war years, if these committees had not been functioning. These committees, it can be truthfully said, went a long way to save the life of all small business during these past 6 years, and more important, it was a signal to all Federal agencies and to Big Business themselves that these committees would not permit small business to be destroyed through ruthless and unfair practices, and that for the first time small business of this Nation could take their rightful pleas to a congressional committee where all just and fair claims did receive the rightful attention. It is important to note that due to the actions of these committees, all Federal agencies having anything to do with the small-business problems were now aware of the objectives of these committees, and the result has been more sympathetic actions to small-business problems. Goodness knows what would have happened as to the trend that was taking place in our economic structure had not these Small Business Committees been set up in the Congress.

Still the basic situation facing small business has not changed and in fact, is getting even more precarious, that is, as to their future. Concentration is increasing in the Nation's industry, and if there can be any question as to that statement, I respectfully refer the committee to the reports of the Senate Small Business Committee, Seventy-ninth Congress, Economic Concentration and World War II and Future of Independent Business, Senate Committee Print No. 16. Then the staff report to the Monopoly Subcommittee of the House Small Business Committee, Seventy-ninth Congress, also the testimony given by various Federal Trade Commission officials before congressional committees in the Seventy-ninth and Eightieth Congresses. Small business, as a whole, is afraid to come forward and lay the facts on the line before congressional committees because they are fearful of retaliation from their source of supply. I don't make that statement just to hear myself talk, but know from actual happenings where some talked out of turn, or were afraid to talk because they were afraid of creating a business war. They knew that antitrust laws were being violated but were fearful of talking. You may find that the Federal Trade Commission has had similar experiences along this line, and yes, even the Antitrust Division of the Department of Justice.

Special credit must be given to the House Small Business Committee in the Eightieth Congress. Because of their actions they have been able to get two agencies of the Government to cooperate in the enforcement of these antitrust laws as they apply to one major industry for the first time in the history of these two agencies. Of course the major industry that is affected by this joint action through the House Small Business Committee, has already set in motion penalties for the ones that were "spark plugs" in bringing about the constructive action of the House Small Business Committee.

Not a week passes by but that some members of the federation's Nation-wide mem-

bership lay before us concrete evidence of antitrust law violations, and in the majority of cases, although their information is factual, the pleas are "Please don't quote us, as we are fearful of retaliation." Surely the House Small Business Committee had this experience within the past month when they attempted to move in immediately on a serious charge of law violation. I do not want the committee to feel that the witness is merelly making broad statements, but I will stand for any questioning to confirm what I said as to these practices, etc. Surely, in view of the fear in the minds of all small business, this situation cannot go on, and if it does, small business of this Nation is facing ruin quicker than Members of Congress can expect.

As I review the reports of the budget requests of the Federal Trade Commission, appearing in the staff reports of the Monopoly Subcommittee, House Small Business Committee, Seventy-ninth Congress, and note the reduced amounts approved and recommended by the Bureau of the Budget and the Congress, which include the enforcement of the Robinson-Patman law, I can readily realize now why this most important law is for all practical purposes a "dead-letter law" insofar as a help to small business of this Nation. I do not make this statement in any way to damage or belittle the constructive work of the Federal Trade Commission, but when one stops to realize the magnitude of what the FTC is expected to do, and what they have to do it with, I can now readily realize the impossibility of full enforcement of the Robinson-Patman law. I quote from the staff report to the Monopoly Subcommittee, House Small Business Committee, Seventy-ninth Congress:

"Any shortcoming of the Federal Trade Commission which may be pointed out in this report should not be allowed to obscure the highly salient fact that the appropriations to the Federal Trade Commission, even if the agency were devoting all its time to handling the most significant antitrust cases, would be insufficient to allow it to fulfill its function in helping to reverse the trend of concentration.

"The unfavorable odds against which the staff of the Federal Trade Commission must work is nowhere more glaringly illustrated than by the case against the Cement Institute. In this case only three Commission attorneys participated in the trial, yet they were opposed by lawyers from 41 law firms, many of them amongst the largest and most successful in the country. Press releases, according to the Federal Trade Commission, have appeared to the effect that the defendants in this case spent in excess of $5,000,000—$5,000,000 against three Commission attorneys. Five million dollars represents twice as much money as the entire Federal Trade Commission receives in 1 year. * * * The Federal Trade Commission lost this case against the Cement Institute by a 2-to-1 decision in the circuit court of appeals.

"Two facts stand out: (1) With the exception of the 1947 appropriation, Congress in each of the 10 years gave the Federal Trade Commission practically the amount approved by the Budget Bureau. Therefore, as far as the Federal Trade Commission's budget for the last 10 years is concerned, the Budget Bureau must be held, in the first instance, responsible for the agency's limited appropriation; (2) the Budget Bureau made very substantial reductions in the amounts originally requested by the Federal Trade Commission."

The Robinson-Patman law was given to the Commission by the Congress early in 1936 and in my opinion Congress would not have been criticized as over-generous or wasting the taxpayers' money if any amount equal to each fiscal year's budget of the Commission was granted exclusively for the enforcement of the Robinson-Patman law. If this has been done the results would be a virile, progressive small business of this Nation and less concentration taking place in Nation's industry. Big business interests of this Nation, as Congress is aware, left no stone unturned to bring about the defeat of the Robinson-Patman law when it was being considered by the Congress, and Congress only voted that law when the facts were presented to them, namely, that without the law, small business, both producers and retailers, would be destroyed. Surely the Federal Trade Commission, on March 4, 1946, presented the happening as to what took place with one major producer and one major distributor. Some years later, a Member of the Senate, when reviewing that operation, stated it was not competition but destruction for all other producers and retailers in that industry. It was largely due to the facts that were brought out at that time by the Commission and some others, that Congress was convinced that the Robinson-Patman law was necessary to save Nation's small business.

What a discouraging situation confronts us and the people I am speaking for when we see that not until July 1947, fully 11 years after the enactment of the Robinson-Patman law by the Congress, was any action taken to enforce the Robinson-Patman law, and it is to the credit of the present House Small Business Committee that the Commission for the first time has instituted action pertaining to one major industry's pricing policies under section 2 of the law. Under the law, the Commission has the power to fix quantity discounts, and no attempt was ever exercised by the Commission under that provision to protect small business against price discrimination until the House Small Business Committee explored the situation in that certain industry. How far the Commission will be able to go will depend upon the funds available in this major undertaking. If their funds are in an ample amount to do this job, then the job will be done sooner; but if, on the other hand, they are not ample, the result will be delays and more delays until the ones who would have benefited by their efforts will have ceased to be in the business world.

Members of the committee may wonder if the Commission was lacking or faulty in its administration. I will answer that before the question arises, as I have had the closest contact with the Commission for 11 years or more, as the Commission well knows. I will state definitely for the record that due to the many twofold duties of the Commission, and due to the lack of adequate appropriation, it was utterly impossible for the Commission to center its main activity on one special action. They did the best job possible under conditions prevailing.

I recall a certain major case instituted by the Commission under the Robinson-Patman law in 1938-39. This case was of major importance and many other industries were watching the development of the planning by that certain major producer. This producer, in less than 6 months after the Robinson-Patman law was placed on the statute books, as some competent business authorities felt and states, his sole action was to circumvent the Robinson-Patman law. All other leading industries were watching the development of the scheme and were wondering whether they would get away with it. Well, they were until the Federal Trade Commission moved in and found them guilty of the violations under the law and the producer admitted his guilt and accepted the Commission's cease-and-desist order; but the irony of the situation has been that the Commission has not been able to follow through in seeing to it that their order was being complied with, and by that I mean that the Commission could make the closest study of the order being carried out if they had had sufficient funds to do so. However, they did not have the necessary competent manpower to use and, due to the lack of sufficient appropriations, could not make this necessary follow-through. The result of the failure of the Commission to follow through on that case brought about just this: All members of that particular industry knew as well as those in other industries that the Robinson-Patman law was just another "eighteenth amendment." This time the victims were small-business institutions of this Nation.

On July 14, 1947, by invitation to the National Federation of Small Business from Senator ROBERT TAFT, chairman of the Joint Committee on the Economic Report, I presented testimony in behalf of the president of the federation, Mr. C. Wilson Harder. He requested that special all-out attention be given to the antitrust law enforcement. He recommended that a special appropriation be given to the Federal Trade Commission in the enforcement of section 2 of the Robinson-Patman law. Although the request was well received by that committee, no action has been taken up to the moment.

If the annual appropriations by the Congress to the commission was for just the enforcement of the Robinson-Patman law, in my opinion, the appropriation would not be too much, nor would the taxpayer's money be wasted. When we look at what the Commission has to do with its limited appropriation, then we can see now more than ever why we have only received a "hit or miss" administration of the law by the Commission.

I do not know whether the reduced appropriations of the Commission rest with the actions of the Bureau of the Budget or the responsibility rests with the Congress. If it is due to the Bureau of the Budget, then I believe the Commission should be granted the authority to lay these facts before the Congress of their own free will, when it happens and then Congress make known publicly where the responsibility lies for reduced appropriations. Nation's small business wants these facts and the sooner the better. Then, on the other hand, if no responsibility rests with the Bureau of the Budget or the Congress as to the necessary funds for the Commission to operate on and to vigorously enforce the laws entrusted to them, small business will then, for the first time, know how to approach the Commission, and if they are found wanting in their administration of the laws, to advise the Congress what should be done, and done at once with the Commission.

Both the Sherman and Robinson-Patman law will go a long way, and in fact a definite way to protect small business, provided lip service action does not continue by the administration and Congress does not close their eyes to the situation. Every so often Members of Congress have repeatedly stated opinions on the problems of small business, but no one does anything about it. You will find this statement appearing repeatedly in the CONGRESSIONAL RECORD.

To make certain for the first time that something will really be done to immediately protect small business, and after all, I am not speaking for myself, but for the entire membership of the National Federation of Small Business who, by the way, has time and time again, by their own vote urged increased appropriations for the administration of all antitrust laws, and speaking also for the people that I represent through the Burger Tire Consultant Service, I recommend:

1. That the committee recommend the full amount requested for the fiscal year by the Federal Trade Commission.

2. That if and when the Bureau of the Budget should reduce the appropriation

requested by the Commission, that the Commission be permitted to make this action public information.

3. That not less than $500,000 of the total request to the Bureau of the Budget be earmarked for cases under the Robinson-Patman Act, with strong emphasis to the Commission of cases involving the establishment by the Commission of maximum quantity limits on discounts as specified under section 2 of the Robinson-Patman Act. This is necessary if the function of the Commission is to promote free and fair competition in interstate trade.

Make no mistake, business of this Nation will get back to normal quicker than many of these so-called experts will tell you or lead you to believe. It cannot go on the way it has been since the end of the war. Signs are appearing in quite a few industries that they are catching up with orders, and when this condition arrives you members of the committee must realize this will be the time when small business will face the most severe squeeze play, and it is our purpose in appearing now before you so that you will see that this important agency of the Government, empowered with important laws to protect the public and the business structure, both big and small, are put in a position to function effectively which, after all, will be saving our Nation's economy.

Signs and actions are appearing of attempts by congressional actions, or otherwise, to bypass the antitrust laws due to the so-called emergency, to suspend these laws. We cannot close our eyes to these attempts and the two services that I am speaking for will fight to the last ditch in the protection of Nation's small business to defeat all such attempts, no matter where the actions come from. This is definite, and we are committed to this fight, and so should any other small business groups be who are supposed to be fighting for small-business interests. This should be their principal objective.

It is encouraging to small business institutions of this Nation to note the new activity of the Federal Trade Commission in its 1949 operation, namely, administered pricing program. We are glad to see this instituted by the Commission because we know from experience of the ruthlessness and vicious practices of major producers putting on special programs in an area, but not in all the areas throughout the Nation. The Commission is to be commended on their action and the results can be beneficial to the consumers of this Nation and also the small business enterprises of the Nation. We think the American public has a right to know the facts.

Finally, the Robinson-Patman law and all other antitrust laws were voted by the Congress so that the public would be protected from gouging, and so forth, and also that small business would be protected and permitted to exist in the business world. These laws were not put on the statute books to protect the inefficient.

If time had permitted, Mr. Chairman, I had hoped to lay before your committee more factual data, but believe me I am speaking the truth and the whole truth, and I trust my pleas in the sole interest of the Nation's small business will not have been in vain, and that the agencies empowered with the enforcement of these antitrust laws may receive the necessary and adequate appropriations that they may do a real job. Let us start to protect our own Nation's business economy now. That is more important to the people of this Nation. Many youths of this Nation want to go into business for themselves. If they have the ability to open a business and put their own money into their own business, let us hope that the little they may have to start a business with and also that are now operating in small business, their investments will not be ruined due solely to the lack of enforcement of the antitrust laws.

The Nazi-Soviet Documents

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of January 22, 1948:

THE NAZI-SOVIET DOCUMENTS

From the collection of Nazi-Soviet documents for the war years 1939 to 1941, seized by American troops in Germany, made public last night by the State Department and printed extensively in the Times this morning, we cite one item as typical. It is taken from the secret additional protocol to the celebrated Russo-German nonaggression pact of August 23, 1939.

This was the treaty, signed by Molotov for Russia and by von Ribbentrop for Germany, which was negotiated shortly before Hitler's unprovoked attack on Poland. This treaty has always been defended, by apologists for Russian diplomacy, and on the basis of its published text, as an agreement designed to stabilize the relations of the Soviets and Germany in the interest of peace in eastern Europe, and the text published at the time does, indeed, say much of refraining from acts of violence and eschewing aggressive alliances. But behind this published text, it is now revealed from the seized files of the German Foreign Office, there stood a "secret additional protocol," in which the Russian Government and the German Government—in advance of Hitler's attack on Poland—drew the boundaries of their respective spheres of influence in the Baltic states and Poland, in the event that what was nicely called the political rearrangement of these areas should be brought about. Thus, in Poland, the line between Russian and German influence was to follow approximately the rivers Narew, Vistula, and San. But more than this. The secret protocol went on to say:

"The question of whether the interests of both parties make desirable the maintenance of an independent Polish state and how such a state should be bounded can only be definitely determined in the course of further political developments. In any event, both Governments will resolve this question by means of a friendly agreement."

So here were Stalin and Hitler calmly deciding, just before Hitler struck his blow at Poland, that they would consider later, and resolve by friendly agreement, whether there would even be an independent Polish state, after Hitler's blow had fallen. Certainly this evidence offers the unhappy Polish people an opportunity for ironic thought on the fidelity with which their present puppet government supports, in the UN and elsewhere, the policies of that same Russian Government which was ready in 1939 to will all Poland out of existence, as a plain matter of political plunder.

The documents now published by our State Department deserve close study. They cover the whole period from 1939 to the June day in 1941 when Hitler double-crossed his partner in the nonaggressive pact and suddenly threw his legions into Russia. The relationship which these documents reveal in those critical and history-shaping years is that of two mutually suspicious and untrustful but equally cynical and ruthless governments matching wits while they plotted a division of power in eastern Europe in the event of a war which had not yet begun but the certainty of which was sealed by their maneuvers.

Palestine Partition

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. GOSSETT. Mr. Speaker, most thoughtful Americans are gravely concerned with the results of our action in bringing about a partition of Palestine by the United Nations. Most Americans are ashamed of the fact that we permitted partisan domestic politics to influence our international conduct. If we continue such a course we will bring shame and disgrace upon this Nation. Doubtless, American troops will soon be called upon to go into Palestine to quell the disorder which our action has promoted. No American wants his son to die in the sands of an un-Holy Land in defense of an illegitimate state. The Arabs and a billion people over whom they exert influence are watching us. If we send American troops into Palestine we not only play into the hands of Russian Communists, but we further alienate the good will of half the world's people who occupy half the world's land area.

This sentiment is expressed in a resolution just received by me from the Public Affairs Luncheon Club of Dallas. This club is composed of hundreds of the leading women of Texas. Their club exists to study public affairs. Their action is characterized by intelligence and good citizenship. Their appeal to this Congress should certainly not go unheeded.

I commend their resolution, which is as follows:

Whereas the partition of Palestine by action of the United Nations has resulted in strife and violence in that country; and

Whereas it is becoming apparent that if the decision of the United Nations to establish a Jewish state in Palestine stands and is enforced, it must be by military power which would threaten the peace of the whole world: Now, therefore, be it

Resolved, That the members of the Public Affairs Luncheon Club, here assembled, are unalterably opposed to the use of any part of the United States Army to enforce the partitioning of Palestine, and that we do earnestly beseech our representatives in Congress to oppose, with all their influence, any effort to send a military force from the United States to Palestine; and be it further

Resolved, That a copy of this resolution be incorporated in the minutes of this organization and that copies also be sent to Senator TOM CONNALLY, Senator W. LEE O'DANIEL, to the Honorable J. FRANK WILSON, of Dallas County, and to the Honorable ED GOSSETT, of Wichita Falls.

Adopted December 15, 1947.

Respectfully submitted.

Mrs. PAULINE ADOUE HALL,
Chairman, Resolutions Committee.
Mrs. MAURICE C. TURNER,
President.

The West Virginia Plan

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CROW
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. CROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the West Virginia plan for veterans' housing:

Housing: Corporation sponsored for World War II veterans.
Erection: Production-line methods.
Financing: Title III, Public Law No. 346.

I. PROPOSAL—WHAT IT IS

A. To suggest a way to contribute to the solution of veterans' housing problem, viz., by corporation sponsorship of home construction projects for resale at cost to World War II veteran employees of the corporation.

B. Making use of production-line methods for building homes as developed by the Byrne organization, at Baltimore, Md., Moline, Ill., and elsewhere.

II. OPERATION—HOW IT WORKS

A. Finance arrangements made by corporation to—

1. Procure extension of bank credit to—
(a) Acquire suitable land.
(b) Develop the subdivision re—
(1) Surveying, landscaping, plotting,
(2) Water.
(3) Sewerage.
(4) Streets.
(5) Electricity.
(6) Gas.
(7) Parks and playgrounds.
(8) Schools (if necessary).
(9) Stores (if necessary).
(10) Miscellaneous improvements.
(c) Coordinate construction of houses.

2. Contract with veteran employees to purchase houses and lots at actual accrued cost by—
(a) Loans from banks and loan associations for 100 percent purchase price which is guaranteed under title III of Public Law No. 346, under escrow trust agreements.

III. RESULT—WHO BENEFITS

A. To corporation:
1. Will improve corporation's relations with its (a) employees, (b) community, (c) customers.
2. Will indirectly increase production.

B. To veterans:
1. Will ease housing shortage by (a) enabling war veterans, who cannot presently purchase building lots or make usual down payments, to purchase corporation-sponsored houses at cost; (b) enabling corporation's war-veteran employees to move into their own homes, thus releasing additional housing for its nonveteran employees and other community citizens.

IV. GENERAL

A. Fortifies private enterprise methods for solving problems of public concern by—
1. Financial sponsorship by corporations to provide homes for their veteran employees.
2. Utilization of banks and loan associations to finance veteran home loans.
3. Multiple construction methods which maximize values and minimize costs.

V. FEASIBILITY OF WEST VIRGINIA PLAN

A. Plan in operation in West Virginia and other States.

B. The John Byrne organization has demonstrated that by using production-line methods the cost of housing can be reduced from one-third to one-half. In this manner veterans can secure good homes within their incomes.

VI. ENDORSEMENT OF WEST VIRGINIA PLAN

A. National convention of the American Legion, August 28, 1947, at Madison Square Garden, New York, N. Y.

B. West Virginia Bankers Association in convention at Wheeling, W. Va., October 26, 1947.

Mr. Speaker, a method has been developed whereby World War II veterans who have regular jobs but who have no substantial savings with which to buy building lots or make down payments on homes, could purchase suitable homes under the loan guaranty provisions of title III of Public Law No. 346.

These loans are particularly attractive because, first, under corporation sponsorship the veteran would get full value for the money he puts in his home; second, the veteran has a steady job whereby he can keep up his payments, and, third, the loan is guaranteed by the United States Government.

These loans would also be attractive to banks as the servicing of such a large number of loans could probably be arranged with the corporation sponsoring the project.

This plan eliminates faulty construction and thereby decreases the number of defaults on veterans' loans.

The proposal is that the original finances can be provided by some corporation, labor union, or cooperative, which can arrange for the purchase of a site of land on which to construct a substantial number of homes, on a multiple-construction basis, such as worked out by the Byrne organization, thus effecting substantial economies of construction and making it possible for the corporation, labor union, or cooperative to sell the completed homes to World War II veteran employees on an actual cost basis, including the cost of landscaping, surveying, plotting, and improving the land, under a contract for sale that could be worked out ahead of time, supplemented by regular trust agreements with a bank or building and loan association, which might be persuaded to advance the necessary funds, particularly where all the coordinating planning should have been approved by the loan guaranty division of the regional office of the Veterans' Administration, as to the contemplated individual loans to be advanced by the bank or the loan association to the individual veteran home purchasers.

Upon completion of such an arrangement the sponsoring corporation, labor union or cooperative would thus be reimbursed as to all of its original expenses. The bank or the building and loan association would feel secure as to its individual loans on the basis of the loan guaranty under title III of Public Law No. 346, extended by the loan guaranty office of the Veterans' Administration. The loan guaranty office of the Veterans' Administration could feel assured of the repayment of such loans, that is providing, of course, that the planning has been coordinated and the construction had been safely performed and supervised, because of the fact that all such veterans would be regular employees of a particular sponsoring corporation, or members of the particular labor union or veterans' cooperative.

Ordinarily, it would be more feasible for a corporation to sponsor such a multiple-construction project as to its own World War II veteran employees, than would be the case as to a veterans cooperative, or as to a labor union, because of its ability to give assurance of the probable continuance of employment of its World War II veteran employees and purchases of such sponsored homes.

Sponsorship of such homes for its World War II veteran employees by the corporations would probably directly bring considerable additional good will to the corporation, on the part of its employees, on the part of the local community in which its plants may be located and on the part of its customers. Satisfied employees—not constantly worried about the housing shortage, would be relieved of much of their anxiety, and consequently their energies would be converted into greater productiveness and serviceability to the corporations, that had assisted them in the solution of their housing problems.

The feasibility of the West Virginia plan nationally is established because it is already in operation on a sound basis in several States.

Navy Veterans Support Marshall Plan

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following resolution which was adopted unanimously by the East St. Louis (Ill.) Navy Club, Ship No. 58, at its last regular meeting in the interest of the Marshall plan and calling for the maintenance of our Military Establishments at the highest possible peak of efficiency:

EAST ST. LOUIS NAVY CLUB, SHIP NO. 58,
East St. Louis, Ill., January 6, 1948.
Hon. MELVIN PRICE,
Congressman, Twenty-second District, Washington, D. C.

DEAR SIR: The following resolution was presented to the East St. Louis Navy Club, Ship No. 58, at the regular meeting and approved unanimously:

"The East St. Louis Navy Club, Ship No. 58, views with alarm the steady deterioration of the relations between the United States and Russia, and the ceaseless and relentless encroachment of Russian domination in Europe.

"The East St. Louis Navy Club, sees in the attitude of Russia, as has recently been evidenced in the United Nations organization meeting, a distinct threat to world peace, The East St. Louis Navy Club believes that it is becoming increasingly clear that communism is the greatest external foe of the United States of America and must be recognized and treated as such: Therefore be it

"Resolved by action of the East St. Louis Navy Club, Ship No. 58, at the regular meeting, That we recommend and endorse the

following course of action by the United States of America:

"1. Maintain our Military Establishments at the highest possible peak of efficiency and instantly ready for action at any time.

"2. Effectuate the Marshall plan of aid to Europe, but under the direct supervision of the United States of America."

L. L. HERGENROEDER,
Commandant.

Pensions of Widows of World War I

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

THE COMMONWEALTH OF MASSACHUSETTS,
DEPARTMENT OF THE ATTORNEY GENERAL,
Boston, December 31, 1947.

Hon. JOSEPH W. MARTIN, Jr.,
Congressional Office Building,
Washington, D. C.

DEAR MR. SPEAKER: I wish to call to your attention a very serious situation which is confronting the widows of World War I veterans; namely, widows' pension. It is a serious thing at this time because of the increase in the mortality rate among the veterans of World War I whose average age is now over 50.

The statute, section 11, Public Law 144, provides: "Payments of compensation under the provisions of this act shall not be made to any widow without child or children whose annual income exceeds $1,000 or to a widow with a child or children whose annual income exceeds $2,500. In determining annual income any payments by the United States Government because of disability or death under law administered by the Veterans' Administration shall not be considered." In interpreting this statute, the Veterans' Administration has made such a narrow construction that widows who have as their only asset a small commercial life-insurance policy have been denied the pension which you wanted them to receive.

I give you two illustrations of decisions of the Veterans' Administration which are numbered among the thousands throughout the country. A Massachusetts veteran died while on vacation in the State of Maine. The widow had to take care of burial expenses in Maine and in Massachusetts amounting to approximately $800, and her health was such that it was impossible for her to work. Her husband left her a commercial life-insurance policy in the face amount of $1,000. When the policy was payable there was a dividend added to it of $98.08. The Veterans' Administration denied the widow a pension on the basis of her annual income being in excess of $1,000.

Another example is of a widow whose husband died January 31, 1947, and she, too, took care of the burial expenses and of his last illness. She was unable to work, and her husband left her a commercial life-insurance policy for $1,000. The Veterans' Administration denied the widow a pension and said, "It appears that after the veteran's death on January 31, 1947, she received, as beneficiary of said veteran's commercial insurance the sum of $1,000, which on a proportionate monthly basis is at a rate in excess of $1,000 per annum. The fact that she expended a sizable portion of the proceeds of the commercial insurance for expenses of the funeral and burial of her husband would have no bearing upon the statutory limitation."

It is my contention that the Veterans' Administration is not correct in its interpretation of the act that the proceeds of such commercial life-insurance policies are income, since everyone of the 48 States, the United States Treasury, and the Collector of Internal Revenue do not consider such proceeds as taxable income. In addition, the Veterans' Administration has refused to give any consideration to the payment by the widow of burial bills and those of last illness in determining her annual income.

May I call to your attention the fact that, under the interpretation of the act by the Veterans' Administration, a World War I veteran with commercial life insurance policies of a large amount who provided for the proceeds to be paid to his widow in installments of less than $1,000 a year would be enabled to still have his widow receive a pension despite this amount of insurance. In addition, a widow of a World War I veteran who had a $10,000 converted Government life insurance policy would be entitled to the widows' pension. However, the widow of a World War I veteran in dire circumstances whose husband, after going through a depression and two postwar periods, and therefore unable to provide for anything save a small life insurance policy to cover the expenses of burial and last illness, is penalized by the interpretation of the Veterans' Administration that such a policy constitutes annual income.

I have under appeal one of these typical widow's cases to the Board of Appeals in Washington, and I am awaiting word for the date of a hearing on it. If there is anything that you can do to expedite this hearing, which is the case of Gertrude Rae Moor, widow of Frank E. Moor, XC-1,789,883, it would be appreciated. In the meantime, however, may I suggest that you contact the Veterans' Administrator and acquaint him with the situation which I have presented to you, and also the possibility of introducing legislation that would correct this problem. In considering corrective legislation I suggest three possibilities:

1. The proceeds of commercial life insurance be placed on the same basis as Government life insurance.

2. That at least a commercial life-insurance policy be exempted from consideration as a widow's annual income in the amount of $3,000.

3. That in determining the annual income of widows, expenses of burial and last illness be deducted and that the income of such widow would be on a net basis.

Since the publication of the fact that the veterans' division is to appeal this widow's case, many widows have contacted me revealing their unfortunate situation, and I can sincerely inform you that a check-up of the Nation would reveal thousands of like widows who have suffered by the adverse decisions of the Veterans' Administration in rejecting their claim for a widow's pension.

It seems to me that it is a challenge to all of us who wish to be of some service to the widows of the men who served in World War I and I will be pleased to join with you in anything that may accomplish this purpose.

Sincerely yours,
CLARENCE A. BARNES,
Attorney General.

A bill relating to the eligibility for pensions of certain widows and children of veterans of World Wars I and II

Be it enacted, etc., That section 1 (c) of the act of June 28, 1934, entitled "An act to compensate widows and children of persons who died while receiving monetary benefits for disabilities directly incurred in or aggravated by active military or naval service in the World War," as amended (U. S. C., 1940 ed., Supp. V, title 38, sec. 503 (c)), is hereby amended to read as follows:

"(c) Payment of compensation under the provisions of this act shall not be made to any widow without child, or a child, whose annual income exceeds $1,000, or to a widow with a child or children whose annual income exceeds $2,500. In determining annual income the Veterans' Administration shall not consider (1) any payments by the United States Government because of disability or death under laws administered by the Veterans' Administration, and (2) any payments by reason of insurance on the life of the deceased veteran: *Provided,* That where payments to a widow are disallowed or discontinued hereunder, payment to a child or children of the deceased veteran may be made as though there is no widow."

Self-Imposed Fair Play Standards Best Control of United States Enterprise

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I herewith insert the following article appearing in the January issue of the Southern Banker, by Hon. John D. Goodloe, Chairman of the Board of the Reconstruction Finance Corporation:

SELF-IMPOSED FAIR PLAY STANDARDS BEST CONTROL OF UNITED STATES ENTERPRISE

(By John D. Goodloe, Chairman, Reconstruction Finance Corporation, Washington, D. C.)

Much has been said and written about the achievements of the American private enterprise system, what makes it tick, what its essential elements are, the dangers it faces, the changes necessary to insure its preservation, and so on. It has been defended and occasionally by a few openly attacked. It is not strange that so many sincerely profess faith in its ability not only to maintain the highest standard of living in the world, but to continue to make available to an increasing number of our people more of the materials necessary for health and enjoyment of life. It is strange, however, to observe the difficulty encountered in any attempt to specify the component parts of that system, the interacting relationships of those parts, and the constant adjustments which are occurring.

ERRONEOUS GENERALITIES

The amazing success of our private enterprise system in supplying a per capita quantity of consumer goods far exceeding that produced by any other country in the world is frequently explained, and sometimes erroneously, through broad generalizations. For example, the many natural resources possessed by the United States are pointed out as an explanation. While we have abundant natural resources, we have not been exceptionally endowed compared to many countries of the world. This fact became alarmingly clear during the recent war when it was necessary for the Reconstruction Finance Corporation to seek abroad, and to stockpile, many raw materials necessary to meet our industrial requirements. These included natural rubber, tin, nickel, manganese, mercury, cobalt, industrial diamonds, and quartz crystals. There are many other materials, such as lead, copper, chromium, uranium, and bauxite, which must be imported in quantity to supplement production in this country.

While we have about 35 percent of the world's proved oil resources, those reserves have been determined largely through the initiative of private industry in persistent exploration and discovery. When we consider that the land area of the United States is only 7 percent of the total world land area, it becomes apparent that we must look elsewhere for an explanation of the success of the American private enterprise system. Nor can it be explained by pointing to the large population of the United States which provides a working force for high production. Our population constitutes only 6 percent of the total world population.

The answer lies not in these factors, but rather in the unique character of American competition, the influence of which is felt in every direction and in every activity. Geographical areas compete with other geographical areas; small business competes with large business; industries compete with each other; new inventions compete with old methods: airplanes compete with railroads and bus lines; coal competes with oil; nylon competes with other fabrics; aluminum competes with steel; and so on ad infinitum.

Of equal importance insofar as the individual is concerned is the fact that opportunity is provided as nowhere else to engage in business or professional activity on such a basis that personal return is governed primarily by the individual's ability, initiative, and resourcefulness. A leading American advertising agency recently conducted a survey to determine the starting salaries of top executives of 50 of the largest businesses in the United States. The average for the 1,943 men surveyed was $13.40 week. Only seven had started at more than $25 weekly. This can be matched in no other country.

Critics of our system frequently state that it is basically selfish: that inherently it is an application of the law of the jungle to the economic relationships of people. Nothing could be farther from truth. Obviously there is a small minority which will never obey the rules. Human nature being what it is, I suppose this will always be true. This is not a condition peculiar to the American system. Nevertheless, the vast majority of American businessmen recognize the rules of fair play and operate within those rules because they sincerely believe in them. Indeed, it is good business to do so since violation of these self-imposed standards of conduct promptly brings disapproval.

HIGH ETHICAL PLANE

My 16 years with agencies of the Government—particularly the RFC—whose functions have involved close and intimate working relationships with private industry during the depression years, and especially during the war, has been more than sufficient to convince me that the vast majority of businesses is conducted on an extremely high ethical plane and with full recognition of its tremendous responsibility. This does not mean that American competition is soft.

Business is not engaged in a game of touch football. The going is much more rugged than that. Competition always results in some casualties. Some enterprises cannot survive for a wide variety of reasons—bad management, failure to keep abreast of technical improvements, new inventions, and numerous others. Occasionally, although most of the rules governing business relationships are unwritten, the Government must step in and establish other rules, including, for example, the Sherman Antitrust Act, the Clayton Act, the Securities Act of 1933, the Federal Trade Commission Act, and the Robinson-Patman Act. None of these laws, however, are designed to interfere with private competition, but to preserve it.

Undoubtedly the American system of free enterprise is and will continue to be affected and influenced by Government, acting, we trust, at all times within its proper sphere. Tax laws will be enacted; tariffs will be lowered or raised; interstate commerce will continue to be regulated; freight rates will be subject to Government control; and working conditions in mines and factories will continue to be a proper field for Government action. All these and many more affect the operation of our competitive system. But in the main adjustment to changing conditions in a free enterprise economy will of necessity be achieved through voluntary decisions of private management, farmers, and labor. Admittedly this is all very complicated; it is interacting and interrelated. Nonetheless the simple fact is that it has worked, if judged in terms of the standard of living made possible through its operation.

At the present time, and certainly in the next few years, the American system is, and will be, put to the severest test in history. This Nation must assume obligations of staggering proportions with respect to the reconstruction of devastated areas the world over. Those responsibilities, as well as the demand for goods at home, will require production possibly rivaling even that of the war years. It is a challenge which can be answered successfully only through the closest cooperation of Government, industry, the farmer, the laborer. Such cooperation can exist only if all parties concerned recognize to the fullest extent possible the individual and collective responsibilities imposed by world conditions.

The RFC was originally established in 1932, when we were balanced precariously on the brink of national bankruptcy, and many well-informed people thought the complete destruction of our great American economy was inevitable. The RFC quickly became one of the most important of the several forces responsible for pulling the country out of that terrible depression. Acting through the RFC, the Government provided billions of dollars to banks, insurance companies, railroads, and other business enterprises. This not only permitted the continued operation of those enterprises but more important, from the standpoint of public interest involved, protected and preserved the investment therein of the millions of depositors, investors, and policyholders.

During those grim depression days in the early thirties, as well as during the critical war years, the RFC and industry were able to work together successfully without any ill effect on our free economy or any substantial diminution of the rights and liberties of the individual citizen. We are proud of that record of cooperation and mutual understanding.

When the clouds of World War II first began to appear, Congress, to expedite our national defense program, gave the RFC extremely broad powers and tremendous financial resources to meet the impending emergency. You are all familiar with the tremendous and important role the RFC played in our war effort. Among its major achievements were the purchase of hundreds of critical and strategic materials and the construction and operation of thousands of defense plants for the production of airplanes, tanks, guns, ammunition. Success of these wartime activities was largely attributable to the cooperation and assistance RFC obtained from private industry, due in a large measure to RFC's recognition of the desirability—indeed, the necessity—of utilizing the personnel, experience, facilities, and know-how of private industry, as well as the belief of RFC in the willingness of industry to work with the Government on a friendly and fair basis. We are proud of the wartime record of our relations with industry.

EMERGENCY POWERS OUT

The present Congress has enacted legislation extending the life and functions of the RFC until June 30, 1948. Under the revised law the emergency powers granted the RFC in 1940 were eliminated, and with this action I am in complete agreement and so testified before both the Senate and House Committees. They were too broad for the normal, peacetime activities of the RFC, having been designed basically for wartime use. However, the extension of the RFC recognizes the desirability of having an organization in existence whose powers, in the event of another emergency, can rapidly be expanded.

The RFC is especially qualified from the standpoint of experienced personnel and organization to deal effectively with such emergency situations. The corporate form of governmental organization responsible to the Congress permits flexibility of operation hardly possible in the case of the usual "old line" Government agency or department. With its 31 field offices strategically located throughout the country, the RFC is in position to move promptly and effectively whenever Congress determines that in the national interest its services are required.

Action by the Congress in extending the life of RFC is also a recognition of the fact that there is a field within which Government can supply credit on a safe and sound basis without competition with the credit facilities provided by private credit institutions. In fact, it has always been RFC's policy to assist and augment the credit facilities of those institutions, and I think it is a fair statement that the loans which RFC makes result in the establishment of new businesses and the preservation of old businesses, thus ultimately creating a sound market for the services of private financing institutions.

The illiquid position of the banks in the early and middle thirties prevented them from making many loans which in the national interest should have been made. It also forced the liquidation of loans which in the national interest should have been extended. In those circumstances, the gap which RFC was intended to fill was relatively large. Today, in contrast, the proportion of deserving borrowers who cannot obtain credit from private sources is smaller and the proper area for RFC operation is correspondingly smaller than in the thirties.

Whether the present period of full employment, high production, and favorable markets and prices will continue indefinitely is not for me to say. So long as we can maintain a free competitive economy and can enjoy conditions which will provide individuals with maximum opportunity to engage in competition on a fair basis, we need have no fear for our country's future.

One Hundred Sixty-seventh Anniversary of the Battle of Cowpens

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. BRYSON. Mr. Speaker, last Saturday, January 17, was the one hundred sixty-seventh anniversary of the Battle of Cowpens, a notable conflict in the American Revolution in which Gen. Daniel Morgan led our troops to victory over Tarleton and his redcoats.

In recalling this historic battle, I wish again to express my wholehearted support of Mr. RICHARD'S bill, H. R. 3570, now pending in the House, to establish the Cowpens Battleground Park on the site of this Revolutionary victory. A similar bill is pending in the other body.

To commemorate this battle in the South Carolina up-country, a song, Cowpens Battleground, has been published by four South Carolina chapters of the Daughters of the American Revolution, the Cowpens chapter, Spartanburg; the Kate Barry chapter, Spartanburg; the Mary Musgrove chapter, Woodruff; the Daniel Morgan chapter, Gaffney.

Music for the song was composed by Mr. Geoffrey O'Hara, and the lyric, which follows, by Mr. Harry Wilkins, well-known poet-businessman of Spartanburg and Gaffney.

COWPENS BATTLEGROUND

O sacred spot of Cherokee,
Where heroes bled and died,
O cradle of true Liberty,
Your glory is our pride.
Here freely ran the warm, red blood
Of strong, young Spartan men,
While battling in cold, winter mud
As British ranks grew thin.
From Carolina's rugged hills,
And faithful Georgia's plains,
Virginia's far-off winding rills,
Men came thru drenching rains,
Then from historic Delaware,
And ardent Maryland;
It seemed they came from everywhere,
This patriotic band!

With Blue Ridge Mountains standing guard,
And Thicketty near by,
Those lean Americans fought hard,
That Right should never die!
By that old Mills' Gap wagon trail
Brave Morgan charged his men:
"We must not fail; we cannot fail!
Today we die or win!"
On your immortal hills and dales,
Redcoats breathed dying breath,
In cattle pens of ancient rails,
And Tyranny met death!
We honor patriot sires today,
Applauding their renown,
And thank Jehovah, we can pray
Without consent of Crown!

Study of the Veterans' Administration

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JANUARY 22, 1948.

Hon. JOSEPH W. MARTIN, JR.,
Speaker of the House of Representatives, Washington, D. C.

DEAR MR. SPEAKER: There is enclosed a draft of joint resolution authorizing the Administrator of Veterans' Affairs to reimburse the Commission on Organization of the Executive Branch of the Government for certain sums expended in connection with its study of the Veterans' Administration, which the Veterans' Administration recommends be enacted into law.

The purpose of the proposal is to authorize the Administrator of Veterans' Affairs to reimburse the Commission on Organization of the Executive Branch of the Government to the extent mutually agreeable to the Administrator and Chairman of the Commission for sums expended by it in extending its study of the Veterans' Administration pursuant to the act of July 7, 1947 (Public Law 162, 80th Cong.), as amended.

Since my appointment as Administrator of Veterans' Affairs, I have received numerous complaints about the service being rendered to veterans in connection with their contracts of national service life insurance. Apparently similar complaints have been made to the Committee on Veterans' Affairs, House of Representatives, as evidenced by its inquiry into the matter of such insurance.

I feel very strongly that veterans are entitled to the best possible service, not only with respect to insurance but also as to all benefits administered by the Veterans' Administration. To this end it is believed that a study of Veterans' Administration's operations and procedures would prove helpful to the Congress and to those of us who administer the laws, and would be in the interest of all citizens, veterans and nonveterans alike.

Apparently my predecessor, Gen. Omar N. Bradley, had a similar view concerning the need for such a study, at least with respect to insurance activities. On September 9, 1947, inquiry on behalf of General Bradley was made to the Comptroller General concerning the authority of the Veterans' Administration to expend appropriated funds for the payment of compensation or expenses to a limited number of specially qualified persons under a contractual agreement whereby they will survey the established procedures and practices of the Veterans' Administration with respect to national service life insurance. By letter (B-69461) dated September 22, 1947, the Comptroller General advised that the procurement of the services of experts for such a purpose would be in contravention of the terms of section 5 of the act of April 6, 1914 (38 Stat. 335; 5 U. S. C. 55), and therefore unauthorized.

General Bradley discussed with Hon. Herbert Hoover, chairman, Commission on Organization of the Executive Branch of the Government, the possibility of the Commission undertaking the type of study indicated. No conclusions had been reached at the time that General Bradley left the Veterans' Administration to return to active military duty. After my appointment as Administrator I contacted Mr. Hoover concerning this matter and he agreed to extend the facilities of the Commission to examine into the organization and procedures of the Veterans' Administration in the field of insurance and other authorized activities beyond that contemplated by the Commission in its budgets.

As you know, the Commission is required by the act of July 7, 1947, supra, to investigate present organization and methods of operation of all Federal agencies in the executive branch of the Government. It is understood that the amount of funds available to the Commission would not permit as detailed a study in the Veterans' Administration as was indicated in my discussions with Mr. Hoover. It is the purpose of the proposed joint resolution to supply the funds necessary to meet the additional cost of a more detailed study than the Commission originally contemplated.

In submitting this proposal consideration has been given to the advisability of seeking authority of the Congress for the Veterans' Administration to contract directly with experts to conduct the desired studies. It was concluded that it would be more feasible and sounder policy to utilize the facilities of an existing Government agency which is authorized to engage in such activities.

By reason of the nature of such work, Mr. Hoover and his staff are unable to state with any degree of certainty the probable cost of the proposed extended studies in the Veterans' Administration. However, it has been indicated that the cost would be in the neighborhood of $100,000.

The early and favorable consideration of this proposal will be greatly appreciated. The need for expeditious action in this matter is indicated by the fact that the Commission's report to the Congress is due within 10 days after the Eighty-first Congress is convened and organized.

Advice has been received from the Bureau of the Budget that there would be no objection to the submission of the proposed resolution for the consideration of the Congress.

Sincerely yours,

CARL R. GRAY, JR.,
Administrator.

Halt! About Face!

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by T. O. Thackrey, from the New York Post of January 21, 1948:

HALT! ABOUT FACE!
(By T. O. Thackrey)

We have become so obsessed with war hysteria that we are establishing a dictatorship of fear in democracy's citadel, where reason once ruled in the name of the people and with their consent.

It is time to call a halt.

We have become so determined to beat our plowshares into swords that we have abandoned all—or nearly all—thought of the harvest.

It is time to about-face.

In the name of strengthening democracy we are deliberately and grimly preparing for war—war which may destroy Russia but which is certain to destroy the very democracy in whose name we are preparing to wage it.

As a prelude, the over-age gentlemen who speak so persistently about saving democracy from the perils of Communist dictatorship are tearing up liberty, freedom, and progress by the roots.

We cry that we are determined to die for democracy, when the truth is that we are merely determined to die: democracy requires that we live for it; that we nourish it by extending it; that our vast resources are used to produce a maximum of food, clothing, shelter, health, education.

Our slogan has become bullets, not bread; guns, not butter: and if that has a familiar sound, it is because we have not yet wholly forgotten that this was Hitler's way—and has been the call to arms of every dictator from Attila to Hirohito.

It is time to halt, about-face.

The President's budget calls for an expenditure of well over half our national resources for military purposes.

The President's Air Policy Commission calls for upping that expenditure by billions—not millions—in an ever-increasing ratio over the next 5 years—for military air power alone!

Our only constructive foreign policy—bread instead of bullets, butter instead of guns, tractors rather than tanks—the European recovery program is beginning to lose its greatest constructive force by talk of military conditions—an alliance of arms for the new war.

Is this, then, to be America's price for bread?

It is time to call a halt. Time to about-face. We must give, and give freely, if we

are to win friends. It is no bargain to a starving man, if he must pay for the food which gives him life, by merely making himself ready for death by bomb, bayonet, or bullet.

A great and progressive and democratic civil administrator has been removed from the Civil Aeronautics Board—ex-Harvard dean James Landis. The President insists—and here even the Senate restrains him—on replacing this able civilian with a major general of the Army, who is to retain his Army status if the President succeeds.

Is this toward peace—or toward war?

It is time to call a halt; about-face.

In the name of protecting ourselves against communism at home we have begun by denying Government employees the very safeguards of fair trial, freedom of conscience and the right to confront their accusers—rights we fought a revolution to preserve and have fought in two world wars to retain.

It is time to call a halt; about-face.

Sometime ago the proposal that the United States adopt universal military service in peacetime, to give us reserves of military strength if our plans and efforts to achieve the peace should fail seemed sound, sensible, and wise to us, and we gave it our support.

It is time to call a halt; about-face.

We are no longer willing to see this added regimentation of our national human resources in a program already beyond bounds in its emphasis on war, and its neglect of equally determined effort to win the peace.

Only if we reorient our policy—determine to place our best brains, our power, our resources, our all-out effort—at work on the constructive task of restoring hope by making the United Nations, and work within its framework, the cornerstone of our policy, would we be willing to consider peacetime conscription as useful, if necessary.

Only, of course, if we do so, neither peacetime conscription nor peacetime budgets with 75 percent of our resources for military purposes will be necessary.

The Distilling Holiday

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. MORTON. Mr. Speaker, in my State of Kentucky, and in other States with distilling capacity, the recent distillery holiday seriously interfered with the food-producing efforts of the farmers. Cattle had been purchased in the West and brought to Kentucky for finishing. The feeders contracted with various distillers for their byproduct. The distillers then were shut down by the efforts of the Luckman committee. There was no feed available for the cattle and they were taken to the stockyards and sold. These were unfinished cattle, not ready for market, and the farmer who had purchased the cattle lost the freight from Texas to Kentucky. In other cases in Kentucky, the distillers fed corn out of their elevators to the livestock in their feeding lots because no byproduct was available.

A protein concentrate is necessary to obtain milk production, egg production, broiler growth, and in the finishing of beef and pork. Distillers' dried grains, along with soybean meal, cottonseed meal, and other products provide such a concentrate. When the distilleries shut down, the supply of concentrate is diminished with resulting higher prices. We talk at great length here in the Halls of Congress about the price of butter and the price of beef, and in the very next breath we pass legislation to cut off the flow of protein concentrates so vital in the production of these items. The farmers of my State are having great difficulty in planning an intelligent, comprehensive feeding program, in view of the hit-or-miss policy of the Congress and the Department of Agriculture in the operation of the distilling industry.

DISRUPTION TO EMPLOYMENT

It was stated by the Citizens Food Committee, otherwise known as the Luckman committee, that only 414 persons had become unemployed due to the voluntary shut-down in the distilling industry. I consider this statement completely at variance with any realistic study of the facts. Most of the major distillers attempted to keep all of their employees at work during the holiday because they were assured it would be temporary in nature. They made work for the men and the National Distillers Products Corp. alone incurred an idle-plant expense for this period in excess of $1,000,000. Obviously, over a long-term period, regardless of their desire to do so, the operating companies cannot continue to maintain these padded pay rolls even though they have a strong desire to take care of their loyal employees. Apparently, the Citizens Food Committee gave no expression to the tremendous lay-offs that occurred in the allied industries. The white-oak cooperage industry is dependent entirely on the operation of the distilleries of this Nation. Thousands of men were laid off during the holiday in the forests, in the sawmills, and in the cooperage plants. The distillery employees of my State rightly feel that it is a great injustice to discriminate against them, especially in view of the fact that no over-all food saving develops as a result of this discrimination. There are counties in Kentucky where a distillery provides the only industrial pay roll and there are many farmers in Kentucky dependent on the byproduct from the operation of that distillery.

LOSS OF TAXES

From a 56-pound bushel of corn, average distillers can produce 4¾ gallons of 100-proof whisky. At the present excise-tax rate, the Federal Government collects $42.75 in excise taxes alone from the whisky produced from 1 bushel of grain. The average State government collects an additional $6.90. These two figures total $49.65 in excise taxes alone. There are many additional revenues received directly and indirectly by Federal, State, and local governments through other taxes, licenses, and permit fees. In the calendar year of 1946, Federal, State, and local governments received a total of approximately $2,500,000,000 from taxes and fees levied on distilled spirits. Congress is now making efforts to reduce personal income taxes. The elimination of the above-named excise taxes will in no way simplify that problem.

THE DEPARTMENT OF AGRICULTURE

Activities of the distilling industry to improve the Nation's complex economy by helping to provide high protein feed concentrates has received the blessing and the cooperation of the Department of Agriculture. Last year Assistant Secretary Charles E. Brannan had this to say: "The Department of Agriculture is quite proud of the fact that it not only urged but aided the distilling industry to get into this program." We now find the Department of Agriculture urging a program which reduces the supply of high protein feed concentrates, even though they exceed in animal food value the grain from which they are produced. In a press release on October 27, 1947, 2 days after the inception of the recent distillery holiday, the Agricultural Research Administration of the Department of Agriculture pointed out that insects and rodents account for a loss of 9 percent of the stored grain and cereal products in this country every year. This means that rats and weavil destroy about 10 times the grain used by the distilling industry. It seems to me that if some time and money were expended on an educational program to reduce this loss, we would make a real contribution toward our over-all agricultural economy. Here is a real opportunity to do something to provide more food for the world.

I sincerely trust, Mr. Speaker, that the very competent Committee on Banking and Currency and its distinguished chairman will arrange to hold exhaustive hearings on this entire matter and not rush through legislation extending the powers of the President from month to month to curtail the use of grain for beverage-distilling purposes. It is my honest conviction that the food production of this country is not in any way increased by such curtailment. Let us examine this thoroughly from a practical, unemotional, and dispassionate point of view.

Fuel-Oil Shortage

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mrs. SMITH of Maine. Mr. Speaker, under unanimous consent, I wish to include in the Appendix of the RECORD the Christian Science Monitor editorial of Friday, January 16, Why Is Fuel Oil Short?

WHY IS FUEL OIL SHORT?

Will that oil in the tank hold out until the tank truck comes again? Which will win in the first big race of 1948, the creeping depletion of fuel-oil reserves or the "rustle of spring"? For some millions of people, anxiety prompts another question: Why is fuel oil so short this winter?

The situation, when stated in general terms, is not hard to understand. Petroleum production is at an all-time high. But consumption is even higher. A month ago it was estimated that the demand for fuel oil would run 3.3 percent ahead of supply until the end of the heating season. That

means dipping into reserve stocks at the rate of almost 7,000,000 gallons per day. These reserves are distributed all the way from big refinery tank "farms" to the small dealer's retired tank car.

Some storage nearest the consumer is pretty slim. A process of progressive depletion slices safety margins almost to zero. The margin in transportation is also thin. Tank-car production, although increasing, has not caught up with the need. Too many tankers, Navy and others, were laid up, and it takes weeks to condition them for service.

In such a situation any interruption in the flow from well to consumer—whether by strikes, bad weather, or inability to shift short transportation around quickly—can cut down that slender margin into a frigid famine. Interruptions from all these causes have occurred. They have aggravated shortages basically created by increased demand.

Nevertheless, there is something about the specific crises and the conservation measures so far undertaken that seem disturbingly unreal. The petroleum industry rests its campaign on urging not only reasonable building temperatures, which make sense, but also such things as insulating and weatherstripping, which either were done during the war or can hardly be done now before the pinch is over. In some areas it has announced 15 percent cuts in consumer deliveries, but has yet to make clear who does the rationing—the buyer or the seller.

One is forced to wonder why the petroleum industry underguessed so badly—why it waited so late to go after more tankers. Also why the oil-burner manufacturers (who installed 475,000 units in 1946 and were putting out 50,000 a month last summer, 127,591 in September) and the oil producers haven't paid attention to each other's figures.

For the present, however, those dependent on fuel oil are chiefly concerned with their prospects of keeping warm. Where real oil famines occur, it is going to take measures more immediate than insulation and more positive than utterly unpoliceable thermostat setting to prevent freezing homes before spring.

State of the Union

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1948

Mr. KLEIN. Mr. Speaker, a few days ago I inserted in the RECORD the third in a series of editorials on the State of the Union, taken from the New York Post and written by Ted Thackrey, whom I am proud to call friend, and who is, with his wife, Dorothy Backer Thackrey, editor and publisher of the Post.

The editorial brought so many comments from Members who had not seen the series, and who wished to read all of Ted Thackrey's sharp, realistic, and commonsense comments that I am inserting I and II of the series today:

[From the New York Post of January 6, 1948]

STATE OF THE UNION—I

(By T. O. Thackrey)

It is a tragic paradox that at this moment in history, when the United States of America is the envy of the world because of unwatched power and material wealth, we are also the despair of mankind because of the poverty of our statesmanship.

At home and abroad we have permitted fear, timidity, and cupidity to usurp the leadership of courage, self-confidence, and humanity without which democracy cannot survive, nor can freedom, liberty, and justice.

Tomorrow the President presents to the Congress his report on the state of the Union. In this fateful session the Congress, by its actions, will serve either to rekindle the light of the world or extinguish hope's flickering flame for centuries to come.

Now is the time for all of us, as citizens responsible for the representation we have in the White House and the Congress, to examine the state of the Union and demand that the power and the resources which belong to us be used to serve the desperate needs of the many, rather than the selfish and destructive aims of the few.

It is only faintly helpful that we are in the year of national elections, whereby we can before its close register with our votes our approval of certain public officials and our disapproval of others.

But even this period is too long a time to wait; in those short months decisions will be taken in the name of the people that may rob us forever of an effective voice in our destiny.

It is the purpose of this and succeeding editorials to observe the nature of our more outstanding problems, look squarely at our failures as a Nation to measure up to our responsibilities, and to suggest remedies within our power to apply.

First, let us determine to rid ourselves of fear, recognizing that fear is the father of hysteria, and hysteria the murderer of reason.

No wiser words have been spoken in our time than those of Franklin Delano Roosevelt when he reminded us at another time of crisis that there is nothing to fear save fear itself.

Even the most superficial examination of our resources and strengths should be enough to prove that it is not the means we lack to banish fear, but the will to progressive and constructive action.

Our irrational fears have blinded us, not only to our strength, but have obscured for us, in a kind of red haze, the recognition of our real enemies * * * the enemies of all people, everywhere.

The enemies of mankind are war, hunger, poverty, disease, ignorance, slavery, discrimination, bigotry, insecurity, hate.

Fear of all, or some, of these disasters has gripped us as a nation in such a profound neurosis we are in danger of suffering the fate of the giant who was bound helpless as he slept by the pygmies of Lilliput.

Yet we alone among all the peoples of the world have the instruments and means to conquer these real enemies.

The United Nations, conceived by President Roosevelt and established at the call of America, deriving the major share of its material support justly from us since we have the greatest means, is the finest instrument ever fashioned by man to substitute international law for the blind passions of brute force between nations.

Fear has driven us too often from its halls. Courage and self-confidence must require us to persistently demonstrate our reliance upon its machinery to provide peaceful and just solutions.

It has been fearfully protested that the United Nations is weak, without power to enforce its decisions, helpless in the face of conflicting national interest.

And yet, if in place of nationalistic adventures sparked by fear, we determined to place our entire military establishment wholly at the command of the United Nations.

[From the New York Post of January 7, 1948]

STATE OF THE UNION—II

(By T. O. Thackrey)

While a hostile Congress listens to the President's report on the State of the Union, our destiny is being shaped by momentous events outside the legislative halls in Washington.

War—the most destructive scourge of mankind—is beginning in Palestine because of our neglect; in Greece and in China our arms, our munitions, our dollars, and even our military forces are pledged to Fascist-minded governments in their fratricidal conflict with communism.

In a blind terror of being scorched by an ever-advancing red flame, we have chosen to fight it with the gasoline of reaction instead of the water of reason.

Only in the European recovery program have we given genuine evidence of confidence in the strength of our democracy and a determination to use its vast resources to conquer democracy's real enemies—poverty, hunger, disease, and ignorance.

Even there, a reckless Republican Congress appears determined to make certain that our aid will once again be too little and too late.

It is not enough merely to bemoan our carelessness in electing Senators and Representatives who are bent on crippling humanitarian programs and frustrating the President's effective and specific plan for controlling inflation. It is not even enough to resolve upon their defeat at the polls next fall.

Grave as the effect of congressional heedlessness will be upon our lives, it is possible that we could, nonetheless, survive long enough to take an active rather than an academic interest in politics.

We cannot, however, survive a continuation on a global scale of a foreign policy which is more and more substituting unilateral action on a nationalistic basis for collective action within the United Nations.

If the United Nations seems weak, we must strengthen it.

If it lacks power, we must supply it.

It will be effective only if we insist upon making it effective; it will have both the means and the will to make decisions and to enforce them, if, and only if, we endow it with our best statesmen and support it with at least as generous a hand as we lavish on our ill-favored Fascist friends abroad.

It is argued that Russia is acting unilaterally; that the national interests of Russia and the United States are colliding around the world; that Russia refuses to abide by United Nations decisions which conflict with her policies; that Russia will veto, boycott, and perhaps finally withdraw, and this is, in the main, true; but the failures of the United Nations can scarcely be said to be exclusively Russian—they are American and British, also, and for the same basic reasons, an insistence on holding national sovereignty above international authority.

But unless our national interests are merged with international interests, and even made subordinate to them, it is inevitable that our national collisions around the world will result in war on a global scale.

The United Nations is an instrument conceived by us, nurtured by us, and shamefully neglected by us in the very functions it was organized to bring about—a peaceful compromise of differences among nations.

We must determine not only to make use of the United Nations as our basic instrument of foreign policy but to make certain that its decisions can be enforced and are enforced.

Specifically, Arabia in making war upon Palestine, and Great Britain by condoning war, are in fact making war on the United Nations.

The United States has not been above supplying arms to Arabia while piously embargoing shipments at the moment arms might have been useful to the Jewish state.

Arms, military power, funds—all these should be supplied—but to the United Nations for enforcement of its will. The United Nations will act promptly and effectively if the United States insists.

Certainly, here no conflict will be found with Russia. Judea was the fruit of Russian-American cooperation.

The United States without delay should present both to the Assembly and the Security Council of the United Nations our intimate knowledge of the threat to the peace of the world in Greece and in China.

Our national commitments to each of those unhappy countries should be withdrawn in favor of international commitments to the United Nations, together with an insistence that the United Nations promptly determine the formula for peace, and that we, in turn, will place our power and our resources at the disposal of the United Nations rather than to any faction in either area.

This is a formula for peace.

This is a formula for a really democratic foreign policy.

It is, in fact, the only means of maintaining and advancing democracy, and establishing a world of law rather than anarchy.

Gambling in Grains

EXTENSION OF REMARKS
OF
HON. EDWARD O. McCOWEN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. McCOWEN. Mr. Speaker, under leave to extend my remarks in the RECORD, and in compliance with a request from the Honorable Adam Frick, of Portsmouth, Ohio, I am inserting the following letter in the Appendix of the CONGRESSIONAL RECORD.

Mr. Adam Frick, of Portsmouth, Ohio, was mayor of that city for several terms. He also represented Scioto County, Ohio, in the general assembly or State legislature for two terms.

PORTSMOUTH, OHIO, *December 13, 1947.*

Re gambling in grains.

Hon. HARRY S. TRUMAN,
President, Washington, D. C.

DEAR PRESIDENT TRUMAN: Even before the induction of Roosevelt into the Presidency, following the cruel state of conditions which bankrupted most farmers of this republic, I insisted that gambling in grains be denied by appropriate Federal legislation. During the current decade I have pressed the matter at every opportunity, but have had to wait until now for recognition.

Grinding farmers' grains had been my business for well over a half century, now three score ten and ten years. During that time I have always had to do with the American farmer, and still have my major investments in these very necessary objectives. Legislation has in the interim been enacted allegedly to benefit, better the lot of the farmer, like county agents, university extension services, and countless isms, under very attractive titles. None of these introductions have saved agriculture from conditions which continue to drive youngsters from our farms. Propagandists of this twentieth century, want farmers wheat, corn, and hogs at 1914 levels, even every other less necessary convenience has risen 200 percent.

I am very deeply grateful for your timely recognition, as of October 5, 1947, of the evils that grow out of gambling in farm commodities. Arresting this sinister practice, which has been permitted uninterruptedly, will redound to the benefit and peace of all mankind on or off the farms. Legislation to prohibit this juggling in food commodities must immediately be enacted. Let those who want to live by way of gambling put their money on Joe Louis, Babe Ruth, Knute Rockne, Maude S., Man of War, or their successors, but not on the sweat of our folk who toil with the Lord in his earth.

Senate investigations reveal that the American taxpayer has paid for these added bureaucrats stationed over all of our 48 States who compile figures and forecasts, not for the welfare of mankind but for the benefit of those who seek to gain riches on odds to harm the others. These insiders grease the way for friends who can carry on the high-handed practices uninterrupted. Pauley says "seeking him out is mere peanuts." He should be commended for that frank statement, alarming as it is, because it confirms what I have always recognized. For these sins there is no fitting name.

Millions—yes; billions—have been made in grain speculation. True, millions—yes; billions—have been lost. But at that, all have had a demoralizing effect on the producers, who sweat in bringing in the sheaves. Prices at the farm must have governmental protection. Wheat, corn, and hogs are necessary to the human race each and every day. Their prices must be fixed at the farm, and be the same every day through the year, not shoved up and then down at the pleasure of these gamblers who never have seen a grain of wheat, corn, or a hog, neither would grow them for even twice the current price. You cannot stop the bit of opening through which these leaks drip information to friends in and out of these various departments that quicken their pace to the trading posts where the farmers sweat and labors are trafficked in every hour of the day, while he and his family on the farms have their hands to the plow and their backs bent working with that which brings daily bread. Pauley says that if Congress wants to outlaw trading, such as it is, then pass a law to that effect. Do that and give our farmers the protection due them and every other from a government by and for all people.

Very truly,

ADAM FRICK.

If trading in these commodities is an honorable business, why the squirming?

Mr. Lewis' Reply to Mr. Krug

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1948

Mr. ELLIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a letter written by Mr. J. A. Krug, Secretary of the Interior, which I am informed, was mailed to leaders in the coal industry, and also a copy of a letter written by Mr. John L. Lewis, president of the United Mine Workers, in reply to the letter from Mr. Krug.

Mr. Lewis, in his wisdom, has correctly stated that the bituminous-coal industry is the outstanding example of an American industry doing an adequate production job without cost to the taxpayers and independent of bureaucratic advice. The labor and operators in the coal industry have done an unprecedented job in production and the same can be said of practically all of our industry. The bottlenecks which have been most troublesome in the postwar period can be traceable in most cases to governmental interference. The men who have developed and operate the coal industry know best how to continue this production.

JANUARY 19, 1948.

The bituminous-coal industry of the United States is on the threshold of a new era in which the prospects for a higher level of economic well-being are bright and in which even greater accomplishments can be made in coal research, safety, conservation, and other activities of importance to the industry. To obtain these objectives, however, particularly in the coming years when the demand for American coals probably will be confined largely to our normal domestic markets, will require foresight, planning, and action by the leaders of the coal industry.

It is believed that there is much that can be done cooperatively by the industry's own leaders to assure a stable future for its affairs. For that reason, and in order that I may have the benefit of the industry's point of view in current and future coal matters, I am anxious to establish a Coal Advisory Council composed of outstanding leaders in the coal industry who will serve as consultants and advisers to the Secretary of the Interior. Accordingly, I am pleased to invite you to become a member of the Council and to meet with me in the Secretary's conference room, Interior Building, in Washington, 10 a. m., Tuesday, January 27, 1948, personally to discuss the organization of the council. I shall appreciate a reply by telegraph if you will be able to attend.

Sincerely,

J. A. KRUG,
Secretary of Interior.

JANUARY 22, 1948.

Hon. J. A. KRUG,
Secretary of the Interior,
Washington, D. C.

DEAR SIR: I refer to your letter of January 19, re appointment of a coal advisory council. I suggest as follows:

1. It is questionable that you possess the authority to designate yourself or anyone else for the task of designing a pattern of production, distribution, or regulation for the bituminous coal industry. It is the outstanding example of an American industry doing an adequate production job without cost to taxpayers and independent of bureaucratic advice.

2. You have previously demonstrated your total lack of ability to comprehend the problems of the coal industry, as well as your complete lack of concern for its requirements. For 2 years you have done nothing to aid the industry in securing machinery for replacements or railroad cars to transport its product to market. Fifty million tons of production were lost during the calendar year 1947 through such inaction.

3. I can conceive of nothing more anemic or futile than a coal industry advisory council attempting to give private advice to you. You have had such a committee to advise you on oil, and it is to be fervently hoped that the consumers of coal will be spared the present unhappy fate of the consumers of oil.

4. The coal industry has no present problem affecting production that management and men in the industry cannot meet if provided adequate mining equipment and transportation. Congress has not bestowed upon you the power to establish controls for this industry. Recently you asked for such power, including the power to freeze wages, which was a gratuitous insult to the men employed in the mining industry. In the absence of the necessity for such a committee and congressional authority empowering you to act, which I am sure Congress will withhold from you, the undersigned in the exercise of commonsense reasoning is forced to decline your invitation.

Yours truly,

JOHN L. LEWIS.

Challenges and Responsibilities of American Law

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, January 23 (legislative day of Wednesday, January 21), 1948

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Challenges and Responsibilities of American Law," which I delivered at a luncheon meeting of the Federal Bar Association, Washington, D. C., on January 22.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CHALLENGES AND RESPONSIBILITIES OF AMERICAN LAW

Mr. Chairman, members of the Federal bar, my friends, it is a privilege to appear before your group this noon, and at the outset I wish to express my appreciation.

In a very real sense, I feel that I have a great deal in common with this group today. We are all members of the same profession, and we are all servants of the people. We work for the people and we work with the people.

In addition to the professional standards and ethical requirements which members of our profession must always seek to maintain, we also have an additional obligation as public servants—particularly those of us who are at times acting in a quasi-judicial capacity.

Our job is to serve the people and it is absolutely imperative for us to remember that at all times. It is not enough for us to be good lawyers; we must also be good and faithful servants.

COUNSEL TO LAWYERS

On this matter of being better servants of the people and better lawyers, I should like, by way of introduction, to cite a bit of counsel that I respectfully submitted to a group of lawyers, judges, and embryo lawyers back in my own State sometime ago.

When we were in college we used to present to one of the old practitioners who taught us, various questions which he couldn't answer. Some of the boys used to indicate surprise at this apparent lack of knowledge on his part.

This teacher would therefore comment to them in this manner: "A lawyer isn't one who always knows. If he always knows, he is either a darn fool or a darn liar and he will make a poor counselor. Don't be ashamed to say 'I don't know.' You will be fortunate to know even after you have spent time to look up the law."

You and I know that a lawyer or anyone else who always knows the answers is generally an unsafe person to follow, and folks usually find him out to be unsafe. Here is another suggestion that came to us in law school days, and it is just as valuable today in Washington as it was then. It is this. Every day take at least 15 minutes apart from your work and profession. Lose yourself, so to speak, in reading the great truths in the Bible, in listening to good music, in reading good books or poetry (if need be in your lunch hour). Do your Boy Scout good deed. In other words, get apart from your law, and you will be a better lawyer because such action clears your brain and you will be better able to see your way. By "seeing your way," an old practitioner said, "you will be able to see the issues clearly and then prepare your case accordingly."

The same wise counselor gave us three other vital guidespots for life:

(A) Develop a sense of humor. Be able to laugh at yourself and with other people.

(B) Develop a good disposition. It oils the wheels of everyday life making for friends and clients, and it saves you from resentment and jealousy.

(C) Seek common sense (which includes faith). It will solve more problems than mere ability or great talent.

Man does not live by bread alone, and wise is the lawyer who realizes that he does not live by or for his law business alone or law work alone.

Now what about your legal work and mine in government?

PROBLEMS OF ADMINISTRATIVE LAW

Our interest in government is not only that of the average taxpaying American citizen but is also that of a worker within the governmental machinery itself. We are in the process of developing new techniques of administrative procedure—particularly with respect to hearings examiners—techniques which, I feel, will do much to eliminate the criticisms which have been directed at governmental lawyers in the past.

Most of us who are present here today are involved in the vast networks which we call administrative law.

This network has grown out of the myriad complexities of present-day government and is probably the outstanding legal development of the twentieth century just as the growth of equity was the outstanding legal development of the eighteenth century, and the expansion of legislative activity was the most widely discussed phase of legal development in the nineteenth century.

There are, of course, those agencies of government whose function is purely executive. There are other agencies which exercise in addition to executive powers subordinate legislative or judicial powers in some degree, at least.

HIGH STANDARDS FOR GOVERNMENT LAWYERS

Administrative law is largely an operating system rather than a common-law subject, although there is a large degree of common law in State administrative law. Only portions of administrative law can be derived from court decisions. Administrative law evolves in a surprising degree from established practices of administrative agencies. That is why it is so imperative that in our administrative agencies, we have the highest caliber legal talent available.

I am certain that this group here today shares with me the fervent desire to maintain the highest possible standards for our corps of Federal lawyers.

However, it is not my purpose here today to discuss either administrative law or the role which attorneys in the Federal service play in the field of administrative law.

Instead I am going to discuss briefly the subject which has been suggested to me as being of particular interest to this group, both as lawyers and as citizens of the District of Columbia.

EFFECT OF THE RECENT RICHMOND DECISION RELATING TO DISTRICT OF COLUMBIA

Undoubtedly every member of this group is familiar with the recent majority decision of the United States Circuit Court of Appeals at Richmond which in effect invalidated a 1940 act giving Federal courts the same jurisdiction to hear disputes between a Washington man and a citizen of a State which those courts already possess in cases involving disputes between citizens of two States.

I am certain at the outset that you gentlemen, as lawyers and as citizens, do not want to reside in a kind of judicial no-man's-land. That is why you are rightly concerned with this recent decision.

I am reluctant to comment on the decision or even on the possibility of legislation permitting citizens of the District of Columbia to sue in Federal courts unless I preface it by stating very definitely that I do not want to have any statement of mine construed in any way as instruction or advice or comment for the Supreme Court in the event it decides to review the Richmond ruling.

I have constantly sought to maintain separate and independent the three coequal branches of our Government, each one of which is sovereign in its own sphere. Of course, it is obvious that the Supreme Court has absolute right to make whatever decision it deems appropriate if it reviews this case.

BACKGROUND OF 1940 ACT

The act of April 20, 1940, represented an attempt to include the District of Columbia within the diversity of citizenship jurisdiction of Federal district courts. In other words, the provision was worded so that a suit between a citizen of a State and a citizen of the District of Columbia amounted to a diversity of citizenship conferring original jurisdiction on the Federal district courts in that class of claims.

My interest in this matter stems, in part, from the fact that a similar provision is now pending before the Senate Committee on the Judiciary as a part of the proposed codification of title 28 of the United States Code in section 1332 thereof.

The proponents of such legislation point out that the need for the legislation is based on the case of *Hepburn* v. *Ellzey*, wherein Chief Justice Marshall ruled that the District of Columbia was not a "State" within the meaning of the term as used in the Constitution and that consequently a citizen of the District could not sue in the courts of the United States on the ground of diversity of citizenship. These citizens, of course, can sue in the Federal courts of the District itself.

The constitutionality of the provision in question has been considered in Federal courts a number of times and there have been eight decisions holding the statute unconstitutional.

There are two cases upholding the constitutionality—the most recent decision on the issue is, of course, that of the Fourth Circuit Court of Appeals in the Tidewater Transfer case.

It is indicated that a writ of certiorari will be sought in the Supreme Court in this particular case. I might add that in both circuit court of appeals decisions, one circuit judge dissented from the judgment of the court.

BASIS FOR AFFIRMING ACTS' CONSTITUTIONALITY

The courts who have upheld the constitutionality have considered:

1. The dictum of Chief Justice Marshall in *Hepburn* v. *Ellzey*, supra, that "This is a subject for legislative not for judicial consideration"; and

2. Article I, section 8, clause 17, of the Constitution gives Congress, among other powers, the authority to "exercise exclusive legislation in all cases whatsoever, over such District" as might become the seat of the Federal Government. Consequently, this power would appear to go so far as to authorize Congress to grant citizens of the District of Columbia the privilege of suing in the Federal courts of the several States.

BASIS FOR AFFIRMING UNCONSTITUTIONALITY

Those courts which have denied the constitutionality point to article III, section 2, of the Constitution, providing that the judicial power of the United States shall extend among other instances to controversies "Between citizens of several States," since the term "State" has been defined by the Supreme Court as excluding the District of Columbia. These courts thus hold that Congress could not constitutionally enact legislation beyond the judicial authority conferred on the United States.

Chief Justice Marshall once said that the statute cannot extend the jurisdiction beyond the limits of the Constitution.

The argument has been that Chief Justice Marshall's dictum in *Hepburn* v. *Ellzey* was not intended to decide literally that legislation could be enacted to remedy the situation, since the term "legislative" was used in a broad sense which would include the process of amending the Constitution. This raises a number of very interesting legal questions. One thing is, however, certain and that is that when the citizens of the District are denied a privilege accorded to those of the States, their situation is unusual and unfortunate.

PROBLEM BEFORE US NOW

Chief Justice Marshall's statement about the anomaly of the present situation under which the United States courts are open to aliens and citizens of other States, but not to District of Columbia citizens, stands as a very clear definition of the present problem.

To establish a kind of judicial twilight zone, in which there is a District black-out of the privileges accorded to the citizens of the several States, hardly seems fair to the people of a great city—a people who have made the same sacrifices in the war as the citizens in the several States. I believe that this subject is a proper subject for study by the Judiciary Committee of the Senate, and it is possible that it should perhaps be the subject of a proposal for a constitutional amendment—a matter in which I have already indicated my keen interest.

CONCLUSION

Now, in closing, I wish again to pay tribute to the interest which your group has in maintaining its professional and ethical standards in the administrative law field.

The lawyer in government is a career man whose work should be rewarded and whose tenure should be safeguarded in a manner commensurate with his interest and his professional standards.

It has been my privilege in the first session of the Eightieth Congress to work with members of your group, particularly in connection with the consideration of nominees for judicial office. While I do not desire to see the legislative branch encroach in any way on the proper exercise of the executive authority to nominate and appoint, I am equally zealous in maintaining that "advice and consent" shall be more than a phrase. It is my continued intention to consult with bar-association groups and with groups such as this one to secure competent professional advice on the professional standards and acceptability of nominees proposed by the executive branch.

In the field of judicial nominations and in many fields relating to administrative law, it should be possible and probable for the legislative branch to consult with lawyers in the Federal service in furtherance of our mutual interest in good government.

Address by Hon. Theodore Francis Green, of Rhode Island, in Reply to Hon. Robert A. Taft, of Ohio

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, January 23 (legislative day of Wednesday, January 21), 1948

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the senior Senator from Rhode Island [Mr. GREEN] at Providence, R. I., on January 19, 1948, in reply to the Senator from Ohio [Mr. TAFT].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow citizens, last Thursday United States Senator ROBERT A. TAFT, of Ohio, an avowed candidate for the Republican nomination for President, addressed a gathering of his fellow Republicans here. He evidently had the purpose of getting the support of the Rhode Island delegates at the Republican National Convention. Senator TAFT was speaking as a candidate and he clearly defined the ultra-conservative course that he will follow, if and when he receives the Republican nomination for President, and if and when he is elected President of the United States.

Senator TAFT criticized severely the so-called New Deal, inaugurated and developed by our great President, the late Franklin D. Roosevelt. For the information of Senator TAFT and as a reminder to our Republican friends, I desire to point out that at each succeeding election President Roosevelt increased his plurality in our State and that in the 1946 election Rhode Island was one of the few States to elect a Democratic United States Senator and two Democratic Representatives in Congress—in other words, a complete Democratic congressional delegation—also, a Democratic Governor together with a complete Democratic slate of general officers. In my opinion, the last place in the world for Senator TAFT to criticize the New Deal was here in "Little Rhody," where the 1932 depression is still sadly remembered for its hardships and sacrifices, and the New Deal is remembered for its assistance to our businessmen and those in need, for its liberal social-security program and its help to all our citizens.

As chairman of the Republican Policy Committee, Senator TAFT is in the foreground as a leader in his party and under his guidance the policy of the Republican majority in the Senate is formulated and promulgated. As leader of this majority his lot is not a happy one and his ultra-conservative policies and his ultrapartisan maneuvers for carrying them into effect are not in accordance with the views of many of the liberal members of the GOP who subordinate party to country when legislation affecting the welfare of all our people is concerned.

Among these Republican Senators who have many times disagreed with Senator TAFT and his policies, are Senator AIKEN, of Vermont, Senator TOBEY, of New Hampshire, Senator BALDWIN, of Connecticut, and that former Rhode Islander, Senator FLANDERS, of Vermont. These Senators, all New Englanders, all staunch Americans, have from time to time disagreed with Senator TAFT and have publicly stated that fact. Senator AIKEN called for the resignation of Carroll Reece as chairman of the Republican National Committee and stated that "he failed miserably to win the confidence of the voting public." Carroll Reece, it will be remembered, was named chairman of the Republican National Committee by Senator TAFT and his friends. Senator TOBEY, of New Hampshire, a liberal, called upon the Republican national chairman, in a public statement, to issue a "manifesto" assuring the country that the Republicans in Congress "are Americans before they are party members" and that they stood ready to cooperate with the Democrats in important foreign and domestic policies. Of course, as yet, Mr. Reece has not complied with the suggestion that he resign nor heeded the appeal that the Republican Party cooperate with the Democratic Party in foreign and domestic policies. If Mr. Reece had so complied he would have found himself in conflict with his patron, Senator TAFT.

After Senator TAFT's radio address criticizing President Truman's message to the special session of Congress last November, Senator FLANDERS, of Vermont, and Senator BALDWIN, of Connecticut, together with other Senators attending a Republican Party conference, are reported to have rebuked Senator TAFT for his radio criticism. These liberal Senators wanted it definitely known that Senator TAFT was speaking as a Presidential candidate rather than a Senate leader and that he was speaking for himself and not for the Republican majority in the Senate.

These Senators had many complaints regarding Senator TAFT's speech and pointed out that many of the suggestions made in the President's program had previously been recommended by a subcommittee of the Joint Committee on the Economic Report, of which Senator FLANDERS, of Vermont, was chairman and of which a majority were members of Senator TAFT's own party. In this connection we should remember that Senator TAFT's policy is clear. As expectant contender with President Truman for the Presidency, he must not admit that President Truman is right about anything he says or does. I don't suppose there is anyone familiar with politics who could not have foretold that whatever the President's program would be, Senator TAFT would be ready to condemn it, as he did that very same evening. If the Senator himself had drafted the message that he thought President Truman ought to deliver and had President Truman delivered it, the Senator still would have found no difficulty in pointing out how full of faults it was—sins of commission and also omission.

Speaking of sins of omission, I believe that many of those who listened to Senator TAFT last Thursday evening were sadly disappointed that he did not discuss at length either price controls, or anti-inflation measures, or adequate housing, or other subjects affecting the daily life of the average citizen. The most important subject under discussion in the Senate is that of controlling prices and I believe that this subject is of more interest and concern to the average citizen than any other matter affecting him and his family. But Senator TAFT conveniently ignored price controls, and did not advise his Rhode Island friends as to whether he concurred with the suggestions of Senator FLANDERS, of Vermont, who only recently in a public statement reported that he and numerous other liberal Republican Senators favored meat rationing. I do not believe it is necessary for us to establish another OPA. However, it does seem necessary that some form of control be exercised in order that the price of food and commodities may be brought within the reach of our average citizens.

What Senator TAFT's proposals are to combat the inflation already mounting, we cannot tell, for he ignored this subject entirely. Perhaps he was fearful that he might unwittingly agree with President Truman.

With regard to housing, you may have forgotten, as Senator TAFT apparently has, that he was one of the sponsors of the Taft-Wagner-Ellender housing bill. This measure, after lengthy hearings, was reported to the Senate by the Committee on Banking and Currency and has been on the Senate Calendar since last April. It may have served the purpose of being something to which Senator TAFT may point as proof of his interest in the subject, but no action has been taken by him, so far as I know, to have this bill considered, and in the meantime tens of thousands of our citizens, including thousands of veterans, are begging for housing and Federal assistance to obtain homes for their families.

Neither in his address here nor in his many addresses as a leader of the Republicans in the Senate has he offered any inkling as to when this housing bill, or for that matter, *any* housing bill, will be considered either by the Senate or the House. If he has forgotten, I beg to assure him that the people of Rhode Island have not.

There is another matter which Senator TAFT failed to mention but which is looming large in the coming campaign, namely, the Taft-Hartley labor law, of which he is a cosponsor. Here, again, he seems to have felt that he has fulfilled his duty on the subject when he lends his name to the introduction of a bill, or, perhaps, he hesitated to do this because he was speaking in a large industrial center and our population includes substantial groups of working people. I voted against this Taft labor bill and also to sustain the President's veto of the Taft-Hartley bill, as it was then called. I regret that this was enacted into law over the President's veto and I hope that at some future date this act, if not repealed, will be amended so that it will be impartial in its treatment of labor and management.

Senator TAFT in his speech here dwelt at length on the President's budget and in particular on compulsory military training and appropriations for the Army, Navy, and Air Forces. I am not surprised that he assumed the role of a military strategist. Nor am I surprised at his suggestion that "If the air is as important as this report indicates it would seem that there might be a further cut in the expenditures for the Navy and the ground forces." Those of us who must listen to him daily in the Senate have learned that there is no subject on which he hesitates to set his own opinion above that of any expert. We Rhode Islanders, living on the Atlantic seaboard, are, I know, definitely in favor of a large Navy, adequately equipped and supplied and fully manned to protect our shores against the enemies of our peace and security. So I know that you agree with me that our Navy should be given the best of modern equipment and that our officers and enlisted men should be the best trained and the best paid Navy men in the world.

With regard to our ground forces, both Army and Navy, I am definitely in favor of retaining a large Military Establishment until the peace of the world is secured and nations behind the iron curtain and elsewhere realize that the United States will not tolerate the spread of their doctrines by aggression. Senator TAFT seems to disagree with this proposal to an extent he left rather uncertain.

President Truman has himself recommended all the cuts for the Army and Navy which he felt safe for the country. However, I have no assurances that Senator TAFT and his Republican policy committee and the Republican majority in both Senate and House will not recommend further cuts. I am firmly convinced that if the Marshall plan is not put into effect for our self-protection we will be forced to adopt not only universal military training but also a peacetime draft. I trust that the Republican majority in Congress will not follow Senator TAFT and cut further the appropriations for the Army, Navy, and Air Forces.

With regard to universal military training, I am at a loss to understand how he believes that we can maintain our huge air bases, our Naval and Military Establishments through voluntary enlistments. The Army, including the Army Air Corps, is now about 100,000 enlistments short of the quota established for this year in spite of strenuous efforts made to stimulate recruiting. Compulsory military training has been discussed in the Senate committees and has been advocated by many patriotic Americans who believe that until peace is assured, the United States must have a well-trained, well-equipped Army, Navy, and Air Force, not to be used for aggressive action but to forestall another catastrophe such as Pearl Harbor and what followed.

Senator TAFT, when speaking here, cautiously avoided mentioning to his audience the secret meeting of 20 Republican Senators, the majority of whom disagreed with Senator VANDENBERG, chairman of the Senate Foreign Relations Committee and President of the Senate, as to his views on the Marshall plan. Senator TAFT, according to press reports was not present at this meeting. However, many of his colleagues were in attendance and voiced their opposition to the plan sponsored by General Marshall for European recovery. The Marshall plan, my fellow citizens, is the only program for world recovery submitted to the Congress of the United States. It is sponsored by that great American, soldier, and statesman, George C. Marshall, and recommended for enactment by President Truman in order to establish and maintain peace in the world. A plan such as this should not be adopted piecemeal—it should not be cut down here and there. To be effective it should be adopted in its entirety. I believe, with most of the members of my own party and with many of the members of the Republican Party, that no consideration of party politics should affect our vote on this matter of such great importance to our country and to the world. Furthermore, we must consider, not only the sacrifices which we must make to carry it out, but also, the greater sacrifices we will almost surely be called upon to make if it is *not* carried out. Senator TAFT seems to have concentrated his attention on the former alternative only. Let us consider the whole question, both as world citizens and primarily, as Americans.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, January 23 (legislative day of Wednesday, January 21), 1948

Mr. HATCH. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of an editorial endorsing the St. Lawrence seaway carried in the Manitowoc Herald-Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BACKING THE SEAWAY

Senator WILEY, chairman of a subcommittee which held hearings on the St. Lawrence seaway, was justified in his remarks the other day about relative amounts of Federal money shoveled into other sections of the country and the Midwest. He was equally right in pointing out that the proposed deepwater route to the Atlantic would not be merely a middle western project.

"The St. Lawrence seaway * * * is an integral part of not only America's economy but of the economy of the entire North American Continent," he declared. He could have added, without exaggeration, that the proposed project would be important in the economic scheme of things for the whole world. Certainly this is true now with so many nations depending on American foodstuffs for their very existence.

The Wisconsin Senator went into statistics to show that other sections of the country, particularly the South and far West, last year received many millions of dollars more in United States appropriations than the Midwest. He wisely added, however, that it would be "obviously absurd" to appropriate money for the development of the Middle West merely to equalize the amount given each region.

Mr. WILEY offered his figures not to promote logrolling, or you vote for my bill and I'll vote for yours, but to shame certain sectors of the country into withdrawing completely selfish opposition to the waterway. The South has long been a stubborn foe of the project and the Pacific coast also seems to have rallied to the antiseaway banner. Their enmity stems from real or imagined competition with the Mississippi River system and West coast ports.

Sectionalism should not be permitted to block a project which is manifestly a national and continental improvement, particularly when it promises to be self-liquidating and self-supporting. Of course, it will benefit the Midwest more than any other region, but that is not the principal reason for urging its passage.

The St. Lawrence measure is expected to come to a Senate vote late this week. If passed, it will then face House action. Manitowoc supporters of the plan should waste no time in contacting their Senators and Representatives and demanding vigorous action.

Antiseaway forces have persistently nudged Congress and can be expected to shove their campaign accelerator to the floor during these last remaining days.

Meat Rationing

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, January 23 (legislative day of Wednesday, January 21), 1948

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "A Thin Line Between," from the Morning World-Herald, of Omaha, Nebr., of January 21, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A THIN LINE BETWEEN

Two Republicans this week introduced a bill which would authorize the Department of Agriculture to spend $1,000,000 in getting ready for meat rationing, when the crisis comes, if it comes.

True, the two introducers—Senator FLANDERS, of Vermont, and Representative JAVITS, of New York—are not members of the Republican high command. But they are elected representatives of the party, and the fact that they introduced such a measure tends to smudge, more than ever, the line of distinction between Republican principles and Democratic principles.

It is a mighty thin line these days, and has been during the past two Presidential campaigns.

In 1940 and again in 1944 the Republican candidates and their official spokesmen, in most cases, failed to come to grips with the basic issue. They refused to make a frontal attack on Government paternalism and New Dealism. Instead they adopted a sort of me-too attitude, talked in terms of we-could-do-it-better.

Naturally they lost. The American people don't like pale imitations. If they are going to get New Dealism they would prefer to get it from the original, bold New Dealers, rather

than from trembling Republicans wearing New Deal masks.

Now another election year is at hand, and various Republican officials and leaders—among them Senator FLANDERS and Representative JAVITS—again are showing signs of the fidgets. Apparently they can't bear the thought that some of President Truman's "Mr. Fixit" proposals will win a handful of votes in Bennington or the Bronx.

In fairness it should be acknowledged that some of these me-too Republicans may be acting in accordance with principles rather than political expediency.

If so, they should be given credit for sincerity—but not for understanding.

Take this business of meat rationing, for example. What would be the effect of it, out here in the cattle country?

Hart Jorgensen, director of the Omaha Livestock Foundation, broadcast that question last week to farmers and feeders.

"If they put controls back," wrote one, "I'm going to unload and vacation in California. I'm through."

"If rationing returns," wrote another, "the farmers will ship what they have on feed and stack their feed bunks as they did before. It takes about 2 years to start up in feeding, but you can get out quickly."

"I am not a large producer," said a third, "but was completely forced out under the former controls."

So it went, without exception. The farmers and feeders have been through it all, and they know what Government control can do to production. The consumers ought to know, too. It was less than 2 years ago that rationing drove good meat off the legitimate market and left in the butchers' trays only an occasional cut of tough Utility beef.

Rationing doesn't make more of anything. It simply divides the scarcity. And because of muscle-bound controls, rationed items generally become scarcer and scarcer.

If the American people are reconciled to a lean future, if they see nothing ahead but shortages of this and shortages of that—getting worse year by year—then they had better make up their minds to accept rationing and wage control and price control and all the other planned-economy machinery.

And they might as well rehire President Truman to run the show for them because he and his crowd have had quite a lot of experience in making people dance.

But if the people are determined to have an economy of abundance, if they intend to have more meat and more food of all sorts and more oil and more steel and more jobs in years to come—then they had better put a stop on restrictive Government controls and let the free economy get busy in a big way.

It is the latter possibility which gives the Republicans their chance in 1948. Provided they have enough courage to make a fight, and don't content themselves with a feeble "me too" every time a totalitarian mind has another brainstorm.

Opposition of Certain Railway Brotherhoods to the St. Lawrence Seaway Project

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, January 23 (legislative day of Wednesday, January 21), 1948

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement which I have prepared on the subject of the opposition by certain railway brotherhoods to the St. Lawrence seaway project.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

RAILROAD LABOR SHOULD NOT OPPOSE ST. LAWRENCE SEAWAY

I know that every Member of this body feels a very deep respect and admiration for America's great railway brotherhood organizations which have been pioneers in the field of labor and which have on countless occasions set a model example for labor unions throughout the Nation in fair, democratic, peaceful bargaining procedures. Moreover, the outstanding record of American railway labor in the First and Second World Wars is so well known that it does not require repetition.

It is with regret, therefore, that I have recently noted that some representatives of the railroad brotherhoods have apparently been speaking to Members of the Senate, urging opposition to the St. Lawrence seaway project.

May I say that I respect the right of representatives of the brotherhoods to present their suggestions to their Congressmen just as it is the constitutional right of every American of whatever organization to point out to his Congressman what he regards as justice and equity in legislation. However, I believe that if the representatives of railway labor continue to seek to influence a vote against the seaway, they will be doing the gravest possible disservice to American railway labor. They will be swallowing hook, line, and sinker the most spurious, obsolete and outdated conceptions of alleged seaway competition with the railroads, which have been foisted by seaway opponents.

WHY RAILROADS SHOULD NOT OPPOSE SEAWAY

1. In the first place, only a very small segment of railway labor is involved at all in this seaway development, and this is some of the railway labor of the Northeast. It is astonishing to find railroad brotherhoods of the Midwest and Far West presenting opposition to a project which does not even affect them and which affects only a few eastern financial interests adversely rather than the railroads themselves.

2. Even the effect of the seaway project on railway labor in the Northeast will be both remote and comparatively insignificant. The effects will probably not be felt for around 15 years or so. At that time, our Nation will be so vastly expanded that the minor diversion of traffic from railroads to the seaway, if any—and even minor diversion is open to doubt—will be completely insignificant in relation to the total expanded needs for railroad transportation. We are today a Nation of 143,000,000, and within 15 years, with increased population, with increased demands for goods, with increased overseas shipments and a perhaps $250,000,000,000 economy, the railroads will still be operating at capacity, even with the seaway completed.

NEW RAILROADS WILL FEED SEAWAY

I am convinced that the overwhelming rank and file of American railroad labor appreciates and understands the need for the continued growth of all forms of transportation in our country. They know, too, that the development of the St. Lawrence seaway will inevitably involve the vast expansion of railroads to feed seaway commerce.

VOTE FOR SEAWAY IS VOTE FOR LABOR

I appeal, therefore, to every Senator and to every Member of the House who may be approached by a railway labor representative to call these facts to his attention. A Senator or Representative who casts his vote for the seaway is casting his vote for American railway labor and for the American Nation as a whole. Railway men of Wisconsin recognize this, and I believe that the railway men throughout the Nation understand it.

REACTIONARY OPPOSITION TO SEAWAY

Railway labor has always prided itself on what it regards as liberal and progressive causes and has fought what it regards as reactionary. To oppose the seaway is, I believe, the most dyed-in-the-wool reactionary (in the truest meaning of that term) effort conceivable. To oppose the seaway is to try to strait-jacket our economy—to choke it to death rather than to allow it to evolve. The welfare of railroad workers will hardly be served by trying to freeze in immobility a transportation system that was good for a $70,000,000,000 economy, but is hopelessly inadequate for a $210,000,000,000 or $250,000,000,000 economy of the future.

In the name of their own enlightened self-interest the brotherhoods should support and fight for the seaway rather than serve as the dupes for a few selfish interests which have fought railway labor anyway.

The Veterans' Economic Development Corporation Act

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, January 9, 1948

Mr. DWORSHAK. Mr. President, one of the real concerns of the Nation today is the economic betterment of our veterans and our small businesses to set the country back on the path of peace and national security. I have here a copy of a Nation-wide radio address given by Commander in Chief Ray H. Brannaman, of the Veterans of Foreign Wars of the United States, prior to a meeting with Congressmen and Ambassadors here in Washington, January 3, before the session of the Eightieth Congress opened.

With it is a State plan as a basis for the veterans' plan to win the peace, which the commander in chief said "may well prove to be the turning point in our history as it provides a direct method of reducing the increasing threat of war and of securing peace and prosperity."

In developing a tentative State plan, which I have designated the Idaho plan, I hope it will be of value to persons in other States with similar problems to further the effectiveness of the proposed Veterans' Economic Development Corporation if enactment is secured.

At this point, I am inserting in the CONGRESSIONAL RECORD a letter that is self-explanatory:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
January 5, 1948.

Hon. HENRY C. DWORSHAK,
Senate Office Building,
Washington, D. C.

DEAR SENATOR DWORSHAK: It was a particular honor to have you attend our luncheon Saturday in Washington given for distinguished Members of Congress, for Ambassadors and representatives of nations under the Marshall plan, of China, of the Philippines, and for representatives of the American Legion, the Disabled American Veterans, and the American Veterans of World War II.

In "the veterans' plan to win the peace" that I announced over the NBC national network and at the luncheon, your Idaho plan can serve to implement plans in the other 47 States. We wish to compliment you on your plan as it will help the people of the communities, including veterans, by bringing new industries to the communities, expanding present businesses, modernizing agriculture and by creating new industrial uses for agricultural products.

We find that experts from other nations are interested in developing programs similar to the Idaho plan to enable their people to prosper and to hold the line against communism and war. It is not an overstatement to say that if applied here at home and abroad, such a plan would help win a bloodless World War III before the shooting starts.

Your championship in Congress of small business in the United States and the establishment of veterans in businesses and profitable careers has our supporpt. The bill that you introduced in the Senate on July 17, 1947, S. 1652, entitled "The Veterans Economic Development Corporation Act," will enable millions of veterans to catch up with the economic parade at home and abroad. Your bill will interest the taxpayers particularly as no appropriation of taxpayers' money is contemplated. In addition, it is estimated that it will reduce taxes as it will save a billion dollars a year of the present cost of government.

The bipartisan support of your bill and its early passage is indicated by the companion bills introduced in the House by ESTES KEFAUVER, of Tennessee; EDITH ROGERS, of Massachusetts, chairman of the important Veterans' Committee; WOLCOTT, of Michigan, an authority on finance and chairman of the Banking and Currency Committee; and past Chairman SPENCE, of Kentucky; by Congressman KEARNEY, of New York, and VAN ZANDT, of Pennsylvania, both former commanders in chief of the Veterans' of Foreign Wars and members of the American Legion. The unusual support of your bill in the Senate is shown by the introduction on July 17 of companion bill S. 1652 by you and Senator BRIDGES, of New Hampshire, chairman of the important Appropriations Committee on your behalf and on behalf of Senators BARKLEY, of Kentucky; BUTLER, of Nebraska, chairman of the Public Lands Committee; REVERCOMB, of West Virginia, chairman of the Public Works Committee; FLANDERS, of Vermont, of the Committee for Economic Development; MORSE, of Oregon, chairman of the Veterans' Committee of the Committee on Labor and Welfare; and Senators CAIN, of Washington; CAPEHART, of Indiana; FERGUSON, of Michigan; HAWKS, of New Jersey; KNOWLAND, of California; JENNER, of Indiana; MARTIN, of Pennsylvania; JOHNSON, of Colorado; FULBRIGHT, of Arkansas; EASTLAND, of Mississippi; MAYBANK, of South Carolina; and HILL, of Alabama. In addition to the approval of your bill given by President Truman, it is significant also that small business associations and others are enthusiastic about the prospects of your bill's helping to enrich the people in the communities.

As our Veterans Economic Development Corporation bill helps others as well as veterans, it should implement your Idaho plan as a new milestone in the illustrious history of Idaho and of the Nation. More power to you, and we veterans are behind you.

Best wishes,

Sincerely,

RAY H. BRANNAMAN,
Commander in Chief.

Mr. President, in the above letter, Commander in Chief Brannaman says that a program such as the Idaho plan is of interest to experts from other nations because it would enable their people to prosper and to hold the line against communism and war.

As a member of the Appropriations Committee, which recently toured Europe to evaluate the requests of the nations under the European recovery program, I visited England, France, Germany, Austria, Trieste, Italy, and Greece.

While I was abroad, our experts in Washington met with the ambassadors and ministers of the European countries, China, and the Philippines, to implement the plan to win the peace by developing the production program in the United States to meet the critical needs of other countries, and by installing in other countries pilot industrial and modernized agricultural operations to demonstrate to those people our system of free enterprise and proficiency.

In these pilot operations in free countries, American experts, with the cooperation of American veterans, will help to speed the modernization of their economy by on-the-scene demonstrations. Not only will this modernization increase the self-sufficiency of the free peoples, but will also increase their purchasing power for American goods and services.

As a preface to Commander Brannaman's radio address I wish to quote from a luncheon talk he made the same day.

This plan to win the peace is timely and urgent. It is evident that World War III is being launched against us by the enemies of democracy as surely as we foresaw that the acts of aggressor nations would bring World Wars I and II. In fact, we are still at war because the enemies of democracy are defeating the peace by refusing to conclude World War II.

This Nation of 140,000,000 people in a world of 2,000,000,000 people is called upon to tip the scales between war and peace. Fortunately, among us is a segment of our population which can balance our forces toward peace. It is the group of 20,000,000 veterans who were selected for their strength and leadership to supply the balance of power which won two world wars. As they supplied the skilled military leadership, they can now under American technological leadership, at home and abroad, constitute a great factor in preventing war.

I ask unanimous consent to insert in the RECORD a major portion of the radio speech referred to above:

THE VETERANS' PLAN TO WIN THE PEACE

(Radio address by Ray H. Brannaman, commander in chief, Veterans of Foreign Wars of the United States, January 3, 1948)

Today, representing the Veterans of Foreign Wars of the United States, an organization composed solely of overseas veterans, I want to present to you a plan for peace and national security. All of us desire peace and security for ourselves and our Nation, and to this end we offer a plan for peace and security for each of us in which you can, as an individual, help and be a part. This plan concerns your present welfare, that of your children, and of their children. It is a plan that may well prove to be a turning point in history. Many people believe it provides a direct method of reducing the increasing threat of war and of securing peace and prosperity. It may be one method to make our contemplated aid to Europe less costly to the American taxpayers.

Our domestic policy is failing because we have adopted a philosophy of scarcity, less work, less production, dog eat dog, everyone seeing how much he can get and how little he can give.

At this moment the crisis here at home is acute. One reason that our cost of living is rising in a dizzy spiral is that our productive capacity in goods and certain foods in the United States has not kept pace in the last decade with our population increase and demands. Clearly this shortage of productive capacity in both food and manufactured products will continue to raise our living cost until it gets out of reach. Unless we act promptly, the expression "boom and bust" will be a reality and not an idle warning. Our standard of living—our very system of personal freedom and free enterprise—is in jeopardy.

Fortunately, we have a plan at this time which can help us meet this double crisis. This plan will enable us not only to correct the weaknesses in our national economy but also to help friendly foreign countries to reinforce their own economies, thereby strengthening the democracies to resist communism and avoid war. The plan is provided by the Veterans Economic Development Corporation Act, one of the most constructive pieces of legislation ever to be introduced in the United States Congress.

Identified in the Senate as Senate bill 1652, this bipartisan proposed legislation was introduced by 19 distinguished Senators. In the House it is identified by six different numbers, one of which is House bill 157, and was introduced by six Members.

The Veterans Economic Development Corporation, popularly known as the little man's RFC, was originally designed to provide veterans with adequate financing to enter business—to make sure they would not become the apple sellers of this generation.

The plan is simple and has two main objectives: The first objective is to develop the maximum human and physical resources of each community. Careers for veterans, as well as continued full employment for other citizens, will be fostered through the following: The establishment of needed new businesses or the expansion of existing businesses; the modernized productivity of agriculture; the utilization of unused natural resources; and the improvement of self-liquidating public projects. Capital for these ventures, and also the technical know-how, will be made available by the Veterans Economic Development Corporation, which will borrow money through the United States Treasury at a low rate of interest and then extend loans to veterans and others at 4 percent, the duration of the loans being up to 20 years.

The second objective of the Veterans' Corporation is to help friendly foreign countries to help themselves through a similar program of modernization abroad by supplying American technical experts who will provide the necessary knowledge for pilot operations in the foreign countries asking our aid.

Essentially, the Veterans' Corporation will be of aid to small business, the foundation upon which our whole system of free enterprise has been built. It should reverse the unhealthy tendency for small industrial companies to merge or sell out to larger companies that have the technical engineers and capital to operate successfully.

Perhaps its best feature is that it will operate without cost to the taxpayers, and will require no appropriation. Furthermore, the Corporation would not compete with private banking. In effect, this "littleman's RFC" would work for individuals and small business just as the original RFC has for big business and big industry.

The veterans' organizations are now taking an inventory of industrial opportunities in every State. We find there is hardly a community that does not need new businesses, the expansion of present factory facilities, and self-liquidating public projects. In most of our States, in addition to

critical housing needs, our agricultural economy is out of balance with our industrial production.

States, counties, and municipalities would be helped to finance useful self-liquidating local public projects, such as parks, buildings, airports, irrigation systems, and so on. Municipalities and private enterprise would be enabled to break bottlenecks in housing.

Further, through the Veterans' Corporation, both veterans and nonveterans could exploit the hundreds of thousands of enemy patents, secret processes, and manufacturing methods that our veterans have captured, and they could utilize our unused war plants and equipment.

Senator BUTLER, chairman of the Public Lands Committee, points out that this bill would help provide for the development of irrigation and the vast mineral deposits of western States could also be developed.

The plan is remarkable for its down-to-earth common sense. I have said that almost everywhere in the United States there is work to be done that is not being done. This veterans' corporation would be, in fact, a fulfillment of the age-old objective to match the ambitious man with the career opportunity, and to finance him so that he may make the most of it. It would utilize profitably the efforts of 2,800,000 veterans who are now in training.

While the primary objective of the plan is to set the United States on its feet economically, the possibilities of its application in other countries are equally promising.

It is significant that the veterans' corporation program is the only program of foreign aid which would enable American technicians with American know-how to be on the spot in the communities of those countries seeking our help. This would assure American taxpayers of the wise investment of the billions of dollars to be given to other countries by the United States if the Marshall plan is adopted.

This piece of legislation, if enacted into law, will place into the hands of millions of veterans and others the tools to work with; place them in a position to be self-supporting; to start a new business or expand an old one; to explore new fields at home and abroad. It will enable veterans to recoup their time and opportunities lost while serving their Nation in uniform. It will save the taxpayers of the Nation approximately a billion dollars a year in the present cost of veterans' affairs.

This bill has the support of James F. O'Neil, the national commander of the American Legion; John Golob, commander of the Disabled American Veterans; Edgar C. Corry, Jr., commander of the American Veterans of World War II; and many others.

I plead with every person listening to me today to adopt a philosophy of plenty—a philosophy of big production. I further plead with you to sell this philosophy to others, because the philosophy of bigger production, both in factories and on our farms, is the only philosophy that will reduce prices, help us feed and clothe the world, and help us place in the hands of our own people, as well as those of the rest of the world, the tools with which to work so that they may become self-supporting.

The veterans' economic development corporation bill will serve as the sparkplug to reach this objective. It provides every Member of Congress the opportunity to serve many millions of our veterans and at the same time insure prosperity and peace for the Nation. The bill is now in the hands of Chairman TAFT, of the Senate Labor and Public Welfare Committee, and of Chairman WOLCOTT, of the House Banking and Currency Committee. We hope this bill will be passed in this session of the Eightieth Congress for the good of the veterans and of the Nation.

I thank you.

Mr. President, nearly everyone with whom I talk, asks "What are we going to do about meeting our own needs as well as those of other countries? What can we do about rising prices? How can we prevent another war?" Everyone will agree that these are directly related problems. We must start in the communities to solve the problem for the individual person and for our State. To serve the interests of our people, I have devised the Idaho plan, which I submit for the CONGRESSIONAL RECORD as it appears to interest people of other States who are also designing a State plan to enrich the people in their communities:

THE IDAHO PLAN

The Idaho plan is designed to develop, under the provisions of the Veterans' Economic Development Corporation, the resources of Idaho to promote the prosperity, welfare, and health of all our people. Career opportunities for veterans as well as continued full employment for others would be fostered through the development of needed new businesses, the modernized productivity of agriculture, the utilization of unused natural resources and the implementation of needed self-liquidating public projects.

The Veterans' Corporation, with authority to extend credit totaling $5,000,000,000, will direct its loans toward supplementing the loans of banks and other existing private lending agencies, and the capital needed will derive from existing public money. No appropriations from Congress will be necessary, as only profitable self-liquidating projects will be considered.

Planning activities would be on a State, county, regional, or community level. A State planning board, with the assistance of a know-how committee composed of technical experts, would plan for the physical development of the State, cooperating with other State agencies in the preparation of programs. It would also assist regional and county committees and community planning boards. It would further extend technical assistance to individuals, new businesses and projects.

Since the veterans' economic development program is essentially a grassroots program—designed to serve small business and industry and agriculture in the community—emphasis on planning would be on a community level. Thus, while the State planning board and know-how committee would engage in planning on a State-wide basis, their primary function would be to serve the interests of the communities and to bring to bear the cooperation of the Federal Government on local projects whenever advisable and necessary.

Because of this emphasis on local planning, the following outline on State and community planning will list specific opportunities for development and expansion under the section on community planning.

Technical experts of friendly nations seeking our help under the Marshall plan and other forms of aid have shown great interest in applying this Idaho plan to their own countries under the provisions of the Veterans' Economic Development Corporation Act.

COMMUNITY PLANNING

1. Local planning board established, representing industry, finance, business, labor, sciences, the professions, veterans, religious groups.

2. Planning board sets up a know-how committee.

3. Planning board outlines program of activity, receiving assistance in organizing and formulating programs from State planning commission or State know-how committee.

(a) Inventory to determine present and future economic needs, including preparation of town and agricultural maps on the following:

Population distribution and trends, property tax surveys, land use, zoning ordinances, traffic studies, recreational facility requirements, health and welfare survey, community center redevelopments, highway maintenance, fire protection, water supply, housing, school system, farming, utility services, transportation service—airport, etc. using facilities of Federal, State, and regional agencies for fact-finding and making projective studies.

4. Opportunities for development and expansion:

(a) Local industries as to research for new products, use of captured enemy patents and new processes, use of natural resources, and new industrial plants for agricultural products.

(b) Land-use development, giving attention to irrigation, underground water resources, reforestation, erosion control, soil treatment, and fertilizers.

(1) Water power development as to utilities, industrial uses, and agricultural purposes.

(2) Agricultural practices relating to livestock improvement and new crops.

(c) Commerce in fields of sales development, new market centers in growing communities, farm cooperatives, assembly, processing and warehousing facilities, air transport, and trucking.

(d) Mining, geological surveys.

(e) Tourist and recreational areas: Beaches, lakes, wood trails and roads, camping areas, sports, fish and game stocking, restoration of historical areas, scenic improvement, hotels, cabins and restaurants, stream and pond pollution control, and handicrafts.

(f) Public service (self-liquidating): Utilities and transportation of passengers.

(g) Public health and welfare (self-liquidating): Medical clinics, fire prevention, sanitation, stream pollution abatement, and sewage disposal.

(h) Public works and public improvements (self-liquidating): Housing, parking areas and buildings, and municipal projects.

(i) Education (self-liquidating): Colleges, professional and trade schools (improvement), community recreation centers, vocational and social guidance, rural school consolidation and transportation.

STATE AND REGIONAL PLANNING

1. State planning board established, representing all groups.

(a) Supplements and implements work of existing State planning agencies.

(b) Cooperates with and serves community planning boards.

2. Planning board sets up a State know-how committee composed of technical experts in various fields.

(a) Know-how committee gives technical advice to planning board, to community know-how committees, to county or regional committees, to individuals, to new businesses and projects.

3. Planning Board outlines program of activity, receiving assistance in organizing and formulating programs from State know-how committee or State planning commission.

(a) Takes inventory to determine present and future economic needs of State and geographical area, preparing State, regional, and county maps and statistical studies—

(1) Uses facilities of Federal, State, and regional departments and agencies for fact-finding and making projective studies.

4. Planning board integrates county, community, and regional plans, eliminating overlapping, confusion, and unprofitable enterprises.

Mr. President, from my studies of the needs of the people of Idaho, I find that there is hardly a business or agricultural community in our State that will not profit from the benefits of this Idaho plan. To mention only a few of the benefits that will enrich the lives of practically everyone, I refer to the new scientific processes, trade secrets, and patents that our veterans have captured from enemy countries, which now are of commercial profit to businesses in our communities. These were developed by the best scientists of Europe over a period of 10 years behind an iron curtain of secrecy. At a recent meeting our expert who made an inventory in Germany of this material said its value to American businessmen is estimated to be as high as $20,000,000,000.

Industrial development in the communities of Idaho and new uses for agricultural products will save on freight rates and provide more profitable labor for our workers, fertilizer plants, canneries, potato-starch factories, cheese factories, tanneries, fiber-processing plants, woolen mills, clay plants, pulp-and-paper mills, and other needed businesses. To add to the creative wealth of the people of our State, the unused mineral deposits and natural resources of Idaho can be developed.

As our veterans are fresh from the war, where they demonstrated their patriotism, resourcefulness, and adaptability in utilizing the products of science, they can now help spearhead the economic development of Idaho for the benefit of all the people in our communities. Teamed with our community fathers and leaders, veterans and everyone else can benefit from the Idaho plan, which will be implemented under the provisions of the Veterans' Economic Development Corporation Act, which we have introduced in this Eightieth Congress.

The Strange Case of the Taft-Hartley Law

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, January 23 (legislative day of Wednesday, January 21), 1948

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the January 1948 issue of the Reader's Digest, which is entitled "The Strange Case of the Taft-Hartley Law," written by Claude Robinson, president, Opinion Research Corp.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE STRANGE CASE OF THE TAFT-HARTLEY LAW

(Condensed from Look)

(By Claude Robinson, president, Opinion Research Corp.)

Shortly after passage of the Taft-Hartley bill over President Truman's veto, my organization decided to sound out the ordinary worker's real opinion of it. We sent interviewers into the concentrated manufacturing areas of the East and Middle West where 7 out of 10 American manufacturing workers live. They talked with union members and nonunion employees in large factories and small plants; with manual and white-collar workers, and with both Roosevelt and Dewey voters. To all they addressed this simple question:

"Do you think Congress should have passed this bill or not?"

"No," said 54 percent. "Yes," said 31 percent. And 15 percent had no opinion. This meant that slightly better than one out of every two workers is against the Taft-Hartley law.

So we decided to find out what features of the law made it unpopular. Selecting several of the most controversial provisions, we asked each worker about each one, without telling him it was part of the Taft-Hartley law. To our surprise, a majority in each case approved all these provisions of the bill. Even the section outlawing the closed shop drew the approval of more union members than were against it.

This is the question the Opinion Research Corp. asked: "If you were in Congress, would you be for or against laws to do the following things?"

1. Require unions to give 60 days' notice before they can go out on strike.

	Percent
All employees:	
For	78
Against	16
No opinion	6
Union members:	
For	70
Against	25
No opinion	5

2. Give the company the right to sue the union if the union breaks its contract.

	Percent
All employees:	
For	77
Against	13
No opinion	10
Union members:	
For	70
Against	20
No opinion	10

3. Require unions to make reports on money taken in and what they spend it for.

	Percent
All employees:	
For	86
Against	11
No opinion	3
Union members:	
For	85
Against	12
No opinion	3

4. Prevent Communists from holding union offices.

	Percent
All employees:	
For	76
Against	18
No opinion	6
Union members:	
For	77
Against	19
No opinion	4

5. Prohibit unions from spending money or making contributions in connection with political campaigns for Federal offices.

	Percent
All employees:	
For	56
Against	36
No opinion	8
Union members:	
For	50
Against	42
No opinion	8

6. Forbid a company to have a union shop until a majority of the workers vote for it. (A "union shop" is defined as one in which the worker does not have to belong to the union to get a job, but must join after he is hired.)

	Percent
All employees:	
For	79
Against	14
No opinion	7
Union members:	
For	77
Against	18
No opinion	5

7. Outlaw the closed shop. (The "closed shop" is defined as a shop in which no one can get a job unless he already belongs to the union before he goes to work there.)

	Percent
All employees:	
For	60
Against	30
No opinion	10
Union members:	
For	48
Against	43
No opinion	9

8. Allow the Government, in industries considered vital to the country's welfare, to get a court order preventing a strike for several months while settlements are attempted.

	Percent
All employees:	
For	78
Against	14
No opinion	8
Union members:	
For	70
Against	21
No opinion	9

The vote results, when averaged up, show a 73-percent approval of these Taft-Hartley provisions. On the basis of our investigation, it seems clear that the American worker favors what is in the Taft-Hartley law—but doesn't know it.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, January 23 (legislative day of Wednesday, January 21), 1948

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "St. Lawrence Seaway," published in the Washington Post of January 21, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ST. LAWRENCE SEAWAY

When the Senate begins debating the Vandenberg resolution approving the agreement between the United States and Canada for development of the St. Lawrence seaway, it will reopen a controversy which has had passionate adherents on both sides for many years. The fight has usually evoked more emotion than deliberation. But that is doubtless inevitable in the case of any project affecting so many varied interests as does this one. We can only hope that the Senate will cut through the special pleading and the barrages of propaganda that are coming from both sides and render a decision in keeping with the national interest.

Mayor O'Dwyer claims that the proposed seaway would take away from New York one-third of its overseas traffic. Whether or not

this estimate is well founded, the fact that some traffic between the Middle West and Europe will be shifted away from the bottleneck of New York is one major reason why the project has found favor in the eyes of a vast number of citizens. Far too much of the Nation's tran-Atlantic traffic is dependent upon the facilities of one great port. Economically as well as from the viewpoint of national security we think it is desirable to improve and develop other channels of commerce. The argument for extending this waterway into the heart of the North American Continent to serve the great agricultural and industrial areas bordering on the Great Lakes is especially strong because of the advantages given to the seaboard areas several decades ago by the construction of the Panama Canal.

In addition, of course, the St. Lawrence project would make possible the generation of a vast amount of hydroelectric power. The plan calls for generators with a capacity of 2,200,000 horsepower at Barnhart Island in the International Rapids section of the river. No doubt the Senate will give careful attention to complaints that this power would not be available in winter because of ice conditions and low run-off from the Great Lakes. There are many technical aspects of the project that call for scrutiny. We have little doubt, however, that the project will be approved on grounds of high policy. The St. Lawrence treaty previously negotiated with Canada failed to obtain the necessary two-thirds vote for ratification in 1934, but it won 46 favorable votes to 42 negative ones. The resolution now awaiting action will require only a majority vote, for it was negotiated under the terms of a treaty already in effect. Moreover, Senator VANDENBERG and other sponsors have added a proviso to the effect that the deep-water navigation works should be made self-liquidating by charging reasonable tolls. Allocation of materials for construction of the seaway will have to be carefully weighed against other demands and our commitments under the European recovery plan. But the arguments for ratifying the agreement at this time are unquestionably strong.

National Security and Universal Military Training

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. BYRNES of Wisconsin. Mr. Speaker, the Commission on Air Policy, after long and serious deliberation, reported that our only real security in this age of the atomic bomb, bacterial warfare and the rapid development of supersonic aircraft and guided missiles was the elimination of war itself "through a regime of law." Realizing the practical remoteness of this ideal, however, it suggested that our national-security policy must be twofold: First, to work toward the elimination of war through support and development of the United Nations; and second, to prepare to defend ourselves for the possibility that war may come.

In preparing for a war that may come in spite of all of our efforts to prevent it, the only course open to us is to arm ourselves so strongly that not only would other nations hesitate to attack us because of our ability to strike back powerfully and swiftly, but so strongly that, if we were attacked, we could smash the assault quickly and surely. The Commission, dealing largely with air policy, concluded that other countries, by the end of 1952, would not only have atomic weapons but the planes and missiles necessary to deliver them on us in quantity. Our only course, therefore, is to develop an air defense that can break up such a sustained attack, and an air offense which would cause any nation contemplating such an attack to think twice before bringing a rain of destruction down upon themselves.

Such an air force will require huge sums of money. It will have a serious impact on our national life. But, the alternatives are so risky and so filled with menace to the security of our Nation that we can ill afford to do less. But this is not all. There are other requirements for a sound national defense, a defense not only necessary in and of itself but necessary as a possible deterrent to war.

At this point, I wish to make clear that I am not discussing the type of warfare that is referred to by sensation seekers as push-button warfare. It is possible that this type might become a reality in 25 or more years. What we are discussing now is that type of warfare which is possible today, or in the light of recent developments, within the next few years. If the estimates of the Commission on Air Policy are correct, we are discussing the type of warfare which will be possible in 1952.

What, then, are the other requirements, besides a powerful air force, for adequate national security, in these days when war is total, terrible, and swift?

It is the general concensus of military men and of civilians who have studied the matter that these are the other basic requirements for national security:

First. A coordinated and highly efficient intelligence service. Intelligence means knowing what the enemy, or potential enemy is doing and thinking. Good intelligence is vital.

Second. Continuous scientific research and development. We must keep abreast of latest developments in basic and applied science, but we must do more. We must keep ahead of the rest of the world.

Third. Industrial mobilization. We must be ready to back up our armed forces with industrial readiness. In this day and age, war requires that all of the resources of the Nation be mobilized for its prosecution.

Fourth. Unified armed forces. We have already placed under a single Cabinet head all of our armed forces. There is much that remains to be done by the Secretary of Defense to make unification more than just a paper affair. A strong Army, Navy, Marine Force, and Air Corps must be molded together into an effective offensive and defensive organization.

There is no serious disagreement that the five points I have mentioned are vitally necessary in any program of preparedness for the possibility of war. The only persons who disagree are those who either believe that we should disarm entirely—and the fallacy of that belief is obvious—and those whose sympathies lie closer to other nations than to their own country.

The main area of disagreement concerns a sixth point which has been suggested by many as being vitally essential to an adequate national security policy. That point is the immediate adoption of a universal military training program.

As your representative, I have expressed my opposition to peacetime conscription on many occasions. To me, as it must be to all Americans, the thought of drafting young men into military training during a time of peace has been repugnant. It has gone against everything that my schooling and my instincts have taught me to believe.

Yet today, I am telling you that I believe universal military training, as outlined in bills presently before Congress, is vitally necessary to our national security. I have not arrived at this conclusion lightly, nor without a great deal of study and soul-searching. I want to explain the reasons for this sincere belief of mine in some detail.

I approached this problem by attempting to find the answer to just one question only. I tried to throw sentiment, emotion and prejudice aside and arrive at a clear-cut answer to this question: Will universal military training make our Nation more, or less, secure? If I could find the answer to that question, I knew that I would have the answer to the basic question, "Should we adopt universal military training?", because national security, to my mind, supersedes all other considerations.

My search for this answer took me back again to a study of what kind of war is possible now, and more important, what kind of war will be possible within the next few years, when other nations have developed and produced atomic weapons in quantity and the means of delivering, or dropping, them upon our homeland.

We have already discussed the first phase of such warfare. The attack would come through the air without warning. I might say, parenthetically, that we would have no warning of the attack except through our intelligence service, and I might also add, that we, as a democracy, would probably have to be attacked before we went to war. It is not in our nature to declare war first.

A military leader has described the initial attack in these graphic words:

> The attack would be primarily at the great cities and would cause great destruction both to physical structures and the people. It might involve atomic bombs, radioactive materials, biological warfare, and crop-destroying chemicals. The atomic bomb would probably be used against cities in preference to military targets. We would have chaos, with communications disrupted, millions of persons sick, wounded, and dying, civil disorder, and sabotage.

Of course, as I have mentioned previously, it would be the duty of an enlarged United States air force to make

this first attack as ineffective as possible and to crush it with counteroffensive measures. Present indications are, however, that even with superdefensive measures, large numbers of planes or missiles would get through to their targets.

The military leader continues:

The initial bombing attack would likely be followed by air-borne troops.

In such a war, where such a devastating initial attack is possible, what kind of armed forces do we need to prevent chaos from engulfing our whole land and leaving us open prey for further follow-up attacks?

First, it is absolutely necessary to have a highly trained body of men, equipped with the latest weapons, ready to strike back through the air to seize either advance bases for future operations or to follow up our own bombing counteroffensive in the homeland of the enemy. The objective of this force must be to make the further launching of attacks against us impossible. This will be the assignment of our regular standing Army, Navy, Marine, and Air Corps.

Now, many people opposed to universal military training agree thus far. They believe that comparatively small, well-trained, and well-equipped forces are absolutely necessary, but they claim that future wars, because they will be fought between such forces, render large bodies of troops unnecessary and even dangerous. They call this concept "World War I thinking."

Here is what I believe is the fallacy in the argument of these sincere people.

We must be realistic. We must grant to our potential enemies an intelligence equal to our own. The bare fact is that in future wars it is entirely within the realm of possibility that we shall be invaded by air-borne forces who will have the same objective as our own striking force, namely, to make it impossible for us to attack their homeland. We must be ready to crush such an invasion.

There is only one way to defend against air-borne invasion against any one of a hundred strategic points in America—that is, by well-trained reserve units in every part of our own country ready and able to meet possible invasion.

There are other reasons for having these units instantly available; with large-scale destruction, they would be needed to handle problems of evacuation, medical care, fire fighting, and repair of essential communications and transportation. They would be needed to maintain order in an atmosphere of disorder and demoralization. They would be needed to combat organized sabotage. They would be needed to clear radioactive areas. They would be needed for a hundred and one jobs, which we cannot rely upon local police and improvised civilian agencies to do satisfactorily.

This will require large numbers of trained men organized into reserve units. True, we could expand the size of our Regular Army to provide these men, but this would require that practically the whole Nation be under arms constantly.

To maintain such a large number of men in reserve units, it is my opinion that universal military training, which will give the rudiments of training to our young men for 6 months, then require that they join one of our reserve armed forces units and train with it for a certain period is essential and necessary. Our reservoir of trained men left over from the last war will not last forever. It must be constantly refreshed.

Thus, straight logic, based upon a review of what is possible in the future, has led me to believe that universal military training is vitally necessary, in this era of uneasy peace, for our national security.

Universal military training will cost money. So will the other five points in an adequate national defense. They will cost money that could be more productively used in other places in our national scheme of things. However, if it will prevent a war, or make us relatively more secure against attack, it is money which must be spent.

There are dangers, of course, in a universal military training program. One is that we would consider it, in itself, as a sort of Maginot line against aggression. I have already pointed out that it must be considered as only part of our national defenses. Another is that it would give too great power to our military leaders, and another is that it might become dangerous to the morals and education of our youth. For these latter two reasons control of the program must be rigidly overseen by an alert citizenry.

Further, the program itself must be universal in its application to all persons of a given age. Only those handicapped persons who can make no material contribution or whose absence from home would create extreme hardship could be excluded. The training undergone by the trainees must be geared to modern warfare and must be intensive; close-order drill will not suffice in the atomic age. The need for skilled craftsmen, technicians, and so forth, must be considered. In short, in adopting a universal military program we must make sure that we will devise a program which will contribute to, and not detract from, our national security.

A final word: It is apparent that logic and the national welfare dictate a military program that is far greater than we conceived would be necessary at the end of the war. This crushing burden upon our national economy can only be dropped when we have achieved real security in a world in which war is no longer possible. We must devote all of our intelligence and energy toward making such a world a definite reality.

Forrestal All Out for Universal Military Training

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 19, 1948

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks in the RECORD, I am pleased to submit for inclusion herein a copy of a newspaper article by John A. Giles, columnist, appearing in the Washington Sunday Star, of date January 25, 1948, giving the views of Secretary of Defense Forrestal in regard to universal military training, as follows:

UMT FOES' ARGUMENTS FALLACIOUS, FORRESTAL LETTER TELLS ROBERTS

(By John A. Giles)

Arguments by foes of universal military training that atomic weapons and push-button warfare had made "mass armies" obsolete and UMT unnecessary were branded as fallacious yesterday by Secretary of Defense Forrestal.

Mr. Forrestal, who is leading the Army-Navy-Air Force fight for passage of the UMT bill, made this charge in a letter to former Supreme Court Justice Owen J. Roberts, chairman of the National Security Committee. Justice Roberts released the text of the letter at a press conference.

The committee, which is composed of individuals and 55 Nation-wide organizations with a membership totaling 16,000,000, was formed last fall to crystallize the campaign for UMT.

"DISTURBED" OVER CHARGES

Justice Roberts said he had become "disturbed by the possible effect of published charges by opponents of UMT to the effect that push-button warfare makes mass armies obsolete and, therefore, universal military training," and that he wrote Mr. Forrestal for his views.

"This argument is fallacious for two reasons," Mr. Forrestal wrote. "In the first place, the push-button era of warfare has certainly not yet arrived and may be many years in the future. In the meantime, we must anticipate that any future war might be of a total aspect involving at the outset a possible sudden and violent attack upon our homes and cities.

"We must therefore be prepared at all times for an immediate mobilization of trained men on a large scale throughout the country. I firmly believe that UMT is the only effective democratic means of providing the necessary trained and ready reserves in such an emergency."

WON'T GIVE "MASS ARMY"

"Secondly, UMT would not give us a 'mass army' in the popular sense. On the contrary, the entire military-training program emphasizes the technical and specialized training that modern warfare requires.

"Before World War II it required a ground crew of three men to service a combat airplane. Today's planes require 12 and more men to keep them in the air. Scientific development of weapons requires not only greater numbers of highly trained men, but longer periods of training as well. The UMT program is designed to furnish the basic elements of such training prior to any future emergency."

Mr. Forrestal also branded as not sound the argument that a greatly increased striking Air Force would obviate the need for UMT.

ERP CALLED VITAL

"True, national security cannot be obtained through any single measure to the exclusion of any other," he wrote. "From the broad standpoint it includes, in addition to a strong Military Establishment, the preservation of a sound free-competitive system of enterprise in our country, the recovery of Europe, the solution of problems of Greece, Turkey, China, and the Middle East, and the revival of the machinery of production throughout the world.

"In short, the European recovery program is a vital element of national security. UMT is another vital element. One cannot discuss security in terms of only one of its

elements nor in terms of the United States alone."

Calling UMT the basis of manpower planning for all of the armed services, Mr. Forrestal declared it absolutely essential to our national security.

Justice Roberts, in releasing Mr. Forrestal's letter, said it effectively destroys the mass-armies fallacy.

ARGUMENT CALLED NONSENSE

"The argument that we don't need millions of men behind the machines is pure nonsense," Justice Roberts said.

The demoralization that would be created by a blitz atomic attack alone necessitates the enactment of UMT, he declared.

The American Legion, meanwhile, charged last night that the House Rules Committee is gagging Members of Congress on universal military training, and demanded that it report a training bill to the House floor for a vote.

In a letter to Chairman ALLEN, John Thomas Taylor, Legion legislative chief, said opinion polls show the public favors universal training by a 2-to-1 margin.

CONGRESS HAS EXCEPTION

"Every group in America except one has expressed its views on universal training or had full opportunity to do so," he declared. "That one exception is Congress. There is no valid reason for further hobbling this legislation and preventing a vote by the House membership."

Mr. ALLEN was not available for comment.

Representative HARNESS, Republican, of Indian, said yesterday he is personally convinced the universal military training bill will not be reported by the Rules Committee for some time He is a member of the committee.

"I think whether the bill is reported will depend on developments between now and the time it is placed on the committee's agenda," he said. "I have taken no position as to the merits of the bill."

No Humanity for Germans

EXTENSION OF REMARKS

OF

HON. THOMAS L. OWENS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. OWENS. Mr. Speaker, since the early part of last year I have called your attention on a number of occasions to the serious question with respect to the German prisoners of war, who are being held as slave laborers in England, France, the Soviet Union, and several other countries of Europe. It has been practically impossible to obtain any definite information or cooperation from the U. S. S. R. and while England and France have gone through the movements of cooperating they really have done comparatively little toward eliminating the inhumane practice of involuntary servitude on the part of these prisoners of war. I have had much correspondence with the Secretary of State and the Acting Secretary of State about this matter. It is my definite intention to ask that steps be taken to end this slavery, which is inhumane, and which we should discourage by refusing to give aid to any countries which indulge in such practices. I would also suggest that the Members of the House read the article entitled "No Humanity for Germans" which appears in the current issue of Human Events. It reads:

NO HUMANITY FOR GERMANS

(By Oswald Garrison Villard)

It should be obvious that the failure of the foreign ministers to create even a basis for an approach to a peace with Germany has intensified the miseries, the psychological sufferings and the growing hopelessness of the German people. But Secretary Marshall has yet to emphasize this simple humanitarian aspect of the tragedy.

This is the more regrettable because the Secretary of State did say, in his comment on April 28, 1947, on the similar failure of the Moscow Conference: "The patient is sinking while the doctors deliberate. So I believe that action cannot await compromise through exhaustion." Moreover, Secretary Marshall has discussed the horrible situation of the Chinese masses, after years of starvation, revolution and warfare, with an appreciation of what this has meant to those pitiful people.

But the Secretary wound up his radio report of December 19, on the utter failure of the London Conference, without a single word as to where this failure left Germany, or as to the outlook for another move.

He merely said: "I fear there can be no settlement until the coming months demonstrate whether or not the civilization of western Europe will prove vigorous enough to rise above the destructive effects of the war and to restore a healthy society," and that "the situation must be stabilized" before any other attempt to solve the impasse. He gave no encouragement to the suffering and half-fed Germans and Austrians to hold out, or to believe that the state of war in which they are still kept will be terminated—not even in the face of the increasing signs of desperation among a literally starving people.

The patient may continue to sink; the doctors have ceased even to deliberate. They seem content to slang each other across the dying body.

This policy of drift means a continuing refusal to reintegrate our conquered subjects into the life of what used to be called one world. The Germans remain beyond the pale. They cannot send cables or radio messages, or use the telephone for any communications outside their existing frontiers. The airmails are closed to them, though they may receive air-borne letters, but these can only be answered by the regular mails which are 4 weeks or longer in transit to the United States. All mail remains liable to wartime censorship, and the ensuing delays, although hostilities ceased in the early summer of 1945.

II

Germans cannot receive from abroad any moneys, large or small—not even from friends and relatives overseas—even though the large sums which would pour in would considerably improve conditions and cut down our Government's expenditures.

As a result the Germans cannot purchase foreign books, magazines, or newspapers. Very few American publications seep in, while their own censored press remains inevitably inefficient and inadequate in the presentation of news and the molding of a free public opinion.

All our efforts at denazification and democratization are thwarted by the lack of materials for extensive assistance to schools, to adult education through the labor unions and otherwise, and because we are withholding the very books and newspapers which would familiarize the Germans with our attitudes, policies and democratic processes. If our Government would but lower the high postal rate charged on food and clothing parcels and remove the present limit on weight (22 pounds), there would be a still greater volume of relief shipments by Americans.

Worst of all, the Germans and Austrians cannot buy hospital equipment or supplies—even such articles as rubber operating gloves and toilet essentials—or the necessary drugs. If they receive some—but not enough—penicillin and streptomycin, it is in part because our military government is fearful that venereal and other contagious diseases may spread to infect our troops.

Travel is almost an impossibility for any German. Even merchants and salesmen are gravely restricted, despite the military government's assertions that it is bent on building up the economy of Bizonia. It is extremely difficult for any German to get permission to cross into Switzerland, though the Swiss Government raises no particular objections. There is a case on record of an elderly woman, seeking a permit to visit Switzerland, who was accused by an American colonel of trying to avoid the hunger punishment.

Again, the Germans cannot understand why anti-Hitler refugees in this country, even men who served in the American Army during the entire war, are frequently refused permission to return to Germany and help to rebuild their country along democratic lines. They are cut off by a brass curtain, as impenetrable as Russia's one of iron.

III

Two facts stand out clearly in this picture. One is that to alter the conditions cited as controlling in our zone requires no further conference of Foreign Ministers, nor any other step beyond a decision by the President to take such action, especially as we have now voluntarily assumed one-half of Britain's expenses in maintaining its zone.

President Truman could certainly order the necessary postal changes, end the ban on airmail, permit the use of the cables, and insist that the American banks now established in Germany be allowed to do business with the Germans instead of only with the occupying forces. This improvement would require only one stroke of the Chief Executive's pen, and the recall of officers now devoting their time to the intricacies of red tape would improve the present desperate housing conditions. So would a further reduction of garrisons which offer no threat to the Russians and are not needed to hold down the unarmed Germans.

One word from the White House to the Army, and the State Department would end its stubborn refusal to allow the return of the anti-Nazi refugees and would make possible the importation of the needed drugs. The Postmaster General can regulate the size of the packages to be sent abroad and the rate to be charged for them. If the President should desire the "Bizonians" to have access to all American books, magazines, and newspapers it would not be difficult to make the necessary currency changes to enable the free import of American intellectual material.

There is an even more important step which Mr. Truman could take if he desired to influence the German mentality in the direction of the the democracies and against the communism of the East. There are still over 3,000,000 prisoners of war in captivity, in violation of the laws of war and of the Geneva Convention; forced to work for beggarly pay in involuntary servitude. For some of this slave labor the United States is morally responsible since it "loaned" German prisoners to the French and British Governments after the surrender.

In 1947, in response to proddings from the International Red Cross, the United States demanded of France the release of the numerous prisoners in that country, with a resultant promise, according to the press, that they would be set free last fall. The

Red Cross has again protested against the continued enslavement of many of these men—an unprecedented outrage of every principle for which America stands.

Millions of Germans have a direct or indirect interest in these "loaned" prisoners. The longer the prisoners are detained, contrary to law and to human decency, the more the German public will regard as pure hypocrisy American assertions that ours is a Christian country, and therefore spiritually and ethically fitted to reform German thinking.

IV

In two speeches prior to the London Conference, General Marshall exalted with true American modesty the complete altruism and unselfishness of our foreign policy. Always, he suggested, it has been wholly just and actuated by the highest motives—forgetting the Mexican War (denounced in 1885 by General Grant as "one of the most unjust ever waged by a stronger against a weaker nation"); and our attack on Spain.

Such self-laudatory interpretations of our history are not only contrary to truth; they do violence to the best in our American traditions. And the tendency to gloss what we are doing with hypocrisy is the second important fact in the present status of our relations to Germany and Austria.

Hypocrisy is attested by the severe criticisms of our policies and their results, as voiced by returning soldiers, civilian officials and journalists—Whitelaw Reed, editor of the New York Herald Tribune, declares that German conditions under our flag are "subhuman."

Letting the patient live—or die if he can—goes counter to our historic policy of generous aid to any and all peoples in distress, to the spirit of General Grant at Appomattox, to our consideration for the Filipinos after the conquest, to the most praiseworthy good-neighbor policy acclaimed by Franklin Roosevelt, to every one of the democratic and humanitarian ideals which were voiced as our reason and our purpose in entering the war. Our sadistic policy in Germany is also contrary to every teaching of history. Nobility begets nobility, and generosity, generosity. This is what the Secretary of State must remember if he wishes to make American foreign policy of today conform to what he thinks and asserts it has been in the past.

There lies a surer road to the restoration of goodwill, true peace and prosperity for all Europe, than the present frantic effort to purchase safety for democratic institutions with dollars. The present turn of events in Germany shows that even if the patient can be resuscitated at the last moment, he is all too likely to hate those who sanctimoniously preached the outlawry of war, and ended up by demanding the outlawry of charity for a fallen foe.

You Can't Fool the People

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, Abraham Lincoln is accredited with having said that you cannot fool all of the people all of the time. That certainly is applicable to my constituents. They are alert, and do not have to be told by their Representative in Congress what is going on. The many sources of information through which they get information is almost unbelievable. But today, they are wise. They know what is going on. You cannot fool the people. The New Deal Administration certainly is not fooling them. They are not to be fooled any longer.

Typical of the many letters I am receiving, I quote the following one which I have just received from one of the fellows back home:

Attached is a copy of the letter which I have just written to the regional manager of the Veterans' Administration trying to get my son his $65 per month, which he applied for about 2 years ago, and for which they sent him another form instead of the final certificate. I am sending this letter to you only for your files, you need not follow it up.

I see that Mr. Pauley has finally got his foot too far in the door. Maybe if the Thomas committee would take a look at the actions of Mr. Pauley just before the "aid" to Greece was signed, they might find where Mr. Pauley got a hand in that, too. For it was told to me that he owned considerable of the Greek shipping, which was organized just a few weeks before the aid bill was passed, and that the bill provided for one-half of the tonage to be hauled in Greek Bottoms, and since Greece had no merchant marine, Mr. Pauley and his friends provided the Greek Bottoms, and thereby hangs another nice New Deal tale.

If we are to help the people of Europe, let's help them. If we are to help the European Governments, let's loan it to them. For you know as well as I that we'll be Uncle Shylocks in a year's time. But if this is a measure to help find jobs for the displaced personnel of OPA, CCC, GPU, and XYZ, then let's manufacture an island or some such spot where they can all rest and relax listening to the soap operas.

Let's get a foreign policy as well as a domestic policy; but first let's get some kind of a vacuum cleaner that will get our own house in order. Really the boys who pay the taxes don't give a damn so long as they are paying them for something in which they can see results; but when their debt is not reduced, when there is more talk of more spending, and no thought of abolishing so many damn departments that no one single person can make heads or tails of it, well, they are getting a little wrathy, and they are going to put a lot of people in who can clean house.

Southern States Industrial Council Insists Upon Careful Scrutiny by Congress of the Marshall Plan

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, the Southern States Industrial Council, which comprises an organization of business men from some 16 Southern States, has expressed itself in no uncertain terms on the Marshall plan. The board of directors of the Southern States Industrial Council insists upon careful scrutiny by Congress of the Marshall plan. The following is a resolution adopted by the board of directors of this organization January 8, 1948:

Whereas British and European recovery is almost wholly dependent upon the efforts of the people themselves, it being authoritatively estimated that a 10-percent increase in production in those countries would do more to advance their economic recovery than any amount the United States conceivably could contribute in loans and gifts; and

Whereas it was the opinion of this board, expressed at a meeting held in New Orleans on January 28–29, 1946, that the proceeds of the British "loan" would be largely wasted and would accomplish few if any of the desirable purposes which the sponsors of this American subsidy of British socialism urged in its support, which opinion and prediction have since been fully confirmed by events; and

Whereas it is the opinion and belief of this board, expressed at a meeting held in New Orleans on October 31–November 1, 1947, and hereby reaffirmed, that "with or without American aid, any program for the economic rehabilitation of Europe is foredoomed to failure unless and until the people of Britain, France, Italy, and other claimant nations are provided with additional incentives to work, produce, save, and invest, which incentives * * * are available only under a system of free enterprise."

Resolved—

1. That the Foreign Relations Committee of the Senate and the Foreign Affairs Committee of the House of Representatives be and they hereby are respectfully urged to explore all aspects of the so-called Marshall plan at the forthcoming hearings, including but not being limited, to the following:

(a) The history of postwar foreign aid to date; the amounts expended; the purposes for which such expenditures were made; and the results accomplished.

(b) Information about production and productivity in the claimant countries; controls in effect and the effect thereof on production; the development and status of cartels; tax burden and what the money is spent for; plans for further nationalization; and the gold and dollars now available to those countries without enactment of any Marshall plan.

(c) How the Marshall plan would operate; the specific purposes for which this money is to be expended and in what amounts; what safeguards are contemplated against use of funds for collectivist political and propaganda purposes; extent to which these countries have implemented the self-help and mutual-aid aspects of the plan; and the effect of any such program on the strategic position of the United States and the claimant countries vis-à-vis the U. S. S. R.

(d) The probable impact of the proposed plan upon the people of this Nation, their daily lives and scale of living, their natural resources, the taxes they pay, the direct and indirect costs of the plan, including the resulting additional inflation and higher prices, and whether the adoption of such a plan will necessitate the reimposition of compulsory price control and rationing.

(e) Possible alternatives to the Marshall plan, including the elimination of the now infamous Morgenthau level-of-industry program under which American taxpayers are compelled to pay German reparations.

2. That the Senate and House committees be respectfully urged to report their findings in language understandable to the average United States citizen, employing terms commonly used in this country, such as bushels (instead of metric tons) in the case of grain.

3. That copies of this resolution be sent to all Members of Congress; that the council tender its assistance to the aforesaid committees in their efforts to assemble all the facts which might assist the Congress and the American people to arrive at a sound and realistic conclusion with respect to the momentous public issue here involved; and that the staff of the council be instructed accordingly.

Fulcrum of Democracy

EXTENSION OF REMARKS
OF
HON. EDWARD G. ROHRBOUGH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. ROHRBOUGH. Mr. Speaker, under leave to revise and extend my remarks, I include therein an editorial from the Washington Post for January 25, 1948, entitled, "The Fulcrum of Democracy." This editorial urges Federal support for education:

FULCRUM OF DEMOCRACY

On Monday, the Republican Steering Committee of the House will meet to decide whether it will permit the Eightieth Congress to act on proposals of Federal aid to education. Here are some stark and stubborn facts for the committee to consider: Five million youngsters between the ages of 6 and 17 are not attending schools of any kind in the United States today. There are some 10,000,000 adults, according to the 1940 census, whose education has not gone as far as completion of the fourth grade. Half a million young men had to be rejected for military service during the war because they lacked even the rudiments of an education.

The quality of public education in the United States, moreover, has dropped deplorably. Niggardly pay scales have caused a tragic exodus from the teaching profession so that in countless communities today classes are conducted by teachers who have no qualifications for their task. Gross inequalities exist throughout the country in educational opportunity—the key to all other opportunities. More than a million children in 1939–40 attended classrooms which cost more than $4,000 a year. On the other hand, more than a million attended classrooms which cost less than $500 a year. This is scarcely a democratic system of public education. The public schools, once an American pride, have been allowed to deteriorate in so many respects that rebuttressing must be undertaken if we are to avoid a colossal waste of human talent.

The inadequacies and inequalities in educational opportunity stem from want of funds. Only Federal aid can furnish the remedy. The Republican Steering Committee is committed, to be sure, to tax reduction and to a program of governmental economy. Let its members ask themselves, however, not whether we can afford to tax ourselves and spend public money for public schools, but whether, as a Nation dedicated to the concept of government by the consent of the governed, we can afford to let ignorance sap our efficiency, our productivity, our capacity to guide ourselves with intelligence in a period of unparalleled difficulty. Such economizing would be nothing more than parsimony. Education is not a luxury. It is the fulcrum of a democratic sociey.

The Cafeteria Strike

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial from the Washington Star, Washington, D. C., of January 22, 1948, in reference to the strike which has been in progress against the cafeterias in Government buildings here in Washington. This editorial presents in clear language the issue involved in this controversy.

Information has reached me that the War Department and the Department of Agriculture, notwithstanding the issue that has been raised, have ignored and bypassed the spirit and clear intent of a Federal law. These two departments have entered into a contract, so I am informed, with Local 471, United Cafeteria and Restaurant Workers, of the United Public Workers, CIO, after that union had disqualified itself as a bargaining agent by refusing to file non-Communist affidavits, as the law provides.

The purpose and intent of the Federal statute was to encourage labor unions to free themselves from the domination of Communist influence. In spite of that fact, it is difficult to understand why an agency of the Federal Government would deliberately proceed in defiance of the clear intent of the law. Such action can only result in disrespect and encouragement to others to ignore the law of the land.

The Federal Government should be the first to fully comply with the purpose of the law, and the last to ignore it or bypass it.

The editorial follows:

FINDING THE CAUSE IS EASY

Secretary of Labor Schwellenbach is correct in contending that the Taft-Hartley law does not prevent Government Services, Inc., from negotiating with the UPWA-CIO Cafeteria Workers' Union in the current strike. But he is wrong if he fails to see any difference between GSI and any private employer confronted with a problem similar to the one which GSI faces. That problem is whether to bargain with a union which refuses to certify that its leadership is noncommunistic.

Mr. Schwellenbach has been directed by President Truman to investigate the strike, which began January 5, when GSI declined to negotiate a new contract unless the union complied with the anti-Communist provisions of the Taft-Hartley law. The Labor Secretary will not have to do much digging to learn that the real issue in the strike is not wages or working conditions but the refusal of the Cafeteria Workers' Local 471 to sign the non-Communist affidavit.

GSI officials have never argued that they are prohibited by law from bargaining with a union which adheres to such a policy. They have asserted, with much logic, that GSI is in a position apart from that of the average restaurant operator. GSI has a unique relationship to the Federal Government in that it was founded by Government officials to serve Government employees. Its board of trustees is composed of administrative officials of various Federal departments. It is, in short, a quasi-governmental agency with quasi-governmental responsibilities. Congress holds it strictly to account for its policies and its actions, as witness the long and still uncompleted investigation of its activities by a Senate committee.

It is contended by GSI—again with much logic—that Congress, in writing into the Taft-Hartley law the anti-Communist provisions, had in mind purging labor unions of communistic influences. A quasi governmental body like GSI would certainly be sticking its neck out if it were to become a party to a union scheme to circumvent the intent of Congress in this respect. GSI should not be subject to criticism for eschewing an untenable position. It would undoubtedly bring down on its head plenty of criticism from Congress if it were to collaborate with the union in any such subterfuge, especially at this time of increasing vigilance against communistic infiltration of the Federal departments.

Secretary Schwellenbach should have little difficulty in finding a simple solution of the controversy. All that is necessary is that the union certify that it is free from Communist domination. That should be an easy thing to do if the union is, in fact, not under communistic leadership. Whether the union, after so certifying, could again qualify as bargaining agent for a majority of GSI employees is a question which only another election could determine. For a large number of new employees have filled the vacancies caused by the walkout. Thus, the recalcitrant union leaders not only are subjecting their followers to the unnecessary hardships of a strike but may be taking their jobs away from them permanently.

Missourian in Peru Describes How Uncle Sam Is Played for a Sucker

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, I just received in the mail a copy of the St. Clair County (Mo.) Republican of January 1, 1948, which contains a copy of a letter written by a Missourian showing how the South American governments are playing Uncle Sam for a sucker. Apparently this man has written to his home county newspaper, the St. Clair County (Mo.) Republican, purporting to give a description of the way in which our American dollars are being used to subsidize the Argentina Government under Peron's 5-year plan. This is a letter worth reading and I have copied the same from the above-named newspaper and pass it on for your information:

LIMA, PERU, SOUTH AMERICA,
December 18, 1947.

THE REPUBLICAN,
Osceola, Mo.

HI FOLKS: Christmas greetings from South America; first off I enclose $1.50 which will pay up until July, at which time we expect to be in or around Osceola on vacation.

Summer is in full swing here on this side of the equator and schools out for the season, the beaches swarming with people trying to keep cool, both from the heat of the season and the political situation, while the kiddies are working up a frenzy over the coming Christmas season we try to join in, but it's just a bit odd to get accustomed to Santa Claus coming calling in the middle of the summer.

We have just returned from a vacation around the southern part of South America, including parts of Peru, Bolivia—where it is an effort even to breathe, due to the altitude—Uruguay, Montevideo, its capital with the wonderful beaches and clean streets and government buildings, with prices reasonable. Several provincial cities in Argentina and, of course, the New York of South America, Buenos Aires, with their beautiful modern stores, prices sky high, and the highly

nationalistic attitude of their people; however, their steaks are delicious and not too expensive if one doesn't let his appetite run away. (Brother, does Peron have a nice little racket that the United States pays for especially with their wheat—the Argentine Government buys up all the farmers' wheat for 75 cents to $1.20 a bushel, sells it abroad to the poor European countries which the United States has staked, call it a loan if you wish, sells it to them for $5 and $6 payable in United States dollars per bushel; the difference in what is paid the farmers and what it is sold on the world market is put into Peron's 5-year plan; this, of course, is just one of their schemes.)

After visiting in Argentina we visited Santiago, capital of Chile, Valparaiso their main seaport, and Vina Del Mar, where the "big shot" politicians and tired businessmen go for rest and relaxation on the beach and in the casino. They have at least done one good deed in that country—they have thrown most of the Communists out and are trying their best to get on their feet again. And so back to Peru. We traveled by plane, train, ship, and bus, had a wonderful trip, but glad to be back home.

We, here in Peru that receive United States dollars, are living in sort of fool's paradise. As the demand for dollars is quite high we receive over double the legal rate in local currency, and at the moment I would say Peru is one of the best places for anyone with dollars to live in South America, but again the political picture is rather shaky and who knows what may happen next. Ah, yes, but Señor, that is manana, so let us enjoy today's blessings.

We expect to be seeing you some time around the middle of July 1948. Meanwhile, I'll keep well informed of the doings of Osceola and surrounding country; through your paper we do enjoy it and can hardly visualize that building boom going on around there now.

Wholly to the Left

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am pleased to quote the following editorial from the Tulsa Daily World, of Tulsa, Okla., of January 16, 1948:

WHOLLY TO THE LEFT

Opinion, generally, is that President Truman has abandoned whatever rightest or conservative leanings he may have had and is now wholly committed to New Deal leftist policies and methods. To what or whom is this presumably final switch due? Apparently, he has a revised set of advisers and they have, in their desire to keep him and themselves in office, decided that the way to get support is to prolong big spending, restore the wartime controls, and, possibly, put on some new ones, to cater shamelessly to the CIO, and kindred elements. Mr. Truman has apparently assented in full; he is striking out for more new dealism than we had before, or at least for aggravated application of the ideals in effect for 15 years.

This is tantamount to saying that the President of the United States played politics in his economic message to Congress as in his Budget message. That is what we meant to say. The defense for the President will be that the Republican majority in Congress is playing politics, too. That is, to a considerable extent, true. Under that state of facts, what will the people favor? What will Congress do to fulfill its trust? Whose politics are the soundest? Congress, apparently, has to prove that its way is better than the President's way, and that is what the people want—the best way out of this awful mess of prices and ruinous Federal costs, this deadly flirting with inflation, this pandering to extremists, this vicious circle called liberal or progressive. It is a demagogic course the administration is evidently bent upon.

The key word is "votes." Mr. Truman was not always thus. He was an acceptable Senator, but he appears to have lost the trust and support of his former colleagues of both parties. The Presidency or something has spoiled him.

An example of the evil attention the President has attracted is found in the comment of Prof. Harold Laski, the noted British leftist (possibly a Communist), who remarked: "It is difficult not to say with vigor that President Truman's address to Congress (the budget message) is the best document that has come out of the White House since Franklin D. Roosevelt died. * * * The real point is that the probable nominee for the Presidency next November has come squarely out for continuation of the New Deal at home and for swift and generous aid to European recovery abroad. * * * He has entirely taken the wind out of Henry Wallace's sails." This is a way of saying Mr. Truman has amplified and particularized the New Deal policies at home and abroad. Upon this endorsement from England and upon the general purport of his two messages, the President must go before the country as an unqualified advocate of controls as a remedy for everything and for an unlimited course of action and involvement abroad.

Mr. Truman, with considerable tiresomeness, continues to advocate controls, tax reduction for the small folk and "sock the rich" for the big ones. Nothing about reduction of costs, nothing about reducing the cost of living except by more costly regulations, nothing about escape from the wildly variegated political bondages imposed in wartime.

Appointment and Installation of Archbishop O'Boyle

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, January 26, 1948

Mr. O'CONOR. Mr. President, in the past few days the District of Columbia gained a new citizen of outstanding merit, whose worth in the spiritual sense and also in a very practical way as well, has been recognized by citizens not only of his own particular faith, but of all faiths and of no particular faith.

I refer to His Excellency, the Most Reverend Patrick A. O'Boyle, newly consecrated archbishop of Washington and as such the spiritual leader of 165,000 Catholics in the District of Columbia and the five adjacent Maryland counties included in the new archdiocese of Washington.

Archbishop O'Boyle's appointment and installation constitute a merited recognition of the importance of the District of Columbia in church affairs in this country. Likewise, the progressive record of the new archbishop elsewhere, as an administrator and organizer, as well as a leader of deep spiritual character, mark him as an outstanding churchman who can be counted on to afford the finest type of spiritual leadership in a day when moral values are so all important.

Because his coming is so significant an event in the history of the District of Columbia, now become a separate archdiocese, I ask unanimous consent to have printed in the RECORD a copy of the statement made by Archbishop O'Boyle to the people and an excerpt from his installation address, as reported in the Catholic Review, the official publication of the archdiocese.

There being no objection, the statement and excerpts were ordered to be printed in the RECORD, as follows:

ARCHBISHOP O'BOYLE'S PROMISE

I know I speak for all the Catholics of this archdiocese when I promise wholehearted support and cooperation in every genuine endeavor to promote the common good.

We may rightfully claim an organized Catholic life going back long before the Revolution, even to the time when the *Ark* and the *Dove* cast anchor off our shores, and the Holy Sacrifice of the Mass was first offered by Father Andrew White in the colony dedicated to the patronage of our Blessed Lady.

It is to a high and ancient lineage that we succeed. If the future is worthy of the past, the fine Catholic life of our people in the District of Columbia and in the historic counties of Prince Georges, Montgomery, St. Mary's, Charles, and Calvert in Maryland will shed on the name of their new archdiocese a luster that will allow us to share the glory that all associate with the mother church of Baltimore.—From Archbishop O'Boyle's address at his installation.

ARCHBISHOP O'BOYLE THANKS WASHINGTON FOR ITS WELCOME—TELLS PEOPLE OF HIS ARCHDIOCESE THAT HE WILL DEDICATE HIMSELF COMPLETELY TO THEM; TOGETHER THEY WILL PROMOTE THE SALVATION OF SOULS

(In response to requests from the press, the following statement by Archbishop-elect O'Boyle was made public at the rectory of St. Matthew's Cathedral shortly after his arrival from New York:)

The gates of the city of Washington have swung open to welcome me with traditional hospitality. Since my appointment was announced the priests, sisters, brothers, and laity of the archdiocese have been very kind in their expressions of fealty and their promises of service. They have reflected my own attitude on the matter. I come with a desire to serve and to help all the people.

I am encouraged by the prospect of close association with the beloved Bishop McNamara. As he assisted at my consecration he will, I hope, stand at my side all my days. The good priests, sisters, and brothers will, I know, serve in our vineyard with the same fervor and zeal which have always marked their labors.

DEDICATES HIMSELF TO PEOPLE

Naturally I am not yet entirely familiar with the many good works and noble institutions of the archdiocese. This knowledge will be my future pleasure. I am, of course, aware that the five counties in Maryland mirror the infancy of our Church in this country. The future, moreover, offers the pleasing prospect of absorption into the life of that great center of Catholic culture—the Catholic University.

To you—the people of the archdiocese—I dedicate myself humbly and completely.

With your help we shall go on together as one family doing God's work for God's honor and glory. Thus will we all promote the salvation of souls—our common responsibility.

I shall earnestly try to be worthy of the great traditions of love of Church and country which have come down from the first American bishop, John Carroll; from the saintly Cardinal Gibbons; from the dynamic leader, Archbishop Curley.

TRIBUTE TO HIS PREDECESSORS

They dedicated their full lives to the salvation of souls. Their attainment in this direction is my ambition. If my years among you help to increase the goodness and sanctity of your lives, then, and only then, will I have discharged the responsibility which I now beseech you to share.

I am humbly grateful to the Holy Father, Pope Pius XII, for the vastly greater opportunities now offered me as a devoted citizen to advance my constant interest and support of everything that contributes to the common good of the archdiocese of Washington and of our beloved country.

European Aid Program

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, January 26, 1948

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Would You Vote the Bonds?", published in the Joplin (Mo.) Globe of January 22, 1948. The Joplin Globe is an important newspaper in the great lead and zinc district of Missouri.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WOULD YOU VOTE THE BONDS?

Wouldn't it be a good idea to put this European aid program on a business basis? To that end, why not add the amount Uncle Sam has expended for the purpose since VJ-day to the amount we are proposing to give to the 19 suppliant nations under the Marshall plan, allocate the total to the various counties and cities of the land and ask the taxpayers to approve bond issues for whatever their share comes to, so it can all be put on a pay-as-you-go basis?

Sounds all right, doesn't it? Quite in line with good business practice?

All right. Here are the various bond issues citizens of the different counties, cities, and towns in this part of Missouri would be called upon to approve:

For Joplin, a bond issue of $12,220,376.

For Carthage, a bond issue of $3,482,465.

For Webb City, a bond issue of $2,313,857.

For Sarcoxie, a bond issue of $347,753.

For Carl Junction, a bond issue of $341,841.

Perhaps it would be better to vote the bonds by counties, in which case the taxpayers of Jasper County would be asked to approve an issue of $25,893,945. Newton County an issue of $9,553,831. McDonald County an issue of $5,181,421. Lawrence County, $8,105,573. Barry County, $7,745,634. Barton County, $4,654,692. Vernon County, $8,418,794. Dade County, $3,700,592.

These figures are taken from a statement prepared by the Legislative Reference Service of the Library of Congress for United States Senator JAMES P. KEM, of Missouri, and printed, at his request, in the January 16 issue of the CONGRESSIONAL RECORD.

The various allocations are divided into two parts, first the foreign aid already extended by Uncle Sam from July 1, 1945, the approximate end of the war, until June 30, 1947, and second, the foreign aid proposed by the Marshall plan. For purposes of comparison, annual tax receipts for the county are included. Thus the tables for Jasper and Newton Counties, as they appear in the CONGRESSIONAL RECORD, are as follows:

County and cities	Foreign aid, July 1, 1945, to June 30, 1947	Foreign aid, proposed by Marshall plan	Total foreign aid provided and proposed	Annual tax receipts
Jasper	$14,403,015	$11,490,930	$25,893,945	$980,344
Carl Junction	190,137	151,694	341,831	----------
Carthage	1,937,055	1,545,410	3,482,465	----------
Jasper	147,132	117,384	264,516	----------
Joplin	6,797,352	5,423,024	12,220,376	----------
Sarcoxie	193,431	154,322	347,753	----------
Webb City	1,287,039	1,026,818	2,313,857	----------
Newton	5,314,137	4,239,694	9,553,831	307,855
Diamond	88,938	70,956	159,894	----------
Granby	266,265	212,430	478,695	----------
Neosho	973,194	776,428	1,749,622	----------
Seneca	199,653	159,286	358,939	----------

If bond issues for the amounts stipulated were put up to the voters, do you think they would be approved? Neither do we.

The question is rather foolish, of course, because the voters are not going to be asked or permitted to express their sentiments on the matter. Not, at least, unless it should become an issue in the next election, which is not probable since Congress is being urged to approve the aid program en toto promptly or risk dire results.

Is it really our duty to help to such an extent these people of Europe who are suffering from a war we didn't start? And isn't it naive to call it aid? Sounds more like complete sustainment, if you get what we mean.

The Home Owners' Loan Corporation

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Monday, January 26, 1948

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent summary of the work of the Home Owners' Loan Corporation, showing what a great advantage it has been to the citizens of this country, and at so little cost to the Government. The summary appears in the form of an editorial published in the Pawtucket Times, of Pawtucket, R. I., on January 23, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOLC REPORT

The Home Owners' Loan Corporation is preparing to wind up its business undertaken during the period of severe depression. It does so with some satisfying attainments. It appears certain this agency will cease business operations with no loss of any sort to the Government and there is a possibility of a small profit.

More impressive than any other achievement is the news it has served the purpose for which it was created and so more than four out of every five of its original debtors have succeeded in avoiding the loss of property. Thus we learn through the latest HOLC report that home owners who have used the agency have paid off 86 percent of a total of $3,500,000,000 lent to them in the depression years. At the close of the HOLC year on November 30 the agency had a profit of $18,000,000, which was built up chiefly from interest on loans. Figured closely, it is revealed the net deficit of the agency comes to about $5,200,000, which is less than two-tenths of 1 percent of its total loans.

It is reported that during the last year of high income and record employment a total of 71,000 borrowers paid off their mortgages entirely and ahead of schedule with about 323,000 accounts remaining on the books. About 97 percent of these are being paid on time and the total investment of the Corporation is down to $497,000,000.

Its operations have been cut to a great extent also with but 600 now employed, which is a drop of 312 in a year. The last of the branch offices was closed not long ago and all business is conducted from headquarters in New York City.

This was a Government venture into business which was born of depression. It was based upon recognition of a quality of human honesty which has been the backbone of business on credit. It has long been recognized that most people will pay for the things they acquire if they possibly can. In other words, by far the great majority of people are honest. The experiment of the HOLC has proved this all over again and there is satisfaction that the helping hand to many has saved cherished property at no loss to the taxpayers who provided the funds to make this possible.

Congress' Major Surgery for Truman's Bloated Budget

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, January 26, 1948

Mr. TAFT. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD an editorial entitled "Congress' Major Surgery for Truman's Bloated Budget," from the San Antonio Express of January 14, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS' MAJOR SURGERY FOR TRUMAN'S BLOATED BUDGET

Popular sentiment on national tax reduction has reversed since last spring. The American Institute of Public Opinion today reveals a strong majority favoring immediate income-tax cuts. Previous Gallup polls indicate that demand to be for genuine general reduction, not for any tricky, ineffective political shift of the direct burden from one economic group to another.

Congress' great majority—including most Republicans and many Democrats—are well advised to agree, in opposition to the Truman administration. As deficit spending during an inflationary period is unthinkable, that demand equally is for over-all reduction of Federal expenditures—enough to enable substantial tax relief without preventing continuing debt retirement.

Consequently, President Truman's intolerable fiscal 1949 budget will be so slashingly revised before congressional approval that little purpose would be served by its detailed analysis here. Even were this not election year, Congress would not "rubber stamp" that proposed unprecedented peacetime outlay ($39,700,000,000). Nor will it allow near war-peak annual revenue around $45,000,000,000 to pile up a 2-year surplus exceeding $12,000,000,000—far more than is needed for debt retirement.

Suffice it to reject the President's budget on sound general principles:

1. The budget is sharply inflationary; it would drain off net income desperately needed for production-expanding industrial investment—the only long-range prosperity-stabilizing force.

2. The budget is extravagant. Congress can pare virtually every item, save perhaps the national-defense outlay, without disrupting essential works and services if economically administered.

3. The budget is political. The President included numerous vote-getting recommendations on matters better left to State and local governments or private enterprise, or deferred to a more propitious time for Federal consideration, or not done at all.

The United States' economy simply cannot support that combination of Rooseveltian domestic New Deal and Wilsonian world-saving. Something has got to go, and Mr. Truman has endangered his Marshall plan seriously by insisting on simultaneous impossible schemes at home.

The rapidly upward cost-of-living trend must be checked, for world, as well as national rehabilitation and stability. All the urgent adjectives at the command of the White House speech writers cannot obscure that glaringly compelling fact. Congress' main task now is to apply careful, but major surgery to that bloated Presidential budget.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. ANDREWS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Daily News of today:

ST. LAWRENCE SEAWAY—WHY?

The St. Lawrence seaway proposal, discussed off and on for the last quarter-century, is hotting up again in Congress. Many are the politicians who are for it, in both parties, and many are those against it, likewise in both parties.

We're against it, for two main reasons.

The first of these is that we are against virtually anything you can name which will injure the port of New York, and we've long been convinced that this project would do just that. Anybody who wants to call such an attitude selfish, ignoble, and generally horrid is welcome to do so. It's still our attitude. "I'm gonna dance with the guy what brung me."

The second reason why we're against the seaway is that we think it would be impractical at any time, and especially so just now, with labor and material prices skyhigh and the Nation short on steel, which the St. Lawrence project would eat up in great quantities.

Mayor O'Dwyer calls the scheme an outsize boondoggle, and we think he has something there.

As most readers probably know, the plan calls for an elaborate deep-water passage plus a big electric power set-up, the whole thing to sprawl all the way from Duluth, Minn., to Montreal, Quebec.

The object of the deep-water passage would be to let oceangoing liners and freighters into Great Lakes ports—Buffalo, Chicago, Cleveland, Duluth, Milwaukee, and so on. From the power project, it is claimed, great wads of kilowatts could be generated for up-State New York and Canada's Province of Ontario, and this would drive power rates downward on the New York side; also, the whole layout is alleged to be desirable from the point of view of national defense.

It all sounds big and broad visioned until you look at some of the catches.

One of these, as remarked above, is the cost. The original estimate, back in 1921, was $252,000,000. That guess has now gone up to $674,000,000, of which the United States would pay $491,000,000. Out of the $491,000,000, incidentally, New York State would have to pony up $161,000,000—the cost of the entire power project.

HUGE COSTS AND DUBIOUS RETURNS

Another catch is that this $674,000,000 estimate covers a channel only 27 feet deep, whereas big modern ships of the type the seaway people want to let into the Great Lakes need channels as deep as 35 feet. That would balloon the cost above the $674,000,000 estimate—and then there would be the heavy expense of dredging many Great Lakes ports' harbors to let the big ships dock in them.

When it comes to national defense, the seaway looks like as much of a liability as an asset. A big series of locks would have to be installed. One bomb, well placed, will knock out one such lock. The next war may easily start with a surprise air attack on our eastern and midwestern industrial centers from across the world's polar cap.

Can we afford to risk having a goodly part of our troop transport and supply ship strength bottled up in the Great Lakes some morning by a bombed-out St. Lawrence seaway lock?

As for the power project, it could be built by the State of New York alone or in cooperation with the Province of Ontario, without help from Washington or Ottawa, assuming a majority of New Yorkers and Ontarians wanted to go ahead with it—which such a majority seemingly has no present desire to do.

As for the selfish interest of the Port of New York in defeating this scheme, the seaway's friends admit that the project, if completed with full-depth channels, would divert huge tonnages of shipping from Atlantic ports. They also admit that fully 50 percent of such tonnages would be drawn off from the Port of New York.

For these reasons, we think the St. Lawrence seaway project should be abandoned.

It would cost too much, especially at this time; the returns on the investment would be dubious at best; and, as we've said for years, we think New Yorkers owe it to themselves to fight the proposal every time it bobs up.

Peace on Earth

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, January 26, 1948

Mr. TAYLOR. Mr. President, I ask unanimous consent that an address on the subject Peace On Earth, broadcast by the well-known commentator, Mr. Arthur Gaeth, on December 24, 1947, be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Out on the White House lawn tonight a big green Christmas tree is now sparkling with several hundred lights, and 5,000 spectators are gathered on the lawn in the cold atmosphere. The President pushed the switch just about 2 hours ago and after the carollers sang Adeste Fideles, he sent a message of good fellowship to the world, promising additional commodity assistance to countries in need.

Everywhere in this Capital, Government business has come to a halt for the next few days—except over in the Department of Agriculture where that list of grain speculators lies heavy on the Department's conscience. Congressional investigators will soon receive another roll including 71 local, State, and Federal employees who have been dabbling in the commodity market. At the same time, Harold Stassen who started all this, told a news conference out in St. Paul that he hopes to follow through and add some more facts to the speculation story.

From Vatican City, Pope Pius warned the world that it is heading for a new war. He accused world diplomats of practising deception and raising it to the dignity of a new system of strategy.

From Chicago, next Monday Henry Wallace is scheduled to announce his candidacy for the Presidency on an independent ticket.

In the Holy Land, scene of the first Christmas, violence marred this evening. At least four persons were slain and four others were wounded in communal strife.

Each year on Christmas Eve we yearn to hear again the story of Jesus. Nineteen-hundred-fifty-one years ago a child was laid in swaddling clothes on the clean straw of a manger in Bethlehem. That infant grew into a sturdy carpenter's son in his native Palestine, a then satellite state of the Romans. But he left carpentry to become a teacher. He was proclaimed a people's prophet. His followers, imbued with the traditions of their times, saw him ultimately as the great Jehovah—God incarnate.

In His first public pronouncement—in the Beatitudes—He offered hope to the poor in spirit, comfort to those who mourned, protection to those who were persecuted for righteousness sake. He extolled the peacemakers. He spoke in easily-comprehensible parables. He would have us act as the despised outsider—the Samaritan—when he found an innocent victim of thieves by the wayside.

The Master advocated prayer in secret and in humility—and He prayed a people's prayer—for daily bread, for the forgiveness of trespasses. He was outspoken against those who devoted their lives only to wealth. He had no sympathy for the fellow who saw all his neighbor's faults but none of his own. He taught his followers to treat others as they themselves expected to be treated.

This Jesus was unbeloved by the religious leaders of His time. He drove money-chang-

ers out of their temples. He was a constant scourge to those who offered lip-service to the law but didn't live it. So they conspired to do away with Him. They finally induced the representative of a foreign power to permit His crucifixion. Yet, in the hearts of His followers He did not die. They perceived the miracle of the resurrection. They sought to establish a kingdom of God on earth—one which will ultimately unite all mankind. The essence of Christ's teaching is peace—and the establishment on earth of the Kingdom of heaven.

Centuries have passed. We Christians never realized the peace. Only slowly have we begun to free mankind from want and fear. Millions have been slaughtered in Christian wars. Always there have been Judases to betray—although many have caught the meaning of the gospel and built hospitals, shared with others, and comforted the distressed. That help has extended across borders and nationalities and it has cast a shadow of brotherhood.

In this rich, productive country of ours we have accepted Christianity. Yet, how often it is with difficulty that the concept shines through the clouds of prejudice and discrimination. True, at Christmastime, we hunt out all the unfortunate. We see to it they have a Christmas dinner and presents—we talk about and do something for the hundred most needy families in our community. Somehow we awaken to the meaning of the words we recite so glibly out of our prayerbooks and scriptures the rest of the year.

Then, after the holiday is over, only too rarely do we sense that those who live about us are our brothers and our neighbors. In community after community in this great land, we brand as if with an iron, the black and the white, the saved and the sinners, when it comes to providing fundamental opportunities in education, housing, and earning a living; too often our charity continues to be degrading instead of opening vistas for self-respect.

Even now a Freedom Train is moving from community to community across the land. It is a museum of documents which form the cornerstone of the political and economic liberties we champion. But that Freedom Train will not stop in Birmingham, Ala., as was scheduled next Monday—so-called free and equal citizens in this country were to be segregated into classes so they could view their Declaration of Independence. The colored people announced they would boycott such meaningless freedom. The train will pass right through Birmingham.

From Jefferson, Lincoln, and Roosevelt—all Christians—we learned much about the application of political liberty. Much less receptive have we been to the concept of economic opportunity and security. Our fight against economic combines has been extended over 50 years—but we find that today the forces of monopoly are as active as ever and that they have friends in Congress and in court. Many seek to charge what the traffic will bear—not to work for prices that will expand increasingly the commodity wealth of the Nation to the greatest possible number. Some of us are shocked that the worker or the farmer should be doing so well and that we no longer hold them as bondsmen. Too many still find it difficult to conceive that our way of life should make possible medical attention when people are ill, social security when they have grown old and contributed to society all their strength allowed, or a decent minimum standard of living. We find it difficult to believe in Christ's miracle of loaves and fishes—that He would give to believing people something for which they had not slaved.

Here in our midst the light does shine through from time to time, but it still causes many of us to blink, to squint, and rebel. We do have the highest standards of living achieved anywhere for the greatest number, but we forget that only as we continue to increase and expand it can we hope to keep all at work and our way of life alive. It is more blessed to give than to receive operates in a very tangible and practical way in a democracy because only economically free people can actually be politically liberated. It seems that from the workers of Hawii we obtain the best example of practical brotherhood. In times past, the employers of the islands brought in workers from all over the world—there is a polyglot population but when they organized it was not along racial lines. The leadership shows Hawaiians, Portuguese, Spanish, Italians, Swedes, Chinese, Japanese, and even some Anglo-Saxons.

Now, we look beyond our own domain, we are suddenly plagued. We find ourselves in a cold war. Not so many moons ago, after months of bloody slaughter, we expressed the pious hope, with the other peoples of this shrinking globe—that all of us must learn to live together as brothers. We cannot all be alike because through the ages we arose from different environments and traditions, but we can all be tolerant and worship at the same altar—breathe the same fresh air. Yet, how easy we have found it to forget the mote in our own eye while we see the beam in another.

Today correspondents report the Communists are responsible for us losing our air bases in Panama. We seem to overlook the fact that for years, while we protected our communications from that land, we put the inferior silver label on the natives—while we blessed ourselves with a gold one. When we built the Canal, American workers were paid in gold—the natives were given silver—and that label of inferiority continued throughout this war—until resentment flashed—and we are pulling out—speaking about building another canal.

Now in the broken and shattered world in which we, almost alone, can live in plenty—it is the Communists we must fight in Europe and Asia—not the people we must help. That is becoming the basis for our recovery program—and we wonder why countries are torn with strife—why classes fight each other to the death. Through the recent weeks, many sections of a friendship train crossed the continent—picking up food donated out of the goodness of the American heart. The idea touched all with the warmth that goodness carries. Among the needy in France it was unloaded and received with the same spirit with which it was given—no one had any opposition and everyone blessed the giver. If international brotherhood ever is to take root, assistance must be divorced from politics. We have learned in Greece and may soon learn in China and elsewhere that when we play politics with aid, we engage in an "Operation Rat Hole."

Today the Russians curse us as warmongers—we revile them as dirty reds. When a 24-year-old Russian agronomist, just out of college, took his first trip abroad and stopped in Karlsbad, Czechoslovakia, he requested from a Russian-speaking acquaintance of mine: "Pokazete mi Bourzoj"—show me someone of the bourgeoisie. He expected to see a strange character, possibly as he had seen the Soviet Punch—Krokodil—depict him. When this same acquaintance took a group of Russian agriculturalists to Texas during the war, to show them developments on American farms, one of the farm occupants told the company to wait while he got his shotgun, when he was told through the door who his visitors were. He apparently expected long-bearded Bolsheviks with guns in their belts.

Our world has grown so small—yet we continue to live so far apart. Our governments and our press continue to raise barriers of distrust. We know other peoples have erected walls to stop us from going to look and see—but now our own country, which has boasted freedom, has begun imitating the others—intimidating expression—casting chains that bound so many for years.

We have just made the most important discovery since fire. Fifteen pounds of atomic fuel will produce enough energy to meet all the demands of the United States for 1 year. A carload of it would heat every building, light every light in the world for a thousand years. Radioactive isotopes today can make the body as transparent as a pane of glass and we are on the way to discovering the causes for all the secret ailments of mankind. If we survive, the day can come when man will be able to live a thousand years.

But we see the atom merely as the basis for destruction—our motto continues to be: "Kill or be killed." All our Christian teaching has never enabled us to escape organized savagery called war. The light of Christmas never dissolved human greed. His example never impressed governments that bludgeons in international relations today will bring no revival, create no millenium or era of peace.

Robert Hutchins, president at the university where atomic enegy was developed wrote in this month's American Magazine that there is no bomb secret and there is no defense against the bomb. He maintains we are foolish if we believe the Russians haven't learned how to make the bomb—if we believe they have no bombs. He explains how two of the new-type bomb—dropped in or off the shores of this country might annihilate great sections of our population through its rays. Rays from the bomb dropped at Bikini were picked up in Los Angeles within a week—and we can make bombs today 1,000 times as powerful.

No nation can dominate militarily for more than a moment at the dawn of this atomic era. No people by power can force other peoples to be good. Christ said that long ago.

Says Hutchins: "Many of us who have thought the situation through have concluded that our only salvation lies in the establishment of an international morality. I believe that all nations must sit down together and agree to be good * * * instead of glowering at one another, nations must understand that we are inevitably destined to have one world or none at all."

This is Christamas Eve. The bells are ringing for peace on earth, good will toward men. What do they say to you? Is there hate or indifference in your heart—or a prayer to God to help you understand to have a sense of responsibility and belongingness toward and with the other fellow—whether he be slight or dark, American, French, Chinese, or Russian. This awakening must begin in our homes—then it may ultimately reach Congress and from there into the United Nations and on to the Russians and others. Remember—the word is still stronger even than the atom bomb—pass it along. What a Christmas spirit would arise if a hundred million of us let such a wave swell and encompass our people. Christ and His Christmas message have not failed us—it is we who have failed Him.

And now a Merry Christmas and to all a goodnight.

Reclamation

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1948

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in

the RECORD, I include an excellent address by Michael W. Straus, United States Commissioner of Reclamation, on the subject, Reclamation Looks Forward. This address was given before the Nebraska Reclamation Association at Kearney, Nebr., on January 15, 1948. The address follows:

It is my good fortune to again be permitted to come before the Nebraska Reclamation Association at its annual meeting, particularly in this special week when in Washington, which I left last night, the President and the Congress are undertaking action which will have major and beneficial effects on the many plans you are developing at this meeting.

Not only did I want to be with you here in Nebraska now, but it is no great state secret that whether I wanted to or not, force of circumstances has just about required my presence here, for Nebraska, with your able support, is rapidly becoming the brightest star in the reclamation constellation. Reclamation is moving forward in this State with a determination and a speed that really keeps the Bureau of Reclamation scrambling. That's only one reason I wanted to be here.

Another reason is because of your energetic congressional delegation that virtually ordered me here. Senator KENNETH WHERRY is the aggressive chairman of the Senate Interior Appropriations Subcommittee that handles the reclamation appropriations that make possible our work in Nebraska and in the West. He follows Nebraska affairs closely and the Senate committee under his able leadership has always supported the reclamation program. Senator WHERRY asked that I come to Kearney in his stead when pressing duties kept him in Washington. Senator HUGH BUTLER, of Nebraska, on whose knowledge and support reclamation frequently relies, is chairman of the Senate Public Lands Committee which writes the reclamation laws and thereby calls the signals for the Bureau, of which I am proud to be the Commissioner. And your representatives in the House, CARL CURTIS, with whom I frequently counsel, and Dr. MILLER, CARL STEFAN, and HOWARD BUFFETT, have like interests. So, when I got your invitation with such forceful seconding from your delegation, I had little choice. With that surprising originality of most bureaucrats, I replied, "Yes, sirs."

Now, I don't want to waste your time and mine by looking backward and extolling the virtues of what has already been accomplished or admiring the beauties of the Nebraska landscape and praising the historical accomplishments of your fine State. I would happily do all that, but we have more pressing business on hand. And I am not going to insult the reclamation leaders of Nebraska by a flock of adjectives and a welter of oratory intended to sell you reclamation. You are already experts on the subject, and anyway that would be too easy. Selling water in the West today is about as hard as selling a sandwich to a starving man. Likewise, I will refrain from vital statistics and description of this or that fine Nebraska project and will not bore you by discussing the relative virtues of a 102- or 107-foot earth dam, or a wooden or iron gate in this or that project. I won't do it for several reasons, but chiefly and truthfully because of the fact that Mr. Avery Batson, the regional director of reclamation, and the Bureau's staff in Nebraska have far more familiarity with the details of the individual Nebraska projects than I have and, incidentally, they are far more competent to perform that particular task than I am. They have already done so or will do so during your meeting here in Kearney.

I ask you to lean back a bit with me and take a broader look at reclamation's problems. They are very real and, in the end, the developments here in Nebraska that will help establish the future economy for the next few decads in your State, will be governed by the solution of those broad problems in which you will participate.

Here in Nebraska, while reclamation is not a new and untried experiment, we are now doing some trail blazing—pioneering which I think is going to lead the way for the water resource development in this country and throughout the world. Nebraska is a pivotal State in the comprehensive Missouri Basin program—the first such program on such a scale that has been embarked upon in this country or anywhere in the world. The Missouri Basin is seven States and one-sixth of the total area of the United States. Here, together with the able Corps of Army Engineers and other local, State, and Federal agencies, there has been blueprinted an integrated and a comprehensive plan for the ultimate development of the natural resources with which the area is blessed. And contrary to history in many other areas, you are not going forward blindly on this little segment or that individual bit of work, but moving forward on a planned basis that takes all resources and benefits into consideration, fitting the picture together to make a comprehensive whole watershed development on a scale heretofore never undertaken. As the principal source of all our well-being in this country and in Nebraska, particularly, is the wealth of our natural resources, our water and our lands and our other blessings, what you are doing here is going to set the framework of the lives of your grandchildren and their grandchildren. So, let us keep our perspective as we meet and solve the thousand tough problems which will arise, and be conscious of the fact that the world is watching a great endeavor—a pioneering effort well worth watching.

In the Republican River Valley here in Nebraska you have, through your own good efforts, got a flying start toward attaining the benefits of the Missouri River plan. Two of your big dams, the Harlan County and the Enders, are already under way and we shall be in a position to get started on Medicine Creek when the weather permits construction to open next spring. At the propitious moment in the wake of disastrous floods last spring, you demonstrated the need to proceed at once with Culbertson and Bonny Dams and to expedite Medicine Creek. You did it so effectively that I was able to go before the Congress in its closing minutes last July and secure funds to get work under way on eight more Missouri Basin dams. It is indeed a pleasure and a test for reclamation to work with the people of Nebraska. But let us lift our sights and take a far look at the horizon and see how and where we can get along with our goal of putting a million acres of the rich Nebraska farmlands under irrigation in our times to achieve all the benefits of the multiple-purpose Missouri River Basin plan.

President Harry Truman, who is not unfamiliar with the midlands landscape, helped us in aiming at our goal when, within the week, in his State of the Union message to the Congress, he said:

"We must expand our reclamation program to bring millions of acres of arid land into production, and to improve water supplies for additional millions of acres. This will provide new opportunities for veterans and others, particularly in the West, and aid in providing a rising living standard for a growing population. * * *

"We must continue to erect multiple-purpose dams on our great rivers—not only to reclaim land, but also to prevent floods, to extend our inland waterways, and to provide hydroelectric power. This public power must not be monopolized for private gain. Only through well-established policies of transmitting power directly to its market and thus encouraging widespread use at low rates can the Federal Government assure the people of their full share of its benefits. Additional power—public and private—is needed to raise the ceilings now imposed by power shortages on industrial and agricultural development.

"We should achieve the wise use of resources through the integrated development of our great river basins."

Well, that's the program. That has been your program in the Nebraska Reclamation Association for some years. But this is a very big country and it needs a lot of education before your and my program becomes fully supported as a national program. And, of course, words alone aren't going to achieve the end. It takes perseverance, work, skill, men, material, and money.

I don't like to talk about this program primarily in terms of money because it goes far beyond money and leads directly to the way of life of those who come after us. All the money in the world won't get you a good program alone without your local wisdom and the technicians' training. And it takes foresight to build the Missouri Basin plan these days as anybody knows who has built a house, a store, a barn, or a shed within cost estimates recently. But it does take money. And it just happens that the dollar mark is a yardstick that a lot of people use and it is going to be used on the Missouri Basin program. So, we better measure ourselves somewhat by the measure that is going to be applied to us under the law.

You may have noticed that sometimes Reclamation discusses, of necessity, some money matters with the Congress. You may also have noticed that the President did not confine his support of your program to words. Just as I was leaving Washington he transmitted his budget to the Congress calling for a $268,000,000 appropriation for Reclamation for the next fiscal year. Now it happens to be true that that is the largest reclamation appropriation ever sought of the Congress at one time. It is nearly double the amount of last year's Presidential requests. You are probably going to hear quite a lot of discussion on this subject in the next few months. Here again I ask you to lean back a bit with me and get your program into perspective.

Arithmetical and historical comparisons of these sums with the past are an interesting numbers game, if you like to play numbers, and it may bring an unwarranted, understandable feeling of achievement that at last our reclamation program is pointed toward a goal more nearly in keeping with our needs for developing water, land, and power resources. But interesting as these comparisons may be, they are no adequate way to scale our needs. We should not and must not gage our progress forward by looking through a rear-view mirror. Funds that were adequate in yesteryear are not adequate for the present or the future because programs of the past are no relation to the scope or velocity of present and future reclamation programs. The road to our destination, where reclamation development will have caught up with national and Nebraska needs, is long and rough, and the goal is still far, far away. To get there, we shall have to keep our eyes fixed on the road ahead and look forward through the windshield and not backward through the rear-view mirror. We will also have to keep the gas pedal shoved flat to the floor board. And that is the situation in the Bureau of Reclamation today as we are striving and struggling to keep up to your thinking.

We should not take as our criterion last year or the year before any more than the boy who came to the stream and took as his criterion the tremendous leap of, say, 8 feet over the stream. He should not have boasted about that tremendous 8-foot leap, for the stream happened to be 16 feet wide and he went splash in the middle. And that is the way it is with our endeavor in the Missouri Basin, and we cannot go "kerplunk" because we misjudged the size of our task.

Federal reclamation projects throughout the West, under construction or authorized for construction, now come to a grand total of some $4,435,000,000 at today's prices. We are scarcely well embarked on this tremendous undertaking. Reclamation is reaching out to satisfy our growing needs of water resource development and must grow with our rapidly expanding national economy to a degree beyond any comparison of the concepts of the past decades. There is little good new agricultural land to be opened up in this country without irrigation. We are past that stage of development. Our frontier is gone, except as we extend it by irrigation. Our population is increasing. I suspect that Americans are going to continue to want to eat well and a lot of them have never eaten as well as you people have here, where the food comes from. And beyond that there are a lot of people in this world, outside the United States, who are getting hungry, and some of them are already starving. One way or another we are going to help feed them. The Missouri Basin and Nebraska are going to do their share and more than their share in providing that food.

And a further word about our backlog of authorized projects: We still have a tremendous project planning and investigations job to place much of these planning data in shape for construction to go forward, as well as to provide for authorization of new work.

Now, let us get a little closer to home, at least in the Missouri Basin program, and see how these broad figures affect the Missouri Basin plan, which is a comparatively new plan and is now coming up for its fourth regular annual appropriation. Also, take a look to see where we are heading. The first Missouri Basin plan reclamation appropriation was only made as recently as 1946 and amounted to $3,200,000. The second regular appropriation of 1947 was $17,500,000 and about the same amount was provided for 1948 in the regular appropriation—the funds being used today. There also have been sizable supplemental appropriations. Over the 3 years to last July 1 a total of $55,000,000 was provided. This week, for the coming single fiscal year starting July 1 alone, the President has asked that $63,900,000 be provided—in other words, as much for reclamation's work in the Missouri Basin program in the coming year alone as in the past 3 years combined. This thing, once started, rolls like a snowball. But with all the midlanders' and the honest Nebraska respect for a dollar, don't let us be fearful of the figures when we use the dollar yardstick. We are going to get our money's worth. This money is not just spent and gone. It is transformed into producing assets of real value that will serve us and those who follow us as long as snow and rain fall and water runs downhill. It is just about the best investment Uncle Sam can ever make.

We have a Missouri Basin plan for the ultimate comprehensive development, to be sure, and it is moving forward successfully. But the people of Nebraska and the Missouri Basin and the United States have not as yet decided how long they shall take in achieving all those benefits, and that is one of the great problems I hope you will consider. The President has asked that almost $64,000,000 be provided for the Missouri Basin plan in the coming fiscal year. That's a lot of money, but much more will be needed before this long-range plan is achieved and the benefits reaped. The construction program to meet the plan's needs is measured in many millions of dollars per year, and you might be interested in the fact that the rate of construction progress now being achieved in the Missouri Basin starts work and sets a pace which in a few years will require annual appropriations of $100,000,000 to $150,000,000 if we are going to think of getting this job done within our times—say, within 20 years—if any of us consider that within our times. So, you see, that perspective shows this is the greatest water program of the world today, and it is high time we made up our minds how long we'll take to do the task.

Now, it happens that rivers and transmission lines, acre-feet of water, and kilowatts are no respecters of arbitrary political subdivisions such as State lines. Water is where you find it and it runs downhill, and hydropower gets up and walks on transmission lines from natural sources to markets, paying no attention whatsoever to State lines. Reclamation, which deals with water and power, does it realistically on the basis of nature's map as it is found, and that is the way the Missouri Basin plan you have brought into being considers these resources, even though Nebraska happens to be one of the States that lies wholly in the basin. But, nevertheless, just to rifle our sights for a moment on what generally may be considered the State of Nebraska in which you have particular interests, although occasionally we will stray over that unnatural State line, you will be interested to know that the President's budget of almost $64,000,000 for this seven-State area of the Missouri Basin in the coming year happens to provide for some $17,855,000 for work primarily of direct interest to Nebraska. The principal part—some fifteen and a quarter million—is for construction of Enders, Medicine Creek, Culbertson, Bonny, and Bostwick, plus transmission lines centering in Nebraska. Additional sums are provided for preconstruction work or surveys and investigations for such projects as Columbus, Grand Island, Middle Loup, Kansas Basin, Lower Platte, Niobrara, North Republican, and South Platte.

Now, that's what the cash register shows. But don't become myopic by staring at the cash register. Large as these sums are they must be viewed not as expenditures but as investments in capital goods—our national agricultural and industrial tools of production. Those are capital goods that bring immediate returns, profits year after year, over many years to come, from our national agriculture and industry. Our producing plant is the envy of the world and makes us the strongest nation in the world. The continuing dividends that will be enjoyed from them dwarf the initial investment. In fact, the growth of our country will be sorely retarded if we fail to go forward with this investment, just as it would if industry should timidly freeze up the flow of new capital investment.

That's not just a reclamation theory; that is an established reclamation fact. Over all the West in the past 45 years of reclamation you, through your Government, made an investment of about a billion dollars in reclamation, in turning waste lands and waste water into productive investment, in opening and establishing the West of today on the soundest economic basis in this world—firm and prosperous communities with assured water supply and industry where sagebrush grew before. Now from that billion-dollar investment dribbled into reclamation over 45 years, there came a yield in the single year of 1947 in crops grown solely by Federal reclamation water of $538,000,000—a return in crop values in the last single year of almost half the total investment of nearly half a century. In addition, revenues from reclamation power sales totaled over $23,000,000 for the single year and the demand for both water and power naturally is increasing instead of diminishing as our country is developing. That's why Uncle Sam is investing. In fact, it is a good investment for anybody in any league, anywhere.

Now, there are a few other things on which I'd like to report to you briefly because they are problems with which we all are confronted. Perhaps the most important of these is that we must find a way of securing steady continuity in carrying forward our reclamation plans—we must take reclamation off the merry-go-round. Past reclamation programs have, by various and sometimes temporary jurisdictions, been alternately cleared and blocked, speeded and slowed down, frozen and thawed, and commanded to "Giddap" and then "Whoa." As one of the great construction programs of the world, reclamation merits and must secure better treatment. You cannot accomplish a multiple-million-dollar complex program by, in alternate years, squeezing it fat and then stretching it thin as if it were an accordion. At least, it cannot be done on an economical and rational basis. While it is inevitable that each shift in the world kaleidoscope reflects on reclamation's and Nebraska's program and that each Congress, by appropriation action, refixes schedules in the light of its latest estimate of comparative needs, reclamation and Nebraska must win for themselves a minimum firm program base that the West can rely upon in scheduling its work intelligently several years—I will say not less than 6 years—in advance. We can provide such a program. It's up to us together to find a way of securing it.

I am hurrying back to Washington from meeting with you here because of two legislative matters which are up and in which you are vitally interested and which will fix a couple of basic ground rules under which Federal participation in your program proceeds. You have a big stake in these measures.

The first is the so-called Rockwell bill, otherwise known as H. R. 2873, with an identical measure known as S. 1608 pending before the Senate, where it was introduced by your own Senator HUGH BUTLER last year. The measure is about to come out on the floor for passage in the House backed by the unanimous favorable report of the committee that gave it long hearings.

The Rockwell bill is of primary interest to you because it will make feasible, under existent law, many sections of the Missouri Basin plan that are now only sketched roughly as possibilities. It does this by reducing the interest rate on the investment in power facilities on reclamation projects from 3 percent where it now stands to 2½ percent (which is still more than your Government pays), by settling long controversies over the application of this interest, and by fixing the amortization period on power investment at 78 years or the useful life of the facilities, whichever is the shortest. Of equal importance, the Rockwell bill would make nonreimbursable to the Federal Government its expenditures on reclamation projects which may be properly allocated to recreation development, fish and wildlife development, silt control, and general salinity control. On the decision of this matter by the Congress will depend whether many of the projects in which you are interested can proceed under reclamation law. I am happy to be able to report to you that the National Reclamation Association and the Bureau of Reclamation and all the interests involved seem to have been able at last to reach agreement on the many features of this bill, and the National Reclamation Association has taken positive action to endorse the measure. On behalf of the Bureau of Reclamation, I wish to report to you that Reclamation approves it in the form in which it is going to the floor of the Congress. It is most important that it be embraced in that form into reclamation law.

The other immediate legislative problem and one on which I offered testimony the day I left Washington, although it sounds technical, is of major importance to Nebraska and the Missouri Basin plan. It is a bill that revises the law under which repayment contracts are made by irrigation districts benefiting from the Missouri Basin development. It does this by revising the so-called 9 (e) clause of the Reclamation Act of 1939. Under this law in its existing form, it is not possible for the Bureau of Reclamation to provide a continuing and pertinent

water right at low annual payments to water users. That is because the present law prohibits Reclamation from making any commitment of water beyond 40 years under this clause in the 1939 act. The tradition of the West and of this area is that permanent water rights accrue by development and use. Reclamation recognizes this tradition and has joined in asking the Congress to provide the authority for making repayment contracts which give assurance of continuing and permanent enjoyment of the water that Reclamation develops. It is Reclamation's hope that this legislative action is taken, for with it, a better, more attractive, and liberalized type of repayment contract can be written in the Missouri Basin and in Nebraska which not only I, but many others, believe will be most attractive to you and meet the West's natural desire and requirement for permanent and assured water.

There are many other items which I might discuss but Reclamation has developed over the past half a century from the wisdom of the communities and the areas which have sampled it and found it to their liking. You will be in session here several days and this convention is but one more milestone in Nebraska's achievement in the Missouri Basin program. You will be solving, by your own wisdom, many a problem over the years that is no thornier than those which have already been overcome. As some of these problems seem large and magnified under the microscope of close attention, my only counsel is to keep them in perspective against the great fabric of the Missouri Basin plan.

All the signs and indicators now point to success in this great endeavor. Through your wisdom and support the program has been successfully launched. Reclamation is proud to be in partnership with Nebraska on this great venture and with you looks forward to the future.

Pushmataha, Choctaw Diplomat

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. STIGLER. Mr. Speaker, from my early years I have heard and read much about Pushmataha, one of the greatest chiefs of the Choctaw Tribe of Indians whoever lived. He was known far and wide and beloved by many. Many times was he the guest at the White House.

Recently there appeared a well-written article in the Evening Star of Washington, written by John Clagett Proctor on the life of "Pushmataha, Choctaw Diplomat." Under leave to extend my remarks I desire to include this article, as follows:

PUSHMATAHA, CHOCTAW DIPLOMAT

(By John Clagett Proctor)

Poor Pushmataha! Methinks I heard this brave Indian's name mentioned on the radio recently, and it carried my mind back to an account of this Indian's visit to Washington in 1824, during the second administration of President James Monroe.

This celebrated Choctaw Indian chief died in Washington about midnight December 23, 1824. He had come to this city with several other chiefs to see the President for the purpose of obtaining a settlement of the debt due from the Government, originating in the treaty held at Doak's Stand in 1820, and known as the "net proceeds claim."

Three of the four chiefs who came here—including Pushmataha—died waiting for a settlement. The fourth, seeking what might await him if he stayed here, went back to the tall timbers and at least had the satisfaction of passing away among those who loved him more and appreciated him better than did the white man at Washington.

DEBT PAID IN 1888

Of course the Government paid the debt—it always does pay its just obligations—but not until 1888, 64 years after poor old "Push" had gone to the happy hunting ground where even United States coins will not pass as currency. However, the unfortunate result was that more than $1,000,000 paid by the Government could then only be used by the grandchildren and great-grandchildren of Pushmataha.

While in Washington this great Indian frequently was the guest of the President and the White House and was often dined and wined by other public officials, notably Gen. Andrew Jackson, who was then serving in the Senate and was always glad to see him. It was General Jackson whom Pushmataha had joined with a large number of his warriors in the Creek War in 1813–14, engaging with distinction in all the battles of that eventful period—Talladega, Holy Ground, and Pensacola—and later accompanied the general to New Orleans, where he witnessed the battle of January 8, 1815, but not as a participant.

MEETS GENERAL LAFAYETTE

While Pushmataha was in Washington, General Lafayette was a guest of the Nation, and the Indian chief had the pleasure of meeting the Marquis, to whom he is said to have made a brief but very eloquent address, closing with the following prophecy which was fulfilled before the close of the year: "We heard your name in our distant wigwams. I longed to see one who had come a long way to assist our friends of the white race when they were a small people. I have seen and shaken your hand. This is our last meeting on earth. Soon the great ocean will divide us. We shall see each other no more till we meet in the happy hunting ground."

Pushmataha was born in what is now the State of Mississippi about the year 1764 and before he had reached his twentieth year he had distinguished himself on the warpath. He early joined an expedition against the Osages on the western side of the Mississippi and, so it is said, because of his youth and propensity for talking, he was a good deal laughed at by the more experienced men of the party.

The principal speech made by Pushmataha upon his visit to Washington was addressed to John C. Calhoun, then Secretary of War. As recorded by McKenney and Hall, the following is what he said:

"Father, I have been here some time. I have not talked—have been sick. You shall hear me talk today. I belong to another district. You have no doubt heard of me. I am Pushmataha.

IN THE BEND OF YOUR ARM

"Father, when in my own country I often looked toward this council house and wanted to come here. I am in trouble. I will tell my distresses. I feel like a small child, not half as high as its father, who comes up to look in his father's face, hanging in the bend of his arm, to tell him his troubles. So, father, I hang in the bend of your arm and look up in your face, and now hear me speak.

"Father, when I was in my own country I heard there were men appointed to talk to us. I would not speak then. I chose to come here and speak in this beloved house. I can boast and say and tell the truth that none of my fathers or grandfathers, nor any Choctaw, ever drew bows against the United States. They have always been friendly. We have held the hand of the United States so long that our nails are long like birds' claws, and there is no danger of their slipping out.

"Father, I have come to speak. My nation has always listened to the applications of the white people. They have given to their country till it is very small. I repeat the same about the land east of the Tombigbee. I came here when a young man to see my Father Jefferson. He told me if ever we got in trouble we must run and tell him. I am come. This is a friendly talk. It is like a man who meets another and says, 'How do you do.' Another will talk further."

MENTIONED BY RANDOLPH

The celebrated John Randolph, of Virginia, who served in Congress, off and on, from 1799 to 1827, upon one occasion alluded to the Indian chief in a speech upon the floor of the Senate, and to his grave in Congressional Cemetery. He said:

"Sir, in a late visit to the public graveyard my attention was arrested by the simple monument of the Choctaw chief, Pushmataha. He was, I have been told by those who knew him, one of nature's nobility; a man who would have adorned any society. He lies quietly by the side of our statesman and his magistrates in the region—for there is one such—where the red man and the white man are on a level. On the sides of the plain shaft that marks his place of burial I read these words: 'Pushmataha, a Choctaw chief, lies here; this monument to his memory is erected by his brother chiefs, who were associated with him in a delegation from their nation, in the year 1824, to the Government of the United States. Pushmataha was a warrior of great distinction. He was wise in council, eloquent in an extraordinary degree, and on all occasions, and under all circumstances, the white man's friend.' He died in Washington on the 24th of December 1824 of the croup, in the sixtieth year of his age. Among his last words were the following: 'When I am gone let the big guns be fired over me.'

"The day after the funeral of Pushmataha the deputation visited the office in charge of the Bureau of Indian Affairs. The countenances of the chiefs wore a gloom which such a loss was well calculated to create. Over the face of one of the deputation, however, was a cloud darker than the rest, and the expression on his face told a tale of deeper sorrow. 'Ask that young man,' said the officer in charge of the Bureau, 'what is the matter with him.' The answer was, 'I am sorry.' 'Ask him what makes him sorry.' The loss, the answer was expected to be, of our beloved chief. But, no; it was, 'I am sorry it was not me'."

THOUSANDS WITNESS FUNERAL

"The ceremonies of the funeral, the reader will bear in mind, were very imposing. The old chief had said, 'When I am gone, let the big guns be fired over me,' and they were fired. Besides the discharge of minute guns on the Capitol Hill and from the ground contiguous to the place of interment, there was an immense concourse of citizens, a long train of carriages, cavalry, military, bands of music, the whole procession extending at least a mile in length, and there were thousands lining the ways and filling the doors and windows, and then the military honors at the grave, combined to produce in this young chief's mind a feeling of regret that he had not been, himself, the subject of these honors. Hence his reply, 'I am sorry it was not me;' and so he explained himself."

The Congressional Cemetery was established in 1807, by the vestry of Christ Episcopal Church parish, G Street between Sixth and Seventh Streets SE., and here are interred more than 60,000 bodies, many distinguished Washingtonians who helped establish the Capital City, celebrated Members of Congress and outstanding members of the Army, Navy, and Marine Corps.

To an extent it is a Federal cemetery, although, as stated, it is governed by Christ Church, and in this connection we find that the United States holds title to sites in ranges 24, 25, 29, 30, 31, 54, 56, 57, 59, and 60, which are occupied by 87 Members of Congress and other high Government officials. In these ranges are also 96 cenotaphs which were erected to the memory of persons whose remains have either been removed from the cemetery for burial elsewhere or who were never buried in this cemetery. It appears to have been the practice at one time to erect cenotaphs to the memory of distinguished persons regardless of whether or not they were actually buried in the Congressional Cemetery. It is one of the outstanding cemeteries of Washington and one of its oldest.

Rhode Island's Freedom Train

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. FORAND. Mr. Speaker, the Freedom Train, now traveling throughout our country, carries many historic documents. Permitting the American people to view these documents is reviving and developing the spirit of Americanism in the hearts of many who have taken for granted the freedom that we enjoy without realizing the real basis for these freedoms and the price that was paid by our forefathers to gain, and pass on to us, this great heritage.

My home State of Rhode Island, though small in area, is great in historic background. In fact there are so many historic documents in our State archives that we could furnish a freedom train of our own. In order that my colleagues, and all who read the CONGRESSIONAL RECORD, may be privileged to gain in small measure a knowledge of some of our prized documents, I am inserting, as a part of my remarks, a brief summary of some of the most important documents that may be viewed by any visitor to our statehouse which is located in the city of Providence.

Secretary of State Armand H. Cote has just transmitted to me a summary prepared by Miss Quinn, his assistant in charge of archives. It follows:

The Freedom Train came to Providence and young and old from all over Rhode Island came to view its treasures. Had you but glanced from its windows as you went through, you would have realized that it had come home for there silhouetted against the sky was the dome of the State house topped by the symbolic figure of the "independent man," a silent guardian of the records which prove that Rhode Island and its people have always been devoted to the idea of freedom and to the ways of democracy. Its very name Rhode Island and Providence Plantations is an evidence of a people who learned to act together. Its legislative body, the general assembly, is a reminder of the fact that long ago government was accomplished through the will of the majority acting in an assembly.

The very oldest document in the State archives, written the 7th day of the first month 1638 is an agreement entered into by the founders of Portsmouth on the Island of Acquidneck to incorporate themselves into a body politic. Their first action under that agreement begins with the words, "We that are freemen incorporate," after which they proceed to elect William Coddington as judge or president to govern them. In turn the judge gives his oath that he will maintain the "fundamental rights and privileges of this bodie politick." From that day forward Rhode Island never turned from its goal, the records tell a continuous story of the building of a government by the inhabitants assembled together freely. At first all acts were agreed on in concert. Then the powers of the assembly were delegated to a judge and elders, with the freemen meeting in quarterly sessions only. As the number of inhabitants grew, this form of meeting became too cumbersome and a petition was presented to parliament by Roger Williams for a "Free Charter of Civil Incorporation" for a "Society * * *, which may in time by the blessing of God upon their endeavor, lay a sure foundation of happiness to all America." This petition resulted in the grant of a Parliamentary patent in 1643–44.

In 1647 the four towns—Providence, Portsmouth, Newport, and Warwick—met in a general court of elections to put the new charter in effect. "It is agreed by this present Assembly thus incorporate, and by this present act declared, that the forme of Government established in Providence Plantations is democratical, that is to say, a Government held by ye free and voluntarie consent of all or the greater part of the free inhabitants." A code of laws was drawn up at this same assembly and the administering of justice according to the laws agreed upon and established throughout the whole colony. In May 1648 "It is ordered that six men of each Towne shall be chosen, in whome ye General Court shall continue." Always the emphasis is on this free choice, "the inhabitants shall choose" and "by the election were chosen."

Because the Patent of 1643 did not seem specific enough in the powers and duties it conferred upon the Government, a petition was presented to King Charles II, which resulted in a most liberal charter being granted on July 8, 1663 to the Colony of Rhode Island and the Providence Plantations. By this charter the colony was permitted to elect its own Governor and general officers who were not subject in any way to approval by the Crown, and to enact such laws as were deemed necessary, provided only that they did not conflict with the laws of England. Rhode Island remained under this form of government until the adoption of the State Constitution of 1842, which is still the basic form of government. When the charter was put into effect according to the provisions contained in it, one of the first acts of the assembly was a discussion of the advisability of allowing the freemen to put in their votes by proxies, because of the difficulties of travel, rather than requiring them to be present at the election of officers to be held at Newport and so perhaps depriving them of their voting privileges. At this same session the section of the charter having reference to liberty of conscience was repeated as an act of the assembly: "That noe parson within the sayd Collony at any time hearafter shall be in any wayes molested, punished, disquieted or called in question for any differance of opinion in matters of Religion and doe not actually disturb the Civell peace of the sayd Collony."

With such a beginning it was but natural that Rhode Island should refuse to submit to any government not of its choosing. So in addition to a continuous legislative record dating back to 1638, which includes not only the acts and resolves of the assembly but also petitions from private citizens which give more than a fair picture of the life of the times, there are these milestones on the path of freedom preserved in the archives of the State:

The Portsmouth compact with the signatures of the founders of the Island of Rhode Island, dated March 1637–38.

A certified copy of the Parliamentary Patent of the Providence Plantations for 1643.

The Code of Laws of 1647.

The King Charles Charter of 1663.

The first revision of the laws of 1705.

The first printed revision of the laws of 1719, which made possible a wider distribution of the laws by which the Colony was governed.

The Commission of the Board, dated September 2, 1772, which inquired into the burning of H. M. S. *Gaspee* in June of 1772, in Narragansett Bay.

The Rhode Island Declaration of Independence, the name by which "An act for altering the form of allegiance" has become known.

The Test Act of Oath of Allegiance to the United Colonies signed on June 16, 1776, by the Governor, the general officers, the members of the House of Magistrates, and most of the deputies.

A certified copy of the Declaration of Independence, signed by John Hancock and indorsed on the back: "Made part of the laws of the State of Rhode Island &c—nemine contradicente."

The Constitution of the United States as ratified by the Constitutional Convention on May 29, 1790.

An engrossed copy of the Bill of Rights forwarded by President Washington in October 1789 and ratified in June of 1790 by the General Assembly which met immediately after the ratification of the Constitution.

The Constitution of the State of Rhode Island of 1842, adopted after the so-called Dorr War.

How To Help Europe Back on Her Feet

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. HESELTON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an article appearing in the February 3, 1948, issue of the magazine Look, which is entitled "How To Help Europe Back on Her Feet," written by our colleague, the gentleman from Massachusetts, Mr. HERTER:

HOW TO HELP EUROPE BACK ON HER FEET
(By Christian A. Herter)

The problem of temporary relief to Europe has now been dealt with. Congress has passed legislation allowing France, Italy, and Austria to maintain their meager economies through April. Some assistance is also provided for China. Now, what next?

It is obviously wishful thinking to believe that this interim aid program is anything other than a stop-gap program. No one in his right senses can believe that France, Italy, or Austria can feed themselves or keep their industries running after April of this year and until the next harvest without still further help. It is equally ostrichlike to refuse to face the fact that not only these countries, but other countries in Europe are going to have further aid from the United States unless their internal economies are to be allowed to disintegrate completely.

This at once poses the question of what the United States can and should do. When I

use the word "can," I speak in terms not of what the United States is able to do under any or all circumstances, but what the United States is physically able to do without weakening its own domestic economy. No one favors jeopardizing our internal strength. The maintenance of that strength is the one beacon light guiding the peoples of the world who believe in the essential rightness of the freedom of the individual as against the slavery of the police state.

The Select Committee on Foreign Aid of the House of Representatives, of which I am privileged to be vice chairman, has submitted to the Congress a number of reports dealing with the principles and organization which we believe should govern any foreign-aid program.

There is much justice in the frequent complaints that the peoples of western Europe are not doing as much for themselves as they should be doing. Either they are not working hard enough, according to these complaints, or they are not securing all the food they can from their own land; or they are failing to take courageous measures to stabilize their monetary systems.

To discuss all these points in detail and find the reasons behind some of the failures would go beyond the scope of this article. The essential fact remains that, in spite of the many shortcomings we could criticize, internal recovery in most of the western European countries outside of Germany has been very real. Recently, we have seen encouraging signs in the right direction—increased productivity in the coal mines of the Ruhr and of Great Britain, increased productivity in the British textile industry, as well as industrial recovery in Italy.

Obviously, the most discouraging phase of the continental picture lies in the continuing disruptive efforts of the Communist minority. It endeavors to demoralize and obstruct economic recovery, to terrorize governments and to invalidate any help that the United States is able to give. It is this continuing opposition from the Communist side that makes many people in this country despair of the efficacy of any help we might give.

Whatever doubts may be entertained as to the efficacy of our help, we cannot afford not to make the try. In my opinion, it is this communistic opposition that requires us to do everything we can, within the limits of our readily available resources, to continue our help.

The stakes for which the United States and other freedom-loving peoples are today playing are the greatest stakes in history. Behind every move that is made on the international chessboard lies the specter of war. The specter is not confined to a duplication of the destruction and horrors of the last war. It is a nightmare in the shape of the unknown destructive potentialities of the atom bomb. In that case, and I think few would deny it, what action can the United States take in order to be most effective and to minimize any gamble on the future it is willing to risk?

The Select Committee on Foreign Aid has recommended that a specific type of new organization be set up within our Government to handle part of the problem. It also laid down the objectives for any program of foreign aid—objectives running parallel to the pledges made by the 16 nations that met in Paris to consider the Marshall proposals. We felt that any American aid given should be given only to complement and assist the European nations in carrying out their own programs of self-aid.

The new organization, which we proposed under the name of the Emergency Foreign Reconstruction Authority, was to take a Federal corporate form. As we saw it, it should have a bipartisan board of eight directors appointed by the President and confirmed by the Senate. One of them would be the full-time Administrator for the Authority. Paralleling this Reconstruction Authority and to act in an advisory capacity, we proposed the creation of another group. This was a Foreign Aid Council comprising certain Cabinet officers, as well as the head of the Export-Import Bank; and the American representatives of the World Bank and of the International Monetary Fund. The Secretary of State would be the Chairman of the Council.

It would be the responsibility of the administrator and the directing head of the Reconstruction authority to lay our programs of foreign aid and to consult with the Foreign Aid Council. He would examine carefully all European requests and screen them against what we had or could make available in surplus and what other nations could contribute. He would also direct the purchase of such food, fuel, and fertilizer as could be made available to the nations in need. At the same time, he would coordinate any programs which the World Bank or the Export-Import Bank might agree upon with respect to loans to these nations with which they could buy raw materials and capital goods. Finally, he would be responsible for the administration of export controls.

In other words, subject to this board of directors and in consultation with the Foreign Aid Council, he would be fully responsible both for the execution of the foreign-aid program and for the protection of our own domestic economy.

I have stressed this organizational side particularly because the committee feels that a properly integrated organization attracting the very best brains we can find in this country is an absolute prerequisite to any intelligent treatment of the problem. It is the best guarantee that there will not be a repetition of some of the mistakes we have made in the past in foreign-aid mistakes that unhappily but justifiably have shaken the faith of many persons in this country as to the efficacy of any foreign-aid program.

Assuming that a proper administrative setup for programs of foreign aid can be achieved, we are then faced with this question: How far can the United States go in making commodities or dollars available to foreign countries without injuring its own economy?

I don't believe anyone can answer that question with any degree of assurance at this time. Many figures have been advanced. Some studies have been submitted by committees appointed by the President to indicate that we could tentatively commit ourselves to a $20,000,000,000 program.

To me, that type of thinking is entirely unrealistic. In the first place, any program by which we finance exports from the United States should consider two things: Not only the situation of the 16 nations of western Europe but also our trade relations with the whole world. I stress this most emphatically because there are many people who feel that our present price rises in the United States have been due entirely to the aid we have been giving to Europe. Just a glance at the figures of our exports for 1947 will disprove this entirely.

During the first three quarters of 1947, we exported at an annual rate of $19,000,000,000. Of this amount, only about one-third went to the 16 nations of Europe that made up the Paris Conference. The rest went to every section of the globe and was paid for in accumulated dollars, gold, Export-Import Bank loans or private credits. It is true that a major proportion of the bread grains exported went to the 16 European nations. Yet, at the same time, our exports of bread grains or their equivalent in flour to South America doubled the prewar figures.

During the whole of 1947, the President, acting through the Secretary of Commerce, had complete power to control any or all of our exports. Yet we allowed to go out of the country this colossal volume. If exports are as great a factor in our price rises as many have alleged them to be, then we have clearly not utilized our export controls as they should have been utilized. But assistance to the war-torn countries has been only as indicated by the figures—one third of the bulk.

It is obvious, however, that exports alone are not wholly responsible for increasing prices. Inflated currency, bank credit and purchasing power—each must take its fair share of the blame.

To come back to the question of how far we can go, we must make three major calculations, each of which will vary very considerably year by year.

The first calculation is the extent to which the nations in need of aid have increased their own productivity both agriculturally and industrially. The second is the quantity of commodities, not dollars, that we have in surplus and can supply without intensifying our domestic scarcities. And the third calculation we must make is how many dollars we are willing to make available to these nations in need in order to secure commodities in surplus supply in other sections of the world.

Each of these calculations is obviously subject to very wide variations and cannot be charted ahead with any degree of accuracy. For that reason I feel that no program of foreign aid should be projected further than 1 year ahead, however much we want to continue helping as long as real progress is being made.

As an example of the difficulties of making accurate calculations, let me take the third category I have mentioned—namely, how many dollars is the United States willing to supply in order to secure commodities in other countries for assistance to those who are in need? The British purchase most of their food from Canada and the Argentine. Canada is badly in need of dollars and cannot make much use of additional sterling. To what extent should the United States supply dollars with which Great Britain will buy Canadian wheat or Argentine meat or Brazilian fats and oils or Cuban sugar? And to what extent should those nations be willing to accept sterling?

At this juncture I do not believe anyone knows the answer. But I think it is clear that the United States should not take the entire burden of supplying credit in dollars. It is also clear that each of these other supplying countries should make some contribution of their own.

Let's also look at the first and second calculations that must be made in drafting a long-range foreign-aid program. With the movement of foodstuffs and particularly cereal grains such an important factor, how could anyone successfully estimate ahead how great the harvest of any one nation will be? The droughts with which the world has been plagued in the last few years have continuously upset our calculations. No one yet can foretell just what effect there will be on next year's crop after the drought of last fall in both Europe and the great grain-producing areas of our country. The best that Congress can do, in my opinion, is to make prudent guesses and then make frequent adjustments in the light of developments.

The hazards in estimating what can properly be done by the United States are another reason why I have felt so strongly that an organization administering foreign-aid programs is of paramount importance—an organization of men in whom the United States has full confidence.

Obviously, the great decisions that will have to be reached in the near future will be based primarily on the self-interest of the American public. There are always humanitarian considerations in giving help to persons who are in need of food and clothing and shelter. But the problem ahead of us is not limited to these humanitarian considerations alone. It involves the question whether in our own self-interest we

wish to see western Europe once again producing and living under conditions that promise freedom of the individual. We must measure this objective against the alternative of having police States on the entire continent of Europe.

It is difficult for most of us who are struggling with our day-to-day problems here at home to try to visualize the kind of world we will be facing if communism spreads to the English Channel. It is even harder for us to visualize the repercussions of such a contingency, both on the Far East and on our neighbors to the south.

It was not many years ago that we were faced with the real prospect that Hitler, if successful in his conquest of Europe, would jump across to South America. Today, unless we are willing to visualize realistically possibilities that are not in the realm of dreams, we are doing a disservice both to ourselves and to our children. We must seriously consider the possibility of a world in which we alone will be trying to maintain the freedom of the individual surrounded on all sides by Communist-governed totalitarian States.

Under such conditions, none of our own freedoms, either in trading with the world or in the maintenance of our own economy, could continue. By default, we would have surrendered to a totalitarian and slave existence.

A Redeclaration of Rights

EXTENSION OF REMARKS
OF
HON. ALBERT L. REEVES, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. REEVES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

A REDECLARATION OF RIGHTS

The life of our Nation is dependent, first, upon the extent to which freedom, truth, and justice are reflected in the daily lives of its citizens; and, second, the willingness of its people to make every sacrifice essential to maintaining these fundamental rights. The cornerstone of this Nation is individual liberty, keyed to the axiom that the Government derives its just powers from the consent of the governed. In the exercise of the inalienable rights guaranteed to us by the Constitution we have achieved a greatness that finds no parallel in all history, and men everywhere have hailed America as the great exponent of the Jeffersonian philosophy that that government is best which governs the least. This is the only real security a citizen can rightly demand or attain.

Achieving greatness has demanded struggle and sacrifice, and remaining great demands an awareness to the designs of those actuated by a purpose to destroy rather than to build. Events have occurred during our generation which make it obvious that the proponents of collectivism and of the socialistic philosophy that "the Government will take care of you" are seeking changes in the fundamentals of our governmental structure that are incompatible with and destructive of our democratic institutions, and one who gives the matter a second thought will realize that we are rapidly losing our constitutional republican form of government. For this reason it is essential that these dangers be revealed and the American people made aware of same.

We charge that the collectivist policies adopted by the Government have destroyed the basis of our monetary system, have devaluated the dollar and have deprived the citizen of his property without just compensation; have promulgated a fallacious theory of national debt; have sought to tear down local self-government and to make the States subservient to the will of Federal bureaucrats; have indulged extravagance in government and loosed a horde of unessential Federal employees to harass the people; have sought to control wages and working conditions and have destroyed equality of contract in employment relations; by the use of subsidies, grants-in-aid, and favoritism have sought to seduce labor and the farmer and to make them slaves to a Socialist state, and by the use of threats and coercion have prevented the exercise of constitutional rights; have sought to control our economy by organizing great Government corporations to compete with private business, by seeking to control all business and by depriving the individual citizen of his constitutional right to work; have used the power to tax as a means of destruction, thereby destroying the initiative to work and produce, have sought to destroy the profit motive and thereby to wreck the free-enterprise system, and have by deceit, duplicity, and guile sought to control our educational system, thereby to lead the American people into the ways of socialism and to destroy the American way of life.

Realizing that the future welfare of this Nation is at stake; we, the officers and directors of the Southern States Industrial Council, do declare our condemnation of the practices which have produced the above conditions, and we unreservedly pledge ourselves to the attainment and preservation of the following rights:

1. The restoration of a sound monetary system, based on the gold standard.
2. The adoption of a systematic plan for payment of the national debt.
3. The balancing of the national budget in times of peace.
4. The reduction of Federal expenses, and the elimination of all unessential Federal employees.
5. The withdrawal of the Federal Government from competition with private business.
6. The restraint of all monopolies, whether of Government, business, or labor.
7. Elimination of Federal subsidies and establishment of a public policy condemning same.
8. The establishment of a sound tax system that will restore and protect the incentive to produce.
9. A return to States' rights, and the restoration of local self-government.
10. A public policy rededicated to the protection of the right to acquire and own private property, and guaranteeing equality of obligation in all contractual relations.
11. The guaranty to the individual of his constitutional right to work, without fear of domination or control from any source.
12. Restoration of the dignity of the individual and a return to the fundamental principle that the Government is the servant of the people.

We call upon all people to support us in this effort to reestablish the guiding principles under which this Nation was founded, and under which it has lived and prospered.

Christian Principles in Business

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered on January 10, 1948, by Mr. J. C. Penney, director of the Laymen's Movement for a Christian World. This address is entitled "Christian Principles in Business," and I heartily recommend the reading of this message by the Members of the House, as well as those who receive the CONGRESSIONAL RECORD. Mr. Penney is president of the J. C. Penney Stores which number approximately 1,600:

CHRISTIAN PRINCIPLES IN BUSINESS

(By J. C. Penney)

I have adopted as the basis for my talk the principle taught by Christ, "Render unto Caesar the things that belong to Caesar and unto God the things that belong to God."

As a businessman I shall not be expected to know anything about homiletics. I am not even sure that this text would be regarded by sermonizers as applicable to my theme. But I think of these words as applying directly to the greath truth that there can be no arbitrary line drawn between the secular and the sacred even though we are directed to "render unto Caesar the things that belong to Caesar and unto God the things that belong to God." In other words, I believe the Great Teacher was admonishing men to do their duty and their whole duty; that even though those who came to Him obeyed all the laws of their faith and failed to pay their taxes, they could not hope to be free from condemnation.

Just as certainly, He meant that taxpayers, however respected by their business associates, had not done their full duty until they had returned proper thanks and service to their Creator.

The man who does not give to business what honest business deserves—his best—is failing in his duty. He may succeed in a measure; but his success is always less than it might have been and is of a kind that will disappear under pressure.

I believe much of the difficulty in the world of business is due to the fact that too many people are trying to get material gain without giving their best or are foisting unfair values upon the public. When we discuss honesty in the abstract there is no difference of opinion. It is only when the principle is applied to our activities, particularly our commercial enterprises, that we may contradict one another. No one will say there is ever justification for an employee taking a dollar from his employer, or for the head of an organization to increase his prosperity by deceiving the public or by underpaying his employees. But how often many of us fail not only to give the best goods for the prices offered but also fail to give to business the best of our minds and talents—the best of our loyalty.

Success, first of all, is a matter of the spirit. When I see a young man or a young woman identifying himself or herself so closely with his or her work that the closing hour passes unheeded I recognize the beginnings of success. Such young people are doing more than is required of them—that is, more than the employer requires—but not more than their conscience demands.

My father was both a clergyman and a businessman. One of the things about him that impressed me was that to him there was no difference between his farm and the church when it came to the matter of faithfulness. He did his best on the farm, in the details of his daily living, and in his relationships with his fellowmen; and he was devoted and consecrated in his religious service.

If it is possible to live the Christian life at any point it should be possible to live it in all relationships of one's life. A man should first ask himself, when he faces a

question of business choice, "Is this worthy of my best?" If the answer is "Yes," he should go into it not only retaining his self-respect but also holding fast to the highest Christian standards.

Some men attain positions of distinction in the business world, and are entrusted with responsibilities involving the well-being of hundreds or even thousands of their fellowmen, while others never get beyond the village store or the country office. But again and again I find those who are in positions often regarded as insignificant doing so much for the people of their communities that others in spectacular positions are shamed by comparison.

Why is this? It is because these unknown people are giving everything they have to their work; unselfishly counting their gains not by money profits but by the service they can render. These humbler members of society do not separate the secular from the sacred. They recognize them as united and in their own lives they are one.

The world at large never heard of my father but I know he was a successful man. I know he lived largely because he lived truly, because he rendered "unto Caesar the things that belong to Caesar" even as he rendered "unto God the things that belong to God."

We shall not be judged by the Heavenly Father by the material success we achieve, nor only according to what we do. We shall be judged by the honesty of our purpose and by the spirit with which we pursue life's duties in all their various phases. We should examine carefully our motivating purpose in life. Is it the thought of material reward—how much we can get by our own efforts to be spent on our own interests? Or is it our purpose to release such powers and talents as we may possess, to release them fully and make them work not only for the support of our dependents and to give us economic sustenance, but also to build a better community, a better state, a better nation, and a better world?

For my life program I adopted six principles. I believe they contain the essentials of success. Since they have a direct bearing on my subject, Christian Principles in Business, I quote them here:

"I believe in preparation. A man must know everything possible about his business; he must know more than any other man knows. Generally, we find what we look for. Our achievement depends largely upon our preparation.

"I believe in hard work. The only kind of luck any man is justified in counting on is hard work; this means sacrifice, persistent effort, and dogged determination. Growth is never by chance; it is the result of a combination of forces.

"I believe in honesty. The kind of honesty that keeps a man from taking something which belongs to someone else, of course; but I believe in that finer honesty that will not allow a man to give less than his best, that makes him count not his hours but his duties and opportunities; that constantly urges him to enlarge his information and to increase his efficiency.

"I believe in having confidence in men. I have found my most valuable associates by giving men responsibility, by making them feel that I relied upon them. And those who have proved unworthy have only caused the others, who far outnumbered them, to stand in a clearer light. In a large measure this principle is responsible for the success of the J. C. Penney Co. Use good judgment, of course. One cannot throw away common sense. But I urge you to believe in yourself and trust your fellowmen.

"I believe in appealing to the spirit of men. One of the wisest men who ever lived said, 'For the letter killeth, but the spirit giveth life.' Every enterprise in which I have been interested demonstrates this fact.

"I believe in a practical application of the Golden Rule as taught by the Master nearly 2,000 years ago. 'Therefore all things whatsoever ye would that men should do to you, do ye even so to them, for this is the law and the prophets.' "

The Golden Rule is one of the most fundamental laws that can be expressed in words. We find it specifically stated in the literature of 11 known religions. Of its origin but little is known, for Christ was not the first to give it expression, though His was the perfect pronouncement.

The Golden Rule is a law of love. It underlies all true religion. Observance of the Golden Rule ensures observance of civil law and carries us past the letter of the law to the spirit which "giveth life." It makes us willing to sacrifice what is commonly called personal liberty for the welfare of others and willing to forego indulgences which however harmless they may seem in our own lives, work ruin in the lives of others.

For many hundred years after the Golden Rule was spoken by the Master it was regarded as beautiful idealism rather than as a law to be put into practice in the everyday lives of men and women. Its early application encompassed only the narrow scope of friends and neighbors. As horizons widened and the definition of "brotherhood" took on broader significance, gradually people came to realize that the Golden Rule was a basic principle to be applied in all one's relationships.

Inherent in most normal human beings is the disposition to defend the weak against the strong, to sympathize with those who are exploited. The Golden Rule permeates the ideals of our public and private justice, even though those ideals are not always translated itno reality. Disregard for the Golden Rule creates untold misery and suffering. It is, I believe, the disregard for the rights and welfare of humanity, through greed and the lust of conquest by a few minorities, that has brought the world to such a terrible impasse at the present time.

Even in our generation we used to think of business as secular and of service as religious. Since no arbitrary line between secular and sacred exists, the realization that the Golden Rule was meant for business as well as for other relationships has in a small way penetrated public consciousness. But men have feared if they were too generous they would be unable to meet the competition of their more unscrupulous neighbors. They have not realized that another principle laid down by the Master was also essential, "Whosoever will save his life shall lose it; and whosoever will lose his life for My sake shall find it."

We have been finding out that by an immutable law the spirit and practice of service underlie even material success. As a seed must be buried in the cold, damp earth before its blossoms can come forth into the sunshine, so every success must be preceded by sacrifice. Self-denial is the basic requirement for accomplishment in any field of endeavor. The law is inescapable. This I know not only in theory but from personal experience. Success comes only to those who will follow the hard road and who are willing to sacrifice everything except honor to achieve their goal.

Diligence in business results in advancement. Unselfishness creates good will which in turn brings forth an increase in material prosperity. Not that I advocate unselfishness for selfish purposes—I am merely setting forth cause and effect.

In founding the J. C. Penney Co., the Golden Rule was made its foundation stone. Throughout the more than 43 years of its existence this company has endeavored to apply the Golden Rule in its relations both with the public and with its employees. Because of this radical departure from the policies prevailing in the community where the business had its birth, its early failure was predicted.

It is my experience that employees will respond to the stimulus of fairness and liberality. Such an attitude brings about a harmony of mind and purpose between employer and employees that enables workers to turn out more and better work and that causes them to bring to their tasks all the devotion of which they are capable.

Up to the outbreak of the war, business was gradually learning the application of the Golden Rule in its dealings with society at large. The leaven of doing unto others seemed to be gradually leavening the lump. Executives of many industries proclaimed their belief in the practice of this principle. Increasingly, year by year, the Golden Rule was being incorporated into business practices, with a decided improvement in relationships between employer and employees, and in an increased number of satisfied customers.

But the world, including our own Nation, had not progressed far in its application of the Golden Rule in international affairs. In its present reversion to barbarism, much of our advancement toward the universal practice of Christian principles appears to have been lost. Nevertheless the long backward perspective shows progress to be on the upward swing. The important thing is that the movement, whether rapid or slow, be upward toward the goal.

Lest I may have given the impression that I have made a perfect record in the application of Christian principles to all phases of my life, I must make a confession.

As I have said, I was born of Christian parents, to whom I owe all I am or ever hope to be. From my early youth I tried to live uprightly and in accord with the moral principles my parents had taught me. But when I had achieved some success, and commenced to get the feel of money, I allowed the purpose of making money to dominate me. The goal of accumulating a fortune had taken possession of me and was crowding out the most important considerations. I had to learn that although I had kept the Ten Commandments there was one thing more.

A great tragedy came into my life. Something that meant far more to me than material possessions, and that money was powerless to restore, was taken from me. When bitter sorrow forced upon me the truth that money could not buy the more valuable things of life, I saw life differently. I began to think more about my obligations to society, as represented by the churches, the hospitals, and other service organizations.

The glimmerings of conviction that it was not enough for men to be upright and moral were breaking in upon me when another fiery ordeal came my way—one that almost broke me physically and mentally. It brought me to a new sense of humility and dependence upon God; and, as happens when man reaches his extremity, and sincerely and earnestly seeks God's aid, it was forthcoming. A light illumined my soul. I cannot otherwise describe it and never could I be the same man again.

Still there was much ground for me to cover. Although seeming to grow in spiritual stature it was years before I arrived at the point where I felt I could affiliate with the church. After I assumed the responsibility of church membership, thus rendering unto God the things that are God's in that particular respect, I was made to realize that merely being a church member, and attending church regularly, was not enough. There was yet the one more thing.

I came to see that I must take still another step—that I must give myself over to God's purpose. It is difficult to find words which express what happened. I became convinced that in order to take the practice of Christian principles to its ultimate

end, I must find God's will for the use of the talents I possessed and experiences I had had. I awakened to the realization that knowing God's will was not easy; that one must seek it through prayer and that our prayers are often strained through our own selfish desires and colored by our own wills, so that one must keep returning to the source of all life in order to be renewed.

These steps came to me through my contacts with the Laymen's Movement for a Christian World, an association of laymen of all denominations who are trying to find out how Christian principles can be applied in their everyday affairs. If in this work I shall be privileged to bring new hope and encouragement to my fellowman I shall be rendering unto God a service into which He seems to be leading me, and which I trust is to some extent a fulfillment of His will for my life.

I close with one word especially to young businessmen. The practice of Christian principles, as I have stated, was necessary when our business was started 44 years ago. But some men who did not follow them succeeded. It is my firm conviction, however, that the stepped-up business cycle, with mass production, and recently by the use of atomic energy, now makes this practice a practical necessity. In my early life, one could put religion in one compartment of his life and his business relations in another and be successful. But this is not true in the same way today. I therefore urge you younger men who have the greater part of your adult life ahead of you to study with great earnestness the relation between Christ's two commandments, to love God and to love your neighbor as yourself. With a balance of these two great laws worked out in your everyday life you are assured a life of spiritual satisfaction and I sincerely hope, one of material prosperity.

But this satisfaction on the spiritual side, and prosperity in the material sense, depends on a prayerful search of the right way according to God's will. It must be sought by prayer and mediation if it takes the place of one own self-will and ambition which we know is strongly set in all of us.

REA

EXTENSION OF REMARKS
OF

HON. GLEN D. JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. JOHNSON of Oklahoma. Mr. Speaker, under leave to extend my remarks I insert a copy of a letter I wrote in response to one I had received from an REA cooperative manager in my State.

On January 22, 1948, I made a speech on the floor of the House in which I referred this letter and pointed out that this cooperative manager had stated to me in his letter, in part, "It is becoming increasingly difficult to explain to our farmers in Oklahoma why Congress takes the attitude it does in refusing to set up funds for REA."

In my reply to this manager, which I am inserting in the RECORD today, I pointed out that it is most unfair for the inference to be passed on to the farmers in Oklahoma that the Oklahoma Congressmen are unfriendly to the REA program and did not vote for these funds. I further pointed out that I hoped he would exercise great care in explaining to the farmers that the individual Oklahoma Congressmen voted for these increased appropriations.

The letter I have referred to is quoted hereafter in full:

JANUARY 22, 1948.

Mr. HOWARD G. CROCKER,
Manager, Northwestern Electric Cooperative, Inc.,
Woodward, Okla.

DEAR MR. CROCKER: I received your letter of December 31, 1947, stating that "our board of trustees are very much concerned over the House of Representatives' attitude in turning down the request for $200,000,000 for deficiency appropriations recently introduced by Congressman JOHN RANKIN," and explaining in the rest of the letter the need for these additional funds.

It will please you, I am sure, to know that I am entirely in accord with the objectives and needs of the REA, as outlined in your letter. However, I am greatly concerned with that portion of your letter which states, in part, "It is pretty hard to explain to our farmers and ranchers why Congress takes the attitude they do in refusing to set up funds with which to build these lines."

It is my hope that when you and the other 26 cooperative managers in the State of Oklahoma to whom I am sending copies of this letter tell the farmers that Congress has refused to provide additional REA funds, you will exercise great care in explaining that the individual Oklahoma Congressmen voted for these increased appropriations.

I remember one occasion last summer, in July, I believe, when Congressman JOHN RANKIN offered an amendment which would have provided an additional $125,000,000 for REA, his amendment lost by only 10 or 12 votes. All eight Congressmen from Oklahoma, six Democrats and two Republicans, voted for the Rankin amendment on this occasion. Your own Congressman RIZLEY voted with the rest of the Oklahoma delegation for these additional funds. That was a roll-call vote and is a matter of record.

A similar situation happened just recently, on or about December 17, 1947, when Congressman RANKIN offered the deficiency appropriation referred to in your letter, which was in the amount of $150,000,000, and this amendment was also defeated by a small majority.

While the Congress as a whole certainly should be held responsible for their attitude in refusing these additional funds, it is most unfair for the inference to be passed on to our farmers in Oklahoma that the Oklahoma Congressmen are unfriendly to the REA program and did not vote for these funds.

Last summer, Mr. Clyde Ellis, your national representative, made a speech in Stillwater, Okla., and while I do not know exactly what he said, he must have left the impression that the Oklahoma Congressmen were unfriendly to the REA program, because I received several letters from my constituents who heard his speech wanting to know why I voted against these additional funds. Fortunately, I was able to dissipate that misconception in those instances by sending the individuals who had written me a copy of the CONGRESSIONAL RECORD showing the roll-call vote on the amendment, and that I and the other seven Oklahoma Congressmen voted for it. The part I deplore most about that incident, however, is that there must have been hundreds of people who heard Ellis' speech who did not write me or the other Oklahoma Congressmen, and who now have the false impression that all of us voted against it.

I know of no better way to express my interest, sympathies, and attitude toward the REA program than by my own recorded votes on roll calls, which are a matter of recorded fact in the CONGRESSIONAL RECORD.

You enclosed to me a list of approximately 2,000 applicants for electric service in your area. I am taking the liberty of having my letter to you duplicated, and am sending it to that list of persons, and only wish it could be sent to all the REA users in Oklahoma.

Under normal circumstances when Congressmen have voted for and fought for a program, as we 8 Oklahoma Congressmen have done for REA on the occasions I referred to (last July and December), it certainly would not have been amiss to have a letter of appreciation from at least one of the 27 REA cooperatives in the State of Oklahoma commending our position, while maybe deploring the attitude of those in Congress who voted against providing the funds. Personally, not only have I never received a letter of commendation from any REA manager, but I have been led to believe that the inference is being made to farmers by some cooperative managers, and certainly the speech of Clyde Ellis in Stillwater last summer left that inference, that the Oklahoma Congressmen are unfriendly to the program.

The chances are that no one, maybe even including Mr. Ellis, specifically said that Oklahoma Congressmen were against the REA program, but when REA personalities point out that "the Congress" did not provide these funds the persons being addressed either through a speech, individual conversation or written letter could quite easily draw that conclusion. I hope I am in error in this assumption, that I would like to be so advised if I am.

I appreciated hearing from you, and I hope that you will likewise appreciate the frankness of my reply.

Sincerely yours,

GLEN D. JOHNSON.

School-Lunch Program

EXTENSION OF REMARKS
OF

HON. PARKE M. BANTA

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. BANTA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to me by Miss Anna Dierssen, of Lowndes, Mo., dated January 18, 1948. Miss Dierssen is superintendent of the Lowndes Consolidated Schools. She is a capable teacher with may years of experience:

LOWNDES, MO., *January 18, 1948.*

Mr. PARKE M. BANTA,
Congress of the United States,
Washington, D. C.

MY DEAR MR. BANTA: It is not often that I feel impelled to write to our Congressman; but this is one of those times, particularly since I did not get a response written to your questionnaire of last November.

The present Congress, I am convinced, should do something definite about economy in government; for it is obvious that we have reached a spending peak beyond which it would not be safe to go. With the exception of national defense, I believe almost everyone would like to see expenses reduced all along the line. In some particular fields definite, immediate reformation can and should be made.

It is to one of these fields that I wish to call your attention.

There is one kind of dole that should be discontinued the moment the present appropriation expires. This is the millions appropriated for the school lunch subsidy.

In the first place, there is no need. Never before were parents so well able to feed their children; and every child that does not have adequate support from parents is amply provided for by ADC. The excuse is sometimes made that parents who can afford to, do not give their children the right food. Neither do they clothe them properly in all cases. Last year I saw high-school girls from comfortable homes going to school in the snow practically barefooted, no stockings, and their toes sticking out of strap sandles. This year and every year, I see little girls going to school in all weather, naked as Igorotes from the waist to the ankles. Shall the Government help buy them some clothes? The need is far greater than for helping to provide their food.

In the second place, one of the chief reasons why parents want their children to eat in a lunchroom is that mothers do not like to fix lunches. They are frank about it usually. If their children live at some distance from school, they do not like to bother fixing package lunches. If they live near at hand, they like to have the whole day to themselves. The strongest proponents of the lunch program live almost in the shadow of the schoolhouses. This is all wrong. If parents are unwilling to prepare food for their children at noon, then they should be willing, or if not willing, compelled to pay full value for lunches at school or in a commercial lunchroom.

In the third place, this subsidy hacks at the very root of personal independence. Let me give you the Cairns family, for example. Four little girls, ranging in ages from the first grade to the tenth. Healthy and happy and at the top of their classes. The father is a renter who makes a good living for his family with very little for frills. Their cellar is typical of the hill community in which they live, full of all manner of canned foods. They have milk. They have meat. They are able to fix wholesome package lunches for their children, but they do not have cash to pay 15 cents a day for the subsidized lunch. That clause that says the child who cannot afford to pay shall eat anyway and his poverty will be kept secret? Well, not for the Cairns and their kind. They feed their own, even if little friends who eat the dole do rather turn up their noses at their children.

In the fourth place, messy cooking is going on in small schools all over the land, to the detriment of good school work and to the distraction of many a teacher, who has to watch a pot while she hears classes. Kitchens have been crowded into laboratories and libraries, and incidental funds needed for the repair of buildings and the replacement of worn out stoves and broken-down seats have been taken to pay the cook. Some schools are literally being fed to children's stomachs rather than to their minds.

In the fifth place, the lunch program is sinfully wasteful. Whole plates of food go back scarcely touched, especially small children's plates. The garbage pail after one of these lunches is something before which to draw a veil. Who dreamed up the idea that children would be better off eating in a public place, exactly the same food that scores of other children of all ages eat? The result is otherwise. A mass of food is rejected. The reason is that each child's eating needs the individual attention which only a parent can give. What better place is there for a child to eat than at the family table under his mother's eye? And if he lives too far to come home for those five meals, what better food than a package lunch that she knows he will eat? The lunchroom food must come out of great common pots. Even in the large schools this is the only practical way. The waste is, therefore, inevitable. Quantities of macaroni, white beans, green beans, hominy, beets, sauerkraut, and, of course, greens go into the garbage, not to mention bread pudding and milk.

In the sixth place, the food is not as good as home food. The lunchroom cooks largely out of tin cans and paper cartons. The farm cellar is full of canned fruits and vegetables. Apples, oranges, lettuce, and cabbage, the fresh foods regularly used in the lunchrooms are obtainable in all small communities for less than a parent pays for his child's subsidized lunch. And the farm child has plenty of fresh milk. He does not need the thin cocoa made from cans of condensed milk that appears rather frequently. Nor does he need fried bologna and wieners, about the only meats he ever sees in the lunchroom. He has meat and poultry at home. As for the city child, his parents have access to year-around markets of fresh vegetables, fruits, and meats, and they can always buy the best of milk.

As for the mythical value of the lunch being hot, with the exception of soup, it is usually stone cold before the child gets to it because of the mass serving.

There is quite a sentimental haze around this school-lunch business, but it looks quite starkly different after one penetrates the haze. It is just one of those things that starts almost by accident under a special condition and goes on long after that condition has been removed; and people follow along, never taking the trouble to ask questions. It started when there were surplus commodities to dump, and mothers went in shifts to cook for their young. But these conditions are long since removed. There are no surplus commodities, and mothers expect the school board to hire a cook. It is time to discontinue the dole aspect of the business entirely.

The lunch subsidy is an entering wedge of socialism, subtle and subversive. Its effect is to pauperize the population from the kindergarten on. And this is an evil. If everybody learns to eat the bread of depepndence, who will be left to work and provide the dole?

To cure this evil the Government needs only to pare this item from the next appropriation bill. As long as those millions are appropriated, people will lose their reason and fight tooth and claw to get their share. As soon as the subsidy is discontinued, the cooking nuisance will disappear almost overnight from the small schools where it serves no good purpose and more often than not does harm; and in the larger schools, if it is retained, it will be put upon a self-sustaining, self-respecting basis.

I am earnestly hoping that this matter will receive your thoughtful, realistic consideration in the present Congress.

Very truly yours,

ANNA DIERSSEN.

Josephus Daniels—A Great American

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1948

Mr. KEFAUVER. Mr. Speaker, it is with profound grief and a distinct sense of loss that I today pay homage to the memory of Josephus Daniels. His story was truly an American story which perhaps could happen only in America. His father died when he was two and his mother opened a millinery store to support her three sons. From this, Josephus Daniels rose to become Navy Secretary in World War I and to hold that post longer than any other man in history.

In his espousal of the Democratic Party and liberalism, Daniels adhered throughout his life to a very definite principle—that of attaching himself to some belittled cause that was right. Such a course, he said, will bring success, and, more important, the satisfaction of doing something worth while. "If a cause is right, it will succeed," he said. "If it isn't, nothing you can do will make it succeed. Most of the things I have advocated in my life have failed at first. Later most of them succeeded, and those that didn't deserved to fail." He was always the fighting liberal, the foe of monopolies, greed, and the privilege for the few.

Daniels was a Tarheel editor at 18. He acquired the News and Observer in 1894 and merged it with his State Chronicle and North Carolinian. It was a period of violent partisanship in the South. Railroads, the Power Trust, and politicians were accustomed to buying editors or papers outright. Neither Daniels nor his paper could be bought. A railroad once poured $250,000 into a newspaper, trying to put him out of business. Daniels survived so well that years later he turned down a $1,000,000 offer from William Randolph Hearst. He would, Daniels said, as soon sell his wife and children as his paper.

When Daniels fought, it was with his entire paper. Even the personals went to war. Once he killed a gubernatorial hope with this apparently harmless item:

J. Elwood Cox was a visitor in town yesterday, traveling by train and using Southern Railway pass No. 6743.

In public life Daniels was attacked as forcefully as he ever attacked. For the order he issued—but never wrote—drying up the Navy during World War I he was lampooned and ridiculed. When he went to Mexico in 1933 as Ambassador irate Mexicans remembered the shelling and occupation of Vera Cruz by his Navy in 1914. They stoned the embassy. An associate wrote that Daniels' amiable patience and beatific smile would turn the stones to roses, and when Daniels left Mexico, though he was still unable to speak the language after 8 years he was showered with gifts.

When Daniels finally resigned as American Ambassador, as he neared the age of 80, most people would have considered him entitled to rest. He had seen his country go through virtually four wars—the Civil War, which was raging when he was born; the Spanish War, the First World War, in which he played a vital part, and the Second World War, which was just beginning.

Instead of retiring, Josephus went back to his first love, newspapering. And every day of the week Josephus got up at 5 or 6 in the morning and beat out his daily column or editorial.

Mr. Daniels kept an active and vigorous interest in politics, and there are many who still chuckle about Daniels when he took issue with former Democratic Chairman James A. Farley's

gloomy report on Democratic prospects in the South.

The gobble-uns'll get you ef you don't watch out—

He wrote—

A split in the Democracy of the South or its secession from the National Democratic Committee is the idle bubble of a dream of those who are in the hopeless minority.

Daniels' twinkling smile, black string tie, and black planter's hat will be remembered affectionately and proudly by many. His faith in the people will long be a monument to his memory.

A Statesmanlike Appraisal

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CROW
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 26, 1948
